### PRINCE ADRIAN OF ZELL.

By W. E. CULE.

CHAPTER I.—MR JAMES BARROWS TAKES A DAY OFF.

**I**F Our Lady of Destiny may be said to take a special delight in anything, it is certain that she must find peculiar pleasure in a dramatic situation. Yet so trifling are the incidents with which she deals that it sometimes seems as though the most momentous crises in life are brought about by nothing more than a cast of the dice. She takes the cup and throws: she glances at the numbers as they stand. Sometimes they represent a situation entirely to her taste, and she leaves them upon the board. Then her subjects must play out their parts according to the powers that are in them.

One spring morning Mr James Barrows, of Welding, had a trifling disappointment. He was an obscure gentleman of middle age and of small independent means, and he lived his life in a small country town some hour's journey from London. His dwelling was a modest semi-detached villa, with a long, narrow garden, to which he gave the greater part of his time and interest. It was in connection with this garden that his trifling disappointment came about.

He had ordered certain supplies from a prominent seedsman in the Reading district, and had expected them on this particular morning. The first post, however, had brought word to the effect that the parcel had been delayed, and would probably be delivered to-morrow. Mr Barrows was inclined to be methodical in his arrangements, and he had set aside this day for dealing with the new supplies. Consequently his dispositions were put out of gear, and he was left without any special employment for the morning. This was his disappointment.

After breakfast he walked aimlessly out to the garden. A low wall divided it from the next-door premises, and on the other side of this wall he saw his neighbour, Hadfield. Hadfield saw him at the same time.

'Good-morning,' he said pleasantly.

'Good-morning,' answered Mr Barrows. 'I am rather put out to-day. The things I've ordered from Stoughton's haven't been sent. They won't come until to-morrow.'

Hadfield was no gardener; but he expressed his sympathy, looking over the wall to do so. He was an ordinary young fellow, of a large build and a pleasant face. To this day he cannot tell what were the things Mr Barrows referred to; but he has a vague impression that they were bulbs.

'That's hard lines,' he said. 'But I suppose a day won't make much difference—will it?'

'Difference? Oh no,' answered the elder man thoughtfully. 'But I had arranged to attend to them to-day; that's all.'

Hadfield smiled. The methodical ways of his neighbour often amused him. Then he made the suggestion which was to have such unlooked-for results.

'Well,' he said, 'since you can't do that, why not take a day off? Why not run up to town, for a change?'

Mr Barrows, leisurely in all things, began to consider the suggestion. While he was doing so Hadfield was joined by his wife, a fair, clear-eyed, and clear-complexioned little woman, to whom ten months of married life had brought nothing but contentment and goodwill. She came to the wall, and greeted Mr Barrows with a smile and a question.

'What!' she said; 'gardening already?'

Her husband was the first to answer. 'No,' he said. 'There is no gardening this morning. I have just been advising Mr Barrows to take a day off, and run up to town.'

'Ah,' said Mrs Hadfield, with a sigh, 'wouldn't that be delightful! Are you going?'

Mr Barrows, smiling, said that he had not yet decided, but that he felt rather inclined

to go. For a few minutes they stood discussing the suggestion lightly, and his inclination became manifestly stronger. Then Hadfield, looking at his watch, declared that he must be off if he intended to get to the office that day, and the conference broke up.

Mr Hadfield and his wife went in, and some five minutes later the former was on his way to the offices of the Welding Local Board, where he occupied a comfortable if not exhilarating position.

Mr Barrows walked the length of his garden to see that all was in order, and then returned to his house to look for a time-table. He had decided at last that he would adopt his neighbour's suggestion. He was not at all eager in the matter, but he had remembered that he might use the opportunity of a run to town by making a call on a trifling matter of business. An idle holiday had no attraction for him; but this fact gave it some appearance of usefulness. Some nine or ten years ago he had written a book, which had chanced to suit the moment, and had brought him in a small sum of money. He had not heard from the publisher for a couple of years now; and, though disinclined to write, had often thought of calling to inquire after the latest fortunes of his venture. He would call to-day.

The time-table showed that he could get a train in less than an hour's time, so he changed his dress, informed his solitary housekeeper, and made all necessary preparations. A little later he was making his way to the station.

There was an enjoyable brightness and sweetness in the air of the little town on this spring morning. As he passed down the High Street he exchanged greetings with one or two of the principal tradesmen, who had come out to breathe the freshness from their own doorsteps. Having been a resident for so many years, Mr Barrows was quite a familiar figure in the town.

When he reached the station he found that an empty compartment was available, and secured it. A morning paper, read in the leisurely manner which marked all Mr Barrows' movements, occupied the hour of the journey. On his arrival in town he went direct to Paternoster Square, and visited a publisher's office. There he sent in his card to Mr MacArthur, and after a brief period of waiting was conducted to that gentleman's room.

Mr MacArthur was portly and pleasant. 'Ah, Mr Barrows,' he said, 'how do you do? Have you just come up?' For his visitor's air and attire spoke clearly of the country.

'Yes,' answered Mr Barrows.

'Then I suppose it must be business. What can I do for you?'

'It is really nothing of importance,' explained the visitor. 'But I thought I would call and

inquire about my little book. I wondered whether—whether you would be thinking of a new edition, or anything of that kind.'

The publisher considered for a moment. He had almost forgotten the book in question, but he did not say so. He touched a bell, which brought a clerk to the door. 'Let me have a copy of Mr James Barrows' book,' he said; and during the interval of waiting he found safer ground for talk in the state of the weather and the prospects of a fine summer.

In a few moments the book was brought in. Mr MacArthur handled it reflectively—a small, modest-looking volume, in a gray binding.

'Ah!' he said, 'here it is: *Prince Adrian of Zell*. You wrote it just after the Prince's death, and it owed its sale to the interest taken at that time in Styrian politics. This is the second edition. You wrote a fresh chapter on the Styrian situation at my request—did you not?'

Mr Barrows intimated that this was so. The publisher nodded.

'Well,' he said, 'I cannot say that I had thought of a new edition. In fact, the second edition did not go off completely. With such a book as this, you know—a kind of political biography, I suppose we may call it—everything depends upon outside circumstances. It owed its sale, in fact, to the unrest in Styria; but things there appear to be quieting down of late. From what I have noticed in the papers, I fancy that they have a strong man at the head of affairs. And if things quiet down, of course there will be no call for work of this kind.'

He closed the book, as if to emphasise his decision. Then he made a further remark out of a freshened memory.

'By the way, if I am not mistaken, it was said that you dealt with the poor Prince rather severely?'

'It certainly was said,' agreed Mr Barrows, smiling; 'but I did not treat him more harshly than he deserved.'

'Ah! I suppose that would have been difficult—for one who knew him so well. A man who made such confusion of his place and opportunities did not deserve gentle handling. But there, he is dead long ago, and forgotten. What is the saying: "*Nihil nisi*"—?'

Mr Barrows promptly completed the sentence. The publisher rose, laying the book aside as he did so.

'Just so,' he said. 'Let him rest. Well, if anything should turn up, Mr Barrows, of course I should communicate with you. But at present, as I have said, I do not see much likelihood. Good-morning.'

He held out his hand, and walked to the door with his visitor. But when Mr Barrows had gone he returned to the table, and took up the book once more, turning the leaves thoughtfully. He

remembered quite clearly, now, that the writer's treatment of Prince Adrian was not only severe, but almost savage in its bitterness; and he could not quite reconcile this with the appearance and manner of Mr Barrows himself. The man from Welding was mild, refined, and courteous; but he had treated another man's failure in an absolutely merciless spirit. Then the publisher remembered that Mr Barrows had once been closely connected with the Prince—had been his secretary, or something of the kind. It occurred to him that this might supply a clue.

'He was probably disappointed,' he thought, 'and perhaps they quarrelled. A man you have disappointed is hardly the best man to write your biography. Yes, I suppose the secret lies just there.' And with that he dismissed the matter from his mind.

In the meantime Mr Barrows had left the building. At the outer doors he paused, apparently to consider the results of the interview. Curiously enough, his expression did not at all suggest a disappointed author. It might have been one of relief rather than disappointment.

'I think,' he said half aloud as he stood for a moment on the doorstep, 'I may consider that incident closed. There will be no need to think of it again.'

Then he passed out, and in a few minutes was one of the multitude in a main thoroughfare. He went aimlessly, for he had no particular object in view, and no limit in the matter of time. His thoughts, however, were not with what he saw, but rather with the conversation which had taken place.

'Dead long ago, and forgotten,' he reflected, dwelling on MacArthur's parting words. 'And if a man is forgotten, it is only natural that his history should cease to be called for. Dead long ago—yet it is only ten or twelve years—and forgotten.'

He came to a pause at the corner of a street where there was a ceaseless thunder of traffic and sound of hurrying footsteps. He was now somewhere in the Hatton Gardens neighbourhood, and for a few minutes his way was blocked. As he stood there waiting, an idle, gray-clad figure stranded upon the kerb, an omnibus came up and stopped just before him.

It seemed to be almost an invitation. He surveyed it absently, smiling at the curious combination of primary colours. Then he noticed a name on the panels, exactly on a level with his eyes. It was the name of a district which contains one of the largest London cemeteries.

Mr Barrows was sometimes inclined to be whimsical. He was also inclined to be impulsive. The idea that came to him now was of a decidedly whimsical character. 'It is evident,' he thought, 'that I am invited to go out there—perhaps to look at the place where the Prince rests. I have nothing to do, and I have time

enough. Why should I not accept this invitation and go?'

Apparently there was no reason why he should not go. The omnibus commenced to move on. Smiling at something in his own resolve, Mr Barrows caught the rail and stepped on to the footboard.

#### CHAPTER II.—A MORNING OF CURIOUS ADVENTURE.

**T**HE great iron gates which divided the field of the dead from the world of the living were standing wide in the noonday sunshine when Mr Barrows reached them. Within he saw one or two attendants at work upon the grounds; and just as he approached the entrance two other persons issued from it. They were evidently mourners. One was a woman of mature age, heavily veiled; and the other appeared to be her daughter. Mr Barrows glanced at them with a species of sympathetic curiosity at first; but the character of his glance changed immediately, and became intent. It was a better view of the younger woman's face that caused the change, for she chanced to look up.

The meeting was only momentary, for they had walked on; but it was sufficient to impress Mr Barrows strongly. It seemed to him that the face of the girl was strikingly attractive. Moreover, the cast of features was a peculiar one, and gave him a curious impression of remembrance and recognition. Yet this impression faded, as such impressions often do, in the space of a minute.

'What curious fancies we get,' he thought, 'when we go out among strangers after a long period of home quiet! One's senses are all on the alert, as it were, and snatch many false and foolish impressions. I could have declared at that moment that I had met that girl before.'

He turned once to look after the couple, but they had already disappeared. Then, still musing upon this curious coincidence of a morning's walk, he passed on into the grounds. But although the second impression had been thrust away, the first remained with him. The girl had been exceedingly attractive, and for a man of steady middle-age there are few more interesting things in this world than a young and beautiful face. At this period, however, mere perfection of feature is not all that is looked for. There is a demand for a higher and more satisfying beauty—that of mind and heart; and it was the suggestion of this that had appealed to him in the brief glance which he had caught. The stranger might have been from twenty-two to twenty-five years of age, for there was a certain firmness in her features which he had noticed almost unconsciously; but, unless he was mistaken, she had developed in more directions than one.

Yet Mr Barrows was a man of various moods, and presently he remembered the purpose of his visit to this place. With the remembrance came a return of his earlier humour. He walked on through the quiet pathways, looking idly to right and left, pausing now and again to examine with greater care one or other of the many monuments which stood near his path. He seemed to be looking for a name which he should recognise.

His search, however, was fruitless, and after a time he came to a stand. Then he saw an attendant some little distance off, busily engaged in cutting the grass on a space of yet undisturbed ground. Mr Barrows looked at his watch, and glanced in that direction.

'Perhaps he will be able to direct me,' he said half aloud. 'Yet I am afraid that it is scarcely worth while to ask him. When a man is quite forgotten, even his grave may be hard to find.'

Still smiling curiously, he returned his watch to its place; but he had now decided to pursue his inquiries, so he left the path and went over towards the man he had seen.

He went in his own leisurely way, halting frequently to look at some inscription or to examine some piece of able carving. It was thus that another person, who had entered the grounds some time after him, was enabled to arrive at the same destination a little before him.

This was a younger man, one who had not numbered many more than half the years that had been placed to Mr Barrows' account. He was tall and sturdy, and he was dressed as a gentleman, while he moved with a certain air of assurance. He went direct to the attendant, and addressed him.

Mr Barrows stopped when he saw that he was forestalled, and turned to examine a gorgeous monument which had lately been erected to the memory of a late alderman of the city of London. He was some ten yards distant from the others, and they did not heed him. In the stillness of the place every word came to him clearly.

'Well,' said the new-comer abruptly, 'any news to-day?'

Mr Barrows gave a perceptible start. Still standing before the glory of the departed alderman, he yet turned slightly, so that he might get a view of the speaker's face.

Impressions are not to be measured by time. The man with the scythe did not answer the question at once, but paused to take a comfortable leaning position upon the shaft of his implement. Yet in that brief period Mr Barrows learned a great deal.

It was the accent of the speaker that had first startled him; and he saw in a moment that his hearing had not played him false. The young

man had a countenance of a peculiar cast. It was not a cast peculiar to a family—a family likeness—but it was suggestive of a national type; and if Mr Barrows was not mistaken—if his senses were not again too much on the alert—the face was of a national type with which he had once been familiar. He waited with interest, looking intently at the name of the dead alderman.

'They've been here, sir,' said the man with the scythe, 'and they haven't gone half-an-hour. You might almost have met them at the gate.'

The visitor gave an exclamation of disgust; but the attendant went on:

'They were over there for quite a time. I got talkin' to them, and—and it's all right.'

'You got what I wanted?' cried the young man.

'I did, sir. They live at No. 19 Franklyn Terrace, and it's not ten minutes' walk from the gates.'

'Ah!' said the visitor; 'No. 19 Franklyn Terrace. Ten minutes from the gates.'

He uttered the words slowly, as though to impress them upon his memory; and Mr Barrows, still intent, noticed something more in his speech than the peculiar accent which had first attracted his attention. It was a note of triumph, so distinct as to be unmistakable, so pronounced as to be almost evil. And suddenly Mr Barrows, who, as I have said before, was a creature of whims and moods, took a certain dislike to this person.

'That was what you wanted to know, sir—wasn't it?' asked the attendant suggestively.

'Thank you, yes,' answered the other. 'That was what I wanted to know.'

Something passed silently from one to the other. The attendant touched his cap.

'Thank you, sir,' he said. 'Good-mornin', sir.'

The young man returned the 'Good-morning' with a careless nod. Then he turned to make his way back to the path.

He was thus obliged to pass Mr Barrows, who took this opportunity of obtaining a better view of his features. It was apparently a casual glance that passed between them; and what the young man saw was a simply dressed, middle-aged person, with quiet, reflective eyes, a mild, somewhat absent expression, and a closely trimmed beard sprinkled with gray. What Mr Barrows saw was what he had expected to see, after what he had already seen and heard: the face of a strongly built young fellow, with triumph distinct in it—a triumph that appeared to emphasise some unpleasant characteristics which had been there before.

'Certainly an unpleasant person to have a quarrel with,' he thought, turning an absent glance once more upon the tomb of the alderman. 'One of the people it is best to know at a distance. Now, I wonder why he is following

up those women; for I am positive that the talk was all about those women I met at the gates. It may be a love affair; but his face did not look much like love. And the most curious part of it is that they are both Lusians. There is no mistaking the type or the accent.'

He seemed to be impressed for the time, for there was a gravity and a perplexity in his face. It was some little while, indeed, before he was able to throw off his unaccustomed soberness and return to the matter of his own business.

'Things seem to be happening to-day,' he thought. 'But, after all, it can be nothing to me. If the Prince were alive—well, if the Prince were alive he might be interested. But he is dead, and I have come here to look at his grave.'

With that he moved on to where the attendant was still leaning upon his scythe, watching the departing figure of his late interviewer. He turned to examine Mr Barrows with idle interest.

'Good-morning,' said Mr Barrows pleasantly.

'Mornin', sir,' answered the man briefly.

'Do you happen to know,' said Mr Barrows, 'whether there are any princes buried about here?'

He put the question with a smile, as if it contained an element of the ridiculous. The man gaped in utter surprise; then, observing the smile, he scented a jest.

'Not that I know of,' he answered, thawing. 'This is not the kind of place they would bury princes in.'

'Not even foreign princes?' asked Mr Barrows. 'It was a foreign prince that I was thinking of.'

Suddenly a new interest dawned in the man's eyes. He looked his questioner over very carefully.

'No, sir,' he said; 'I don't know of any foreign princes buried here. Anyhow, I never heard of one. But it's a queer thing you should come and ask just now.'

'Why?' asked Mr Barrows.

'Why? Why, because there was a foreign gentleman buried here a couple of months back, and his wife and daughter have been comin' here ever since. And if I'm any judge at all, they're the real nobility, even if it is a foreign kind. But that's not the queerest part of it, either.'

The man was superficially surly; but, like

many others who are surly on the surface, he could be loquacious. He was also in a good mood, as a result of the tip he had so recently earned.

'Indeed!' said Mr Barrows, with a show of surprise. 'Then what else is there?'

'It's just this, sir. You noticed the gentleman who was here just now? Well, if I'm not mistaken, he's a foreigner too; and, unless I'm very much out, he's as good class as the other lot. He knows those others, and he wanted me to find out where they lived.'

Mr Barrows was already aware of that. He turned the current by a question:

'Indeed! So he is a foreigner too? Do you know his name?'

'No, sir, I don't. But the other party's name—why, it's to be seen plain enough over the grave. And that's just over there.'

He pointed towards a piece of ground where Mr Barrows could see a number of newly raised mounds. 'If you walk over you'll see it,' he said. 'It's on a little wooden cross, painted in white letters.'

Mr Barrows stood and considered. He had only recently decided that this affair was none of his business; but the additional circumstances had naturally aroused his curiosity.

'Thank you,' he said. 'I'll go over. Good-morning.'

'Good-mornin', sir.'

Mr Barrows moved away in the direction which had been indicated. Perhaps he had a wish to discover the name of the young woman whose face had pleased him so well. And all this was the outcome of his trifling disappointment in the early morning.

In a few minutes he reached the spot which the communicative attendant had pointed out to him; and there he saw one mound which had a small wooden cross at its head, either as a merely temporary erection or as the modest effort of poverty. He approached it from the back, and was obliged to walk round to the other side before he could see the inscription.

As the man had said, it was plainly lettered in white paint. It took him but an instant to read it.

It must have been at that instant that Our Lady of Destiny tilted the cup and threw the numbers upon the board. Perhaps she smiled at the result as something after her own heart. 'Let them stand thus,' she said, 'and let them play out their parts.'

## IN A TROPICAL HARBOUR.

It is my great good fortune to live on the shore of one of the finest tropical harbours in the world, that of Kingston, Jamaica, situated nearly five thousand miles away from grimy London, among 'an archipelago of sunlit isles.' This harbour is of vast extent, being at least twelve miles long by three miles wide. A long strip of sand and coral-reef, crowned with a fringe of coco-nut palms, forms a breakwater along its southern side. Cross over this strip, and you are at the ocean's edge, strewn here and there with the wreckage of goodly ships torn asunder by the fury of some tropical cyclone. The placid, treacherous Caribbean stretches out, intensely blue, like a floor of glass, as far as the eye can reach, with long-backed breakers falling in cata-racts of foam on the coral sands, and seeming for all the world like the keyboard of some mighty organ. Presently, perhaps, the south-east trade-wind springs up and furrows the glassy ocean into little white-capped waves, which happily relieve the monotony of blue sky and blue sea. The palms, rustling in the breeze, make a murmuring music sweeter than anything else on earth, except the same melody among the graceful *flus* pines on the seaboard of eastern tropical islands like Mauritius and Réunion.

The northern shore is guarded by a chain of giant peaks called the Blue Mountains. Well do these mountains deserve the name, for all day long, under the white-hot glare of the tropical sun, they reflect the gorgeous azure of sea and sky. A plain, covered with the luxuriant vegetation of cane-fields and banana-groves, stretches from the foothills of these mountains to the harbour's edge. One tastes the full joy of life in such a land. However, man does not live by scenery alone. Robert Louis Stevenson talked good sense when he said the average reader cannot stand more than two minutes of description at a dose.

My harbour is a paradise for the sportsman as well as for the lover of the beautiful. Nowhere can you find a better place for yachting. Except in one or two of the hottest months of the year, a fairly stiff sea-breeze blows every day. Luckily I am the owner of a small sloop-rigged yacht: not an ambitious sort of craft, it is true, but excellently adapted for exploring every nook and cranny of the harbour. Those luckless wretches who have never tasted the delights of sailing in the tropics do not know what it is to live. To skim before the trade-wind with mainsail and spinnaker full, and a lather of foam round the bows, is more exhilarating than champagne; and if only we are leaving a rival yacht astern our cup of happiness runs over. The harbour is

alive with small craft of all sorts and conditions, from stately liners and sinister-looking warships to tiny turtle-schooners and the humble 'dug-outs' in which the negro fishermen perform surprising and daring feats of seamanship. As the nose of the yacht cleaves through the waves, the fish, with which the harbour teems, become scared, and sometimes jump out of the water in shoals, turning with a silvery gleam in the sunlight and flopping back again, perhaps into the maw of a hungry barracoota. That brigand of the ocean is a long, thin fish, armed with rows of cruel, sharp teeth, and more savage than a pike. Frequently it grows to the length of a man, and it is dreaded by the bather in tropical waters far more than a shark or a crocodile. The fear seems superfluous, however, for a barracoota will not attack a man if it can possibly get away from him; but if one were driven into a corner, it might turn at bay and fight viciously. I have known cases, too, where fishermen have had to fight hard to protect themselves from a barracoota landed in their boat; but it could hardly dismember a man, like a shark or alligator, though it might bite off a finger or nip a piece of flesh out of a vital part.

It is commonly supposed that swimming in tropical waters is dangerous; but the supposition is quite erroneous. There are plenty of sharks, barracootas, crocodiles, and other marine monsters of evil reputation in the harbour; but they are far more afraid of the swimmer than the swimmer is of them. Hundreds of people, principally negro boys, bathe in the harbour every day, and yet there is not a single fatality on record. Most of the inhabitants of Kingston will tell you it is absolutely suicidal to go into the water. They have never been in it themselves; but they are full of horrific shark-legends. When you ask them to mention an authentic case of a man being bitten, they cannot do so; the memory of the oldest inhabitant does not include one such catastrophe. I can claim to be no mean authority on the subject, since it has been my habit for over a year to go for a swim once or twice a day. Quite recently a friend and I were in the harbour for three hours and a half, swimming five miles at a stretch—a fairly easy task in these warm and placid waters. During most of the time we were a long way from the shore, but no man-eating monster troubled us. Once, it is true, we had a little scare. We were swimming along quietly about a quarter of a mile from land, through emerald water so beautifully transparent that we could plainly see multitudes of rainbow-tinted fish flitting to and fro many yards away and many fathoms below the surface. Presently a large shoal of mullet, gorgeously striped with blue, brown, and silver, darted in

front of us and vanished like a streak of lightning, leaving in their place a barracoota fully six feet in length. He was not scared by our approach, but stuck to his guns and eyed us with a threatening curiosity. Six feet of horror lying motionless athwart our path, a few feet below the surface, was too much for our nerves, and with a shout of 'Shore!' and a wild splashing that ought to have scared anything with fins, we left the barracoota master of the field. Probably it had been hunting for a breakfast off the mullet, and was as surprised as we were when we took their place, as we must have seemed strange creatures. Most likely the barracoota darted away just as we did, and in far greater terror. In calmer moments, after the shock of the encounter is over, we think of these things; but at the time they do not occur to us.

When the late Mr James Anthony Froude honoured this island with a visit, he wrote: 'Of the sharks with which the harbour used to swarm we saw none. "Port Royal Jack" and his kindred are said to have disappeared, driven or frightened out by the screws of the steamers; but it is not a place which I should choose for a swim. Nor did the nigger boys seem as anxious as I had seen them in other spots to dive for sixpences under the ship's side.' Mr Froude was misinformed. There are plenty of sharks still. I have seen dozens of them, and once assisted in the capture of an enormous brute nearly twenty feet long, which it took the whole of a steamer's crew to lug on deck. I remember, on another occasion, trying to sleep one night in a tiny cockle-shell of a rowing-boat tied up to a buoy at the harbour-mouth. The heavy ocean swell rocked the boat so violently that it was impossible to do more than doze fitfully. All night long three big sharks swam round and round the tiny craft in narrow circles, splashing the water into a livid, phosphorescent glow decidedly uncanny under the circumstances. The steamers Mr Froude referred to only use a small portion of the harbour, yet in that portion sharks are most numerous. They browse around for the refuse from the cook's galley. As for 'Port Royal Tom,' who was supposed to eat three or four sailors every morning for breakfast in the good old days, he is merely a marine 'Mrs Harris.' 'There ain't no sich a person,' and never was. Sailors are all arrant sharkophobists—if I may be allowed to coin a necessary word. Jack Shark is their legendary enemy, and they blacken his reputation far more than he deserves. They see him from the deck of their ship, and think that if they fall overboard they will be gobbled up in a brace of shakes. As a matter of fact, the shark, scared to death, would dart away like lightning, and not stop swimming until he had covered two or three miles. There is a similar legend about the beautiful harbour of Nassau, in the Bahamas, which is said to be

guarded by a shark over fifteen feet in length, known as 'The Harbour-Master.' Sir William Robinson, G.C.M.G., formerly Governor of the Bahamas, remarked in a recent lecture before the Royal Colonial Institute: 'I do not think that any one who has been upset on the bar has ever reached the shore alive, and it cannot be distant more than two hundred yards.' Now, as a matter of fact, I know a negro who used to bathe at that very spot every day. 'The Harbour-Master' never troubled him, and he says it is a myth.

While on the subject of sharks, I may mention a curious capture in Kingston harbour some little time ago. Perhaps the reader has heard, and disbelieved, the story that baby-sharks take refuge down their mother's throat at the approach of danger. It is perfectly true. An immense shark was caught lately by the marines of His Majesty's Guardship *Urgent* at Port Royal. It was so big that the most stalwart seaman aboard could have passed through its mouth without touching the teeth. This may sound like an old salt's yarn, but it is the absolute truth. I do not want to stagger the reader's credulity, yet it is also a fact that no less than forty-nine young ones, all alive and kicking, were found in the mother's stomach.

This is an age of whitewashing. All the bad characters in history are being canonised by degrees, and the demons of our ancestors are recognised as merely piebald. It is time somebody stood up for the shark. He is really not the man-eating ruffian he is painted, but a quiet, harmless, timorous creature only too glad to live and let live. He is far more sinned against than sinning, for the average sailor will torture him atrociously whenever he gets the chance. A friend tells me that in Savanna-la-Mer harbour, in Jamaica, he once saw a small pig in the water surrounded by half-a-dozen sharks. They kept swimming up to him only to dart away in terror when he kicked his little legs about. He swam to shore without being bitten. Take another case within my knowledge. The steamship *Speke Hall* foundered in May 1885 in the Arabian Sea. Only the second officer was saved. He drifted about for three days on a plank, with many sharks around him, until he was rescued by a passing steamer. Personally, therefore, I would never give up the supreme delights of swimming in the tropics for fear of sharks.

There is plenty to see, when we go yachting, besides sharks. Sometimes a shoal of clumsy, pig-eyed dolphins flit swiftly by, bouncing about like indiarubber balls. Huge pelicans, powerful on the wing even in the stiffest gale, soar a few score feet above the waves, keeping their weather-eye lifting until some luckless fish come near the surface, and then darting down and transfixing them with their huge beaks. The pelican never misses its aim; it notices a fish, perhaps, from a

height of two hundred feet, and comes down as swiftly and surely as an arrow to the mark. Equally good fishermen are the graceful frigate-birds, whose flight is the true poetry of motion; and the more commonplace gulls, gluttonous little wretches, flock in myriads whenever there is a chance of a good feed.

To the Englishman who loves his country, the harbour is dear by reason of its glorious association with bygone days when the 'bow of Ulysses' was indeed strung taut. Valiant old Benbow, 'true pattern of English courage,' was brought here to die of his wounds after the disastrous sea-fight off Santa Martha. On a brighter day the gallant Rodney sailed in triumph up the harbour with half of France's greatest fleet, captured at 'England's Salamis.' Nelson, when a captain, commanded one of the forts defending Port Royal, dreaming his dreams and waiting for his chance. To this day three nameless graves are shown as those of his 'three wives.' The evidence is not good enough to hang a dog upon, and we may hope he was no worse than the average sailor before he met Lady Hamilton.

The old forts which preserved the harbour in those stormy days are crumbling to ruins, their walls dismantled and moss-grown, their rusty guns lying amidst tangled masses of tropical vegetation. Fort Augusta is the chief of these ancient defences, and is still used as a powder-magazine. No place on earth has a more ghastly

record. It is a military Golgotha. Now that outcries are being made against War Office methods, it is interesting to recall the most criminal piece of mismanagement in the annals of the British army. The fort is built upon a malarial mangrove-swamp. There were many healthy sites which might have been used; but the solitary, fatal spot was chosen out of sheer perversity. Regiment after regiment went there—to die. Tradition says that of one battalion only two men survived. There is no place round the fort where horses can trot a hundred yards; but the sapient War Office of one of the Georges actually sent out a regiment of Hussars, who perished like the rest. Fort Augusta has slain more men than the bloodiest battle in history. Thank God! it is now garrisoned only by a small guard of negro soldiers, who are constantly relieved. Modern batteries in healthy locations replace the ruined forts.

Rich in romance, distinguished for its beauty even amidst West Indian scenery, and prodigal of pleasure to the sportsman, the harbour is my constant delight. It is pleasant to sail along with a fair wind and a cloudless sky; pleasanter still to drift beneath the rich glory of the tropic moon with a banjo aboard; but pleasantest of all to beat home in the teeth of a tearing squall, with the spray flying to the burgee and the boat half-full of water. That brings out the grit in a man.

## CLIPPED WINGS.

[Copyright in the United States of America by Mary Stuart Boyd.]

### CHAPTER XXV.—BITTER-SWEET.

**T**HE remaining weeks of her stay in England proved a busy time for Lucie, who had returned to Queen's Gate, where Honoria was already actively engaged in preparations for her wedding, which had been fixed to take place early in October.

It was a most agreeable surprise to Lucie to find the attitude of aggrieved toleration wherewith Honoria had been accustomed to regard her changed to one of amiable cordiality. For Lucie's share in the unexpected restoration of her uncle's property, and Honoria's assurance that she alone possessed Mr Ruddenheim's affections, combined with the knowledge that very shortly the troublesome Colonial cousin would set forth on the return journey to her far-away home, had all had a felicitous effect in mollifying Honoria.

For the first time in her existence Honoria was too busy to be discontented; consequently Honoria was happy.

Mr Ruddenheim had deferred to her unquestionably good taste respecting the complete

redecorating of the Bayswater mansion, which was in progress against the advent of its new mistress. So from morning till night Miss Seton-Lorimer had not an idle moment. The hours which were not passed in choosing tints and in deciding upon the selection and disposition of furniture were spent in driving from one place of business to another. For the trousseau of a maiden with Honoria's aspirations was a matter demanding and receiving much personal attention from the heads of even exclusive establishments.

Every bride is a heroine to her sex; and Honoria gloried in the position. Even her appearance improved under the influence of wholesome excitement. Her skin became clearer; her expression lost its stereotyped suavity, and became almost natural. She was so nice to her *fiancé* that Lucie actually began to imagine that it was really the man Honoria was in love with, not the married state.

To Mr Lorimer's regret, both Lucie and Lieutenant Tresscott had resolutely refused to accept the thousand pounds, although Lucie gratified her

uncle by allowing him to refund the four hundred pounds she had lost—money that Lucie at once remitted to her father in repayment of the second sum for that amount which, immediately on hearing of her loss, he had cabled to her. With the remainder of her father's allowance she revelled among the tempting wares of the shops, whose goods impressed her Colonial-bred mind as being so amazingly cheap.

It was a vast gratification to Lucie to anticipate returning to her family laden with tangible signs of her affection and thought for them. She purchased handsome materials and good laces for her mother, dainty frocks and hats and lingerie for Kitty. There were gifts for her father also, though to think of articles that would suit his taste was a harder task than buying any amount of fal-lals and frippery for her mother and sister; for in the little issues of life Mr Peter Lorimer's nature inclined to the captious, and he had a way of receiving affection's tributes in a spirit that was more critical than grateful.

'Why, you might as well buy a trousseau when you're at it,' Honoria remarked, seeing the lavish way Lucie bought pretty frocks suitable for the Southern summer to which she was going. But though Lucie laughed off the matter, she had flushed hotly at Honoria's jest, for in her secret heart she knew she was preparing for her marriage with David Straight.

As time progressed, the vow that, as a matter of conscience, she had taken, never dreaming of the untoward influence it would exercise on her future, had begun to press more and more heavily upon her heart. Ofttimes in the hurry-scurry of her last weeks in town she forgot it for a little; then the memory of her rash pledge came back with a rush, blighting her pleasure.

The Admiralty, graciously condescending to accede to Tresscott's request, had reappointed him to the Australian station; and his passage was already secured by a quick steamer direct to Auckland, that was due to sail on the 14th of September. Lucie's berth in the same ship had been taken early; and Tresscott, now happy in the prospect of a long voyage in her company, was with his father spending the end of his leave at a shooting-box in Scotland. Letters in his scrawling handwriting, and offerings of game packed in fragrant heather—game that the Queen's Gate servants objected to because it entailed labour in plucking and dressing—arrived frequently to remind Lucie that, although Tresscott's body might be in the Highlands, his heart was in London.

A dress-length of Macleod tartan—the clan to which a Tresscott grandmother had belonged—had come to Lucie with the Commander's love; and, surveying herself in the extremely smart travelling-costume whereinto Fredoline had graciously consented to fashion it, Lucie wept secret

tears to think that, the voyage once ended, her future travelling must be done with David Straight.

She bitterly regretted not having confided in Tommy her intention of marrying Straight; but unless he led up to the subject, it was a difficult one for a maiden to broach.

'Perhaps David may have changed. He may not any longer wish me.' She tried hard to cherish the idea that therein might lie an easy way out of her difficulties, though common-sense assured her that it was a forlorn hope. Straight had gained a seat in the New Zealand Parliament now, and life as the wife of a member of the House of Representatives might have been tolerable if only— Lucie sighed to think of the difference Tresscott's chancing to get leave had wrought in her life-scheme.

September came, and the day of Lucie's departure drew near. Honoria had professed herself woefully disappointed that her cousin could not delay another fortnight to act as one of her bridesmaids; but the chance of a direct steamer to Auckland had presented itself, and was not to be missed.

Mr Ruddenheim, touched by Lucie's reticence regarding his spasmodic attraction toward herself, had insisted on presenting her with a replica of the gifts intended for the bridesmaids, as a mark of his esteem. It was a bangle bearing a design of two hearts—the one with the monogram H.S.L., the other with P.R.—pierced by an arrow and surmounted by a true-lovers'-knot in diamonds; but if Lucie's keen sense of the ridiculous lent a tinge of humour to the situation, she concealed it, and thanked the donor with becoming grace.

The night before Lucie sailed, Honoria, for once setting aside her own inclinations, gave a little dinner-party to those friends with whom Lucie's visit had been more immediately connected.

The Commander was there, fresh from his shooting exploits, regretful about the near parting with his son, but full of an as yet embryonic scheme for spending the succeeding winter in the South Seas. Aunt Sarah, looking neater and nicer than ever, wore a soft gray satin, trimmed with some old lace whose value inspired respect even in Honoria. Mr Muter, who arrived inconveniently early, brought Lucie as a parting gift a copy of his manual on zoophytes. She was pleased to see that he wore a new well-fitting evening-suit, and that white silk socks, of which he seemed inordinately proud, adorned his ankles.

Mr and Mrs Denman were expected; but Mrs Denman, who arrived twenty-five minutes late, apologised for her husband's absence by saying that at the last moment he had been prevented from coming.

'Found his dress-clothes ruined by moths, and

blamed *me* for it. Me! as if I had anything to do with the matter,' she told Lucie confidentially. 'Now, isn't that Man all over?'

At dessert Mr Seton-Lorimer—who dearly loved any occasion that demanded an oration—rising from his chair, formally presented Lucie with a costly pearl necklace clasped with a diamond rose, at the same time proposing the future prosperity of his niece in terms of such warm affection that only the sympathetic pressure of Tommy's hand, which had reassuringly grasped hers under cover of the tablecloth, prevented Lucie from breaking down altogether.

Tresscott's share in the recovery of his stolen property Mr Seton-Lorimer acknowledged by the bestowal of as handsome a set of nautical instruments as money could buy, a purchase in whose selection he had wisely secured the secret connivance of the Commander.

'Nice little girl,' remarked Mr Ruddenheim when the ladies had adjourned to the drawing-room. 'Pity she has to go back to that God-forsaken place. I suppose she'll be marrying shortly.'

'Will she?' Tommy said interrogatively, wondering whether Mr Ruddenheim spoke from knowledge or merely indulged in prophecy.

'Yes. Going to marry some fellow she met out there. Why, didn't you know? She told me so herself,' he added, perceiving that his information held a surprise, and not a pleasant one, for Tresscott. 'But, I say, she told me in confidence. So perhaps you'd better not mention it. I can depend on you?'

'Yes. You can depend on me,' Tommy answered, never doubting that it was Challoner to whom Lucie had referred, and feeling sorely wounded at the lack of confidence shown in him both by his friend and by the girl he loved.

Thus it came about that during the early days of the voyage Tresscott's manner was oddly constrained. But Lucie was not at ease either. Their intercourse had lost its spontaneity and its brightness. The memory of Ruddenheim's revelation haunted Tommy, as the recollection of her resolve shadowed Lucie, and both were wretched.

Many a time Tresscott would have put his future to the test, but that an indefinable something in Lucie's manner taught him that any attempt to put their relations on a more tender footing could only end in a rebuff; and Lucie, uncertain of her power to resist should Tommy plead for himself, carefully avoided giving him an opportunity of speaking. She busied herself with the children of ailing mothers, played chess with the invalids, and tried hard to school her faltering soul to patience.

Meanwhile the days slipped by. Through calm and storm the *Ruatapu* had steadily ploughed her way southwards, and the voyage neared its

end. It was their last night at sea: the morrow would find them at Auckland. A day later Tresscott would journey south to join his new ship, which was stationed at Wellington. The night was wet and stormy. Lucie—trying hard to persuade herself that she was glad she had succeeded in adhering to her determination to give Tommy no chance of acquainting her with the state of his feelings—was in the saloon joining half-heartedly in a hilarious game of cards with the younger members of the company.

There is a note in a man's voice that no true woman ever refuses to obey. So when Tresscott, suddenly appearing by her side, said in a tone of quiet authority, 'Lucie, come on deck at once; I wish you,' Lucie, who would have resisted any amount of entreaty, rose without a protest, and, handing her cards to a substitute, followed her master.

'But it is so wet,' she said, drawing back at sight of the rain-lashed promenade. Tommy's sole answer was to dash into the deserted deck writing-room and requisition a tartan-lined wrap that lay on a couch.

'There!' he said, drawing the cloak round her shoulders, and its hood over her head. 'Now come.'

A splash of spray caught them as he guided her across the intervening strip of wet planks to the shelter of the roofed seat at the end of the deck-house.

For a space they were silent. In the music-room beneath some one was singing 'Soldiers of the Queen.' All around was the rush of wind and rain, the surge of the great waters of the Pacific.

Lucie waited, impatient yet reluctant, to hear Tresscott's first words.

'Lucie, I wish you had put more confidence in me.'

'But there was nothing I could tell,' she answered, weakly taking refuge in subterfuge.

Nothing to tell! Tresscott's heart leaped at the words. 'Then it wasn't true?' he cried, turning quickly. 'Why, Lucie, I must be an ass—I thought you had promised to marry Challoner.'

'Challoner? Oh, no, no!'

'Funny I should have believed that.' Immediately Tommy's face was aglow with delight at this unexpected demolition of his bugbear. 'But Vic did ask you, didn't he? Was it at the island?'

'No. He wrote a few days later.'

'And you told him, dear—?' The tender inflection in Tommy's voice made her heart throb.

'And I told him I could never marry a man I did not respect. But,' she continued quickly, fearful lest Tommy might imagine her free, 'you ought to know there's somebody else'—

'Somebody you love?'

'Oh no! Somebody I ought to marry.'

'Who is he?' Tommy asked bluntly.

'You've met him: David Straight.'

'But you used to dislike Straight.'

'Oh, yes, yes! I did—I do. But—oh, Tommy!—I was so foolish, and I didn't really know you then.' Lucie never quite knew how it came that the confession of her vow was sobbed out on Tommy's damp shoulder.

Long afterwards anything moist touching Lucie's cheek brought vividly back the surroundings and emotions of that night: her feeling of mingled rapture and regret, the motion of the ship, the sound of wailing waters, the keen breath of the ozone, the sense of aloofness from all the world, as the frail ship buffeted her way through the angry waves.

All around them lay darkness and silence. The one light visible from the shelter burned dimly behind its rain-lashed encasement. Sometimes a sailor in oilskins crossed the disc of light and vanished. Only a distant strain of music at times reminded them that they were not alone.

Hearing Lucie's disclosure, Tresscott tried in vain to argue her out of remaining constant to her resolve; but she felt it a point of conscience, a religious duty. Her wings had grown strong now, strong enough to bear her forward even against adverse winds; and his pleading failed to alter her decision, though, to Tresscott's joy, she made no secret that her love was his.

'Of course, David may not wish to marry me now. I've been away nearly nine months. Oh

Tommy! don't you think he is sure to have seen somebody he likes better?'

But Tommy took counsel with his own heart, and it gave him the unsatisfactory assurance that, having loved Lucie, Straight could not possibly descend to another.

'Let us say our good-byes here, if they must be good-byes,' Tommy pleaded. So, oblivious of the lapse of time, they lingered on in the seclusion of the shelter.

Eight bells in little shivering chimes smote the moist air.

'Lights burning bright, and all's well,' sang the watch.

Through the surge of the sea the cry arose in wailing crescendo. To Lucie it sounded like a summons from another world—a call to return from those forbidden fields of elysium whereto the knowledge of mutual love had transported them, back to the everyday world, to that matter-of-fact sphere where duty rules as with a rod of iron.

The precious feeling of isolation had fled. They were no longer alone. The alert figure of the officer hastening to take his watch on the bridge passed the end of the shelter and ascended the step-ladder. A gang of men muffled in oilskins trooped past, grumbling as they went.

'Twelve o'clock!' Lucie exclaimed in alarm.

'Surely it can't possibly be midnight? Every one must be in bed long ago.'

'At any rate these stolen hours are our own, Lucie,' Tresscott replied, tenderly replacing the hood that had fallen back from her head. 'Your future may belong to some one else; but even he cannot rob us of to-night.'

## CHINESE CUSTOMS.

By Rev. E. J. HARDY, M.A., Chaplain to the Forces, Hong-Kong, Author of *How to be Happy though Married*, Mr Thomas Atkins, &c.

CHINA is the problem of the twentieth century. Whatever that great country becomes and whatever the European Powers do with it will influence more than anything else the destiny of the world. Five hundred millions of most intelligent, patient people, who can live upon nothing, and who have no objection to die: what can they not do? The worst of it is that no one understands China or what she is going to do next. It is, like a woman, a conundrum: we shall never guess her, but we shall never, never give her up. To one coming for the first time to China everything seems to be upside-down; but it is not really so. The Chinese can give as good reasons for their manners and customs as can Britishers for theirs; and things that seem to us most absurd in China when first we see them are afterwards discovered

to be most reasonable. John Chinaman, with his placid, patient smile, and eyes that see apparently round corners, is by no means so great a fool as he looks.

As, then, China is so out of the common, and a country about which we shall hear much in the future, perhaps it may interest readers if I note down a few of the first impressions which I had on coming out here to Hong-Kong as Chaplain to the Forces. When I hear Mr Thomas Atkins talking contemptuously of 'them Chinese,' I tell him that 'them Chinese' were a highly civilised, deeply philosophical people when we were painted savages, and that they have probably forgotten more than we ever knew.

To us China is a veritable topsy-turvydom; but of course England seems the same to the Chinese. Their compass points to the south, ours

to the north. The bow of their junks is like the stern of our vessels, and the junks seem to sail backwards. In Western lands a pillow is a bag of feathers to support the head; in China a pillow is a support for the neck—either a small stool of bamboo, a block of wood, or more commonly a brick. What corresponds to his Christian name comes after a Chinaman's surname; with us it is the other way. The Chinese put on hats when saluting; we take them off. They laugh on receiving bad news, to deceive evil spirits. Long nails on the hands in China are a sign of respectability; in England, of untidiness. The place of honour at a Chinese feast is at the left hand of the host. A Chinaman rides with his heels instead of his toes in the stirrups. He keeps out of step when walking with others. The Chinese read their books backward, and write in an opposite way to what we do. With them the mourning colour is white; with us it is black. At a fashionable dinner, with them soup is the last course; with us it is the first. Chinese women wear trousers, and the men frequently gowns. A Chinaman pays a physician to keep himself and his family well; we pay when we turn ill. When he meets acquaintances he shakes his own hand and not theirs as we do.

The Chinese seem to have no nerves, and never fuss like Anglo-Saxons. Exercise for its own sake seems to them madness. Even the children play very quietly, and the babies remain perfectly tranquil tied on the backs of mothers who are at work. A Cantonese asked a servant about a foreign lady whom he had seen playing tennis: 'How much is she paid for rushing about like that?' On being told 'Nothing,' he would not believe it.

The conservatism of the Chinese was first observed by me on the steamer in which I crossed the Pacific. The 'boy' who attended me at dinner always wanted to bring exactly the same food as that which I ordered the first day, and seemed to think I should have no change. A cook used to break and throw away an egg before making a certain pudding because the first egg happened to be a bad one when he was shown how to make that pudding.

That riches are a burden is felt when travelling in China. Even the Mexican dollar is heavy, and when you get for one of these from eight hundred to a thousand brass pieces of money called *cash*, with holes in the centre and tied on strings, it may be imagined what an amount of 'filthy lucre' you must bring with you for even a short tour. And the lucre is filthy; it cannot be handled without contamination. The losses on silver coins are great; those belonging to one part of the country will not be accepted at all in another, or only at a heavy discount. The inexperienced traveller loses both when he buys them and when he sells them. As

for the strings of *cash*, their value changes every day and in every place.

A man will sell his house and land and all that he has in order to provide a suitable funeral for a parent. Filial piety requires that he should mourn three years, and during this time he frequently spends whole nights at the grave. According to Chinese teaching, 'selfish attachment to wife and children' may be unfilial conduct, and a typical instance of the contrary is given. A man with one child said to his wife, 'We are so poor that we cannot support mother; why not bury the child? We may have another; but if mother should die, we cannot obtain her again.' His wife dared not oppose him, and accordingly a hole was dug, when a vase full of money, and bearing an inscription stating that Heaven bestowed this reward on a filial son, was found.

The Chinese are a most economical people. This struck me when I was staying in the north of the country. There the people will eat horse, mule, donkey, or any animal, and they will eat all of the animal, and even when it has died of disease. The smallest children are sent out to gather fuel. You will see boys up in trees beating off leaves as if they were fruit, and not a straw is allowed to lie idle on the ground. Scotch thrift is nothing compared to Chinese economy. In ordinary houses a dim light which costs almost nothing will be placed in a hole in a dividing wall so as to light two apartments. An old woman who was hobbling along painfully was asked where she was going to. She was going to the home of a relative, so as to die in a place near to the family graveyard, and thus avoid the expense of coffin-bearers for so long a distance.

A Chinaman is never in a hurry; but the amount of cheerful labour which he does is astonishing. He will take his time to it, however, and he is as inaccurate about time as he is about everything else. It is necessary when travelling to ascertain, when the distance is given in miles (*li*), whether the miles are 'large' or not! The method of reckoning is frequently based, not on distance, but on the difficulty of getting over the ground. Ask a Chinaman how many families there are in his native village, and he will answer, 'A few hundred,' 'Several hundred,' or 'Not a few.' As for a Chinese census, all that can be said of it is what was said of the Supreme Court of the United States: that it has 'the last guess at the case.'

Chinese who make a 'practice of virtue' often keep an account in which they charge themselves with every bad act they can remember, and credit themselves with every good one. The balance between the two shows their standing at any particular time in the account-books of the Chinese Rhadamanthus. Among the acts by which merit may be accumulated is the purchase

of live birds and fish that they may be restored to their native elements. It is easier to stand on the brink of a river, watch a fisherman lower his net, pay for his catch, and throw it back into the river than to look into the cases of needy men and women and give them judicious help. Besides, the fish are done with, while this is not always the case with human recipients of charity. A medical missionary was asked by a native gentleman to cure a blind beggar. It was a case of cataract, and an operation restored sight. Then the missionary was waited upon by the same gentleman, and told that, as he had destroyed the only means by which the blind man could get a living—that is, by begging—it was the duty of the missionary to make it up to him by taking him into his employment as a gatekeeper!

On their wedding-day brides, who are nearly always very young, are 'chaffed' unmercifully. When they come to their new home they are subjected to the same sort of criticism expressed aloud to their face as a newly bought horse. In some places it is allowable for any one to turn back the curtains of her sedan-chair and stare at a bride, or even to throw handfuls of hayseed or chaff upon her carefully oiled hair.

The theory of responsibility as understood in China seems to us Westerners to be unjust, but from another point of view to have something to recommend it. In the year 1873 'a Chinaman was accused of having broken open the grave of a relative of the Imperial family in order to rob the coffin of certain gold, silver, and jade ornaments which had been buried in it. The entire family of the criminal—consisting of four generations, from a man more than ninety years of age to a female infant only a few months old—was exterminated.' The fact, however, that No. 1, or the headman, in any position is responsible for every act of his subordinates is a great help to European employers. There is a tradition of a head-compradore in a bank, who was called to account because the 'boy' had allowed a mosquito to insinuate itself within the mosquito-net of the bank manager.

Instead of saying 'How do you do?' when one Chinese acquaintance meets another he asks, 'Have you eaten your rice?' If the inter-

rogated person has done this he answers, 'Yes. I beg your pardon.' He begs pardon for having anticipated his acquaintance at breakfast or dinner.

A South Sea Islander said of his race, 'As soon as we open our mouth a lie is born;' and the Chinese acknowledge without shame the same of themselves. It may be true amongst Western nations that 'the affairs of life hinge upon confidence;' but this is not true in the East, and least of all in China. Here in China they hinge upon suspicion. There are few Chinese who attach any importance to keeping an engagement. Most of them are like the man who, being accused of having broken his promise, replied that it was of no consequence, as he could make another just as good. The Chinese say that one should never refuse a request in an abrupt manner; on the contrary, he should grant it in form, although with no intention to do so in substance. 'Put him off till to-morrow, and then until another to-morrow. Thus you comfort his heart.'

It is considered good manners in China to speak contemptuously of whatever belongs to the speaker and in terms of praise of whatever relates to the person addressed. The polite Chinese will refer to his wife as his 'dull thorn,' or in some similar elegant figure of speech, while the rustic alludes to the companion of his joys and sorrows as his 'stinking woman.' They will speak of your honourable wife, your honourable house, honourable horse, dog, and so on.

No civilised nation is so superstitious and credulous as the Chinese. On the two days of the month set apart for that purpose, the fox, the weasel, the hedgehog, the snake, and the rat are worshipped. These are styled in printed placards 'Their Excellencies.' Of China it might be said, as Gibbon remarked of Rome, that to the common people all religions are equally true, to the philosopher all are equally false, and to the magistrate all are equally useful. Of the Emperor of China, as of the Roman Emperor, it might be affirmed that he is 'at once a high-priest, an atheist, and a god!' This is what has come of Confucianism, mixed with polytheism and pantheism.

## OPAL-FIELDS OF NEW SOUTH WALES.

UPERSTITIOUS associations and evil reputation have hitherto prevented a full appreciation of the iridescent splendour of the opal; but now the exquisite vari-coloured stone, flashing with living fire, ranks

as the jewel representing the various emotions of the human heart.

The probable opal district extends from latitude twenty-two degrees to thirty-two degrees south, and longitude one hundred and forty-one degrees to one hundred and forty-six degrees east; but the best-known parts are situated across the far-famed Darling River in New South Wales, and between the Bulloo and Paroo Rivers in Queensland. Westward, out on Cooper's Creek,

the country is reported to be very wealthy; but, as only a few of the most adventurous prospectors have ever been there, the probabilities are that Nature will guard her treasures until some inventive genius discovers how to go and take them.

The town of White Cliffs is the centre of the New South Wales fields; and from it, I believe, nearly all the opal in the world is supplied. The town is a marvellous combination of galvanised iron erections and tents. The former comprise the drinking-saloons, the latter the abode of successful miners; but the greater part of the population has only the brilliant constellations of the Southern Hemisphere for a roof.

The opal is found in parallel seams at various recognised depths from the surface to forty feet; but the best is obtained on the fifteen feet-strata, and consequently that level is more exploited than any other. The land is pegged out and held much as gold claims are, forty feet square being allowed to each man. The first operation is to sink a hole about six feet deep; then, if no opal has been met with, a rough windlass is erected, and the work of excavation is continued until a seam of opal is cut through or 'bottom' (generally the forty-feet level) is reached. If no paying opal has been struck—opal of every colour and shade abounds everywhere, but that which has not the living fire of green or gold is considered valueless—the miner drives a tunnel along one of the levels in search of the elusive gem or sinks a shaft elsewhere. However, the miners are reluctant to leave the shafts of their own sinking; for, as they say, 'one stroke of the pick may lay bare a seam of "pin-fire" opal or break in two a rich band of "orange."' These two varieties of the gem are readily sold to buyers on the field at prices ranging from fifteen to thirty pounds per ounce.

When I first visited White Cliffs I had a vague idea that opal was a blue stone; but I knew nothing whatever of its nature or value, or the method of finding it. Having had previous experience on goldfields, I knew how to secure my claim, and eventually pegged out one adjoining that of a tall, lanky Australian, who said his name was 'Copt' Dan, because he could always find that substance but had never yet 'struck' a 'pot' or rich find of opal. I laboured manfully at my hole, as Dan called it, and by the close of the first day had excavated three feet. On the second day I sent my pick crashing through a substance which rang like glass, and instinctively I knew that I had 'struck it' in a double sense. Carefully I worked round the stuff, and at length uncovered a layer of deep-blue shining stones, which extended away into the side of my shaft. The sun was directly overhead, and the temperature about one hundred and forty degrees; but I did not feel the heat,

for here was fortune within my grasp. I picked out slab after slab of the glistening stones, and burrowed along horizontally. There seemed to be no end of the seam, and soon I had filled my bucket.

I noticed that the stones had passed through a series of changes in hue, a brilliant pink now taking the place of the former deep-blue colour. However, I did not notice that I was also undermining the ground, and only realised that all was not right when the walls fell in and almost buried me. Luckily Dan heard my shout, ran over, and at length dug me out.

'How did you git under thet?' he asked in surprise, as I wiped the earth from my eyes and ears.

Filled with gratitude because of my rescue, I replied, 'Dan, I believe there are tons of opal in there. I have filled my bucket, and was digging for more when the ground collapsed.'

'Ye filled a bucket?' he gasped.

'Yes.'

'An' is't there now?'

'I suppose so.'

'Then let me at it,' cried Dan, jumping down into the hole. Plying his shovel vigorously, in an incredibly short time he threw the earth from the shaft and grasped the bucket. Then the air was filled with true Australian bush-poetry.

When he had exhausted himself I inquired the reason for his powerful language; but the look he gave me in reply instantly sent the temperature in my neighbourhood down to zero.

'My colonial!' he at length got out. 'A bucketful! Tons o' it! An'—an' I digged it up. My oath, if ye weren't sich a durned new chum I'd make ye eat it.'

'Why, Dan, what's wrong?' I inquired anxiously.

'Wrong!' he repeated scornfully. 'It's only potch, an' not worth a drink, the whole durned lot.'

'But'—

'Come along,' said he, 'an' I'll show ye tons in my shaft, an' ye can hev' it all fur the takin' away.'

To say that I was surprised would be like saying that a temperature of one hundred and forty degrees is warm: it is—exceptionally so. When I saw the glistening walls of Dan's shaft scintillating with colour right down to the forty-feet level on which he was working I felt anything but pleased.

I soon resumed my labours, and continued hard at work for several days. Occasionally I cut through seams of opal matrix carrying stones of beautiful red tints and sometimes of a peculiar blend of almost every colour. For all these Dan had but one contemptuous name, 'potch,' which is the miner's term for inferior opal;

and after hearing his verdict I would go on again sinking the shaft, my hopes sinking correspondingly.

One day Dan came over to my shaft in a fever of excitement; and, sliding down my windlass-rope, he soon stood beside me.

'Does yer know the nigger's claim?' he asked abruptly when he touched the bottom.

'Yes,' I answered. 'It's three claims above you and me. What about it?'

'Well,' said Dan, 'he's fairly struck it, an' a pot too'—

'Of potch?' I inquired. 'There is plenty of that here.'

'No, durn ye! no; but fiery an' green flashy stuff, worth twenty pun' an ounce; an' it's comin' down this way somewheres.'

'Well, good luck to the poor beggar,' I said. 'If it comes our way we'll have a chance of striking something better than potch or copi!'

'Yes; but don't ye see it'll maybe not come that way, an' then we wouldn't stan' a ghost o' a show unless ye did the trick.'

'What trick, Dan?'

'Why, can't ye git down Black George's shaft w' some o' them instruments o' yourn, an' find out where it goes; an' then me an' you would go mates, an' peg out the ground, an' go down after it like a 'guana after a snake.'

'Will he let us down his shaft?' I inquired.

'Ye jes' bet he will. Come on.'

Feeling complimented at Dan's evident faith in my abilities, I ascended with him; and, taking from my tent a small spirit-level and my tried and trusty compass, I followed him up the hill to where Black George was toiling at his windlass.

'Good-day, George,' cried Dan.

'Good-day,' answered George.

'We hears ye has struck it,' said Dan.

'Ye hears too much, den,' replied the dusky one. 'I'se only got some stones as good as colours when de blessed t'ing cuts out again.'

'Cuts out, does it?' roared Dan. 'Nigger, ye're lyin'. I seed ye stakin' off the day. Where does it go, anyway?'

'Ah, now, Dan,' said the nigger, with a chuckle, 'how does I know? It goes somewheres—by golly! it do; but jes' ye come down an' see my shaft.'

We at once accepted the invitation, and followed him down the rope; then, after lighting our candles, we crawled into his drive. Our progress was difficult, the drive being irregular and resembling in many respects the burrow of an animal. Dan struggled to find suitable words to express his opinion of George's unmethodical handiwork; but his attempts ceased suddenly, for the drive came to an end at a wall of flashing gems. They sparkled and shone in the candle-light—a mass of translucent stones, blazing with the vivid fire of diamonds, rubies, and

emeralds. I was speechless with astonishment, for it was the grandest display of gems in their natural state I had ever seen. The seam carrying them, however, suddenly dipped at an acute angle, and near the bottom of the wall disappeared entirely.

'Never mind, George,' said Dan as he viewed the apparently "cut-out" seam; 'ye've got enough opal on the surface thare to keep ye slingin' bad beer all yer life.—Can ye make anythin' outen it?' he continued, addressing me.

'Oh yes,' I replied, trying the level. 'It is evidently running south from here, and will probably outcrop farther down the hill.'

I knew that much from the fact that George had struck the lode at the thirty-feet level, while Dan farther down the hill, and directly in the line of reef, had already sunk forty feet and found no trace. The angle of the dip showed clearly that the opal was still far under the workings of our claims; but I knew that, obeying its natural laws, the lode would turn when it encountered original country, and run up again like the letter V at the same angle.

'It should be near the surface at our lowest boundary peg,' I continued, making a mental calculation.

'Yer don't say so!' cried Dan in surprise.

'Oh yes, I do,' I answered. 'I do not know much about opal as yet; but I have studied geology a little bit.'

'An' does "Gology" tell ye thet?'

'It does.'

'Then I'll shout for "Gology" whenever I sees him.'

'Better let us see if it is correct first,' I said; and, taking careful bearings, we ascended George's shaft, and, followed by the wondering nigger, proceeded down the hill.

'About here,' I said at length. 'The seam should not be far off here; but of course it will have turned to potch by this time.'

'Wait till we sees,' said Dan, smashing energetically at the ground with his pick. 'Lor! what was that?' he cried as a crashing sound followed his first stroke.

'Golly!' ejaculated George. 'Let me try, Dan;' and, throwing himself on the ground, he tore at it with his gouge, or small hand-pick.

Breathlessly we watched him as with deft hands he threw the earth aside, and in a few minutes there was laid bare a layer of opal that caused Dan to give vent to some tall words from sheer excitement. The opal was hidden by the white crust of matrix which surrounded it, and might have been mistaken for more of the hateful potch but for the piece that Dan's pick had shattered. The broken edges dispelled that idea, for quivering flashes of green and gold shot through its facets, and the stone actually seemed to be endowed with life.

We looked at each other. The find was just

inside my claim, and what it was worth could as yet only be guessed at.

'Men,' I said, 'the probabilities are that this formation extends farther over towards the west, so'— But my audience were gone. They had heard enough; and in ten minutes both Dan and George had pegged out new claims in the direct line of the seam, thus abandoning their old claims for the chances that might be in the new. They were right, however; and in half-an-hour the ground was pegged out for miles around.

The great curse on the opal-fields is the drinking proclivities of the men; and although flour and other necessities may sometimes be unprocurable in the dry seasons, liquor, such as it is, can always be had; and—to those who care to take it under the circumstances—it is to be had gratis. These strange circumstances are to be explained thus: when a miner strikes a 'pot' he at once sells all that he can readily uncover, and then rushes into the nearest saloon, flings the buyer's cheque on the bar, and 'shouts' or calls for drinks for all comers. The news quickly spreads, and soon every man knows that 'Scottie' has struck it, and that free drinks are dispensed at the 'Union-Jack' saloon.

On the opal-fields there are no labour disputes; every man works for himself. Of course it is desirable to have a comrade to assist at the windlass, and many strange partnerships are formed for that purpose.

The day's work begins about half-past eight, and is continued more or less industriously until half-past eleven. At that time the man at the windlass boils the billy, and then hauls up his perspiring mate from the candle-lit gloom of the workings to the light of day. After this meal work is resumed until four o'clock; but at that hour the opal-seeker must cease his daily toil, or he will be forcibly assisted to do so by his indignant neighbours. The next hour is devoted to fancy cooking, and at five o'clock the men dine on the various results.

Saturdays and Sundays are given over to sports, washing, and drinking. Sometimes these days are also taken advantage of to prospect new ground; but as no one has yet been able to tell from surface indications what is the formation underneath, the miner invariably tosses up a penny and determines from its fall where next he will try his luck.

It is curious how the various races of humanity on the fields make certain lines of trade peculiarly their own. The Chinese are well represented among the storekeepers. The camel-drivers are all Afghans; but the bullock-drivers are—well, one has only to listen for a moment to their poetical mode of expression to know that they are true sons of Britannia's Southern Empire. The saloon-owners are generally English or Scotch; the lucky man is usually an Irishman;

and the buyers are all either Germans or Jews. The latter retire from business after having gone a few trips from Sydney or Melbourne to White Cliffs; and, judging from that fact and their well-known characteristics, it is evident that they at least 'do' well.

I have travelled far and have staked my claim on every goldfield of any note; but White Cliffs is the only place that I know where a man of no experience may be reasonably confident of at least earning a good living. There are few men on the opal-fields who do not average five pounds per week, and the chance is—for the man who stays long enough—that he will one day make his fortune.

White Cliffs, although situated in New South Wales, is much more accessible from Adelaide than from Sydney, and is best reached by rail from the South Australian capital to the famous Great Barrier town of Broken Hill, thence by mail-coach one hundred and eighty miles to the opal-fields. From the other capitals, the route is by rail to Cobar, five hundred miles west from Sydney; from Cobar the coach crosses the desert to the Darling River at Wilcannia; and thence another coach runs three times weekly over the remaining seventy miles to the fields. The whole country is of opal formation, and only awaits the advent of the intrepid and systematic fortune-seeker to yield its treasure to his hand.

#### THE SKYLARK.

The skylark in the morning

Sings a song of hope and trust;

He asks not for God's bounty:

He knows that come it must.

And the listener's heart is turned to Heaven,

His faith raised from the dust.

He sings again at noontide

A song of love and joy,

An endless throbbing melody

With naught of earth's alloy;

And the listener's heart is purified

Of earthly thoughts that cloy.

But the skylark in the evening

Sings a song of peace and rest;

And of all these glorious harmonies

This surely is the best,

For the listener's heart is quieted

And turned from earthly quest.

Thus morning, noon, and evening

Sings the bright bird of light;

While listeners, pausing in their work,

Grow trustful of Heaven's might,

Till they too sing in sunshine,

And find peace in the night.

## SIXTH SERIES.

### THE LAST OF HER RACE.

By NORMAN MACLEAN.

I saw the nursery windows  
Wide open to the air;  
But the faces of the children,  
They were no longer there.

LONGFELLOW.

HE lived in a little town by the sea, far from the mountains she loved and the fair glen where in the days long gone her ancestors had marshalled their men and led them to forays and battles. In the winter the little town was sombre and quiet, and she liked it then because she could dream her dreams in peace; but in summer steamers flooded the place with noisy cheap-trippers that to her seemed visitors from an unknown world—a world of vulgar turmoil and ceaseless activity—and she hated the little town then. Nor was it easy for her to leave it, for she was very poor—this faded old lady, dressed in the garments of an earlier century, at the sight of whom the smart trippers stared and laughed. She was proud, too, as she was poor, for the blood of many chiefs and of a far-off race of island kings ran in her veins, and of them all she was now the last.

Her house, in a sheltered loop of the bay, had a few straggling trees about it. She loved these trees, for they reminded her of the wooded slopes of her childhood's home, and of the pathway down which her father would come in the evening, with his gillies behind him leading the hairy ponies that carried the stags. She can see him yet as he was then—though he is dead these threescore years and more—with his noble bearing, his towering height, his loose Highland dress that showed his sinewy limbs, and in his bonnet the eagle-feather which only the chief wore. She can still feel the pride which she felt when, perched high on his shoulder, he carried her to the door one evening as he returned home from the hills, and the children ran shouting to meet him. She hears these shouts now in her dreams.

Her father was the last of the chiefs. There  
No. 241.—Vol. V.

were others after him, but in them the chief had disappeared in the landlord. There are those even now who call themselves chiefs, but are only lairds; he was a chief! When he went from home, even when the nineteenth century was well out of its teens, his tail of servants walked after him and his bard before him. Sir Walter came north to his keep beside Loch Oich, and found in him the prototype of Fergus Mac-Ivor, Vich Ian Vohr, chief of Glennaquoich, in whose personality he portrayed the strength and weakness, the overweening pride and kindness, the chivalry and the dignity, of the last of the chiefs. Sir Walter saw the devotion the chief inspired in his people, and that devotion he depicted in Evan MacCombich, who, when Fergus was condemned at Carlisle, offered to fetch six men from Glennaquoich to die for their chief, of which he himself would be the first. When the court laughed, Evan, looking sternly round, said, 'If the Saxon gentlemen are laughing because a poor man such as me thinks my life, or the life of six of my degree, is worth that of Vich Ian Vohr, it's like enough they may be right; but if they laugh because they think I would not keep my word and come back to redeem him, I can tell them they ken neither the heart of the Hielandman nor the honour of a gentleman.' The devotion of his clan to Fergus which is made so vivid in *Waverley* is only the devotion which Sir Walter saw in the glens westward from Loch Oich inspired by the chief, of whom he wrote: 'Warm-hearted, generous, friendly, he is beloved by those who know him. . . . To me he is a treasure.' But evil days befell the chief, 'who was born a hundred years too late,' as his friend of Abbotsford declared. He had wasted his substance attempting to revive the ancient glory of his family, and on his death it was found impossible for his son to reign in his place. So the glens passed to others, and now the old lady who lived in the little house in the loop of the bay was the last of them all.

[All Rights Reserved.]

JULY 12, 1902.

She, the last of Siol 'ic Alastair, was very lonely, as those always are who live beyond the fourscore years and survive all their kindred—unless they have wealth, which she had not. Those who lived in the large houses at the outskirts of the town knew her as the last of a great race who once on a time had made the throne of the United Kingdom rock; but she did not care to know them! They were not of her world. Almost her only friend was the minister of the poor little chapel that stood in a mean street, in which the gospel was still preached in the language of the Gael to a rapidly diminishing congregation. As long as she could she said her '*Adsum*' every Sunday when the gray, bent, old minister ascended his pulpit and faced the little company that assembled there to worship in a manner which, to the smart congregations of the suburbs, savoured of the Covenanting days. The wail of the old tunes, the plaintive chanting, the emotional richness of the language she loved, made the dingy, cobwebby chapel a place of delight to her. She seemed again to hear the women singing their songs far away among the hills at milking-time; she seemed to feel the breeze laden with the scent of the heather coming over the moors, and hear the roar of the waters as the floods swept down the rough-flowing river; the mildewed walls of the decaying chapel faded away, and the vulgar little town melted into mist, and she stood again in that fairyland of youth 'where the wind blows over seven glens and seven bens and seven mountain moors.'

It was only to the minister that she spoke of the ancient days. He was an attentive listener, who had himself known better days, and who through many misfortunes, and many follies perhaps, had at last come to this—that he was glad to minister in that little chapel for a pittance that kept him from want. His own troubles had made him tender, and the memory of his own follies saved him from harsh judgments on the folly of others. To him the proud old lady could speak, knowing she would be understood. Many a day did he turn to her house to give her the comfort of having some one to speak to. The house was small and mean; the furniture was massive, and in these little rooms it looked like a prince strayed among the denizens of the slums; decay had fallen on much of it. The paper hung in patches on the walls; chairs stood some on three castors, some on two; but there were priceless relics: pieces of old silver, dusty faded pictures, things which many men would pay a ransom for. There was a leather-covered chair in which she always sat near the fire; from a little window in the gable by its side she could see a glint of the sea and of the wooded ridge beyond, and because of these she loved that seat best. When the minister sat on the other side of the fire, and the ancient serving-woman brought out the old silver teapot that had been used so long in the

old castle which now stands magnificent even in its decay on its solitary rock, and she poured out a cup for her friend and herself, then she could speak—speak of the old days, and of the old home, till the little room seemed as if it resounded with the shouts of 'Creag an Fhithich! Creag an Fhithich!' (the war-cry of the Macdonells) as the clansmen rushed with claymores on their foes in the days of long ago.

She was never tired speaking of her father. She pictured him so vividly that her listener could see the chief with his hounds going forth to the hunt, and note the droop of the eagle-feather in his bonnet. Proudly she would tell how, accompanied by twelve men of his clan, he went to Edinburgh, and with his brother the Colonel—that Colonel who, assisted by his sergeant, had shut the great gate of Hougomont against the French, thereby saving the place; and after receiving the prize as the bravest man at Waterloo from the Iron Duke, handed it to the sergeant—broke through the guards and welcomed George IV. to Scotland on his landing. He felt it his duty that he, the representative of the ancient race of kings that ruled the isles of the west, should be the first to welcome the king who came to pay a visit to a kingdom that had not seen its king for over two hundred years. It was only the courtesy due from one potentate to another! If the poor, benighted Edinburgh bailies could not see it in his light, why then he and his twelve good men could burst through any cordon that could be drawn round any pier in Leith. If the hide-bound authorities of Dundee could not see his point of view, Sir Walter did, and it was he who acted as colonel of the kilted bodyguard thus provided for the king, and swore them in. But Sir Walter, who could read the secrets of all men's hearts, knew the mind of a chief.

Sometimes the daughter of the chief would speak of more trifling incidents. With a smile she told how the chief, having crossed the loch in his new barge and spent the day on the hills, found, when returning across the loch in the evening, a packman hid in the prow of the boat. When half-way across, the chief stepped up to the prow and lifted the pedlar by his belt and dropped him gently into the loch. It was, he thought, fit punishment for the low-bred seller of needles who presumed to cross his loch in the company of Mac 'ic Alastair. But the pedlar had the better of it; he made a declaration that a pocket-book containing a hundred pounds fell out of his coat-pocket when he was thrown into the water, and, an action being threatened against the chief, he had to pay. The pedlar took a farm with the money, and his children's children are there still, while the ancient seat of the chief is a *larach* (a desolate ruin). Of these things would she speak while the darkness was creeping over the little town and the lamplighter went up the

dingy street to light the lamps; but though looking from her gable window as he passed, she saw, not him, but the pathway of the moon on her father's locks, far, far away among the hills.

But an unlooked-for day came when the old minister, feeling sad at heart, went to see the little old lady, for a great blow had fallen on her. A book had been written by one whose name the minister had never heard before, which proved that one of the chiefs of that old family had acted the spy. The book was called *Sykle the Sly*; and the old man, feeling it boded ill to his patron, bought and read it. At least he tried to read it through; but it was a dreary book. From curious spelling of words and curious dotting of letters, it showed that the grand-uncle of the old lady had, while serving King James, written letters to the Government of King George telling them the secrets of the particular kind of toddy poor Prince Charlie drank, and of the quarrels he carried on with and about the Walkinshaw, and other such important things. The book made a great sensation. The minister was at a dinner shortly after it was published, and when a young lady began to speak enthusiastically of the chivalry of the chiefs who went out to fight for a cause which they knew in their hearts to be lost, a youth with an empty face shrugged his shoulders and murmured, 'Sykle the Sly.' At the sound the words died on the lips of her who spoke of Highland chivalry, and half the company shrugged their shoulders. The memory of that scene was keen with the minister when he turned towards his patron's house, feeling that he could not stay longer away.

She sat in her old place by the little window in the gable; but the furrows were deeper on her face, and her figure seemed shrunken. The folds of her homespun—she clung tenaciously to the homespun—lay about her wasted limbs more loosely than ever before. Her deep-set eyes had a look of dumb pain in them. In silence he sat down in his accustomed chair.

Without any beating about the bush, she began at once on the subject he dreaded. Had he seen the book? What did he think? If he could have said that he did not believe the book without telling a falsehood, that's what he would have said. But though he believed in the authenticity of Ossian, yet he could not believe in the probity of the chief who wrote as *Sykle the Sly*. His hesitation and his restraint showed her what he thought. 'Oh! it is a sad blow to my family,' she cried, while the tears glistened on her cheeks and her voice broke. The book lay on a case at the side of the room, and she started up to get it. In her excitement she forgot that her foot was twisted with rheumatism, and that she could not walk without a crutch. After one slip she gave a scream, and clutched the table to save herself from falling. The minister jumped to her

side and offered his arm. No, she would not take it. Her family always fended for themselves. Let him bring her the crutch. He brought it, and she hobbled over, got the book, and returned to her seat. The little scene broke the restraint that had fallen on the two friends, and they sat more at their ease while she turned over the pages of *Sykle the Sly*—the pages which proved one of the chiefs of her race a mercenary tale-bearer and a traitor.

Her fingers trembled so much as she turned the leaves that it looked as if she could not find what she wanted. At last she found it, and read with a voice tremulous with scorn the words in which the writer disclaimed any delicacy he might have had in publishing the book because his hero died unmarried and childless, and the present representatives of an honoured family were not his descendants. Sir Walter would not have written that apology; he knew the hearts of the Highlanders. She was not a descendant. No; but was he not one of the chiefs, her father's uncle, and if his honour was smirched was not the honour of the whole family smirched? But even suppose it true, were there not things for the sake of which the pitiful thing might have been left in its grave? Why did this man—'the man with the muck-rake,' she scornfully called him—gloat over the miserable treachery of one weakling while he was silent regarding the heroism of those others of her race who in their devotion to their rightful king set themselves to attempt the impossible? Why did he not tell of the little band, two thousand strong, that marshalled in the gray morning by Loch Oich, of whom six hundred were of her race, and threw down the gauge of battle to three kingdoms, and who shed their blood from Prestonpans to Culloden fighting for a cause that was long lost? Did he know of her great-grandfather, who, a lad of twenty, commanded his clan and died on the streets of Falkirk, begging that mercy might be shown to the man who unwittingly killed him? And there was her cousin, Keppoch, who, when the enemy came down on the doomed Highland army—an army that faced their foe hungry, shivering with cold, and the snow driving in their faces, deprived even of their night's sleep by that futile march to Nairn—and when the centre of their army had rushed to its destruction, pled with his men to charge, and, on their sullenly refusing, advanced alone with claymore and dagger to attack the foe, crying, 'My God, have the children of my tribe forsaken me?' and so died. Was not that a fitter theme for a great writer's pen? If for the sake of these he would not keep silent, might he not think of those others who stood by their Prince when a ragged fugitive, with a hunted look in his eyes, and with no comfort save the *uisge-beatha*, which was to him warmth, food, shelter, and forgetfulness—what wonder he learned to drink it!—and when

their own houses were burning, and fire and sword had swept through the glens, yet had no thought but how to save him, guiding him from hill to hill and from cave to cave until he passed to return no more: for their sake might he not have passed over this in silence? Even though this one fell from the high renown of the others, perhaps something might be said for him. He had never drawn the sword for his Prince; he languished in prison while his brother led his men to the charge at Falkirk; he had not known the chivalry and loyalty born of conflict. The degradation of a prison broke his spirit; the poverty and hunger of an exile broke his honour. He wanted bread. Were not men in those days governed by corruption? Did not the men who made the laws have their hands open at their backs to receive the price of their votes? Sir Robert Walpole has declared that Shippen the Jacobite was the only man whose price he could not name. Who can judge the man who, broken in spirit and destitute, stooped to their level?

However, no words could cover the wound made by that book in her pride of race. Again and again, as often as the old minister went to see her, she would return to it. Men would now only remember the shadow cast by one of her race and not the glory of the others, she would moan. As a man came often to be remembered only by one incident on which some one laid hold and placed

on record in a vivid way, so her race would hereafter be remembered only by this one thing which a master of his craft had set forth in a manner which held it up to all men, that they numbered among them a Sykle the Sly. All the rest would be as if it were not. As often as she spoke of it she ended by saying, 'It is a sad, sad blow to my family.' Many a night she would waken up as from an evil dream, and lie until the dawn with wide-open eyes alone with the thought that she was the last of her race—she, a desolate, lonely old woman—and that she was leaving behind her a name tarnished and dishonoured, with none to redeem it. When she lay dying a few months later she said bitterly, 'If the man with the muck-rake had only waited till I was dead!'

When she died there was none to bring her home—the ruined castle on the rock was always home to her—and lay her beside her father in the old vault beside the loch. At her funeral no pipers played their coronach before her coffin, and no throng of clansmen followed after. She was laid by those she knew not in a corner of the graveyard of the little town in which she had lived so long, and there the green-sward was drawn over the head of the last of a great race. And the old vault beside the loch will never again open its iron portals to receive a son or a daughter of Siol 'ic Alastair.

## PRINCE ADRIAN OF ZELL.

### CHAPTER III.—THE STORY OF PRINCE ADRIAN.

**I**T was late in the evening when Mr Barrows returned to Welding. On reaching home he took his tea, and then went out to the garden. There, looking over the low wall, he called Hadfield.

The call was heard, and Hadfield appeared.

'Ah, Mr Barrows!' he said, 'so you went up to town? Did you have a good day?'

'Yes, thank you,' was the answer. 'But will you come over here? I want to have a chat with you.'

Hadfield obeyed at once. Such requests were not at all infrequent, and the visits were generally pleasant. He mounted the wall, and dropped on the other side.

'It's growing chilly out here,' said Mr Barrows, 'and it will soon be dark. Let us go into my room.'

He led the way through the house to the room which he was accustomed to call his own. It was a front room, looking out upon the street, and he had furnished it as a lonely man's library and sitting-room. It was well furnished with bookshelves, for Mr Barrows was something of a reader and a bookman. There was also a com-

fortable writing-table, a small but careful selection of pictures, and a couple of easy-chairs which were none the worse for having seen wear. Last, but not least, there was a smokers' cabinet, which was always well supplied.

'Just make yourself comfortable,' said the owner of this den hospitably. 'Take a cigar and choose a chair.'

Hadfield complied in silence. The young man from the Local Board Offices was not particularly quick of perception; but he had an idea that something had happened. When he was settled he prepared to listen, and by that time Mr Barrows was ready to speak.

'To-day,' he began, 'I have had a rather curious adventure. Have you any acquaintance with Styrian politics?'

'Styrian politics?' cried Hadfield. 'I cannot say that I have. Of course, I sometimes read the newspaper reports; but that does not amount to much.'

He was naturally surprised at such a sudden plunge into an entirely new topic. Mr Barrows did not seem to notice it at first.

'Then perhaps you have never heard of Prince Adrian of Zell?' he asked thoughtfully.

Hadfield fancied he had, at some time or other. Then Mr Barrows explained.

'You are surprised at my mentioning such a subject as this, I see. But, as it happens, my little adventure to-day has a very close connection with this out-of-the-way subject.'

'Say just what you want to say,' put in Hadfield quickly. 'I am listening. Go straight on.'

'Well,' said Mr Barrows, 'I will. Now, in the matter of Styrian politics you have, no doubt, a hazy idea that the term implies political chaos. We have already heard of trouble and unrest over there, and unrest sometimes so serious that it has threatened the stability of the whole empire—the Styrian Empire I mean, of course. And probably you have noticed the cause of that unrest?'

'The dissatisfaction in Lusia?' asked Hadfield doubtfully.

'Exactly. All the trouble comes from Lusia. Lusia once had an independent existence as a kingdom, but it was incorporated with Styria some fifty years ago. There was naturally some friction afterwards, and the friction increased, chiefly through tactless government. There has been one armed rebellion, which failed; and there have been various finely arranged conspiracies, which also have failed. There are secret societies in Lusia to this day, having separation from the empire as their one object of existence; but, as perhaps you have noticed lately, things are gradually settling down, thanks largely to the tact of the present Chancellor, Quinzell. The last really dangerous conspiracy took place about twenty years ago. It was a very clever affair, and well engineered; and its managers drew into their ranks a very near connection of the Emperor himself. This person was the young half-brother of the first Empress, Theresa, and he was called Prince Adrian of Zell. Zell, I may say, is a small principality in south-east Lusia.'

Mr Barrows spoke carefully, without any particular animation; yet Hadfield began to be interested.

'The conspirators,' continued Mr Barrows, 'thought Prince Adrian likely to be useful. As for the young fellow himself, perhaps he was simply foolish, and no doubt he had been filled with raw ideas of Lusian liberty and independence, which he would see the folly of if he were alive to-day, with the recent and present developments before him. The worst of it was, however—or, perhaps, the best of it—that he was not the creature to make a conspirator at all. He lacked a simple necessity, physical courage; and he lacked moral courage also. Naturally, he proved a failure, and after first betraying the faith of the Emperor, who had regarded him as a brother, he deserted the cause he had been induced to support. The plot was discovered at the last moment. There was a choice for him: two

chances to make a best end to a bad case. He might have faced the consequences and accepted the punishment, or he might have ended, voluntarily, a career which he had ruined. As I have said, however, he was a coward, not only physically but morally; so each course was impossible for him. He did the worst thing, therefore. He left his friends in the lurch, fled the country, and escaped to France. One person went with him: James Barrows.'

There was a pause. 'You?' echoed Hadfield, astounded.

'Yes,' answered Mr Barrows. 'I, his secretary and his only companion.'

Mr Barrows was amused by his neighbour's surprise. 'Don't look like that,' he said. 'It was a simple affair enough. The Styrians, like the Poles and Russians, are remarkable linguists, and take a pleasure in "getting languages." There is scarcely a family of any note in Styria or Lusia which hasn't an English tutor or governess; and when I say that I had gone out to Graaden, the capital, as tutor in one such household, you will begin to see light. Friends in good places brought about the connection with Prince Adrian, who fancied that he required a secretary; and so I became possessed of an office which was both easy and, in its way, distinguished.'

'Well, upon my word!' muttered Hadfield; and he surveyed his quiet neighbour with an entirely new interest.

'Perhaps I was no better than Prince Adrian himself,' said Mr Barrows, 'or I might have persuaded him to something better. It is hard, however, to persuade a coward to put himself in danger; and, at all events, I went with him. We went to France and crossed to England, and then, for quite a number of years, tramped the world together in a curious kind of companionship. After that again, finding that this world had no need of him, and no place for him, Prince Adrian decided to leave it. You may have heard, possibly, that he died obscurely, and was buried in a nameless grave. I was with him to the end, and saw the last of a failure which was complete enough to be pitiful. After that, having had a certain sum of money left me, I came down here, weary enough, I must say, both of princes and of politics. One of the first things I did then was to write the Prince's story. It is here.'

Mr Barrows rose, and took from a drawer in his table a small volume bound in gray. He passed it over to Hadfield. 'You will take this home with you,' he said, 'and look through it. I am afraid I treated my unlucky companion rather severely; but when I was writing of him I lost all patience with such a bungler. Just think, Hadfield, of what he fooled away!'

'It certainly was bad,' agreed Hadfield.

'Bad? Bad is no word for it. But there! let us be done with Prince Adrian. It is only necessary to say of him that his name was never afterwards mentioned in the Emperor's presence. Ferdinand of Styria has a very strict code of honour. If the Prince had died neatly he might have forgiven him; what he could not forgive was his preference for life before honour. He could not bear the thought of a coward in the imperial circle.

'But now to the story. Many of the conspirators suffered; a few somehow escaped notice, and one of these was a friend of the Prince, Count Mathias Hamar. He was a young noble of large estates, with a young wife and one little daughter, so he had everything to lose. It was entirely the Prince who had drawn him into the affair. I remember that quite clearly. Finding that the storm had passed over him, he retired from political matters and attended to his own lands; but, fearing to rouse against himself the enmity of the surviving plotters, he failed to withdraw entirely from their cause. He allowed his name to remain on the roll of their society.

'That was a serious mistake. As the years passed, his child became a very beautiful woman, and it happened that one of her suitors was the only son of a powerful neighbour, Count Brode. This man, the Count, was in favour at Graaden, being an able creature enough; but his nature will not bear description. He had all the bad points of the Lusian aristocracy, and none of the good ones; while his son, it seems, was only behind him in the matter of brains. This son's fondness for Hamar's daughter was a great opportunity, in the father's eyes, for a concentration of wealth, and therefore of power. The girl, however, being a fine girl, would have none of him, and the natural results took place. Remember, we are speaking now of Lusian.

'The Brodes left no stone unturned to gain their ends, and among other stones they moved was the secret of Hamar's share in the old conspiracy, and the fact of his present connection with the revolutionists. That was a good weapon, and they used it. One day they presented their ultimatum. Hamar was a fine fellow, and showed them the door; but in a few hours he was on his way to England with his wife and daughter. Their escape was narrow, for before he reached this side of the Channel the bolt had fallen. Had he stayed he would have found a Styrian prison as strong and enduring as he well knew it to be, and his helpless women would have been at their enemy's mercy.

'Then,' continued Mr Barrows calmly, 'the Brodes played one more card. They succeeded in obtaining a promise from the Court that if Hamar's daughter married Count Philip her father's forfeited lands might be restored to her

husband. With this promise the young man tracked the fugitives to London; and in the meantime things had been going entirely in his favour. Hamar was a man of no stamina, and his health had given way. Very shortly after coming over he died, and was buried in one of the London cemeteries. So when Count Philip was following up their traces, the Countess and her daughter were left in the great city almost resourceless and quite unprotected.'

Mr Barrows paused. Something in his manner told Hadfield that the crisis of his story was now near.

'It is just here,' he went on presently, 'that I come in. This morning, while in town, I was led to visit one of the cemeteries. The first thing I saw there was a face whose type was Lusian—the face of Hamar's daughter. Directly after, I saw another Lusian face—that of Philip Brode. Losing all trace of the Hamars, he had yet discovered that the father was dead; and then he had set about making inquiries in the cemeteries. One of his spies had found out the place of burial, and the rest was simple. This morning he had hunted the women down, and fancied that they were already at his mercy.

'I knew neither face, of course, and was blind to suggestion; but a moment later I came upon a newly erected cross, with the name of Mathias Hamar upon it. Then I began to suspect.'

He then gave the details of his visit to the cemetery for the purpose of seeing Prince Adrian's resting-place, and the curious combination of circumstances which had roused his curiosity. 'But,' he continued, 'what was I to do? I might guess what had happened to the Hamars, and the expression of Brode's face told me that there was evil in the wind. I felt that I had not been sent there for nothing, and that I ought to, at the very least, make some inquiries. It was quite in vain that I told myself that Prince Adrian was dead, and that his business was none of mine. I was obliged to remember that I had been his companion for many years, and this connection seemed to demand my interference. What was I to do? What would you have done in my place?'

Mr Barrows rose from his chair. The question was spoken in an animated tone, and he was evidently moved. He scanned Hadfield's face with a certain eagerness.

Hadfield, however, was too much bewildered to find a ready answer. He had not grasped the situation clearly, for the rapid development of the story had taken him by surprise.

'I—I don't know,' he said. 'What did you do?'

'Well,' said Mr Barrows, 'perhaps I did a very foolish thing, considering that I had sworn years ago to have no more connection with Styria or

her people. I stepped into what was none of my business. I went to the place where the Hamars lived, and saw them. Even to the Countess I was quite a stranger, for she had been with her child in Lusitania while her husband was with Prince Adrian at the capital. These women were glad, however—you may imagine how glad they were—to see any one who had known Mathias. They told me the story I have just related to you, and I was then able to understand the whole meaning of the scene in the cemetery.

'It is often the case that it is easier to go into an affair than to retire from it. My curiosity had taken me into this business, and as soon as the story was told I saw that I must remain. Here were two women alone in a foreign capital, absolutely at the mercy of a man who carried his disposition in his face, possessed of wealth, and therefore of power, and likely to stop at nothing that would help him to his ends; and one of these women was a beautiful girl, relying upon a mother who seemed broken both in strength and spirit. I do not know what another and a wiser man would have done in my place, Hadfield; but I did what I thought I was bound to do. I decided that I would keep that girl out of the ruffian's clutches if I possibly could!'

'Well done!' said Hadfield shortly. 'Go on.'

'The first thing, of course, must be to get them away. There was only one place that I could think of as secure—Welding; and I thought I knew two people in Welding who would make the exiles welcome. I thought, Hadfield, of yourself and your little wife.'

He looked at his neighbour questioningly, but with a smile in the look. Hadfield stood up, took the cigar from his lips, and answered solemnly:

'You did quite right.'

'Thank you,' said Mr Barrows. 'I felt sure of that. It only remains to tell you, now, that they must come down at once, before Brode

begins his work. Can you receive them to-morrow evening?'

'I believe we are always ready,' replied Hadfield. 'Consider it settled.'

He had been stirred to a high pitch of interest and excitement. Half-unconsciously he extended his hand. After a silent grip Barrows said:

'Now, I mustn't keep you longer, because you will wish to explain everything to your wife. But you had better take this book with you, in case you get half-an-hour to spare later. It will help you to get into the atmosphere of this business.'

Hadfield picked up the little gray book, and the two men returned through the garden. Night had come during their conversation, and darkness had fallen. Hadfield crossed to his own side of the wall.

'I'll speak to my wife,' he said, 'and let you know in ten minutes. Will you wait out here, or will you come in?'

'Oh,' answered Mr Barrows, 'I'll wait out here.'

So Hadfield went in to tell his story. In less than ten minutes he was back at the wall, to say that all was clear. There would be a welcome for the strangers whenever they might come, and the sooner the better.

'Thank you,' said Mr Barrows; 'and thank your wife for me. Good-night!'

'Good-night!'

That was the last word. Mr Barrows went in, and Hadfield returned to discuss this extraordinary occurrence with his wife.

Later on he spent a little time in reading his neighbour's book. It was the story of a failure, told by one who had seen it intimately, but without pity or sympathy. He was able, after the story he had heard, to understand the attitude of Mr Barrows towards his former master; but he was not quite able to sympathise with it. As he told his wife afterwards, the perusal of the volume left a somewhat unpleasant taste in the mouth.

## THE LATEST AMERICAN COLONY.

THE sale of the Danish West Indies to the United States, which has recently taken place, is of interest to Englishmen for the reason that these islands, though a Danish possession, have long been English in speech and sentiment. It is a curious fact that the natives (even the negroes) still consider themselves Englishmen, although the islands have only been in the possession of Great Britain for a few short periods: in 1667-71, 1801, and 1807-15.

The group formerly called the Danish West Indies is composed of the islands of St Thomas, St Croix, and St John, besides a number of small islets of little consequence, and for the most part uninhabited. St Thomas is the most important of the islands from a commercial or strategic standpoint, although the island of St Croix is more populous and agriculturally richer.

St Thomas contains only one town, which was christened Charlotte Amalie, in honour of the Queen of Denmark; but the new designation has

never 'taken,' and the town is always known by the same name as the island, the other name being confined to official documents, geographies, and maps. Its position is unique for the purpose of trade or the establishment of a naval or coaling station. Apart from its splendid natural harbour—which is surrounded by high hills, is completely landlocked, and affords ample accommodation for the largest vessels—it is the keystone of the arch formed by the chain of the West Indian Islands, as a glance at the map will show, and is also the nearest island of any importance to Europe. Owing to this combination, it is most conveniently situated for a general entrepôt or distributing-point of European commerce throughout the West Indies, and formerly occupied that position in the commercial world. In former days the capacious harbour was full of vessels waiting to be chartered for the sugar-crop, though all the sugar shipped was the produce of neighbouring islands. The harbour was also the rendezvous in the West Indies of the various European lines of steamers trading to that part of the world. Now all these have abandoned it except the German line (the Hamburg-American Steam-Packet Company), which has its headquarters and coaling-station there; and some of its vessels are nearly always in the harbour. The company has a large trade with the West Indies and the adjoining mainland, and its influence has helped to bolster up the decaying fortunes of the island. It is noticeable that the German line always avoids British possessions. On the other hand, the Royal Mail Steam-Packet Company removed its headquarters to Barbadoes, which has no harbour but only an open roadstead, is not so near to Britain, and does not occupy so central a position in the group, being indeed rather isolated; but then, Barbadoes has the advantage of being a British colony. It claims, in fact, to be the oldest and most intensely loyal of all our colonies.

For many years previous to the removal of the steamship centres to other islands, St Thomas had been steadily declining. It suffered, in common with the rest of the West Indies, from the depression which has overtaken the archipelago ever since the emancipation of the slaves, and the decline became more intensified when Continental nations created a bounty on sugar, thus severely handicapping the staple industry of the islands. The general introduction of steam and telegraphic communication also acted most injuriously, by depriving the island of the relative importance it formerly held as a trading centre; since, with increased facilities of communication, the other seaports found it more advantageous to import direct from Europe.

St Thomas lies directly in the track of steamers from Britain to the Isthmus of Panamá, an importance which will be greatly enhanced should either the Panamá or the Nicaragua Canal ever be

completed. It is, perhaps, owing to this circumstance, as well as to the fact that it also lies in the direct track of steamers bound from the Atlantic ports of the United States to South America, that Uncle Sam has recently become alive to the advantages of securing this island, the strategic and commercial importance of which is universally recognised. However, this is not the first occasion that the United States Government has made a bid for the purchase of the Danish West Indies. In the year 1867 negotiations were nearly completed for the purchase; but they ultimately fell through.

The inhabitants of the islands are very cosmopolitan in character, the English language predominating, although in the palmy days of St Thomas, Spanish was even more necessary than English from a commercial standpoint, the town serving as an entrepôt of trade for the neighbouring islands of Porto Rico, San Domingo, and Cuba, as well as the various countries of the Spanish Main, such as Venezuela and Colombia. Here may be parenthetically mentioned the mistaken idea somewhat prevalent that the designation 'Spanish Main' refers to the seas in these latitudes. Even the poet Longfellow fell into this error, for he speaks of an ancient mariner 'who had sailed the Spanish Main.' After the Spaniards discovered America, they made their first settlements in the West Indian Islands; and when at a later date they commenced to colonise the mainland they called it (to distinguish it from their insular possessions) *Tierra Firme*; and the English settlers called it the Spanish Main—that is, the mainland—a name which it still retains.

In the prosperous days of St Thomas, nearly half a century ago, it was the custom for merchants in all parts of the West Indies to place their orders there. In the town were many large stores, stocked with merchandise of the most valuable kinds from all parts of the world, where one could place an order for goods worth ten thousand pounds, and they would scarcely be missed by the vender; indeed, such an order was looked on as a very ordinary transaction. Cases of Manchester goods, bales of French and Italian silks, and costly Spanish wines were to be found there, as well as flour and hams from the United States, and hats from Ecuador. These latter are not made in Panamá, which is only the port of shipment; and they are not to be confounded with the articles of straw frequently sold in English shops as 'genuine Panamá.' A good Panamá hat costs more than a suit of clothes, and will last a lifetime. It may be rolled up and put in the pocket, being as pliable as silk, and can be washed like linen. They are made by hand from a very fine species of fibre, and the finer kinds sometimes take months of labour to produce. We have seen these costly hats in St Thomas

pressed together in bales like ordinary Manchester goods.

Alas! St Thomas can now only reflect on its past glory, for the trade of the island has sunk into comparative insignificance. It is no longer a wholesale centre of any importance, though some trade is still done with San Domingo and St Croix, and also with Porto Rico; but it is uncertain how the annexation of the island to the United States will affect this commerce. The people of St Thomas used to look with great affection on the Porto Ricans, who were their best customers, and whose beautiful island was a favourite holiday resort of the inhabitants of the quondam Danish colony, for Porto Rico is quite near, and its mountains are plainly visible from St Thomas. During the American civil war the waning fortunes of the island were benefited to some extent by the diversion of trade caused by blockade-running, which became a regular business, though it never was a great centre for this hazardous form of commerce like Nassau (in the Bahamas) or the Bermudas. The decline of its trade has been most noticeable, however, since the conclusion of the civil war in 1865.

The population of the island is about thirty thousand, nearly one-half of which is in the town of St Thomas; it was formerly more numerous, and is mainly black or coloured. Spanish influence is still evident in the general architecture of the houses, and also to a certain extent in the habits of the people. The natives of St Thomas, who have emigrated to a great extent owing to the decline of its prosperity, are to be found all over the West Indies and adjoining countries on the mainland. The blacks are noted for their energy, like those of Barbadoes; and all, black and white, are noted linguists. There are few who cannot speak two or three languages, and many speak four or five fluently. Although St Thomas was for centuries a Danish possession, a new arrival might be totally unaware of the fact, as far as any external evidence goes, were it not for the Danish flag flying over the little fort and the names of the streets in Danish, which is the official language, though its use is almost entirely confined to a few Government officials. The language which one hears in the shops and in the streets is English.

There are no industries in St Thomas, except those connected with the shipping and transit trade, though a little bay-rum is manufactured, which finds a ready sale for toilet purposes in the United States. There were formerly numerous sugar plantations on the island, as is attested by the ruins of many stone windmills. There is no permanent water-supply on the island, for the brooks, which are roaring torrents after heavy rains, are entirely devoid of water during the long dry season. It is said that springs at one time were numerous, but after a severe earth-

quake they disappeared, presumably owing to a dislocation of the subterranean strata of rocks. At the present time the inhabitants are dependent for their supply of water on large cisterns attached to nearly every house, which catch and store up the water that falls abundantly during the rainy season.

During the time of the buccaneers St Thomas was their favourite resort, and there is still pointed out an old stone tower known as Black Beard's Castle, so called from a famous buccaneer who bore that nickname, derived from his long flowing beard, which he wore in plaits, for he was a great dandy. He must also have been a great favourite with the ladies, for he enjoyed a plurality of wives, like his namesake the fabulous Bluebeard.

The year 1867 was calamitous for the Danish West Indies, as the colony was then visited by a cyclone of exceptional severity, and also by an epidemic of cholera—a combination of disasters which caused much destruction and loss of life, principally among the shipping, for there is no harbour which is secure against a West Indian cyclone. The houses of the well-to-do classes, specially built to withstand cyclones, suffered comparatively little damage; but the frail wooden houses of the negroes, with their contents, were scattered to the four winds of heaven. The writer was in St Thomas during that time; but his walk through the negro suburb after the disaster was an experience too painful to describe. The trees were completely stripped of their foliage, and presented a strange sight in these islands of perpetual verdure, reminding one rather of an English winter than of a climate where the summer is eternal. Yet—such is the vigour of nature in these latitudes—in a few weeks, one might almost say in a few days, the trees had regained their verdure, and showed scarcely a sign of the catastrophe which had overtaken them, except that some had been uprooted and overturned. Slight shocks of earthquakes also are frequent—too frequent, in fact, to attract much notice; but destructive ones are happily rare. However, one occurred in the same year as the cyclone and epidemic just mentioned; and, like many occurrences of that kind, it was accompanied by an immense tidal wave, which swept over the lower part of the town, after completely swamping the shipping in the harbour. The destruction would have been much greater had it not been for the narrow entrance to the harbour, which broke the force of the wave and caused it to spread out like a fan.

The neighbouring island of St Croix—notwithstanding the spelling, pronounced in the Spanish fashion, Santa Cruz—unlike St Thomas, is mainly an agricultural island, and was formerly cultivated like a garden, though it also has shared the general depression which has overtaken the West Indies.

We have before us as we write a copy of the *Royal Danish-American Gazette*, published in St Croix on 5th October 1791. It is printed entirely in English, and contains the latest news from Europe, the most important being the decrees of the French National Assembly and the intimation that the French monarch was practically under arrest. It also states that the news had already been received in Guadeloupe, and had caused great consternation in that French West Indian colony, where a petty revolution had taken place; the soldiers had joined the mob, and the planters and gentlemen of property in the island had assembled and marched against them sword in hand. Some of the advertisements in this sheet are curious enough. For example, after announcing the sale of some pipes of Madeira wine, a few barrels of herrings, rye-flour, vinegar, snuff, tea, &c., the following notice appears: 'On Wednesday the 12th inst., at eleven o'clock, will be sold at public sale, at the English Tavern,

the following negroes—namely, Maria, a good seamstress and darning, with her child Richard; Johanna, a seamstress; Marian, a washer, with her child Feronie; and Jennet, a baker and seller.'

To those who think of trying their fortunes in these latest colonies of the United States we should say we consider the chances of success somewhat doubtful. Porto Rico, in the immediate vicinity of St Thomas, is much more prosperous, and affords more scope both for business and agriculture; it has also a cooler climate in the mountainous districts. The language of the latter colony is of course Spanish; but in Ponce, on the southern coast, the outlet of the richest agricultural district, are many English and American residents, sufficient at the time of our visit to support a small church, where the service was conducted in English. This was prior to the American annexation; English-speaking residents have presumably increased since then.

## CLIPPED WINGS.

[Copyright in the United States of America by Mary Stuart Boyd.]

### CHAPTER XXVI.—JOURNEYS END IN LOVERS' MEETINGS.

LITTLE apart from the expectant passengers clustered forward on the promenade deck, Lucie and Tresscott stood silently watching the appearance of each familiar landmark.

The Great Barrier lay far behind them, and the *Ruatapu* was threading her way through the islets dotting the Hauraki Gulf. The storm had passed, and the sun shone radiantly upon the vivid greens of the semi-tropical spring.

A little later they had rounded the North Head, and Auckland Wharf, with its groups of waiting friends, was in view. The emotions rising in Lucie's softened heart at the sight of her home-land had dimmed her vision, and it was Tresscott's sharp eyes that first distinguished her people.

'Straight is there; I see him,' said Tommy, picking out the tall figure of his rival. 'Your father and mother are there too, and Kitty. Yes—and Kitty is holding up the Angel. It's just as well we said good-bye last night, Lucie,' he added with unwonted bitterness; 'there wouldn't be much chance of a word now.'

'Oh, *don't*, Tommy!' Lucie protested feebly, gulping down a lump in her throat, for the presence of Straight only served to reveal the futility of the cherished hope that he had forgotten her.

As the *Ruatapu* drew near it seemed to Lucie as though all save herself were unchanged. How peaceful and home-like the town looked after the irritating bustle of London and the rest-

less turmoil of the ocean! Standing on the identical spot whence they had waved farewell, Mr and Mrs Lorimer and Kitty waved a welcome; but now their faces were suffused with smiles. The tears were in Lucie's eyes, not in theirs.

Straight's appearance, Lucie could not help remarking, was remarkably improved. He wore a high collar, and his hair was becomingly cropped. Apart from these needed emendations, his parliamentary position appeared to have given him an assurance of bearing sadly lacking before.

During her absence Lucie's family had gained new beauty in her sight. The affectionate pride in her mother's eyes, the warmth of her usually laconic father's welcome, touched her keenly. And Kitty! She had never before realised how pretty and sparkling Kitty was. Returning from sojourning in a land where every face was strange, the delight of meeting known faces thrilled the wayfarer's heart.

'If the Lieutenant does not sail till to-morrow morning, he must come right back with us now, and stop over the night,' said the ever-hospitable Mrs Lorimer. 'No—no,' in reply to an attempted refusal from Tommy, who had no desire to witness the triumph of his rival. 'You must come. We won't take a denial.—Will we, pa?'

Mr Lorimer having seconded his wife's invitation by summarily rejecting any further protest, Tresscott speedily found himself perched up beside Straight in a high dogcart, already on the

way to Pipimutu. Mr Lorimer, who was detained in town by business, had promised to see the luggage through the Customs, and send it on to Ingarangi in the care of the outdoor man, who was waiting in readiness with a cart. Kitty was driving her mother and sister home in the buggy.

After a parting that has lasted months, such a diversity of thoughts seek utterance that at the first interview conversation usually flounders among a medley of topics.

'And you are quite strong again, mother? I was so anxious when I heard you were ill,' Lucie said, with a loving pressure of Mrs Lorimer's plump hand. 'And how well father is looking, and how nice!'

'Oh Lucie! pa was so pleased when you wrote to say you would like a photograph of him. I don't know when I saw him so proud; not since you were born, I do believe. He went that very day your letter came, and got taken. What a nice new way that is you do your hair!' Mrs Lorimer branched off, in kindly criticism of her elder daughter. 'You must teach Kitty to do hers like that. And what a terrible time you had with those impostors, Lucie! I declare, when we got your letter telling us about it I was so upset I couldn't sleep in my bed at nights. And pa, he was for cabling to you to come home at once. But what a position for a young girl in a strange land! And the man's paralysed now, and there is no hope of his ever recovering. Well, well!'

They had reached the outskirts of the town, and were driving along a retired road, before Lucie, who was eagerly enjoying the well-remembered surroundings and thirstily drinking in long draughts of the familiar exhilarating air, noticed that Kitty's tell-tale face revealed a warring mixture of expressions.

'How smart David Straight looks to-day!' Lucie remarked, unconsciously touching upon the subject of her sister's confusion. And Kitty, meeting her eyes, blushed furiously.

'Weren't you surprised when you heard our news?' she asked diffidently.

'About the marriage, you know,' assisted Mrs Lorimer. 'We were sure you'd be surprised.'

'Surprised? I should say so,' agreed Lucie. 'But her niece marrying the lawyer and claiming possession of the house and everything served Miss Santhem right, for the property was really left by Millie's father—wasn't it? So it must have been hers all the time.'

'Oh, but Millie Santhem's marriage is fiddler's news,' Kitty interposed quickly. 'Didn't you get our letters last mail with our special news, and a list of things we wanted you to buy?'

'No; the mail was ten days overdue when we sailed. Broken a shaft or something; we signalled her in the Channel. I'm sorry I did not get the list in time; but I've got lots of nice things for

you in my boxes. What was the news?' she asked, seeing Mrs Lorimer and Kitty exchange conscious glances.

'Then you don't know that Kitty and David Straight are going to be married? Yes,' Mrs Lorimer beamed and nodded her best bonnet in triumphant confirmation of her announcement. 'They made it up all of a sudden. You know you never cared for David yourself, Lucie,' Mrs Lorimer broke off to say with motherly solicitude. 'And when Kitty agreed, David wanted to have the marriage right off. Though, as I told him, he needn't be afraid of Kitty jilting him. But Kitty wouldn't hear of having it till you came home.'

The sudden illumination of Lucie's face left Kitty, who was breathlessly watching her reception of the information, no doubt as to the cordiality of her sister's congratulations as, with a fervour that rendered the driving somewhat erratic, Lucie bent forward and embraced her, saying, 'Oh Kitty, I am so glad—so glad!'

The road they traversed was the well-worn highway leading from Auckland to Pipimutu; but with the falling of the burden that for many weeks Lucie's slender shoulders had been bent under, it had suddenly become transfigured. A radiance overspread the sky; never had foliage seemed so luxuriant, never air so fragrant as that perfumed by the blossoming sweet-brier that wreathed the hedges.

'The English wild-roses are scentless,' unconsciously Lucie murmured her thought aloud. 'Oh Kitty, I am so glad!—you can't guess how glad.'

'Then you really aren't vexed, my dear?' inquired Mrs Lorimer, with well-intentioned but blundering solicitude. 'I was saying to pa only this morning that even if you did feel a wee bit slighted it would only be natural.'

'Slighted? Oh, no, no! There is nothing else that could possibly have happened that would have pleased me nearly so much,' Lucie replied with conviction. Her eyes had strayed to the distance where she could see the dogcart crossing the paddock towards where the bungalow, amid a blaze of azaleas and gorgeous velvet-petalled pelargoniums, nestled at the foot of the Maori *pahi*.

Alighting from the buggy, Mrs Lorimer hurried off to the kitchen to hasten the preparations for lunch; Kitty hastened to the stables to assure her lover of Lucie's unreserved good wishes; and Lucie was free to seek Tresscott, who, actuated by a desire not to interfere with what he believed to be Straight's prerogative, was strolling alone on the lawn, viewing with unseeing eyes the glorious medley of blossoms—roses, wallflowers, ixias, pansies, Cape jasmine, iris, anemones, bride gladioli, sweet-peas, gaillardias, eschscholtzias, forget-me-nots, yellow broom, and Michaelmas daisies—that, encouraged to rebellion by a generous

climate, had loosed the galling bonds of conventionality, and, taking no heed of times and seasons, were all blooming together this balmy late October day.

Standing near where the gnarled branches of the great wistaria that entwined the veranda posts had burst into a fringe of fragrant lilac tassels, Tresscott sought to relieve the monotonous melancholy of his soul by watching the efforts of the indefatigable white duck to teach deportment to a brand-new brood of fluffy yellow ducklings, and did not hear Lucie's approach.

'Tommy,' she panted, rendered breathless by the rapid throbbing of her heart—'Tommy'—and Tresscott turned to see her face aglow with ecstasy.

'Lucie, what is it? Tell me,' he urged, eager

to learn what glad tidings had wrought the enchantment; but a sudden bashfulness possessed Lucie, and words forsook her. She stood before him tongue-tied, her cheeks aflame, her gray eyes downcast, her breath coming in little gasps.

'What is it, dear? What has happened?' he asked gently.

'Kitty'—

'Yes, yes, dear. Kitty?'

'Oh Tommy, Kitty is going to marry David!'

'Kitty—going—to marry—Straight!' cried Tresscott exultantly. 'Then, Lucie—then—?' Whereupon the white duck, actuated by a sense of delicacy exceptional in one of her race, promptly hustled her fledgelings out of sight and hearing under the deodar.

THE END.

## RAPID TELEGRAPHY.

THIS is the age of inventions—of inventions which a score of years ago seemed outside the realms of possibility. Marconi has demonstrated the utility of wireless telegraphy; Edison has, among other things, given us the phonograph; the indomitable Santos Dumont has partially surmounted the difficulties of aerial navigation; Tesla has created many marvels; and Röntgen, by means of his rays, has revolutionised the operations of the surgeon. Other men in other directions have added materially to the wonders of the twentieth century.

Among these must be included a young Australian journalist named Donald Murray, who has been engaged at the General Post-Office in St Martin's-le-Grand for some time, justifying to the satisfaction of the chief officials the possibilities of an invention which he has perfected for attaining a high speed in telegraphy. When Mr Murray's machine is brought into general use, as it undoubtedly will be, in our telegraphic service, a great benefit will be conferred on the public, inasmuch as it will expedite business, and help materially in preventing those delays in transmission which every now and again are causes of complaint against our telegraph department.

It was while pursuing his avocation as a journalist in Australia that Mr Murray, a few years ago, came to the conclusion that telegraphy, as dotted and dashed out by the Morse instrument, was a slow process, and might be improved on. The average speed of a skilled Morse operator is twenty-five words a minute. The ingenuity of Mr Murray has increased this to at least one hundred and thirty words; and working quadruplex the speed is increased to four hundred words, as against the highest with the Morse, which is set down at eighty words per minute.

The inventor with implicit belief in the possibilities of his invention has plenty of grit in him. This is not the prerogative of any one nationality, strong though it may be in the British race. Marconi has said that apparent failure only made him strive the more, Edison has worked against enormous odds, and Santos Dumont in the face of what seemed the most crushing defeats has never once let his enthusiasm wane for an instant. Mr Murray, in the same way, surmounted difficulties enough at the outset to make even a strong man weary of his task. Having made his machine, having satisfied himself that it was capable of performing all that he anticipated, his next difficulty was to induce other people to adopt it. The telegraph authorities in Australia would not have it. No doubt, they said, it was a very good thing, and would accomplish all that was claimed for it; but they were content to continue on the old lines. Then it was that Mr Murray packed his machine and took it to America. It was some time even in that go-ahead country before the young inventor secured a trial of his machine, which fulfilled all his expectations; and the proof of his success is the fact that at the present time his high-speed machines are established in the New York postal telegraph offices, and are giving every satisfaction. The tests were severe. Between Chicago and New York and Boston and New York a speed of over one hundred words a minute was attained. On a line three hundred and eighty-four miles long the rate was increased to one hundred and twenty-five words, and in subsequent tests it rose to one hundred and thirty words per minute.

Four main instruments are brought into use, two for transmitting and two for receiving the despatches. There is a special alphabet, consisting of eighty-four characters, including capitals, small letters, and figures. In the despatching-office is a

transmitting perforator and a modified automatic Wheatstone. At the other end of the wire is a receiving perforator and an automatic typewriting attachment. The despatch, instead of being punched by hand as in the case of the Wheatstone, is perforated by an instrument not unlike the usual typewriter, though much more compact. This is so constructed that as the tape is run through the machine, the striking of each key makes the proper combination of perforations in each half-inch of character-space allowed. On the transmitting and receiving tapes the different characters appear as small circular perforations. In each half-inch division one letter or numeral is dotted; and it is the arrangement of these dots, their position, and the space between, that determine the letter or numeral. As soon as the message has been punched it is torn off and inserted in the modified automatic Wheatstone transmitter, which performs the functions of an ordinary telegraphic key. The tape is fed by means of an electrical pendulum motor, driving a small star-wheel which engages the central line

of perforations and draws the tape through the machine. While the transmitting instrument is worked by hand, the receiving perforator is actuated by electrical energy, and accurately reproduces the perforations and spaces of the transmitting tape. The automatic transference of these perforated characters to a printing-machine, in order that they may appear in page form in Roman characters, is done by means of a typewriter, the key-levers of which are operated by a combination of five transverse-locking combs and a set of vertically oscillating levers.

The adaptability of Mr Murray's machine for getting through the mass of daily work, especially when there is a glut of messages, has been fully demonstrated. The inventor does not claim that any great saving of labour is effected, but that there is an immense saving of wire. So far the tests of this long-distance and high-speed page-printing telegraph invention has been in every way satisfactory, and its adoption at the postal-telegraph offices may be looked upon as practically settled.

## TWICE BALKED.

SOME ten to fifteen years ago the Republic of Argentina was making very rapid strides in growth and prosperity. The country was then enjoying a temporary boom, which promised to bring that great country almost on a parallel with that greatest of republics farther north. Everywhere railways were being constructed or extended. Foreign capital, principally British, had been poured into the provinces of Buenos Ayres, Santa Fé, and Cordoba, and the country fairly swarmed with engineers, contractors, and navvies, until apparently, and I believe actually, the native element was in a minority as compared with the hosts of Englishmen, Italians, and men of other nationalities who were working at the making of a roadway for the iron horse, the first essential towards progress in a young country.

At that time I was under contract with the Octavia, Novita, and Buenos Ayres Railway Company as engineer of the construction between the towns of Octavia and Novita. These towns were then of very little importance; but to-day they are flourishing, having increased in size and importance at an almost incredible rate, owing chiefly to the railway and the vast wheat-fields it taps, which produce great quantities of grain for the European market. However, virgin prairie or 'camp' then lay for hundreds of leagues on both sides of the railway, and it might almost be said that the natives hardly knew the face of a white man until we disturbed their isolation and the indolent life they had led. I gained some

very valuable experience of railway work during the construction, and also—which was perhaps not quite so valuable—a knowledge of the ways and character of the native, or *gaucho*.

I camped with my staff not far from the point of rails in the district known locally by the name of Padre Muerto. I chose this site for our camp on account of a small *laguna*, or lake, which afforded good duck-shooting. The camp-grass also was of fair quality, so that our horses had a chance of picking up a bit after having just passed through a long tract of salt-country. The earthwork contractor had pitched his camp—which included a gang of about two hundred Italians—some two miles farther ahead.

With so many men on the job, the 'grub' question was, of course, an all-important one. Arrangements were made, as usual, with the *estanciero* through whose camp we were laying the rails to supply us with the butcher-meat we required, and several *gauchos* were employed by Don Manuel Rojas, the *estanciero*, to slaughter the animals and deliver the beef to the contractor's gang. The *gaucho* in charge was one of the most ruffianly specimens of his kind I have come across, and that is saying a good deal.

In the ordinary course of events I had no occasion to come in contact with this brutish native. It so happened, however, that I was travelling between two stations in the brake-van of a material-train, which was stopped to pick up the butcher's gang. Now, we made a point of never allowing these men to travel in the van, as it was the only part of the train in

which the engineers and assistants could travel with any degree of comfort. On this occasion, as usual, the natives were given a 'flat' or open truck on which to travel along with the newly killed beef. There seemed to be some delay about getting the gang on board; and, as we were all in a hurry to get back to camp, I stepped out to ascertain the cause of the delay. On reaching the platform I was confronted by Ignacio, the afore-mentioned ruffian, who pushed past me muttering something to the effect that he wouldn't travel *como un perro* ('like a dog'), and swaggered into the van.

As it was the duty of the guard to turn out the intruder, I did not pay much attention to his growling; and just then the guard, on seeing me looking along the train, gave the signal to the driver, and we went ahead.

When the guard swung himself on to the foot-board I saw from his face that he had a grievance; and he no sooner got on board than he informed me, with many exclamations in mingled Spanish and Italian, that this *bruto* Ignacio refused to travel except in the van. 'The worst of it is,' added the guard in a low voice, '*el canallo* would put a knife into me as soon as look at me.'

I felt bound to back up the guard, who had been instructed repeatedly not to allow *gauchos* into the van; so I went along with him, and in as diplomatic a way as possible told Ignacio that the van was reserved for the engineers.

'*Si, señor!*' was all the reply vouchsafed to me by the native, and that in a tone of voice which was in itself an insult.

'Stop the train,' I said, turning to the guard.

The train was brought up with a jerk as the driver caught sight of our signal.

'Get down!' I commanded the *gaucha*.

'*No me bajo*' ('I will not get down'), he replied.

Although feeling very irate, I kept my temper as best I could. It didn't suit me to have a row with this blackguard, so I turned over in my mind how to get the better of him. I remembered that some five kilometres ahead there was a loop-line or siding for shunting purposes, and a brilliant idea at once suggested itself.

'All right,' I said to Ignacio; 'but of course you will have to take the consequences.'

I then took the guard aside and gave him certain instructions. A grin of satisfaction spread across that individual's face as he went along to the engine-driver to explain matters.

Accompanied by my assistant I betook myself to the front platform of the van, where we were presently joined by the guard, and the train once more proceeded.

The *gaucha* was now left in solitary possession of the van, the door of which, at the end of the train, was closed but not locked. The guard now inserted the key as quietly as possible, and locked the door of the van.

On nearing the siding the train was slowed down sufficiently to allow the fireman to run ahead and change the points, and the train rolled into the siding. We now passed from the platform of the van to the truck directly in front of it; and at a favourable moment, when the train had reached the middle of the siding, the coupling-chain between the truck and the van was cast off, a signal given to the driver, and we forged ahead, leaving friend Ignacio and the van in solitary grandeur, ten kilometres from the next station and several leagues from any *estancio*.

The train was well clear of the siding before the native rushed out of the van; and it was with unmitigated satisfaction that we saw his furious gesticulations when he comprehended the trick played upon him. His companions in charge of the beef were hugely tickled at the situation, and I gathered from this that Ignacio was by no means a favourite with his own men.

At the next station we wired down the line giving instructions for the van to be brought on by the next day's train. On arriving at our camp I related the occurrence to the fellows there, who of course enjoyed the joke played off upon the wily *gaucha*. Then, for the time being, I forgot all about the incident.

Now for the sequel. During several weeks thereafter my attention was fully occupied with the work on hand. Then a report was given in by one of the engine-drivers to the effect that a fencing-post had been found lying across the line at kilometre one hundred and fifty; but the cow-catcher fortunately cleared the line. The post, I thought, must have slipped off the load brought out the previous day. Two days later, however, another report was handed in, stating that a steel sleeper had been found lying across the track a short distance from the spot where the post had been found. On this occasion the driver was keeping a smart lookout ahead, and he spotted the obstruction in time to stop the train. Thinking it was high time to make a move to prevent a serious derailment, I held a council of war, in which several *capataces* and train-guards took part. One of these men told me that there was a *pulperia*, or drinking-booth, about a league distant from that point of the line, and situated on the camp of Don Manuel Rojas.

These *pulperias*, which are plentifully distributed about the country, are known to be the rendezvous of all the *gauchos* in the district. The natives meet there on a Sunday or feast-day to run races, play the game of *taba*, gamble, and get drunk on the vilest of liquor. At these meetings half the murders done in the country are committed by the *gauchos*, who, when in their cups, are perhaps the most dangerously vindictive and unscrupulous blackguards in existence. As every *gaucha* carries a knife and knows how to use it on the slightest provocation, it is no wonder that stabbing cases are as common in these places as pocket-picking

is in London. I very naturally connected the attempts to wreck our trains with the habitués of this gambling hell, and resolved to pay a visit to Don Manuel Rojas, who was known to be a very decent sort, and enlist his influence in order to prevent a recurrence of the outrage.

On the following day I rode over to Don Manuel's *estancia*, La Estella. I found that gentleman taking life with his customary ease. I was received with great courtesy, and presently lay on a deck-chair alongside my host, while a good-looking *china* (pronounced 'cheena'—that is, half-breed) girl served the inevitable *maté*. Cigarettes were in full blast before I ventured to inform Don Manuel of the object of my visit; and his indignation on hearing my complaint was undoubtedly genuine. He vowed in sufficiently strong language that he would put a stop to such practices in his neighbourhood. '*Me extraño*' ('It surprises me'), he exclaimed, 'that such a thing should have happened on my camp. As you know, Don Carlos,' he continued, 'I am *juez* [judge] of this district, and, *carrumba!* if I can lay hands on the animal who has done this, he will pay dearly for it. *Pero mire*, Don Carlos,' he continued, 'did you not have some disagreement with my *capataz* Ignacio the other day?'

'Ah! *si*,' I replied, remembering the occurrence; 'but surely one of your own men would not dare to do such a thing?'

'But Ignacio doesn't work for me any longer,' replied Don Manuel. 'You see, he told a long story about not being allowed by you to travel in the train, and I said that if he couldn't work amicably with the *Ingleses* he had better find work elsewhere.'

'Oho!' I said. 'Ignacio, no doubt, wants his revenge, does he?' Then I laughingly told Don Manuel how we served him.

'*Qué rico!*' ('How rich!') he cried after listening to the story of how Ignacio was cast adrift. '*Bien hecho!*' ('Well done!') '*amigo* Carlos.' '*Muy bien*' ('Very well'), he went on as his face again became hard, 'I shall soon fix the matter. On Sunday next there will be races at the *pulperia*. You must meet me there at, say, four o'clock in the afternoon, and never fear but that I will *arreglar este* Ignacio.'

I promised to do as he suggested, and after many assurances of goodwill and so on, I was permitted to take my departure.

As a result of the arrangement, on the following Sunday afternoon I cantered over to the *pulperia* shortly after four o'clock, fully expecting to find Don Manuel there. As I neared the mud-hut which did duty as storehouse and bar, I saw that the usual motley crew were disporting themselves about the premises. The racing was evidently over. Perhaps twenty horses were tethered to the *palenque*, while their owners were amusing themselves, some by playing *taba*, and others were lying stretched in the shade of a solitary tree, smoking

the inevitable cigarette while they watched the players. I fully expected to hear the usual uproar proceeding from the drinking-shop as I rode up; but just then there must have been an unusual lull, which I concluded was due to the presence of Don Manuel. However, to make sure, I rode up to the nearest *gaucho* and asked, 'Is Don Manuel in the *pulperia*?'

'*Si, señor gringo*' (contemptuous name applied to foreigners), the native replied, with a drunken swagger.

His insolent manner, I suppose, more than his reply, called forth a derisive laugh from the crowd. The players had suspended their game as I approached, and they were evidently in a mood to be amused by trifles.

Supposing that Don Manuel Rojas must be in the *pulperia*, I tethered my horse, and, paying no attention to the facetious remarks of the natives, walked over to the house. I discovered afterwards that the owner of the *pulperia* was also called Don Manuel; so the *gaucho* I had questioned probably believed that my query referred to him.

On pushing open the door of the hut a roar of laughter greeted me, followed by a dead silence as the occupants of the room saw I had entered. Only when my eyes became accustomed to the smoke-laden atmosphere could I distinguish the crowd of ruffianly faces. A moment later I saw the bloodshot eyes of Ignacio blazing into mine; he had evidently been drinking hard. In fact, the whole crew were in more or less advanced stages of intoxication. Evidently Rojas had not arrived.

'*Carrumba, señores! Hablar del diablo*' ('Speak of the devil'), were the first words to break the silence. Ignacio spoke, and his Spanish version of the well-known proverb was evidently connected with my appearance.

I must confess that I began to wish myself anywhere else; but I also knew that I must put a good face on the situation, and hoped that the timely arrival of Don Manuel Rojas would terminate the unpleasantness of my position.

'Hullo, Ignacio!' I said, nodding towards him as I walked up to the bar, and in a loud voice asked the tender if Don Manuel Rojas had not arrived.

'No, *señor*,' was the reply.

'Ah! then I shall wait for him, as he promised to meet me here at four o'clock.'

I noticed that some of the *gauchos* looked less glaringly insolent after they heard my question; but my enemy Ignacio was either too drunk to hear, or, if he heard, too enraged to heed. I ordered a drink, and as it was being served kept an eye on the movements of the drunken beast, who evidently meant mischief. I saw his hand loosen in its sheath the silver-handled *facon*, or long double-edged knife, with which he was armed. Then I put my fingers into my right-hand waistcoat pocket, where I carried a derringer pistol, the two barrels loaded with the usual heavy ball-

cartridges. I thanked my stars that I had taken the precaution to put the small but effective weapon there before starting. However, Ignacio evidently had no intention of attacking me without having duly enjoyed the situation.

'Señores!' he cried oratorically, 'this is the same *gringo*, of whom I have just told you, who left me planted in middle camp, on foot, five leagues from my house. 'Si, señores!' he continued, with a drunken and diabolical oath; 'so you can imagine with what pleasure I shall shake hands with him.'

As he spoke he advanced a grimy paw as though to clasp mine.

I saw his ruse, however. A vision of my severed hand lying on the floor warned me to grip the butt of my derringer.

'You refuse me your hand, you — *gringo*!' he yelled. '*Yo le enseñare*' ('I'll teach you'), he panted as he drew his *facon*.

I confess that I am not a man of iron nerve, and must say that I felt as if growing white and cold when I realised it would be necessary to shoot the brute before me to prevent that foot-long burnished steel knife being inserted in my body with deadly effect. I resolved, however, with a calmness which I had not thought myself capable, that I would use my pistol only as a last resort. What I feared most was that the native would throw his knife, a practice in which these men are so clever that they can hit any desired spot at five or six paces with unerring aim and most deadly effect.

I can see the picture quite clearly even now. The slanting rays of the sun fell in bars and patches on the whitewashed wall on my right, as it was prevented from blazing in at the window in one unbroken square by the crowd of *gauchos* who had left their tamer sports to witness the *matanza* of a *gringo*.

The *gaucho* Ignacio, with murder in his heart and in his bloodshot eyes, stood in the middle of the room, his finger feeling the point of the knife, the silver handle gripped by his sinewy right hand. The onlookers had withdrawn to the sides of the room and out of the line of fire in case I should prove to be armed; and I am safe in saying that the same lust for blood which encourages the torturing and final slaughter of a helpless bull in the ring was in the heart of each. They were on the tiptoe of expectation, and no doubt already pictured me lying bleeding on the floor.

The strain on my eyes was now becoming painful with watching my would-be murderer's every action, and I felt my nerves would soon fail me if the tension they were undergoing were not relaxed. But there was one more drop required to fill the cup of enjoyment which Ignacio was bent on drinking to the dregs, one more dig of malice to administer before sending home that final and deadly thrust.

'Ho! ho!' he cried maliciously; 'you wonder who it is that is trying to smash up your — engines? Well, well! this is going to be better sport than derailing trains.'

He balanced the knife in his hand as if to throw it; but his jaw dropped as I covered him with my derringer, and —

There was a movement amongst those blocking the doorway, and the jingle of a spurred heel.

'*Alto!*' ('Halt!')

The one harsh word burst into the strained silence with an incredible shock. Every eye in the room was flashed in the direction whence it came. There stood the commanding figure of Don Manuel Rojas, his hand, holding his *revenue*, or short whip, pointing in our direction.

'Seize that man,' he commanded, indicating Ignacio, as two soldiers pushed their way into the room.

A moment later I had the satisfaction of seeing Ignacio led out by the hardly less ruffian-looking soldiers, while I gulped down the glass of cognac which still stood on the counter.

Luckily Don Manuel had overheard the words in which Ignacio confessed himself to be the perpetrator of the attempts to wreck our trains, and subsequently a local paper announced that the *gaucho* had been condemned to undergo five years' imprisonment, which I sincerely hope may have had a salutary effect on his revengeful disposition.

#### SUMMER IN THE HEBRIDES.

HALF October, all September,  
Half of August: you remember  
What a time for you and me,  
Sailing on the Hebrid sea;  
Sailing on from isle to isle,  
Threading strait and narrow kyle,  
Spying o'er the open main  
Severed summits link again;  
Pleased to watch the waters sleep  
Round Iona, green and deep;  
Pleased to watch the waters roar,  
Lashed on Seavaig's iron shore.

Pleasant summer scenes like these,  
Bowers of the Hesperides,  
On the sense return again  
Through the fog and London rain.  
Dearest, were it well that we,  
Hand in hand, light-heartedly,  
Running to a prosperous gale,  
Round the west should ever sail?  
Pushing our adventurous bark  
Far from 'Ronin's mountains dark';  
Far beyond the racing seas  
That vex the Outer Hebrides;  
Far beyond the frown and smile  
Of St Kilda's changeful isle;  
Till on our astonished eyes  
Strange new Hebrides arise.

# Chambers's Journal

## SIXTH SERIES.

### MRS HUGH MILLER'S JOURNAL.

EDITED BY HER GRANDDAUGHTER.

PART IV.—CONCLUSION.

(Continued from page 464, Part 55, *Chambers's Journal*.)

**T**HE great grief of our early married life and residence in Cromarty was the loss of our darling child. She was a delight and wonder to Hugh above all wonders. Her little smiles and caresses sent him always away to his daily toil with a lighter heart. When he took smallpox, I, of course, slept on a couch in his room and was with him night and day; but the great privation was that he could not see her. We ventured when he was mending to open the room door and let him look at her across the entrance lobby, and to allow her to stretch out her little arms to him. Her own illness began soon after. It was a very tedious one connected with teething, and lasting nine or ten months. All our mutual recreations and many of my employments, including a school for fisher-lads, which I had taught for some years at eight every evening, had to be given up. In the spring of 1839 I had a close nursing of several weeks. Then there was a marked amendment. One lovely evening in April I went out for the first time that spring to breathe the air of the hill. When I returned I found the child, then seventeen months old, in the nurse's arms at the attic window, from which she used to greet her papa when he came up the street. She had been planting a little garden in the window-sill of polyanthus, primroses, and other spring flowers. When she saw me she pushed them away with the plaintive "Awa, awa," she used to utter, and laid her head on my breast. The next time she looked up it was to push my head backwards with her little hand, while a startled, inquiring, almost terrible look came into her lovely eyes. All the time she lay dying—three days and three nights—her father was prostrate in the dust before God in an agony of tears. Whether he performed his daily bank duties, or any part of them, I

do not remember; but such a personification of David the king at a like mournful time it is impossible to imagine. All the strong man was bowed down. He wept; he mourned; he fasted; he prayed. He entreated God for her life. Yet when she was taken away a calm and implicit submission to the Divine will succeeded, although still his eyes were fountains of tears. Never again in the course of his life was he thus affected. He was an affectionate father, and some of his children were at times near death; but he never again lost thus the calmness and dignity, the natural equipoise as it were, of his manhood. He made the little headstone for his darling child himself. It was the last time he ever put chisel on stone.

'We buried it,' wrote Hugh Miller in his autobiography, 'beside the old chapel of St Regulus, with the deep rich woods all around, save where an opening in front commands the distant land and the blue sea; and where the daisies, which it had learned to love, mottled, star-like, the mossy mounds; and where birds, whose songs its ear had become skilful enough to distinguish, pour their notes over its little grave.' It was there in the churchyard hallowed by so many associations of joy, and now of sorrow, that Mrs Miller wrote the pathetic little poem quoted in *Schools and Schoolmasters*:

Thou'rt 'awa, awa' from thy mother's side,  
And 'awa, awa' from thy father's knee;  
Thou'rt 'awa' from our blessing, our care, our caressing,  
But 'awa' from our hearts thou wilt never be.

Thou'rt 'awa, awa' from the bursting spring-time  
Tho' o'er thy head its green boughs wave;  
The lambs are leaving their little footprints  
Upon the turf of thy new-made grave.

It was very soon after this that Hugh Miller became absorbed in what was then called the

Church Question. In May of this same year he wrote his *Letter to Lord Brougham*; and hoping that it might be of some little service on the popular side, he sent it to Mr Robert Paul, of Edinburgh, asking him to try to find a publisher for it. 'The price,' he wrote, 'may be very low; the writer's interest in it will not add to the expense; it is an offering for the altar.' Dr Candlish tells how a few days after this he met Mr Paul in the street, who 'in a casual, off-hand manner' told him of the manuscript, and asked him to look at it. 'I suppose he mentioned Mr Miller's name,' writes the Doctor; 'but I had not heard of him before. I took the manuscript home and laid it aside, intending to give a cursory glance over it in the course of a day or two, and then return it; certainly expecting to find nothing remarkable in it. . . . That same evening, being alone—for I recollect that my family were in the country—and being somewhat dull and listless, I thought I might as well look at the manuscript Mr Paul had given me. I began to read it in a thoroughly indifferent mood. I never can forget the rapture—for it was nothing short of that—into which the first pages threw me. I finished the reading in a state of great excitement; so much so that, though it was late, I could not rest till I had hastened with the manuscript to Mr Dunlop, beseeching him to read it that very night. The following day Mr Dunlop and I met with Mr Paul and a few friends, and either then or a few days thereafter it was agreed to ask Mr Miller to become editor of the *Witness* newspaper, then about to be started.'

Mr Paul wrote to Hugh Miller asking him to come up to Edinburgh on important business, but not telling what exactly it concerned. As Mrs Miller was in need of a change of air, Hugh asked Mr Paul kindly to find lodgings for both of them, and Mr Paul replied by cordially inviting them to his house in Melville Street; and so, not knowing how profoundly his life's current was to be changed, Hugh Miller went to Edinburgh.

'To our surprise,' writes Mrs Miller in the manuscript, 'Hugh was looked upon as a lion—a sort of remarkable phenomenon. So far as I could understand the matter—and I happened to meet with a few people *not* of the "non-intrusion" way of thinking—things had been very much asleep, and the question had excited but a faint and feeble interest. Chalmers and Candlish had written; but the gist of the matter was little understood. It was not from the clerical but the lay aspect of the subject that the public mind was to take fire. To find himself a leader on a great public question was a position that Hugh had never for a moment contemplated. He shrank from anything like public life, the embroilments and perplexities of public questions being exactly that which he would have wished most carefully to avoid. Had any sort of attention been paid to

him as a literary man, to that he had been in some manner accustomed, and he would have been noways surprised. His *Traditions of Cromarty* had been published and had been well received, and he was engaged in writing for respectable periodicals, while the consciousness of an innate power of literary achievement and success must have been strong within him. But he had written the *Letter to Lord Brougham* in all simplicity, without the least idea of being moved from his quietude and repose. It was a subject that touched all personal traditions and sympathies of his life. Old Donald Roy of Nigg (in Ross-shire) was one of the heroes of his boyhood. That old man had left the Church of Scotland under protest. All Hugh's feelings of indignation against the wrong about to be perpetrated were aroused. To him the question had a personal and not a political aspect. The same subject may be regarded in these two vastly different ways: the member of Parliament who votes for Free Trade in order to keep his seat or strengthen his party is at one with the poor man who is looking at the increasing or diminishing loaf on his table for himself and his children. (Yet they regard the matter from very different standpoints.) So Hugh's first views on the subject of his Church being kept open to the popular voice in the selection of pastors might be the narrowest, but were beyond all question the most intense. But beyond this simple expression, as a unit of the people interested, he had never thought of advancing.

'We enjoyed the time of our sojourn with Mr Paul and his family very much. There was, of course, a famous dinner-party at which we were introduced to Dr Cunningham, Dr Candlish, Dr Abercromby, and others. We were very much pleased and gratified by the kindly and friendly tone which prevailed as to the real business of coming to Edinburgh. Mr Paul complained that it progressed but slowly. He could not get Hugh brought to definite terms. The truth was that, as might be expected, he fought shy. The cause was a great cause, and his heart was in it; but the change was sudden and startling, and the responsibility at such a crisis was tremendous. Then he thought himself unfitted by nature, and he felt himself to be so by habit, for any public sphere. He to be the editor of a newspaper when he scarce ever read one! When compelled, he looked at the latest news for political intelligence, scarce ever otherwise. Whatever his literary talent was, he was sure it did not lie that way.

'Surely one cannot wonder at his backwardness when so much was at stake for himself and others. The failure of the first newspaper which was definitely instituted to advocate the cause of the people and the Freedom of the Church would not certainly have ensured the failure of the cause; but it would have been a sad discomfiture and sore disgrace. "It did not

follow as a matter of course," he argued, "that because a man might have considerable power of mind and literary ability he was therefore able to conduct a newspaper." Coleridge, Leigh Hunt, &c. had tried it, and had failed. What power had he to succeed that they wanted? I was, as usual, sanguine. Perhaps I did not see all the difficulties. My confidence in his powers was greater than his own; my appreciation of the position, from the inferior grade of mind, was less. I see it, now that the din of conflict and the dire results of the battle are before me, better than I did then. Whether this was best or not I cannot say. If I had been more clear-sighted I, too, might have shrunk back in dismay, and might not have used what influence I had in the onward direction.

'On the 25th of November 1839 God made up to us in some measure for the loss we had sustained by the birth of another girl. She was baptized by Mr Stewart in the parish church by the name of Harriet, the name of her father's mother. It had been agreed that the *Witness* was to start at the New Year of 1840; therefore Hugh prepared to leave for Edinburgh in less than a month after his child was born. There was then no railway to the North, and the readiest and most convenient mode of egress from Cromarty was by sea; but it was the month of December, and the very depth of winter, and the young infant and myself were feeble for such an undertaking, so it was arranged that I should remain till the following spring, and that Hugh should go into lodgings. So Hugh set forth on his knight-errantry alone.

'The gulf that separated the life after the year 1840 and that before it was indeed a very wide one. I know not anywhere else an instance of a man being apparently not one individual but two. During the foregoing portion of Hugh's life repose and serenity had been the conditions of his being; mildness was the expression of his countenance—extreme gentleness of his manners. I remember the great amusement caused in our circle in Cromarty by the remark of a little portrait-painter, who had spent most of his time in Italy and who spoke a kind of mongrel English, that "Miller had the most infuriated expression" he ever saw. It was his eye at which the painter looked, and he saw there the capacity for enthusiasm—the divine *fureur* which is always characteristic of genius. But as applicable to his general expression and deportment, the mirth excited by the remark shows how wide it was of the reality. In his inner sphere of thought he inhabited constantly—not sometimes but always—that higher and nobler world, in which he hoped to be always left to dwell. His findings in geology gave a sort of vent to his day-dreams which seemed to piece the outer and inner life together.

While breaking open his specimens or thinking over them at his work, he was intensely happy—the happiness of an unruffled spirit at peace with God and all men; and he drank daily deep draughts of increasing knowledge from nature around him and from the magnificent visions of past creation which opened themselves up to him. For it is a curious fact that Hugh had no geological books to instruct him. Now I think of it, it seems odd, yet is nevertheless true, that when I wanted some initiation into the mysteries of the science he had not one treatise to give me. I had to get some volumes of Lyell's for myself. Such as he had consisted only of old odd volumes full of monstrosities and absurdities, such as *Tchamed on the Wonders of the Sea*, which pleased him by their air of traditional extravagance: a proof this, *en passant*, of the reality of geological facts and inductions, that they may be rediscovered and reconstructed by solitary individuals, just as the discovery of a planet has taken place in two different parts of the world at once. To a mind like Hugh's, so tenacious of facts, yet with an imagination capable of soaring so far beyond them in its reconstructive power, what the wonders of the shore must have been when those visions of past creation first unveiled themselves to him may be readily conceived. But independent of these, a serene happiness and tranquillity was the normal temperament of his mind. I believe it would have continued so to the end of his days but for shattered nerves and disease of the brain. Of the aspirations of ambition to trouble him he had none; or, if he had any, they were of that tranquil literary kind which had every reasonable hope of being gratified. To dress better, to live in a better house, to have daintier fare—all these were things to him as if they were not. Indeed, the absence of that ordinary kind of ambition in him might be said to amount to a fault. I might want respectable tables and chairs, and take pleasure in painting and garnishing my house, and he might look upon all this as something to be expected in the feminine gender, and to be tolerated accordingly; but, for himself, he professed just what he felt—to be content with a table, a chair, and a pot, with a little fire in his grate and a little meat to cook on it.

'He took pleasure when he could—for that was rare—in sitting with fossil-shelves and bookshelves around him, and with a heap of literary confusion about, which was order to him, and which no hands might touch. And if I came in and sat on his knee and talked to him a little, that was his paradise. But of personal ambition, other than to write something which men would not willingly let die, he had not a single grain. So in setting his face toward the metropolis, there was none of that desire to rise in life, that appetite for personal applause and distinction

which might have made the difficulty and the struggle appear less.'

Here the manuscript ends somewhat abruptly. Henceforward Hugh Miller's life was to be lived amid the storm and stress of a great ecclesiastical upheaval, not any more in the quiet and peace of the little seaport town, with its fair surroundings and its kind and loving hearts. Mrs Miller refers to the great change in her husband that this transplanting brought about. No one could be more utterly relentless, it seemed, in his castigation of an opponent, no one more keenly stinging and caustic in the manner of giving it. Yet the old gentle nature was always there deep down, and it was always the *view*, the *opinion* he really attacked, not the *man*. 'If you want me to crush any one,' he would say, half in jest and half in earnest, 'don't let me see him.'

Dr Guthrie used to tell how sometimes he would try to draw Hugh Miller out for the benefit of a dinner-table of admirers; but as surely as there was a suspicion of lionising, so surely would he withdraw into his shell. Yet among intimates his charm was always the same. Among his closest friends in Edinburgh was Mr Makgill Crichton of Rankeillour. At his house Hugh Miller was as much himself as he had been in the little circle in Cromarty. There are stories told of long, fascinating winter-evening talks by the library fire at Rankeillour, when Mr Makgill Crichton, Sir David Brewster, and one or two others would sit till all hours, while Hugh Miller enthralled them by eerie tales of the supernatural, so vivid and realistic that Sir

David would insist on being escorted every step of the way to his bedroom door when the party broke up in the small hours of the morning.

It might have been expected that the sudden change from his quiet life in Cromarty to the position of a public leader, admired and courted, as he came to be, by all classes of society, might have spoiled him; but it does not seem to have done so. There were many ways in which he changed little in his new life. Personally he seems to have been always rather shy and proud, hating to be made much of, and persistently refusing invitations to great houses. A remark Mrs Miller used to make on the scrupulous integrity that made him fear to incur even a sixpenny debt recalls Dr Guthrie's account of an episode which took place in 1855, the year before his death. He was weary and overworked, and some of his friends were anxious on his behalf, and hailed with joy an offer made him by Lord Breadalbane of a small Government post bringing in about eight hundred pounds a year, and offering him the opportunity of much-needed rest; for, although the money responsibilities were heavy, the actual duties were light. Dr Guthrie was made the bearer of the offer to Hugh Miller, and they paced up and down the street outside his door considering it, the one urging, the other thinking and hesitating. At last Hugh Miller said, 'My powers are not what they were. I could not take the responsibility of having so much money pass through my hands. I cannot accept it.' Dr Guthrie thought it might have saved him from the tragedy that came afterwards.

## PRINCE ADRIAN OF ZELL

### CHAPTER IV.—A BRIEF PAUSE.

MR BARROWS had been placed in a difficult position. Curiosity, and some better emotion, had urged him forward, despite the fact that he had long ago cut himself off from all connection with Styria and the Styrians, and had even ceased to feel any particular interest in their affairs. He now felt vaguely that he had entered upon a course of which he could not see the end. Had he been able to see the end that first step would never have been taken.

The Countess Hamar had received his suggestion as a gift of Providence. The events of recent months had broken down both her health and her spirit, for despair had been added to grief, and grief piled upon despair. Never a woman of strong mind, her fortitude and even her natural pride had given way at the realisation that she was left with her daughter without resources and without friends in an alien land; and as a natural

consequence, her thoughts had even begun to turn to their persistent enemy as an only hope. But then, at the last, came a man who had seen her husband's name upon a cross and had recognised it. He had sought them out, had spoken as a friend, and had even shown an acquaintance with their native tongue. Further, with a quiet tact that was in itself reassuring, he had placed aside all barriers and had learned all that there was to know of their story. Then he had made a suggestion which seemed to offer a temporary salvation, and hope had returned. Sympathy, knowledge, suggestion—all were forthcoming, all that they needed most. They had come to Welding.

It was dusk when they reached the town, and Mr Barrows led them direct through the quiet streets to the welcome which awaited them. As soon as the door of Hadfield's house had closed they found themselves secure in the atmosphere of a home.

The way had been well prepared, and every-

thing went smoothly. The 'little woman,' as Barrows was accustomed to call Mrs Hadfield, knew all the arts of homeliness, and was possessed of no small share of tact. Nor was there any awkwardness of greeting, for even that had been smoothed away beforehand; 'Mrs Mathias' and her daughter took their places in the little household as guests who had been looked for.

To the Countess the change of atmosphere and the relief brought a sudden breakdown after the strain of the past days and the burden of anxiety. On the morning after their arrival she was prostrate, and medical advice had to be called in. For a week the utmost care was necessary, and even after the first danger had passed there was still need for watchful attendance and sympathy.

In about a fortnight, however, the Countess was able to come downstairs. That was on a brilliant afternoon in May. Mr Barrows, who had been most helpful throughout, presently came over from his own garden to join the little group that sat at the door of Hadfield's dining-room, in the sunshine.

He received a grateful welcome, and opened a conversation in that quiet, sympathetic manner which he had used on the occasion of their first meeting. The range of talk, however, was limited, for the past was too painful to be discussed, while by tacit agreement the questions of the future were left until the health of the Countess should be in a better condition. He spoke of his little garden, to which he had been giving his attention during the intervening days in an unusually restless and intermittent fashion; and he listened, with much apparent interest, to a description of their gardens at Cronia. As he listened he watched the face of the younger woman, who was sitting before him; and he became so absorbed in this that he ceased to make any remark, so that presently a silence fell. He was thinking, indeed, of this girl's pursuer, the man whose face betrayed so much of the brute; and as he compared them an angry indignation stirred his heart, and was reflected in his face. The Countess looked at him, and saw it.

'What is it, my friend?' she asked gently. 'Of what are you thinking?'

'I was thinking of Count Philip,' said Mr Barrows hastily. He spoke without thought, and regretted it immediately. A flush stole over the girl's cheeks and brows; but in a moment she looked up and met his glance. There was confusion in her eyes, but there was no reproach.

'Ah!' said the Countess, 'here, for a while, we do not need to think of him. Let us not do so until we must.'

'Certainly,' agreed Barrows. 'I was very foolish.'

He blamed himself secretly with much more vigour, and felt that it was time for him to go. At that moment Mrs Hadfield came in with some dainty preparation for the invalid, and he took

the opportunity to rise. He walked down towards the garden door, but he did not go alone. The girl rose to go down with him. He fancied that she had guessed his self-reproach. Nor was he mistaken. Edna—for that was her name—said little as they trod the length of Hadfield's garden, and he said less; but when they reached the door she held out her hand with a smile.

'You must not think that we fear any one here,' she said. 'In this home, to which you have brought us, we feel secure.'

'And you are secure!' was the answer that came readily to the man's lips, a reassuring, convenient, and every way suitable answer, but not a true one. Because it would not have been true he did not utter it. He was quite an ordinary man, a man of expediency and not over-particular; but as he looked into her face he felt that he could not do with her what was only expedient and convenient. So he did not answer at all.

'I must tell you what my mother will tell you when she is stronger,' the girl went on quickly—'how grateful we are for what you have done. Some day, when we go back, we shall be able to repay you.'

Here, too, Mr Barrows found himself at a loss. 'When we go back' was the expression she had used, full of the hope of young days, and of the confidence which had not yet fully realised their calamity. He failed to find words, and she took sudden alarm at his silence.

'You do not say!' she cried. 'Don't you think that we shall go back? It is not that?'

There was no answer; but evasion was now absolutely necessary. The fear which he saw come into her eyes spurred Mr Barrows to an effort.

'Go back?' he said, smiling. 'Are you, then, so eager to leave our England?'

The device was successful. 'I did not mean that,' she explained. 'You must not think it. I shall always think of England as this place, and shall always like Englishmen.'

Mr Barrows bowed and smiled playfully. Fearing a return to the other topic, he seized the opportunity to go, and raised the latch of the door. After a few further words she returned to her mother, and he entered his own garden.

'When we go back.' He shook his head as he thought of that remark, for he knew that unless a miracle took place there could be no going back. After a public denunciation and a public flight, the Styrian Government could show no weakness, and could not be expected to show any, further than in the promise which had been given to the Brodes. That was the only way of going back, and even the matter-of-fact and easy-going Mr Barrows felt his cheek burn at the thought of it.

The next hour was a troubled one for him. He sat at his window with a cigar, and now and

again a word or a sentence reached him in the clear voice which he was already beginning to know so well. There was no laughter, for sorrow was too near; but the tones had life and hope and affection in them, and they jarred upon the spirit of the man who knew what clouds overhung. As he listened his mood grew darker; and it was bitter enough when Hadfield came over in the evening.

Since the arrival of the strangers, that young man had lived in a state of half-subdued excitement. It seemed to him that his plain and straightforward existence had been transformed, or that he had stepped over its borders into a realm of stir and romance, peopled with the mighty. He had a great respect for the mighty, and it was no small thing to find that his next-door neighbour was the one-time secretary to a prince and a partner in revolutions; it was naturally a still greater thing that he should be sheltering under his own roof a countess and the daughter of a countess. It was as much as he could do to keep the secret, and a hundred times a day he feasted his imagination upon the scene which would follow if he should drop it into the serene atmosphere of his office.

'I say,' he remarked now, as he took a seat at his neighbour's side, 'I can't help being glad that you brought them to us. They're awfully nice people.'

'Really?' said Mr Barrows absently.

'Yes. There's no nonsense about them, you know, and no pride. No one would think they were of the nobility.'

Mr Barrows smiled, perhaps at Hadfield's simple conception of the manner in which the pride of race and place might have displayed itself.

Hadfield went on: 'The only thing is that they're so sad. The Countess especially seems very much depressed. I wish we could cheer them up.'

'Ah!' said Mr Barrows, his smile vanishing, 'you must remember what trouble they have had, and wait a little.'

Hadfield was struck by his sudden change of tone. Mr Barrows, however, went on, glad perhaps to have an opportunity of expressing some of the bitterness of his mood.

'You asked me,' he said, 'why I was so hard on Prince Adrian in that book. Perhaps you understand it better now, when you have some of his victims in your own house.'

'Why, of course,' said Hadfield. 'This comes about through him.'

'Quite through him. The man who never did any good with his life has been able to do incalculable mischief, even after his death. I could wish him nothing worse than that he should see what he has done.'

'Oh, well,' said Hadfield awkwardly, 'it can't be helped now, you know, and I suppose it will all come right if we only wait a little.'

After he had gone Mr Barrows continued to turn that remark over in his mind. It was as hopeful as Edna's, and showed just as much knowledge of the truth. Then he tried to consider the question, 'What next?' It had haunted him from the first. He knew the character of the Countess's enemies, and felt that they would not lightly give up their purpose. Here was a prize both for the father's greed and the son's passion, and they would do anything to win it. Anything, with them, would mean a great deal. He foresaw a struggle, and a struggle in which all the power was on the other side. Nor was the prospect brighter when he looked at the alternative. Suppose they gave up the chase, or suppose the pursuer failed to find a clue. What was then in store for those two helpless women, strangers in a strange land? Their resources would be exhausted, and that very soon; and there was no hope from their own country. They would suffer poverty, with all its accompaniments. He knew, or at least he could guess, what poverty would mean for this broken woman and this lovely girl. After what had so lately been theirs, they would have to seek some kind of work in order to live. He could do little for them, even if his little would have been accepted, for his income would afford no more than the very modest comforts he now enjoyed. It seemed to him that the situation was a singularly hopeless one.

A few days passed quietly, but there was no lifting of the cloud; and after those few days he was obliged to face a danger which he had failed to count with, and one that became pressing.

It was connected with the health of the Countess. To a certain point she recovered her strength; but there the progress was stayed. As her mind became clearer, the first relief afforded by the new situation passed away, and she began to remember the power of her enemies. Her despondency made her morbid, and she followed her daughter's movements with a despairing look which spoke clearly of fear and terror. This reaction was disastrous in its effects, for it was accompanied by a nervous condition which caused her to start at the sound of the door-bell, and to tremble at the approach of footsteps. This last phase greatly troubled the physician, who decided to consult Mr Barrows.

One morning, therefore, after leaving his patient, he called next door, and found Mr Barrows at his writing-table. He gave a brief outline of the symptoms which troubled him in the Countess.

'This is something I cannot reach,' he said, 'and it is, therefore, all the more serious. She is labouring under some uneasiness which must be dissipated. Have you not observed it?'

Mr Barrows was obliged to admit that he had. After a pause Dr Henslow decided that he must speak more clearly.

'It is having a very grave effect,' he declared. 'In fact, I must tell you that unless some change takes place in this respect I cannot answer for the consequences. She is thoroughly worn down in health, and the strain is too much.'

Dr Henslow's patients were accustomed to say that he was too reserved, and that he did not treat their complaints with sufficient seriousness. Mr Barrows remembered this when he had gone, and saw its significance. He also saw the cause of the evil.

'It is that fellow, of course,' he said to himself. 'After what he has done she has a morbid fear of him, and feels, rather than knows, that he will hunt them down. If he comes, the shock will probably kill her; and if he does not come, the strain will have the same effect. That would be another death to Prince Adrian's account.'

He clenched his hands at the thought. Yet what was to be done? He pondered this new question deeply, and at last arrived at what seemed to be the only possible solution, though even here the hope was very slender. It occurred to him that the pursuer might be met and faced, and even forced to abandon his purpose. Or, if he had already gone, the fact might be ascertained and the Countess's mind relieved by the news.

The latter chance was a very feeble one, and the first meant an ordeal from which he shrank. He already detested and feared Count Philip, knowing fairly well the mingled strength and brutality of his character. This was a task for a strong man, and he was not strong; his, indeed, was a most dangerous weakness—the weakness of one who distrusts himself. He knew that he was not by any means a man of action; yet this course offered just that chance which he felt forced to take.

Naturally his mind dwelt on the alternative—the hope that Count Philip had already given up the pursuit. It was but a frail hope, and it was shattered finally before he had fairly considered it.

As he sat at his table he glanced occasionally into the street. Very few people passed in that quiet spot, and most of those were quite familiar figures. For this reason his attention was caught

presently by the appearance of a person who passed, in a leisurely way, on the other side.

He was of a very commonplace appearance, not in the least unlike one of the half-dozen insurance canvassers or touts who came daily; indeed, he was much more like one of those persons than he required to be in order to play the part. Mr Barrows had an observant eye, and something about this stranger's bearing fitted in with an expectation of his own. He saw the man pass out of sight, but still kept a watch upon the street; and he was not at all surprised, after he had waited ten minutes, to see him pass the window again, this time on the nearer side.

Mr Barrows decided to make sure. Moving nearer to the window, he saw the fellow leave the street once more, and vanish; but he knew that if his suspicions were just the matter was not done with. This time he waited half-an-hour; then he heard brisk footsteps on the pavement, and the same man walked innocently up to Hadfield's gate, opened it, and made straight for the front door. He carried a worn leather bag, which was well stocked, no doubt, with insurance company leaflets or sewing-machine prospectuses. In another moment he would have rung the bell; but before he could do so Mr Barrows had thrown up his window. It was a bay window, and he was face to face with the stranger.

'Not to-day, thank you,' he said pleasantly.

The man stopped, and stared. He raised his hand to the bell.

'No,' said Mr Barrows firmly. 'Not to-day, thank you. You mustn't call to-day, *there*.'

The visitor sought words, but was so utterly taken by surprise by this flank attack that he could not find them. He saw detection in Mr Barrows' look, heard it in his voice, read it in his smile. Without a defence, he retired to the gate, passed out, and made his retreat, looking back once in mingled fear, anger, and amazement.

'Very clumsy indeed,' thought Mr Barrows, closing down his window. 'They do these things much better in Styria! But it is just as I thought. There is only one thing to be done.'

He reflected uneasily upon the way in which he was being led from one step to another. But there was no one else to go!

## THE COMING RUSH TO SOUTH AFRICA.

FAMOUS phrase of the last generation, 'Young man, go West!' is likely in the near future to lose its significance for Britons. Certain it is that, with the cessation of hostilities and the consequent removal of martial law restrictions, the tide of emigration will follow the flag, and an unprecedented rush set in to the El Dorado in the

South recently acquired by an effusion of blood and expenditure of treasure only justified by the fact that the war was deliberately forced on us. Therefore, a few hints may not be unwelcome.

Before the writer's recent return to England, after an absence of some years, he and other residents in the country had reason to deplore the presence in the coast-towns of numbers of Britons who, in their anxiety to be in good

time for the golden future, had rushed out to South Africa, where, on arrival, they were disillusioned by the discovery that for every practical purpose they had better have remained in England for some months longer. Martial law wisely prohibited them from proceeding more than a few miles up-country. Trade and business in the annexed territories were in a condition of coma; and in the coast-towns, where the immigrant was compelled to remain, the cost of living is far greater than in England, and for any and every kind of vacancy which may occasionally present itself the applicants are superabundant.

To those who intend to emigrate to South Africa a word of kindly warning is here offered: Do not be in a hurry. Rest assured that everything will come, improved and mellowed by the delay, to him who waits. Spend the interval in finding out everything that is to be found out about the country which you intend shall be your future home. See that your outfit, while not profuse, is well selected, and above all do not go out 'on spec.' It is not to be expected that every one can go out to a snug appointment secured in advance; but have some fixed ideas as to what you intend, or at least wish, to do—some more or less predetermined plan of campaign. There is, generally speaking, no more hopeless failure than the man who is 'willing to take anything;' he is usually one who can or will do nothing. Having settled what occupation is the most suitable for you, or you desire to follow, ascertain if there is a friend or even acquaintance already in South Africa who could, in some measure, assist or advise you before you sail. Above all, having found something for your right hand to do, do it with all your might; and, having put your hand to the plough, do not turn or even look back, but push steadily on to success and a future competency. Both can be assured to any one possessed of energy and perseverance in the South Africa of the future.

Now, to commence *ab initio*, we shall deal first with the large majority to whom the Rand will be the goal. As is generally known, the three leading steamship lines carrying passengers to South Africa are the Union-Castle of Fenchurch Street, Bullard-King of St Mary Axe, and the Rennie Line. While the first-named has incomparably the largest traffic, the other two have certain special advantages which preclude leaving them out of consideration when the question as to which line shall be chosen comes up for consideration. The fact, however, that the Bullard-King and Rennie boats run direct to Natal without any stoppage at the Cape greatly simplifies the matter of choice. Generally speaking, if it is intended to proceed to Natal direct, or to reach Johannesburg *via* Natal, there is much to be said in favour of travelling by one of these lines; for, although the Union-Castle boats also

reach Durban, it is only after calling at all the Cape Colony ports, with a delay of perhaps two or three days at Capetown; which, of course, means additional expense, as one naturally goes ashore during coaling, &c. Another point for consideration is, that the fares of the Rennie and Bullard-King boats will be found to be considerably lower than those for corresponding classes in the Union-Castle line; and while the boats of the former may be smaller and less ornate, the life on board a trifle more restful, and the table a little less lavish, it is not to be imagined that they are in any way strikingly inferior, for emphatically they are not. The only drawback to the two direct lines mentioned is that they carry no third-class passengers. If it is desired to proceed to Natal in this class, the Union-Castle line becomes a very pleasant 'Hobson's choice.'

A word in passing on the subject of third-class travelling. It is fair to assume that the majority of people desirous of reaching South Africa also desire to do so at as moderate a cost as possible, compatible with comfort. Now, the average second-class fare by intermediate Union-Castle steamer to Natal is twenty-six guineas, and the average third-class four-berth cabin is sixteen guineas, a clear saving of ten guineas. When the writer first went out to South Africa some years ago he travelled third class for reasons of economy, and was so comfortable that he has no hesitation in recommending the adoption of the same course to-day to young men for whom a saving of ten guineas is a consideration; the more so as third-class accommodation has vastly improved of late years.

It is not intended to encumber this article with information which can be more conveniently and fully obtained from the various shipping companies. A few suggestions having been made which may assist in the selection of one particular line, reference will now be made to the provision of a suitable outfit. However, little need be said regarding outfits, for what is used in England is, with few exceptions, used in South Africa. As the writer is only qualified to advise men, the following remarks must be considered as strictly applicable to them.

While an elaborate outfit is undesirable, it is very desirable that, as far as possible, all articles should be of the best quality. Cheap boots, cheap mackintoshes, and cheap clothes are as grass in the oven in the dry Transvaal climate, and a sheer waste of money. A heavy greatcoat is hardly necessary, and might with advantage be replaced by a covert-coat; while a really *waterproof* waterproof is essential, as also one good pair of shooting or field boots, even for a town life, South Africa's rain being as vehement as its sun. In choosing suits, it should be borne in mind that one of the Transvaal's leading characteristics is a prevalence of red, sandy dust

during high winds; therefore, if one or two suits of reddish-brown homespun are provided, the spoiling of clothes by dust-storms will be reduced to a minimum. Owing to this dust nuisance spotless linen is at a premium; and, as the laundrying by coolies and Kaffirs is frequently of a painfully vigorous character, the wear and tear in shirts is considerable. To counteract this to a great extent, an excellent plan is to procure shirts of the 'reversible-cuff' pattern now so freely advertised. One or two washing suits, preferably of khaki drill, will also be found to save their initial cost over and over again.

Outfit and voyage being disposed of, the next points for consideration are the conditions of life in South Africa in general, and Johannesburg—the Mecca of most South African pilgrims—in particular. Business—and, for the matter of that, social—life in Johannesburg has two very distinct and different phases, namely, town and reef. By the latter term is meant employment and life on one of the many mines on the line of reef, which stretches twenty-five miles east and west of Johannesburg. The work, conditions, and pay at each are so different that it will be necessary to deal with them separately.

Every mine is a little township and community by itself. The leading positions, such as general, battery, cyanide, mine, and compound managers, are, of course, filled by experts who have qualified for the lucrative positions they hold by lengthy experience at their special work; while the actual mining—that is, excavation by drilling and blasting—is in the hands of miners, experts in their way, from the mines of Cornwall and the north-country. While there is no reason why newcomers and novices should not aspire to, and ultimately gain, positions in the higher grades of the gold-mining industry, it would be useless to do more than simply refer to them in an article written especially for 'new chums.' So we give particulars, stating the salaries and duties, of the subordinate positions which even a newcomer might reasonably feel himself competent to fill.

**Storekeeper.**—Twenty pounds to forty pounds per month. Ordering and issue of all mining stores and material, and keeping of books thereant.

**Assistant Storekeeper.**—Fifteen pounds to twenty pounds per month. Assisting storekeeper. The larger mines may employ two or three assistants in the store, the senior usually obtaining promotion on the departure of the storekeeper.

**Timekeeper.**—Fifteen pounds to twenty-five pounds per month. Keeping of native time-tickets, denoting number of shifts worked, and by which the workers are paid.

**Mine Secretary.**—Twenty pounds to fifty pounds per month. Secretarial duties in the mine-office, as apart from the town or transfer office where the share records and transactions are kept. Compilation of statistics dealing with the cost of

working, keeping of all accounts, and making up of pay-sheets. In fact, the manager's adjutant.

**Office Assistants.**—Twelve pounds ten shillings to twenty-five pounds per month. It is from among the office assistants, after they are quite familiar with the work, that the secretary is usually appointed.

**Battery-hands (Amalgamators).**—Fifteen pounds to twenty-five pounds per month. This work, which is largely manual, consisting of the first stage of the recovery of the gold as it passes under the battery stamp-heads, is, of course, technical, but can readily be learnt in three months—during which period merely nominal pay is given. After this hands are graded through various classes; the lucrative and exceedingly responsible position of battery-manager is conferred on senior amalgamators.

**Cyanide-hands.**—Fifteen pounds to twenty-five pounds per month. All above remarks *re* amalgamators apply here, the cyanide being the second or further process of extraction. The hope of every cyanide hand is to become a cyanide manager with forty pounds to sixty pounds per month, and allowances.

**Electrician.**—Twenty pounds to fifty pounds per month. Sole charge of all electrical plant on property, with responsibility for efficient lighting of all surface and underground works.

**Assistant Electricians.**—Fifteen pounds to twenty-five pounds per month. Assistants to above.

There are many other positions—such as carpenters, blacksmiths, &c.—on a mine filled by white men; but the above has been compiled with a view to its utility to the class that will be most likely to read the *Journal*. The storekeepers, timekeepers, secretary, office-assistants, and electricians, unless breakdowns occur, work regular hours, generally from eight in the morning till half-past four in the afternoon. The cyanide and battery hands work in shifts of eight hours on and sixteen off, an arrangement somewhat analogous to the 'dog-watch' on board ship, being adopted to obviate one set of hands always having night-shift turn.

It must not, however, be understood that it is possible to rise from the lower to the higher figure given in the approximate statement of salaries merely by long employment on one property. The lower rate is given on small mines; the higher on larger and richer properties, where the duties are more onerous and the responsibilities greater.

Now for the cost of living. As far as single men are concerned, a very few words will suffice. More fortunate than their town brethren, they obtain a room, with electric-light, free, or at an absolutely nominal rent. Excellent board can be arranged at the mine boarding-house, the usual charge being six pounds per month, and washing costs another sovereign; and with medical fund, recreation-room, and all deductions added, the

total cost of living on a mine, for a bachelor, should not exceed eight pounds per month. The married fare even better. Those on the staff—such as secretary, storekeeper, electrician, engineer, &c.—are always provided with a house on the property rent free, also coal, lighting, and Kaffir labour, so that the actual cost of living is reduced to a minimum—namely, providing furniture, provisions, clothes, education for children, and any luxuries desired.

When the reason for all these special advantages is traced to its source, it will be seen that the effect is due to a very distinct cause. It is essential to the efficient and economical working of the mine that all employes, from the humble Kaffir to the general manager, should reside on the property. This, of course, tends to make life on a mine somewhat restricted, all social pleasures and amusements having to be sought in town; which, when a mine is perhaps twenty miles out, is an item to be considered. Further, high pay on a gold-mine is regarded as a species of insurance. Where gold is being won it is imperative that the employes shall be above suspicion; and the best means to ensure this is to pay well, so that the temptation to steal is minimised or non-existent.

A fair idea having been given of the possibilities and probabilities of a mining career, we will now turn to the town. We find that in town the average salary may be somewhat smaller, and unaugmented by the special advantages which obtain on the reef; but this is more than compensated for by the fact that, although the competition in town is keener, there exist here potentialities and opportunities quite unknown among the mines. On the reef the number of positions to which one may aspire are precisely known; the emoluments, though comfortable, are rigidly limited. In town, however, it is different. There, in the heart of the mêlée and keen spurring competition, the man of action, who sees long vistas of glowing possibilities—not chimerical—rising before him, feels at home. As the bottom of the ladder will have to be negotiated before the top rungs are reached, it will be advisable to restrict data to that referring to the ordinary business and commercial posts more or less accessible to all.

First and foremost comes the Civil Service. This, under the Dutch régime, was a very abstruse scheme, and must perforce be vastly more so in the future. In the past it embraced, *inter alia*, the Postal, Telegraph, and Customs Services, Government Offices, Mining Commissioners' Departments, and Police. It would be quite impossible within the limits of this article to enter into this vast question, the future workings and scope of which are at present so nebulous and tentative. The information, moreover, will no doubt, be shortly procurable in official handbook form.

Clerks in ordinary offices receive from fifteen

pounds to thirty-five pounds monthly, a knowledge of typewriting and shorthand being essential with many employers; while ability to correspond in French or German means a certain advance in salary.

Assistants in stores receive a rate of salary very similar to that of the clerks, the range of necessary attainments being smaller, but the hours longer.

Commercial travelling offers a magnificent and a most remunerative field, save in cases where the square peg has been fitted into a round hole. Travellers are usually engaged under a combined system of salary and commission, which in the hands of a capable and pushing representative of a good house easily reaches fifty pounds or more.

On the Rand mechanics are in clover, one pound a day being readily obtained.

In the banks a somewhat lower rate rules than in the offices, but still one on which it is possible to be very comfortable and yet to save. Tellers are usually started at a minimum of twelve pounds ten shillings or fifteen pounds per month, rising by fixed increments to anything up to seventy or eighty pounds monthly.

One great advantage attaching to town billets is that it is always clearly recognised that the motto for all is 'Excelsior.' Fresh openings at higher rates of salary are always offering themselves, and it is universally understood that an employé, unless indispensable or under agreement, shall be permitted, at the expiration of a reasonable term of notice, to transfer his services to another and more highly paid sphere of labour should he so wish it. This does not mean that the commercial organisation becomes disjointed. Constant change is unavoidable in a new country where the volume of business is ever increasing and new industrial concerns always being floated. This is recognised and allowed for. More latitude is permissible in business circles in South Africa than at home, though fully as high a standard of work is maintained; and what would here be regarded as a rolling-stone disposition is there recognised as a definite forward and upward movement, and an unavoidable phase of commercial advance and exploration.

The above is the 'Cr.' side of the ledger of life in Johannesburg. An inquiry into the items constituting the 'Dr.' side will give a representative idea of things in general. Taking first the case of those who are at present ploughing their furrows alone, the bachelors of the community: Board and lodging are readily procurable at seven pounds to ten pounds per month; washing, one pound to one pound ten shillings; allowance for possible medical attendance, pleasure, &c., three pounds to seven pounds—a monthly expenditure of from eleven pounds to eighteen pounds ten shillings. Thus a single man, receiving what may honestly be described

as the minimum which a white man is ever asked to work for in Johannesburg—namely, twelve pounds ten shillings per month—can, if he wishes, put something by; while those in the higher walks of business life would have no difficulty in saving at least one hundred pounds per annum.

For the information of married men, a slightly ampler scheme is necessary; and as a basis for calculation we will take an average household of one man, his wife, two children, and one native servant: Average rental of a five-roomed house, unfurnished, eight pounds ten shillings; butcher's bill, two pounds fifteen shillings; milk, at sixpence per pint, one pound two shillings and sixpence; grocer's bill, including coal, seven pounds; chemist's bill, ten shillings; wage to Kaffir 'boy' under British rule, two pounds; allowance for rates, &c., three pounds two shillings and sixpence—total, twenty-five pounds. This amount may be accepted as an honest indication of what it should cost per month for a small family in Johannesburg to live, if not in luxury, at least in quiet comfort. While a married man would be precluded from accepting the minor appointments at which a bachelor would be content to start, he is usually a man more advanced in age and business experience, and qualified by these conditions for better appointments, which he can usually expect to obtain. Education, which has not been included in the above schedule, is provided for by numerous public and private schools at moderate fees.

One final word before leaving the Transvaal for a survey of the conditions in the neighbouring colonies of the Cape and Natal.

One often hears it said, 'What is the use of going to the Transvaal? Salaries certainly are higher, but so are expenses.' A moment's reflection will demonstrate the shallowness of such an argument, which only holds good so long as the amount received in salary is not greater than that expended in living. The moment the former exceeds the latter it is obvious that every spare sovereign in South Africa is practically equal to one in England. Indeed, taking the increased and improved openings for investment and legitimate speculation into consideration, it is obvious that they far more than counterbalance the higher relative cost of luxuries and pleasure.

Such towns in the Cape Colony and Natal as Capetown, Port Elizabeth, East London, and Durban are, in their way, but pocket editions of Johannesburg. The business of the Gold Reef City is largely conducted in these towns; her imports pass through them in a ceaseless stream, and emigrants bound for the Rand are compelled to land at one of these ports. Thus the business openings are very similar, though on a far smaller scale, with lower salaries but a decreased cost of living.

The average store assistant in the older colonies receives from ten pounds to seventeen pounds ten shillings per month; the average clerk the same. Civil servants commence at twelve pounds ten shillings, and rise to a maximum of about fifty pounds monthly, in some departments, with, of course, pensions under the present system. The Customs and shipping offices generally open up a wide field; while the railways, which are in South Africa invariably State-owned, are part and parcel of the Civil Services of their respective colonies.

The cost of living in Natal and the Cape Colony in normal times is about seven pounds per month, inclusive, for a single man; and from fifteen to twenty-five pounds for a married couple. Under present circumstances, however, the price of everything is inflated, and all perspectives distorted; therefore intending emigrants are advised to wait till normal conditions again obtain.

It has been impossible to compress within the limits of a magazine article a really comprehensive scheme of advice to emigrants. There are many openings not even indicated here, either from incompetency so to do or lack of space; such as the vast schemes which are mooted for settlement on the land, stock-raising, and agricultural expansion and development, all of which can only be handled at length and by experts. It might, however, be mentioned ere closing that for those who think of settling upon the land, according to Colonel Parrott of the New South Wales Corps of Engineers, there is a fine climate, rich soil, and plentiful rainfall in the Transvaal, and ample water in many parts for irrigation purposes. The amount of Government land in the Orange River Colony is small; in the Transvaal a great area belongs to the Government. The late Mr Rhodes, who formulated a scheme of his own for land settlement, estimated the cost of starting one yeoman upon a dry or pastoral farm at four thousand pounds, and he was of opinion that the introduction of two thousand British farmers to the Transvaal lands would be sufficient to work a social and industrial revolution. The Scottish Settlers' Association (32 York Place, Edinburgh) has already been the means of settling wage-earners, small capitalists, and farm pupils. And for all classes it is of importance to get a knowledge of both the present and past in South Africa. This may be done by a perusal of Dr Theal's *Progress of South Africa in the Century* in 'Chambers's Nineteenth Century Series.' My aim has been as much to interest and suggest as instruct; to assure falterers that for the ambitious, the energetic, and the industrious there is no finer field than South Africa under a newer and purer administration.

## THE LOST GALLEON.

By KATHARINE TYNAN.

IN TWO PARTS.—PART I.

**I**T was not likely the old compact should be remembered except by Bridget, my nurse, and she had been present when my father and the Lord Fitzwalter had joined my baby hand and that of Lady Nesta: a jest of fine gentlemen over the wine, to be forgotten when the Considines of Doon had come low in the world, or to be remembered only by a fond old woman, and she half-crazed because of the misfortunes of those she served, who were dearer to her than her own flesh and blood.

Of our misfortunes I will not speak. My father, Brian Considine, was at rest; and the bailiffs, who had become as familiar about the place as the crows of our old rookery, had winged their flight elsewhere. They had not troubled my father's last hours, God rest him! for I had bled myself and my name dry that every man should have his own, and none have cause to reproach him who was gone.

In which matter I had proved myself in the eyes of many but little of a Considine; for what Considine ever before had taken his debts anything but gaily? I am serious, inheriting the gravity of my mother, a Langton of Langton in the county of Devon, who had loathed the debts, and had indeed, dear soul, died of the trouble of them. At her knee I learnt to hate the load that was fretting her thin. So here I was at twenty-five a free man from my father's creditors, but utterly stripped and bare, so that I knew not whither I must turn to earn so much as should keep the life in me and the few helpless folk dependent on me.

These were, firstly, Bridget, my nurse; secondly, Thady, our old butler, and in these latter days my father's body-servant; thirdly, his son Tim, but the rascal could have earned a living for himself anyhow, and would have gone soldiering with me in Flanders with a joyful heart if I had held myself free to go; fourthly, a number of the halt, the sick, and the blind, little children and old people, who had been fed from Doon since time immemorial; fifthly, those gentle pensioners, the horses and the dogs, mainly old, and in no wise fitted to make a way for themselves in the world.

'Twas wintry weather, and the hills around were covered with snow. Between them the lake was black as steel, excepting where at the opening to the southward the sea came leaping and roaring. Every little pool was frozen, and the trees outside the window were fringed with icicles like old men's beards. But the lake was not

frozen, for the sea-salt in it kept it unfrozen in the hardest weather; and the like of this in our soft climate no man remembered. Great flocks of gulls had come crying about the house. I had ordered food to be set for them, but they were insatiable; they quarrelled among themselves and with the greedy crows, so that the little singing-birds had but one chance to be fed, and that was to snatch a piece when the great birds were quarrelling.

Thady had come in and closed the shutters and heaped the turf on the fire. Happily, for fires we did not want, since the bog was at our door—neither I nor my poor neighbours. As the flame leaped up I surveyed the pleasant room which was yet mine. It was hung with cordovan leather finely tooled and gilt. The parquetté floor was a thing of beauty. The great mantelpiece of inlaid marbles framed a Madonna of Bellini. Yet all these too must go. So many things had been thrown to the wolves that Doon was become an old rat-hole, hardly fit to house us. But no one who trusted me should want while I had these things to excite the greed of a London dealer. And for all of them one had offered great quantities, as it seemed to me, of gold.

'Tis a night for a glimpse of the *Santa Anna*,' said I to Thady.

'On such a night, your honour, it was seen last,' he replied, 'and that was in the lifetime of your great-grandfather. I wish 'twould give up its gold.'

'I'm at one with you there, Thady,' I made quick reply, 'for it was never more badly needed.'

'Lord!' said he, 'to think of the Don's doubloons and pieces of eight and gold plate and silver plate blackening in the brine, and Doon and the Considines vanishing from earth because of the need of them.'

'I have no money to sink in search of the treasure-ship,' said I.

'Nay, your honour,' said he, 'too much has gone that way already. You might believe the ship had never been there but that so many witnessed the contrary, let alone that the ghost of her drives on Carrigadoon hull foremost like a bull in act to charge. Yet in the great depths of the lake none has ever discovered her, though we chartered many a diver in days gone by. Just to think the Don's parchment rots for useless!'

'Ay, good gentleman!' said I. 'He would do us a good turn because we had saved him, cast up by the waves, from the fate that befell his

friends over at Smerwick. He could not have thought his galleon would have vanished like a pebble sucked in by the sea.'

'True for you!' said Thady; 'yet vanished it has as though the *Santa Anna* was a thing to be lost like a needle in a hay-rick.'

A shrill bell pealed through the house, and Thady, with an exclamation, shuffled away to open the door.

I had few friends to visit Doon in these days, except Father Simon O'Clery, the abbé, as he liked to call himself, a thin, silver-haired old priest who had been at Douai the happiest days of his life, and was parched for equal friendship in those latter evil days.

But it was not the priest in his faded cassock whom Thady ushered in. It was a lady veiled from head to foot, yet carrying herself so freely and graciously that the glint of gold hair revealing itself through the veil might have been a crown.

'A lady to see your honour,' said Thady, and vanished discreetly.

When the door had closed behind him she threw back her veil. Her face was white amid its golden hair. Her eyes were at once imperious and tender. As I looked upon her she lowered them, and the colour of roses surged in her cheeks. Her lips took a delicate line of submission, and she stood leaning towards me a little as though she would yield her beauty to her lover.

As for me, a gust took and shook me. I controlled myself by a strong effort. Coming so, alone, under shadow of nightfall, she had trusted me, and I would repay her trust.

'Lady Nesta,' I asked, 'why are you here?'

'Sir Maurice Considine,' she replied, 'so that you may save me.'

The colour flickered in her cheek like a candle blown by the wind. Then it settled in two deep spots which I could have sworn I saw pulsing, so living were they.

'My father would marry me to Damer of Coote Hall,' she went on.

'Doubly forsworn,' I cried; 'a traitor to his God and his country; old, lean, yellow—a lover of gold. Is the Lord Fitzwalter mad?'

'Alas!' she said, 'he too is eaten up by the lust of gold. He sees Mr Damer through a golden air of it. But I—I swear if I marry the man I will kill myself at the altar. I am young to die, Sir Maurice Considine.'

Her voice went off like the mourning of doves. As for me, I felt the soul in me toss like forest trees in a storm.

'What would you have me do?' I asked in a stifled voice.

She came a little nearer.

'We were betrothed in infancy,' she murmured, and her voice was like a silver rain.

'You know it, then?'

'I know it. My father broke the compact with yours. I am ready to fulfil it.'

'To save yourself from Richard Damer?'

'Because I would give my hand with my heart,' she said, her eyes closing as though she would faint.

I caught her to my breast and held her there. Before, I had hardly known that I loved her, the little promised wife of my infancy; but what bond was it by which my love now sprang full-grown, and I knew I would die a thousand deaths rather than that she should suffer ill?

Again the bell pealed through the house.

She clung to me fast, and I knew her fears.

'It is no pursuer,' I said; 'only the Abbé O'Clery, who plays dominoes with me of nights. Do not be afraid, my beloved. I think he will place you in safety.'

'In your arms?' she said. 'Then I am ready.'

I put her in a chair and went to meet the old priest. He listened to me perturbed, taking snuff agitatedly as I told him my tale. But his eyes were not afraid.

'I shall make the lady your wife,' he said at last. 'She must be protected, though 'twill be the worse for me. Fitzwalter is powerful, and—I ask your pardon, madam—unrelenting. We are only suffered here, and have no friends but the poor. His vengeance will fall on me. Yet,' he went on, 'what have I to do with it? Shall a priest of the Most High fear the frown of his fellow-creatures? We must save the lady, Sir Maurice.'

Without in the frost a twig crackled. Otherwise the night was dead-still, for the distant booming of the waves on the bar of Doon was beyond our hearing.

I went through the marriage like a man in a dream. I was too overwrought and too much on fire then to think of my poverty and how poor an estate I had to offer to the heiress of the Lord Fitzwalter. Truly, while the priest prayed over us I had but one thought, but one apprehension, that something might happen to prevent the marriage. But nothing happened. The words were said; my mother's ring was on her hand; the old servants, who had come in to witness the marriage, went away with joyous and disturbed faces. She was mine who had seemed so far beyond me; and nothing now could break the bond, since the Lord Fitzwalter, albeit an irreligious man and a persecutor, was also of the old religion, or at least had never abjured it openly.

When the marriage was over and the priest had left us together, she clung to me a while; then she took her head off my breast, and taking up her cloak and the hat with its long veil, she swathed herself in them. It was like night putting out the day, when the glories of her face were eclipsed, and also her petticoat of white

and silver, for she had come gorgeous under her clouds of blackness.

'Would you leave me?' I asked, looking at her in wonder.

'Alas! I must,' she replied. 'I go to win my father. I am his one child, and I would not have enmity between you and him.'

'But how will you do it?' I asked.

'I know not. Give me time. He sups to-night with Mr Damer. I shall be at home long before he reaches it. Good-night, my beloved.'

I did not dispute her will, although I was loath that we should part so soon. Had she not done enough in coming and giving herself to me? And must not Doon be somewhat habitable to receive its mistress? I went with her over the low hills of Daragh and by the footpath-way across the Lord Fitzwalter's park, and nothing more unfriendly met me than a herd of grazing deer that sniffed with their nostrils as we came near, and then were gone like the wind.

'I return the way I came,' she said as we approached the lancet-topped postern in the high wall of the Italian garden. 'None will have missed me except one who is in my confidence. Good-night, heart's beloved. To think that I return a wife! Ah! with this talisman of your ring I shall have nothing to fear.'

As I went homeward a low mist writhed and curled below the trees of the park. It made things old seem new and unfamiliar. My mind was in that state that I had no leisure to think upon it; but now I remember that the Valley of the Heifer was filled in with a solid floor of the mist, so that I could have sworn it was a lake like my own Doonass, with the mountains ringing it about.

It was a sudden mist, not borne on any wind, but exhaled, it would seem, from the stiff ground. Sometimes it was in a solid body of vapour like that which lay upon the Valley of the Heifer. Again it was broken up in shreds and patches. My feet walked in it and my head was clear, or else I stood all clear, and could place my hand within that thistledown. Looking over the hedges on either side of me, I could see now a clear space with the rushes standing like lances of silver, and again nothing but the magic mist that veiled I knew not what.

I came out presently on the edge of Doonass Lake, emerging there from the low wood full of myrtles and fuchsias, with many choice ferns uncurling among the bracken. It was an inhospitable air for them to breathe on such a night. So hard a frost it was that it seemed to me my breath froze as it mingled with the air. I came out on the edge of Doonass Lake, as I have said; and it was well for me I was so familiar with the place, or I might have gone to join the Don's treasure at the bottom of that inland sea.

The whole lake was covered with a mist—gray mist, silvery shining, because the moon was at

her full somewhere out of sight. A night-bird cried across the dark waters. Where I stood was clear enough, yet the lake water lapped almost at my feet and was not visible.

An instant I stood gazing into the mist. Then something—something of movement in its dullness—arrested my vision. I stood like one turned to stone. What was that that took shape in the silver? The great ship came on soundlessly. I could see her high poop crusted with images. Above it I saw the faces of men—dark sunburnt faces, with the gray veil of the mist or some other pallor upon them.

The mist now had turned gray and threatening. It was streaked through and through as with rain driven by a great tempest. There was not a sound; yet I swear that a hurly-burly of a wind arose, was let loose from all the quarters of heaven upon the galleon. I saw her great sails flap helplessly, and wondered an instant that they did not fill; till, as the galleon slewed a little towards the shore, the pitiless rents revealed themselves, and I saw how naked she was of all succour, flogged by the merciless wind into the reef and the terrible cliff-face of Carrigadoon.

More than that I saw, for the magnet that was in the rocks I observed to be drawing her. There was no sound, and yet she sped over the waters like a racer, not wallowing in the trough of the waters, but hurling herself upon her ruin as though she were driven by all the furies.

Then, as I looked, one face separated itself from those others—the pale and careless faces that leaned above the poop as though they watched a fair and quiet shore; and the face I saw so distinctly that I have never forgotten it. It was that of a man of more than middle age, dark and handsome, with curling moustachios and a little pointed beard. It was framed in long ringletted hair that was thickly powdered over with gray. A scar ran across the right cheek, showing darkly purple. The expression of the face was noble and dignified, as I could not fail to see, since the two eyes looked in mine. Looked, did I say? Why, they drew me as Carrigadoon drew that unhappy vessel, and I could not choose but gaze into them, so that for the time we were alone, although all those silent figures crowded the poop and leant upon the bulwarks.

The message of the eyes was something insistent. I remember that I marvelled what the ghost's business might be with me; for that it was a ghost I never doubted, nor those dark sailor-men nor that ill-fated ship to be of anything but the company of ghosts.

Then the eyes seemed to withdraw themselves, and the ship to retreat to a great distance. Once more I was a spectator of her peril, and now I perceived that she was almost upon the rocks. I listened for the roar of the impact, the crashing

of her timbers, the crying of her doomed crew, when Carrigadoon should crush her and fling her back broken and writhing upon the waters. I listened in terror, I say, for it would not be the first time I had heard on this treacherous lake of ours the cry of the dying.

But, lo and behold! while I yet looked the vessel recoiled a little, shuddering as though about to take the leap that should destroy her. Then she rushed upon the rock and I saw

clearly, plain as the face of day, that she seemed to pass within it. The rock might have opened to receive her; of that I could not be sure; but she passed from before my eyes into that tremendous wall with its great columns range upon range, that only the gannet and the gull have visited. She passed, I say, and there was nothing before me but the steel-gray lake of Doonass, with the mists blowing off and letting the frosty moon shine through.

## SIR WILLIAM LENG AND CHARLES READE.

LEEN literary swordsman as each was, going straight for his enemy and with the sharpest of weapons, the journalist William Christopher Leng and the novelist Charles Reade were just the men to appreciate each other. The town of Sheffield and the crying evil of her trade-union outrages brought the two together, even as Sheffield's fierce clannishness and contempt of law, bred of her long ages of geographical isolation, produced the outrages.

The local trade-law of Sheffield handicrafts forty years ago—almost the only law that ran there in the early part of last century—was that each worker should enter, and loyally support and obey, his trade-union. If he did not—and providing he worked at one of a few select trades—certain rudely expressed, ill-spelt missives reached him, pointing out his duty and sternly ordering compliance. Further neglect saw his workshop entered during his absence and his tools stolen or destroyed, or, in local phrase, he was 'rattened.' If yet unyielding, he soon found the opposing argument taking the shape of explosion at home or at his work, of bullet as he sat at dinner, or of personal assault and disablement as he walked the street at night.

The perpetrators of these iniquities were never caught, and although the moral certainty was that the instigators were the officials of this or that trade-union of ill-repute (for not all the unions were tainted), the fact could never be brought home to them; but, offering rewards for the detection of the offenders and indignantly repudiating all part or lot in the matter, they long escaped discovery.

Grown up amidst these conditions, the average respectable Sheffielder deplored but yet thought little of them, taking them for granted and as much a local product as Sheffield steel itself. An outsider was needed to catch the full significance of this strange development; and fortunately the man was forthcoming in William Christopher Leng.

In the year 1866, and soon after Mr Leng

came to Sheffield, the house of a saw-grinder was blown up. In the early hours of a foggy autumn morning a can of gunpowder had been thrown, with a lighted fuse attached, down the cellar-grating. Mr Leng went to the house, found the side of the wall blown out, and the man's wife almost dead with terror. Letters were shown to Mr Leng threatening the husband—a defaulter in the eyes of his trade-union—with a dose of 'Linley's lead-pills,' a reference to the death of a man named Linley, who had been mysteriously shot as he sat in a Sheffield tavern some time before. After reading the letters Mr Leng was convinced that the explosion had been ordered and paid for by William Broadhead, the secretary of the Saw-grinders' Union. Saying this—or what practically amounted to it—in his paper, the *Sheffield Telegraph*, Mr Leng himself became the recipient of similar threats; but, with revolver at hand day and night, he dared everything, and pursued his investigations, ably seconded by the late Mr John Jackson, then chief constable of Sheffield. Light began to dawn. It was noticed that in the suspected trades certain workmen who seldom or never worked were yet never short of money. These were watched, suspicion grew, and evidence gradually accumulated. At length the fear, jealousy, and greed of one of these men placed a secret confession at the searchers' command. The suggestion of the *Telegraph* that a Royal Commission should sit to inquire passed into effect, and presently the whole thing was out.

To most people it was a nine days' wonder, with Sheffield as the burning mark for the pointing of the world's finger; but to Charles Reade it was a fascinating problem in human motive and conduct—a problem which, seeing its possibilities, he resolved to study on the spot. He therefore went to Sheffield, prepared to stay some little time.

'On coming to Sheffield,' Sir William Leng himself told the present writer, 'Charles Reade took rooms at the Victoria Station Hotel. He called to see me at my office; and, being very busy myself, I placed my foreman-compositor at his service, who took him round the town and

district, including the upper reaches of the neighbouring streams, where the lonely grinding-wheels are, and explained to him the whole *modus operandi* of "rattening," with all the perils that followed when rattening failed of its purpose. Charles Reade was a large, genial man, apparently a little lethargic. I saw him twice in London. The first time, he was at work, writing rapidly and in a bold hand on foolscap paper. As he filled each sheet he threw it on a pile of such sheets on the floor. The house was fitted up in the French style: no heavy furniture, but everything very bright and light. Several large mirrors reflected the light from side to side of the room, and I noticed a few lounging-chairs. His back windows looked into the Park, whilst those at the front were screened from Albert Gate by little ornamental balconies packed full of flowering plants. The second time I called I asked him what he was doing. He said he was doing nothing, but was waiting for ideas. I met him one night by appointment at the Victoria Station Hotel, Sheffield. It was an exceedingly hot night. I remember he made up a large bowl of claret-cup, putting in the ingredients himself, about which he was very particular; and he was surprised and disappointed because the hotel-people could not get him a bloater. At length, with the claret-cup, he had anchovies served on toast, but he would plainly have much preferred one of the old-fashioned, copper-coloured, smoked bloaters. The extreme heat was such that we surprised ourselves and each other by the quantity of claret-cup we drank. I did not see much of Mr Reade myself whilst he was in Sheffield, my time being much taken up with my paper. Under the guidance of my foreman, however, he saw the formation of the country, and noted the fine opportunities it gave for the carrying out of secret plans when rattening was afoot. My foreman, too, had been intimate with Broadhead, and by this means the novelist was enabled the better to understand and delineate the man whose characteristics he afterwards so powerfully portrayed in *Put Yourself in His Place*.

In a letter written from Sheffield and quoted by his biographer, Charles Reade wrote: 'I saw Broadhead yesterday, and indeed was in his bar-parlour for nearly an hour. Noted his head, face, and conversation; but of course we never touched the particular subject in which he is distinguished.'

Of the indomitable editor lately dead—the Mr Holdfast of the story—the novelist drew in his book the following sketch: 'A gentleman not above the middle height, but with a remarkable chest, both broad and deep; yet he was not unwieldy, but clean-built and symmetrical. An agreeable face, with one remarkable feature, a mouth full of iron resolution, and a slight humorous dimple at the corners.' Throughout

the story it is plain that Mr Leng's dogged tenacity and untiring 'go' had won Charles Reade's unstinted admiration.

The tradition remains at the Sheffield Free Library of the novelist's frequent attendance there to consult newspaper-files and to study the literature of the locality. The book itself shows that he must have passed freely amongst both masters and workmen at the works and grinding-wheels, picking up anecdotes and racy sayings, and seeing both sides of the question. To the same source we must turn to note how quickly he caught the tone and colour of local life and character, mastered intricate trade problems, took advantage of the most striking features of local scenery, legend, and incident; and how vividly, unsparingly, effectively, he held up to light the horrid deeds of darkness done, until brutality itself cried shame. It is painful reading, too, especially to a Sheffielder. But it should be remembered these men believed they were maintaining their rights, however wrongly they did it; and there is extenuation in the fact that it was only in 1870, the very year in which Charles Reade's story was published, that England first grappled, in anything like adequate measure, with her awful arrears of national education.

#### THE SHADY SIDE.

Our house is on the shady side;

And neighbours just across the way  
Remark, with pardonable pride,

That all their garden-beds are gay  
And sweet with many a varied bloom,  
While ours lack colour and perfume.

Ah, well! there must be dark and bright.

The sun is good, we will confess;  
But even in reflected light

Some have to find their happiness,  
And watch the sunshine as it falls  
Upon their neighbours' roofs and walls.

What time the summer sky is hot,

And flowers droop under fervid blue,  
The grass within our homely plot  
Is dim with shadow, fresh with dew;  
And o'er it, in the quiet dusk,  
Float vagrant scents of rose and musk.

Across the way laburnums shake

Their yellow tassels, bright as gold;  
We note the glory that they make  
As morn by morn new buds unfold.

We hear the music of the leaves,  
And martins build below our eaves.

And when at noon each brilliant lawn

Lies baked amid a fiery glare,  
And all our neighbours' blinds are drawn,

We revel in our cooler air,  
And say, 'Tis better to abide—  
At times—upon the shady side.'

### THE PURCHASING OF ANTIQUES.

#### SECOND ARTICLE.

By HARRY OATWAY.

IN a previous article (*Journal*, May 3, 1902) instances were given of clever painters and others lending themselves to the production of spurious works of art. These were necessitous and comparatively unknown men, as one would expect the generality of such individuals to be; so that it may come as a surprise to some readers to learn that the name of Michelangelo must be added to the list. It is on record, however, that at least upon one occasion the great artist was an offender in this respect. Heath Wilson, in his interesting and exhaustive *Life of Buonarrotti*, relates that one of Michelangelo's earliest sculptures, representing a recumbent and sleeping Cupid, in its execution so closely resembled ancient work that, when seen by Lorenzo di Pier Francesco de' Medici, he suggested that it might be artificially discoloured to produce the appearance of age, as thus it would fetch a higher price. This advice was acted upon, and the figure, after treatment, was parted with to one Messer Baldassarre del Milanese, a dealer, who sold it in Rome to the Cardinal San Giorgio as an antique for a sum equivalent to ninety-six pounds sterling; only fourteen pounds having been paid to the artist.

Now, it is not in the power of all persons to enforce the return of their money, as did the Cardinal; in many similar cases victims of less importance and strength of mind prefer to suffer in silence rather than face ridicule, as the following old, but some say well-authenticated, story tends to show:

A Parisian dealer, part antiquary and a good deal adventurer, misled by the bragging of an Englishman as to his intentions of forming an art collection, wasted several days of valuable time in endeavouring to sell his client genuine but (as is always the case when unimpeachable) high-priced goods. Failing to effect any business

in Paris, he proposed that the would-be amateur—who, by the way, belonged to the genus *nouveau riche*—should accompany him to Rome, where, the dealer asserted, his artistic requirements could be satisfied at lower prices. The journey was agreed upon, and shortly after their arrival in that city, dealer and client visited the Borghese Gardens, where the Englishman was mightily smitten with a statue which he had taste enough to consider worthy of being placed in the grounds of his newly acquired estate. The dealer—who had again tried and failed to do any legitimate business, but had been the recipient of a good deal of native insolence—thoroughly disgusted and amused with the ignorance his patron displayed, on the spur of the moment decided to exploit him. With unblushing effrontery he observed that the purchase of the statue might be advantageously arranged if left entirely in his hands; and, in effect, concluded the transaction that same evening, greatly to the Englishman's satisfaction. Upon receiving a receipt and permit to remove the statue from the grounds, the Englishman handed his agent six hundred pounds, with which it is needless to say the Parisian immediately decamped. It is hardly conceivable that a foreigner visiting London would be so grossly ignorant as to allow the cleverest confidence-man to sell him, for example, Le Sueur's statue of King Charles at Charing Cross. Still, there is a good foundation, it is believed, of truth in the foregoing, although the actual sum netted might not be so large as stated. No ill befell the dealer; for, when the purchaser discovered and realised the full measure of his stupidity, he preferred to lose his money and hush the matter up rather than become the laughing-stock of the smart acquaintances he was anxious to cultivate.

There is another of these tales of which no doubt exists, to the effect that a wealthy

American (not entirely unconnected with the mining interest), anxious to form a collection, conceived that the wisest course to be adopted so as to ensure authenticity and fair prices was to purchase direct and only from private owners. When this gentleman's fad became generally known he was given up by the legitimate traders, who could not afford to be bothered with a person that doubted every one's judgment but his own. However, two speculative dealers elected to satisfy his requirements, and to that end purchased a château in France, which they filled, at considerable expense, with antique goods, the bulk of the pieces being genuine but unsaleable to connoisseurs. This done, it was arranged that the old country mansion and its art treasures be brought to the prospective purchaser's notice through private and apparently *bona fide* agency. The American inspected the place; noted that the tapestries, pictures, armour, and the hundred-and-one other things it was crammed with appeared to have stood there for centuries; and, feeling perfectly secure, straightway purchased the contents *en bloc*, greatly to the satisfaction of the interested parties, who are credited with having netted the modest profit of seven hundred thousand francs.

It may be unpleasant for us to admit—still, it is nevertheless true—that the French amateur must rank as the most generous buyer and finest judge of works of art in the world; for, relatively to his wealth, the Frenchman will pay a higher price than any one else for desirable *objets d'art*, and next to him the American, and then the Englishman.

Whilst on this ground it may be well to correct the erroneous impression that prevails among a section of the British public regarding the people across the Atlantic. Before an educated and leisured American commences to buy artistic or antique goods he generally decides to confine himself to one branch, and, whether his purchases are to be of large or small extent, throws himself into the matter heart and soul, reads all available works on the subject, visits museums, obtains the best advice and judgment, and then, when he has attained an astonishing mastery of all details, considers himself in a position to treat with dealers, and able to insist upon and verify the absolute integrity of each piece offered for his consideration, for which, whilst paying liberally, he will disburse no greater amount than would be expected from a wealthy Englishman, and certainly not so much as might be obtained from a Frenchman. This is the man who considers fine specimens only, knows his requirements, and—what is more satisfactory from the vender's point of view—is quite aware of the value of what he is purchasing.

Another popular fallacy is that buyers for the best class of antiques are more numerous in the United States than elsewhere. This is not so; neither can gorgeous rubbish be sold at big prices to Americans in general. Certainly a few instances

may be cited like the one already given; but such cases are quite unique, and the persons who have created this false impression are a distinct type from the New York or Boston amateurs, who collectively are a very cultured and charming people. That many Americans should not have sufficient knowledge to avoid mistakes is not surprising when one recollects that it is no uncommon occurrence in such a country as theirs, abounding in natural resources and Arabian-Nights-like possibilities of wealth-gathering, for a man who has retired overnight comparatively poor to rise the next morning and find that at last his plans have matured and wealth is pouring in upon him from all sides. Directly such an event occurs, and the full extent of this change of fortune is realised by the feminine portion of his family, a residence in New York is insisted upon, a large house taken, and furnishing in the highest style of the modern upholsterer's art commenced. This occupies some time; but before it is finished the women, quick to accustom themselves to their altered circumstances and surroundings, commence to push their way into a more exclusive society than they have hitherto had the opportunity of enjoying; and as they gain step by step a higher position in the social world and penetrate other homes, they see pictures, statuary, and various evidences of culture and refined taste treated by their possessors as customary objects of everyday life. Straightway such things appear to become necessary for their well-being, and paterfamilias is urged to 'do Europe,' and buy pictures and a host of other things. Now, the head of the family, poor man, knows as much about art (to use an Americanism) 'as would fill a filbert,' and, fully aware of his deficiency, endeavours to make up for what he lacks by bringing the full force of a trained business instinct to bear upon all purchases. This American certainly does now and again crop up in picture galleries on the Continent and elsewhere, and after pricing works of art regardless of their merit, but simply because they bear names the press has familiarised him with, makes an offer of a lump sum for the lot just in the same way as he would operate in a purely mercantile transaction.

There is, again, the type of American who is too busy and cannot afford to leave his work. Caring nothing for art, and thinking only of pleasing his wife, he leaves the matter entirely in the hands of an agent, or buys from dealers' recommendations. That man certainly does, at times, get fairly decent things; but he is also the person mainly responsible for the very high prices which now rule. Leaving *carte-blanche* commissions in dealers' or other people's hands is risky work, unless one is quite sure of his agent.

Whether the American taste may be at fault or not, it is, however, hardly satisfactory for us to remember that the all-absorbing passion of the women of the early Victorian era was Berlin

wool and—lightly whisper it—*bead-work*. For the distinctive features of the bead-work period, the reader, if of robust artistic constitution, should refer to the illustrated catalogue of the 1851 Exhibition.

It was only during the eighteenth century that the best English houses became what may be called completely furnished. In most cases the styles of furniture so much in vogue in the reigns of Louis XIV. and of Louis XV. were altered without improvement, the exception being Thomas Chippendale, the greatest *maitre-ébéniste* England has produced. A host of imitators followed in this master's footsteps, most of whom endeavoured to improve on his designs and gain trade notoriety by wildness of conception, as the bulk of the drawings of Johnson, Ince & Mahew, and others plainly show. The popularity of his style appears to have declined during the later years preceding the French Revolution; and the English Louis XVI. period commenced, expounded chiefly by the brothers Adam, and in a lesser degree by Hepplewhite and Sheraton, whose productions, although comparatively beautiful, cannot claim to have improved or created a style. In due course these designers and makers were succeeded by what Smith, sometime keeper of the prints in the British Museum, refers to as 'the beautiful classic change brought in by Thomas Hope, Esquire,' author of *Anastasis, or the Memoirs of a Greek*, whilst Chippendale's *chef d'œuvres* he describes as 'unmeaning scroll and shellwork;' but it is interesting, in view of Smith's foresight and the appreciation of to-day, to also read that 'Chippendale's book will again be sought after with redoubled avidity; and, as many of the copies must have been sold as waste-paper, the few remaining will probably bear rather a high price.' The writer, who tried to purchase a copy at auction recently, can verify that fact, for the work fetched twenty odd pounds, and then, in trade parlance, 'money was run on it.'

The term 'money was run on it' refers to a settlement vulgarly called a 'knock-out,' an institution which plays an important part at most sales; and as few people outside 'the trade' understand its working, an explanation may be appropriate. A settlement is brought about by two or more dealers at a sale by auction agreeing not to oppose each other; practically a syndicate is formed to acquire certain lots upon terms the most favourable to themselves. At the end of the sale, or at such time as the desired lots have been purchased, an adjournment is made, generally to an hotel, where the goods are put up for settlement, the dealer who offers the highest advance being the holder. The difference to the ordinary routine is that the profit is shared by all admitted to the settlement in ratio to the advance each man's individual judgment permits of his offering. Thus, supposing Jones, Brown,

Smith, and Robinson desire lot No. 60. They agree to 'join'—in other words combine—to purchase that lot for their mutual account, and secure it at the sale for ten pounds. At the settlement Jones offers a profit of one pound in advance of the purchase price, Brown two, Smith three, Robinson four. It then becomes Jones's turn again, and he says five; Brown and Smith, having gone as far as their judgment considers safe, withdraw further opposition, and are each entitled to one-fourth of five pounds. The price now stands at fifteen pounds; and later on Robinson and Jones, who both know the true value, 'run' another ten pounds upon the lot, when Jones, having made the highest offer, 'holds' it and pays out as follows: Robinson, who was in at the finish, takes six pounds five shillings; Brown and Smith take twenty-five shillings each; Jones, the purchaser, keeps his share and adds it to the cost of the goods, as he would have received nearly that amount had he not topped Robinson's last offer. So the total cost and approximate value of the lot is twenty-five pounds. Robinson and Jones would make the second settlement privately, in order that the other two dealers should not benefit by their superior judgment.

With important goods as many as four settlements or more may be made; and, in view of this it is scarcely wise for private buyers to base their judgment upon records of sale prices and accounts of sales. As a case in point, quite recently some articles realised under the hammer prices that were commented upon in a journal as excessive; but, as a matter of fact, money was paid out on these very goods in a settlement, and they have since changed hands three times, and each time at a profit.

It is difficult to decide the question as to the morality of the arrangement termed a settlement. Upon the face of it the system certainly appears to be lacking in principle; yet in these days of big combines it is somewhat illogical to single out any one trade and prohibit the men engaged therein from buying as well and cheaply as their knowledge will allow. Besides, it is open to all those wishing to dispose of goods by auction or private treaty to safeguard their interests by obtaining the advice and assistance of an expert valuer for quite a moderate fee; and the best judge of such values is the man who deals in the goods and knows the markets, not the man in the rostrum, as many imagine.

Whilst dealers, naturally, are bargain-hunters, none worthy of the name are 'poor buyers;' generally speaking better prices for small collections of antiques may be obtained from firms of known reputation than would be realised by an auction sale of the same goods. It must, however, be admitted that there are people engaged in the business who leave no stone unturned in their endeavours to buy goods for considerably under

the market value; and when one of these individuals is deceived or overreaches himself his fall is generally interesting.

Too great a leaning towards this dubious kind of smartness once cost a member of the trade the loss of a goodly amount of profit which, had he exercised quite ordinary business methods, would have accrued to him. The event happened whilst the dealer was staying for a few days' holiday in a small German village, situated close to the French frontier, shortly after peace had been concluded between the two countries. Returning from a long country ramble one morning, the dealer was overtaken by a peasant, who was jogging along the dusty road in a wagon; and, feeling hot and tired, he requested and obtained a lift. No sooner was he comfortably seated than the driver plied him with questions as to his reason for staying in the village, his age, family, and on many of the other details country people are so anxious to know about. Having by cross-examination elicited the fact that the stranger was by trade a dealer in old things, the driver dived into the recesses of the cart and produced therefrom a magnificent old Sevres vase mounted with gilt metal-work. This, together with some other pieces he was carrying to market to dispose of, he offered to sell for the value of the old metal. Without betraying any great interest in the matter, the dealer ascertained that the articles had been left during the war-time—and never since claimed—by two soldiers who were billeted upon the countryman; and the statement satisfying his doubts as to the original and rightful owners of the property, he suggested, as some return for the ride, that they should proceed to an inn, where over a bottle of wine the goods could be examined and, if worth anything, perhaps purchased. Nothing

loath, the man agreed, and in a private room the dealer feasted his eyes upon some thirty important pieces of Sevres china, most of which were mounted. The next proceeding was to purchase without raising suspicion as to their real value. Taking his cue from the fact that the owner harped strongly upon the value of the metal, the dealer observed that he was quite right, as of course the china was of small account, and so offered a small sum per pound for the mounts, the china to be thrown in. This was accepted, and the weight computed by the vender at so much. All would now have gone well; but the dealer, overacting his part, would not accept the other's decision, and haggled about a difference amounting to a few shillings, for the whole sum asked was absurdly small. The rustic, perhaps a little fuddled with wine, resented strongly any reflection upon his judgment, waxed disputatious, and ended by backing himself for another bottle against the dealer or any man as a computer of weight. Finally, he insisted upon carrying the goods to his friend the village butcher, to have them put in the scales. The other, sure of the pigeon he was preparing to pluck, agreed to this, and sat chuckling over another bottle of wine while he waited for his victim's return. At the expiration of half-an-hour back came the peasant, and, throwing a sack at the feet of the horrified antique dealer, shouted triumphantly that he was only 'zwei Pfund out!' To arrive at an honest weight, the simple-minded fellow had broken every piece of china to remove the mounts, as it had suddenly dawned upon him that to weigh the china *in* would not be fair. Ever since that dealer has deplored his sharpness; for the Sevres, being of the earliest period and finest decoration, was then extremely valuable, and at the present day would have realised fabulous prices.

## PRINCE ADRIAN OF ZELL.

### CHAPTER V.—MR BARROWS MEETS AN ENEMY.

IN these new days of vast fabrics and world-wide advertisement, the Hotel Petersburg holds no prominent place in the public notice. Situated on the corner of a quiet square in Westminster, it appears to avoid rather than to court the attention of busy travellers. Perhaps for this reason it is almost unknown to the ubiquitous American; but it has, nevertheless, a standing of its own and a vogue which many a more pretentious house might envy.

Its proprietor is a native of that territory which, while Lusian in sentiment and by tradition, forms a small portion of the Russian dominions. After his emigration he kept his nationality well in view, and decided to bid for

the patronage of his own people and their neighbours. Success rewarded him richly, and to his house came an ever-increasing stream of notables from eastern Europe, with many others who had no claim to be described as notables at all, glad to find, at such a distance from home, their natural tastes thoroughly catered for and their natural, national, and sometimes their personal peculiarities fully comprehended. In this way the Hotel Petersburg held its own place securely; and if you knew that a Russian, Styrian, or Balkan personage had arrived in London, you might reasonably expect to find him established there.

To the 'Petersburg,' therefore, came Mr Barrows, late in the day upon which he had resolved to take a second step in other people's affairs. Entering

the vestibule in the somewhat unobtrusive manner which betrayed a comparative stranger to hotels and their ways, he advanced to the office and inquired whether Count Philip Brode were staying in the house. The answer, as he had expected, was in the affirmative.

His success did not seem to give him any particular pleasure. 'I wish to see him,' he said, with an effort. 'Is he in just now?'

An attendant was called, a splendid personage who dwarfed Mr Barrows both in figure and in manner. He was able to answer the second question.

'Yes, sir; the young Count is in.'

Had not Mr Barrows been somewhat agitated he must have noticed the significance of the expression used. As it was he noticed nothing, but produced a card on which he had written the words 'On important business' beneath his name. In a few minutes the man returned, to lead him upstairs.

It seemed but a moment more before he was standing within the doorway of a luxurious room on the first floor, facing the person he had come to see. Philip Brode had been reading an evening journal, and was standing in the window. He turned as the door was opened.

Mr Barrows had known, of course, that he would meet the man whom he had seen in the cemetery. He saw the same face, the only difference being that the features were not now illumined by that species of evil triumph which had been so noticeable on the first occasion. Without this illumination they seemed heavier and older. The man was little over thirty; but his was a life in which every passion had moved unchecked. If Barrows thought of Edna at that moment he may have shuddered. Her mother had good cause for fear.

What the young man saw was what all saw who looked at Mr Barrows: a plain, middle-aged, and most unpretentious man, though possibly a gentleman. After the first glance, however, he knew that they had met before. Moving forward to a table, he laid his paper down and looked at his visitor questioningly.

'Good-evening, sir,' said Mr Barrows plainly.

'Good-evening,' said the other, with a slight inclination of the head. 'You wished to see me?'

It was a sufficient opening, and Mr Barrows took it. 'Yes, sir,' he said; 'I have come as a friend of the Countess Hamar.'

This was a new note, and the younger man's attention was caught. He waited with a look which became intent.

'Circumstances,' explained Mr Barrows, 'brought me into contact with the Countess some days back, and made me acquainted with her situation. As it happened, I had known the late Count Hamar, and felt bound to serve his family in their difficulties. At my suggestion they left

London, and went to find quiet and rest in the country.'

Mr Barrows had schooled himself well. So far he had spoken without apparent emotion, and evenly. At that point, however, his opponent's face darkened and hardened.

'Ah!' he said abruptly. 'So it was you?'

Mr Barrows experienced an answering emotion. 'Yes,' he answered briefly but rather more firmly, 'it was I; and I am now come to tell you what the Countess and her daughter desire, and what will be best. It is that you should cease to persecute her, because your attentions to her daughter are'—loathsome was the word that his rising anger suggested, but he thrust it aside—'because your attentions are distasteful.'

'And by what right do you speak?' asked Count Philip, after a pause that seemed full of restrained wrath.

'I speak as one who has a right to assist two helpless women,' answered Barrows, who was surprised to find himself master of his tongue, 'one of whom you have already terrorised into a serious illness. I request an assurance that you will trouble her no further.'

There was a longer pause. As he waited for his answer his detestation for the man he addressed seemed to gain new force. Equipped with some experience of character, he comprehended with vivid clearness the pure young girl's feeling of repulsion and her mother's dread. As for this anxious suitor, taken wholly by surprise, faced by a situation entirely unexpected, he was utterly at a loss. His anger could not find words; and probably his difficulty was the greater because it was necessary, as far as he knew, to find English words. His command of that language was not sufficiently complete to suit moments of emergency.

'And if I refuse?' he said at last hoarsely.

'If you refuse,' said Mr Barrows promptly, 'it will be necessary to make you suffer. Things here are not as they are in—in Styria. The law can do much, and beyond the law there is public opinion. It would not serve you, either here or at home, to have your conduct made public.'

If Mr Barrows had been forced to describe his attitude at that point in one word, he might have chosen the somewhat vulgar term 'bluff'. It was plain, nevertheless, that this attitude was the best for his purpose. For a moment or two the young man stared into his face, mute with rage and bewilderment; then he turned abruptly and walked to the window. Mr Barrows sat down at the table.

Several minutes passed. Count Philip was plainly at a loss, and Mr Barrows saw victory within his reach. As he had hoped, the enemy's ideas had been thrown into confusion by the discovery that his intended victims had a protector and a champion. He prepared one or two convincing remarks, and waited.

It was something from outside that changed the situation. As they waited in complete silence, they heard some one pass up the thickly carpeted corridor and open a door on the other side. Mr Barrows heard but took no notice. The young man heard it, and started. One moment he gave to consideration, and then he spoke, harshly:

'Excuse me for one minute, sir.'

Without waiting for a reply, he left the room. Apparently he crossed the corridor, to the door which had just been opened. Mr Barrows heard him enter and close it behind him. Then silence fell.

This movement had taken the visitor somewhat by surprise. Naturally his thoughts flew to seek an explanation. Some one had entered a neighbouring room, and the young man had gone to consult that person. Who could it be?

With the question came the answer, for only one answer seemed possible. As it came Mr Barrows half-rose from his seat; then he sat down again, all his thoughts in confusion and alarm.

The minutes that followed were anxious ones to this would-be protector of women. He passed them in a pitiful state of indecision, now rising to move to the door, now taking his seat again to wait. To go was to throw away everything that he had come for; to stay, said Hope, was at least to have a chance. He was not quite certain; his idea might be a mistaken one. Yes, he must wait. So he waited. It might have been three minutes, it might have been ten; but the man that waited was scarcely the man who had so forcefully delivered his ultimatum just before.

Presently the door was opened, and Philip Brode returned; but he brought with him the person whom he had gone out to consult.

The stranger was a man of something over sixty, but not an old man nevertheless: a man with scanty gray hairs brushed back from his brows, and a white, clean-shaven face showing a thousand lines and wrinkles. But there was no sign of age, either in impaired vigour or in dullness of intellect. Every movement was quick and alert, and the keen, hawk-like countenance was that of a master.

There was no ceremony in what followed. Mr Barrows sat facing the door, and did not move at their entrance. The thing he had feared had now come to pass.

'This is the man,' said Count Philip, in Lusian; and the new-comer, standing just within the threshold, looked at Mr Barrows attentively. He had spent some thirty years of his life in the diplomatic service, and had not lost the effects of his training. If he felt any surprise, the fact could only be guessed from the length of his scrutiny. He took up a card which lay upon the table—Mr Barrows's card. Looking again at its owner, he smiled.

'So,' he said, 'Mr Barrows!'

As he spoke he sat down at the table, facing the man he addressed. In the silence his mind worked swiftly. Philip, leaving his case in abler hands than his own, retired to the window to watch. Mr Barrows was pale and mute.

Count Brode soon came to a conclusion. He turned in his chair to address his son, speaking suavely and slowly. He was a man who never wasted a syllable.

'So, Philip,' he said, 'this is the gentleman who intervened. He speaks to you of the law, and of something beyond the law. He threatens to make your business public—public!'

The young man nodded sullenly. His father turned to Mr Barrows, his every word clean-cut and measured.

'Mr Barrows, your name is one that I have heard before. There was a Mr Barrows who was secretary to a man now dead. You, I take it, are the same person?'

It was a remark rather than a question, and Mr Barrows made no answer. The Count went on:

'Then surely it was not discreet of you to speak of the law and the public. One might speak to the public of you, Mr Barrows. One might ask the public to inquire'—he leaned forward over the table, and ended his sentence in a lower tone—'to inquire *how your master died*.'

Mr Barrows opened his lips, but no words issued. He made a movement as if to rise, but a careless gesture from the Count seemed to force him back into his place. He might have been drawn as a picture of incarnate guilt.

Count Brode spent two minutes or so in deep thought. His fingers played with the slip of pasteboard, but otherwise he did not stir. Once he glanced at his son, who was watching the scene with quiet enjoyment. It was after that glance that the idea for which he had been seeking came to him suddenly.

'This is a very perplexing situation,' he said; 'but I see a way out of it;' and he turned again to his son.

'Philip,' he began grimly, 'Mr Barrows certainly has some claim to protect the persons we know. Mr Barrows, nevertheless, is a man of honour, and he will no longer speak to you of law and of the public. As a man of honour, he perceives that there is another way.'

'And that way?' asked Philip; for no sign came from the other side of the table.

'The way we have in Styria,' answered the old man, 'when two gentlemen seek one woman.'

His face was never more hawk-like than now, as he fixed his gaze upon Mr Barrows. It was the look of one who loves cruelty for its own sake.

'To fight?' asked Philip, with sudden intelligence; and his father nodded.

'You understand, Mr Barrows?' he went on carefully. 'This is a simpler and quieter way out of our difficulty. It is the best way, and,

indeed, the only way we can accept. We shall abide by the result as a matter of course. If fortune favour you, my son withdraws, and will trouble the Countess no more. On the other hand, if fortune favour my son, I take it that you will no longer stand in the way.'

There was no emphasis upon the last words, and only the man addressed could see their diabolical meaning. Mr Barrows saw it, and spoke with dry lips. He was in the other man's place now.

'And if I do not care to—to fight?'

'That,' said the Count, smiling, 'will amount to the same thing. If you refuse, you will see it is impossible for you to meddle further. This is your opening. If you take it, whatever the result, no one shall know of your story. If you refuse, there is the law—and the public!'

A minute fled in silence; then the Count, as if weary, ended the interview.

'That is all, Mr Barrows. We shall wait a week for your answer—yes, a week, for you shall have time to think. If you do not accept in a week, we shall know that you will not stand in the way. If you accept, we can make all further arrangements then. That is all.'

He rose, and stood at the table waiting. Then Mr Barrows rose, without a word, and fumbled for his hat and gloves upon the table. Finding them, he went hurriedly to the door, passed into the dusky corridor like a man half-blind or half-intoxicated, and so towards the stairs.

Count Brode, after closing the door, joined his son at the window. The old man was smiling at his own thoughts, perhaps at the recollection of Mr Barrows's appearance in departing. His son searched his inscrutable face in bewilderment.

'And what does it all mean?' he asked. 'What has that man done?'

The Count touched his shoulder half-playfully. 'No questions, Philip,' he said pleasantly. 'No questions. You must trust me in this affair.'

'But a duel?' said the young man. 'Why did you arrange a duel?'

'Because, my son, you are a good swordsman and a splendid shot. That is a good reason.'

There was some pride in his tone as he spoke. He admitted that his son lacked the gift of intellect, but he was accustomed, naturally, to look at what he had. These possessions suited the present occasion admirably.

'But,' he said a moment later, 'perhaps he will not accept—perhaps he will not come. And that—that will be just as well.'

Philip seldom endeavoured to search out his father's thoughts. There was a perfect confidence between this father and son, based on the son's sense of his own lack and his father's powers. So he asked no further questions, either by word or look; but even he could see that the Count was enjoying a season of triumph. His look was as of one who said, 'My enemy is given into my hands.'

(To be continued.)

## 'WHO'S WHO IN AMERICA?'

I thumbed well and skipped nowise till I learned  
Who was who, what was what.

—ROBERT BROWNING, in *'Asolando.'*

**T**HAT handy and useful volume of contemporary biography, *Who's Who?* in the fifty-fourth year of its issue with us, has a companion and corresponding book on the other side of the Atlantic, *Who's Who in America?* which made its first appearance in 1899, under the editorship of John W. Leonard, and is published by A. N. Marquis and Co., Chicago. The new volume for 1901-2 has been thoroughly revised and greatly enlarged; and, as becomes a nation of some seventy-six millions of people, it forms a marvellous testimony to the ability, energy, and pushfulness of our American cousins that eleven thousand five hundred and fifty-one individuals exist about whom the general reader and the man in the street may wish to know something. There were only eight thousand six hundred and two persons notified in the first edition, so that either a fresh crop of notabilities has arisen since or the first edition was less comprehensive.

The book is brimful of interest of the most

varied kind: millionaires, preachers, statesmen, inventors, merchants, manufacturers, and authors jostle one another in the orderly confusion of alphabetical arrangement, and another excellent feature is a key to the publishers of books by the various authors. The facts are given in the briefest possible way—in telegraphese, in fact; a lifetime's achievement as well as a notable discovery or invention is summed up in a sentence. The addresses given are an immense convenience; but the securing of them was a work of great labour and difficulty. Some preposterous replies were received in answer to queries sent out by the editor. One man who was asked for the maiden name of his wife wrote on the corrected proof: 'I am sorry I cannot comply with your request to give my wife's maiden name, as she is now travelling in Europe.' One lady wrote in reply to the request for the date of her birth: 'I am not young enough to be careless, nor old enough to be reckless.' Thus, while the book mirrors the national life in all its phases, it also epitomises 'the stories of opportunities grandly improved by thousands of men and women who have helped to shape the conditions of to-day in American thought and action.' Education counts for much

in that bustling, pushing life, and we find amongst eleven thousand notabilities that nearly one-half are graduates of universities and colleges, eight hundred and eight were trained in public schools, and thirty-one are self-taught.

Not colonels but inventors and authors seem to figure very largely in *Who's Who*? Nothing is more interesting than to note the number of useful inventions by people entirely unknown to fame. It may be of interest to mention a few of the inventors and manufacturers, known or unknown, to whom we are indebted for many everyday and useful inventions.

Alexander Graham Bell, born in Edinburgh in 1819, now resides in Washington. He is the inventor of visible speech, and has written on phonetics. His son, Alexander Graham Bell, inventor of the telephone (1876) and the photophone, was born in Edinburgh in 1847, went to Canada, and became professor of 'vocal physiology' in Boston in 1872. How many who use the telephone ever think of Alexander Graham Bell or of Francis Blake of Keewaydin, inventor of the 'Blake transmitter,' the telephone transmitter most in use? Ohio C. Barber has founded and built up Barberton, a town of six thousand inhabitants, on the strength of the match industry, which he consolidated under the name of the Diamond Match Company. James Ogilvie Clephane, lawyer and financier, 45 Broadway, New York, son of James Clephane of Edinburgh, Scotland, has interested himself in the development of the typewriter, and under his direction the first Sholes or Remington typewriter was built. He suggested to Mr Ottmar Mergenthaler the idea of a typesetting machine, 'and furnished the means whereby was evolved the present successful linotype machine.' Later, we are told, he was assisted by Whitelaw Reid and others; and at his instance the Fowler and Heinkle printing-press was constructed, enabling presswork to be done directly from linotype bars. He has also interested himself in the Graphophone Company.

The English Kodak Company is notable for its success and large dividends. George Eastman of Rochester, N.Y., who perfected a process of making dry plates, is inventor of the kodak. He was born at Waterville, N.Y., 12th July 1854, is general manager of the Eastman Kodak Company of Rochester, and managing director of the English company. The achievements of Thomas Alva Edison, born at Milan, Ohio, 11th February 1847, are sufficiently well known. Henry Fairbanks of St Johnsbury, Vermont, has thirty patents to his credit, and is the son of an inventor of scales. Merritt Gally of Brooklyn has over four hundred patents to his credit, including a 'Universal' printing-press and a machine for making linotypes and printing machinery. He was a clergyman for three years, but on losing his voice devoted himself to mechanics. Richard Jordan Gatling of Hartford, Conn., who graduated at Ohio Medical College,

but never practised, assisted his father in perfecting a machine for sowing cotton-seed; later, he invented a machine for sowing rice and wheat; but his name is more widely known for the Gatling gun of 1862. In 1886 he invented a new gun-metal of steel and aluminium. He is also the inventor of a steam-plough and a hemp-breaking machine. James Weir Graydon, born 1848, is inventor of the Graydon dynamite-gun and the Graydon gigantic wheels exhibited at Paris, Vienna, Madrid, Rome, and Blackpool, besides an aerial torpedo and a carriage-heater. Charles Martin Hall of Niagara Falls invented the electrolytic process for the manufacture of aluminium which has so much cheapened that valuable metal. Samuel Johnston of Buffalo has a long list of inventions, including corn-planters, harrows, self-rakes for harvesters, corn-harvesters, platform reapers and binders, and a new method for coking fuels. Albert Augustus Pope, founder of the Pope Manufacturing Company of Boston, in 1877 began selling imported cycles, and introduced the cycle industry in 1879. He also founded the *Wheelman*, now *Outing*, devoted to the pastime of cycling. Mr Lovejoy of the Carnegie Steel Company was the first man that owned and rode a cycle in the States.

Louis Prang of Boston has a world-wide reputation for colour-printing and Christmas cards, and is author of *The Prang Standard of Colour*, showing one thousand one hundred and seventy-six colours. Thaddeus S. C. Lowe invented the compression ice-machine in 1865, making the first artificial ice in the United States. Sir Hiram Steevens Maxim, born in 1840 at Sangerville, Mo., had a common school education and obtained his scientific knowledge by study and attending lectures; he served a few years' apprenticeship to a coachbuilder, and worked in various ironworks. Many inventions stand to his credit besides the Maxim gun and cordite, and he is a director of Vickers, Sons, and Maxim. Guglielmo Marconi was born at Marzabotto, Italy, in 1875, his father being Italian, his mother English. He was educated at the universities of Bologna and Padua, and began in 1890 those experiments in wireless telegraphy now leading to practical results. Charles M. Schwab, president of the United States Steel Corporation, born at Williamsburg, 18th April 1862, drove the stage from Loretto to Cresson when a boy; then he began work with the Carnegie Company as a stake-driver, and rose to be superintendent of the Homestead Works and president of the Carnegie Steel Company. After the amalgamation of the Carnegie Company with other steel firms he was appointed the first president of the vast concern. Lyman Cornelius Smith of Albany, N.Y., is inventor of a type-writer known as the Smith-Premier. Nikola Tesla, the famous electrician, was born at Smiljan Lika in 1857, and after some experience in

telegraph engineering, came to the United States, where he was for a time employed in the Edison works. Next he became electrician to the Tesla Electric Light Company, and established the Tesla Laboratory in New York. He invented 'the modern principle of the rotary magnetic field embodied in the apparatus used in the transmission of power from Niagara Falls,' dynamos, oscillator, &c. The name of George Francis Train suggests the beginnings of tramways in England; while Charles E. Tripler of New York is famous for the manufacture of 'liquid air,' which he has applied to the operation of an engine. George Westinghouse, Westinghouse Buildings, Pittsburgh, invented in 1865 a device for replacing railroad cars on the track, and the Westinghouse brake in 1868. His name stands identified also with railway signalling and twelve industrial corporations. John Wilson Wheeler, who had been a farmer, grocer, and carpenter in turn, started a sewing-machine business now known as the New Home Sewing-Machine Company.

We have spent so much time over the inventors and manufacturers that there is less space than is desirable for those interesting persons who are either authors or journalists by profession, or have published successful books. To find a stock-broker both poet and essayist, with much distinction of style, is an uncommon combination; yet Edmund Clarence Stedman is all these! To single out the magazine editors: there are Henry Mills Alden, who has been editor of *Harper's Magazine* since 1869; E. L. Burlingame of *Scribner's Magazine*, since 1886; Richard Watson Gilder of the *Century*: he was also on the old *Scribner* (the pioneer of the American illustrated monthlies), founded by J. G. Holland and Roswell Smith. Samuel Sidney McClure has been editor of *McClure's Magazine* since its start in 1891; and Frank Andrew Munsey founded *Munsey's Magazine* in 1891. It is hard to think that Samuel Langhorne Clemens, 'Mark Twain,' is bordering on his seventieth year. Like Sir Walter Scott, he espoused the debts of a publishing firm with which he was connected, that of C. L. Webster and Co., and lectured round the world and scribbled himself out of his difficulties. Fannie Mack Lothrop of 106 West Ninetieth Street, New York, author and journalist, is said to own the largest collection of portraits of celebrities in the world, numbering two hundred thousand. Jane Cunningham Croly ('Jenny June'), an American lady-journalist, heard of sometimes at the Pioneer Club, London, started the duplicate system of correspondence which is said to have led to the rise of the modern syndicate. Harriet Hubbard Ayer, of the *New York World*, has the reputation of being the highest paid lady-journalist in the United States. She was married at sixteen to a wealthy American, who went into business but failed for a large amount, when Mrs Ayer started a manufacturing business by which she cleared

two hundred thousand dollars in four years. She forsook business for a post in the *New York World* in 1894, and has educated her daughters at the best European schools without extraneous help. Mrs Frank Leslie, whose maiden name is Miriam Florence Folline, belongs to a French creole family of New Orleans. She has shown distinct business capabilities in literature and also the publishing of magazines and periodicals since the death of her husband, Frank Leslie. She has some fresh enterprises on hand. Irving Bacheller, who was on the staff of the *New York World*, has made a great hit with that fresh and delightful story, *Eben Holden*. Hubert Howe Bancroft, the historian of the western part of North America, has collected a library of sixty thousand volumes to assist him in his work. James Baldwin, as an educational editor in the employment of Harper Brothers, has been responsible for a vast number of schoolbooks. Sarah Knowles Bolton, a delightful compiler of biographical books for young people, is responsible for quite a small library of such books, including *Poor Boys who became Famous* and *Girls who became Famous*. Frances Hodgson Burnett (author of *Little Lord Fauntleroy*), born at Manchester in 1849, has two residences, one in Washington and another in Kent. John Burroughs, the delightful essayist, since 1874 has gone back, like the late R. D. Blackmore, to the land, devoting his time to fruit-culture and literature alternately. F. Marion Crawford the novelist, son of Thomas Crawford the sculptor, spends much of his time at Sorrento, Italy. Jeremiah Curtin, who has travelled in Mongolia, is credited with knowing over sixty languages.

It is curious how talent, contrary to experience, sometimes descends to succeeding generations. A son of the poet Longfellow, Ernest Wadsworth Longfellow, is an artist; a son of Ralph Waldo Emerson, Edward Waldo Emerson, is an instructor of art anatomy in Boston; and Oliver Wendell Holmes, a son of the Autocrat of the Breakfast Table, is a Chief-Justice of the Judicial Court of Massachusetts. A son of Henry George, bearing the same name, also finds a place here. Finley Peter Dunne, a Chicago journalist, is creator of 'Mr Dooley.' There are a number of eminent Shakespearian scholars, such as Horace Howard Furness, which shows the grasp American scholars have of English literature. Mark Harvey Liddell has edited an edition of Shakespeare in forty volumes; so has W. J. Rolfe, besides quite a library of English classics.

No explanation is offered as to W. H. Gannett's home monthly, *Comfort*, which is said to circulate to the tune of one million two hundred and fifty thousand monthly. Joel Chandler Harris, the creator of 'Uncle Remus,' served an apprenticeship to the printing trade. T. W. Higginson, author of *Cheerful Yesterdays*, has a splendid list of books to his credit. There is an enormous

*Jewish Encyclopedia* in progress in twelve volumes, with two thousand illustrations, of which Isidore Singer, a native of Austria, is managing editor. The first volume appeared last year. On the staff of this *Encyclopedia* are Joseph Jacobs, the well-known author and journalist, who left London in 1900 to assist in this work; Cyrus Adler; and Kaufmann Kohler, a well-known Biblical critic and Jewish rabbi.

The literary syndicate is a wonderful creation of the last century. The sermons of the late T. De Witt Talmage, editor of the *Christian Herald*, have been published weekly for the past thirty years, and through syndicates were published in three thousand six hundred papers, reaching, it is believed, thirty millions of people weekly in the United States and elsewhere. Louis Klopach, journalist, proprietor of the *Christian Herald* since 1892, through its agency has raised millions of dollars for philanthropic purposes such as famines in India and Russia, besides guaranteeing the support of five thousand famine-stricken orphans in India.

Theodore Roosevelt, before he became President of the United States, was known as the author of *Hunting Trips of a Ranchman*, *Rough Riders*, and other books showing vigour and distinction of style. His uncle, Robert Barnwell Roosevelt, banker, has even a longer notice than the nephew, so dramatically hoisted into the President's Chair. He has interested himself in field sports and in the protection and preservation of game, was editor of *New York Citizen* for some years, and has been a member of Congress. He is author of books on game birds and fish, *Progressive Pettecoats*, &c. Of the *Sacred Songs and Solos* of Ira D. Sankey some fifty millions have been sold, and the book has been translated into many languages. One is glad to hear that Marcius Willson, author and editor mostly of schoolbooks, has received two hundred and fifty thousand dollars in royalties, of which sum two hundred thousand dollars were from the Harpers alone. As far as we have noticed, this is the only instance of such a fact being mentioned in the volume. W. D. Howells, Henry James, Mrs Ward, and a host of less-known authors all find a place.

Artists, well-known actors, soldiers, scientists, bankers, and financiers are all here, although John Jacob Astor, James Gordon Bennett, Andrew Carnegie, Pierpont Morgan, Admiral Dewey, the Rockfellers, Vanderbilts, and other famous magnates are quite on a level, as far as space is concerned, with many of their poorer but still notable brethren. These magnates have specially signalled themselves by their large gifts for educational purposes, libraries, and for technical and engineering purposes to various colleges.

George Cadbury's model village of Bourneville, near Birmingham, is well known; but the experiment made by Elbert Hubbard, an American

author and journalist, who started the Roycroft Shop at the village of East Aurora, New York State, for the work of printing and producing *de luxe* editions of the classics, is not so well known amongst us. To printing has been added illuminating by hand, bookbinding, cabinetmaking, and clay-modelling, until some three hundred dwellers in the village have been interested and employed. Mr Ruskin attempted the revival of village industries, but was never so successful as Mr Hubbard, who took his inspiration from William Morris. Two magazines are produced, one of which, *The Philistine*, edited by Elbert Hubbard, has a circulation of one hundred thousand copies. Thus, according to *The Shrine*, Elbert Hubbard has reversed the process by which the town drains the life-blood of the village. There is a library, as well as a recreation-room, pictures, statues, flowers everywhere, and a piano in every house. Dances, concerts, and lectures are arranged for the evenings, and every opportunity is given for individual instruction. It is the founder's conviction that the beauty with which the workers are surrounded, the liberty which they enjoy, the cheerfulness and kindness of their intercourse, are faithfully reproduced in the work they put forth. These advantages, as he puts it, 'are all transmuted into good, and come out again at the finger-tips of the workers in beautiful results.' Elbert Hubbard, who was born in 1859, is author of a clever story, *A Message to Garcia*, and *Little Journeys to the Homes of Good Men and Great*.

Cecil John Rhodes, in some political notes written in 1890, said: 'What an awful thought it is that if we had not lost America, or if even now we could arrange with the present members of the United States Assembly and our House of Commons, the peace of the world is secured for all eternity!' His further idea was of a Federal Parliament held for five years at Washington and five at London. The existence of huge trusts and other evidences of trade rivalry shows that a keen commercial if bloodless war is being waged between the new country and the old. Mr Rhodes urged as a measure of retaliation a commercial war against those who are trying to boycott our manufactures. Then 'you might finish the war by union with America, and universal peace after a hundred years.' To the men and women in this volume must be given a large share of the credit of working out the world's salvation in this respect, and in binding East and West together in the bonds of brotherhood.

This, therefore, is a hopeful book. Ten years hence will thirteen hundred odd pages hold the crop of notable people worthy of a place in such a volume? One thing is evident: those who are at present included deserve the distinction, and we congratulate publisher, editor, and all concerned upon the success of their efforts.

## THE LOST GALLEON.

IN TWO PARTS.—PART II.

WENT home forgetting all else, even my wedded wife. I remembered only the wreck.

I found Thady busy, as he often was, polishing up the few pieces of thin silver which represented the old treasures of Doon. I bade him come to me in the book-room—that room in which two hours ago I had stood for my marriage, and there I imparted to him what I had seen. He listened to me with his old head craned towards me, the muscles in the old neck showing above the shabby livery, one ancient hand fondling his chin.

‘What do you make of it, Thady?’ I asked him when I had finished.

‘Make of it, your honour? Why, that the *Santa Anna* never went to the bottom of Doonass at all, an’ them that was huntin’ for her there might have spared their time an’ trouble. She’s locked fast in Carrigadoon. Sure, ’tis a wilderness of wild caves an’ galleries, as all the world knows. An’ there the money’ll stay till the Judgment Day.’

‘Why should it stay,’ asked I, ‘seeing that we have such sore need of it?’

Indeed, my heart had leaped up at his words, for I saw Doon proud as of old, its lands restored to it, its old chambers beautiful, the treasures of which it had been dispossessed returned again. I saw more. Through the gold of this lost ship of the Armada I saw my wife like a queen walking in these old rooms in a state that befitted her pride and beauty. I saw the Considines, who had been so stripped and impoverished that the last of them had nothing but his sword, holding their heads again with the highest. I saw my sons, her sons and mine, growing up about me, to exalt the name that had sunk into obscurity, almost into oblivion.

‘Why should it stay?’ I repeated, meeting the old fellow’s cunning eyes.

‘There is but one way into Carrigadoon,’ said he, ‘an’ that is by the Chimney. Your honour would never take it?’

‘I think Don Miguel meant that I should,’ I said. ‘Would he cast me on my destruction?’

‘It might be an evil spirit in his shape,’ said the old fellow, wiser than ever. ‘Time was,’ he went on, ‘I’d have been for scalin’ the Chimney; but old blood runs cold. You won’t be for tryin’ it, Master Maurice?’

‘My blood runs hot enough,’ said I.

‘You wouldn’t be for leavin’ the lady a widow?’

The suggestion staggered me a little, and the old fellow saw his advantage and pressed it.

‘It ’ud be the greatest of luck for old Damer if your honour was out of the way,’ he said, eyeing me curiously.

‘Let me be now, Thady,’ I said. ‘I shall take the night to think upon it.’

He went half unwillingly, and I to my bed, but not to sleep. Under the moth-eaten canopy of the great bed I lay staring into the moony dark. My thoughts were too full of excitement to let me sleep. Such happenings of a single night! Did any one ever know the like? How could I have imagined, awaking in the cold dawn, that I should be a husband before night, and that from the other world a hand should be stretched out to me proffering riches?

And I never doubted that I should go. Thady’s arguments had but shaken me into the consciousness of how much I risked. Yet would I be worthy of the Lady Nesta, my wife, the Lady Nesta Considine—a fierce joy took me and shook me as I said her new name—if I were not ready for Fortune when she flung her gifts in my lap? As for Thady’s suggestion about that noble ghost, I spurned it. There was no treachery in those sad eyes and on those stern lips. He was a true man that Don Miguel Santana, whether he lived or died.

I slept late, and when I awoke that rascal Tim was by my bedside. He was holding me a cup of chocolate as he had learned to make it in French Flanders.

‘I thought your honour would sleep to the dinner-hour,’ he said; ‘and you have talked—Lord, how you have talked!—about the treasure-ships, and dead men, and other matters.’

‘Tim,’ I asked, ‘what day is this?’

‘Christmas Eve,’ he answered, ‘and the world sunk in the snow. ’Twill be bad for the lambs born to-night. What suit will your honour wear: the plum-colour, with the white lacing?’

It was plain he thought I would be for seeing my bride; but I had the will to thwart myself till I should pour the Don’s gold into her lap.

‘Nay,’ said I, ‘but the toughest and plainest suit I possess.’

‘What would your honour be for doing?’ he asked, staring.

Then I told him, as I had told his father, the story of the ship and her ghosts. He heard me out. Then—I could depend on him—he could scarce contain himself until the descent of the Chimney might be made.

‘Tis no such great thing,’ he said. ‘A black gulf, and the roaring of waters, and the devil’s name were enough to scare silly folk. So much the better for us, Master Maurice.’

Now, we did not dare to make that venture

by daylight, for I had it in my mind that at the least hint of our absence together old Thady might set the hue-and-cry upon us; and I was minded that we should see the matter through for ourselves.

The storm that day was enough to keep any one within doors. I spent the hours of it in the book-room, making a disposition of my affairs and belongings, such as they were. To the Lady Nesta, 'my beloved and honoured wife,' I left all things whatsoever of which I should die possessed, praying her out of the love she bore me to let not my old servants, and the poor who leant upon me, suffer. I left her especially that deed of gift by which Don Miguel had willed his galleon to Sir Terence Considine in the days of Elizabeth, and I set the parchment, witnessed and sealed by a notary who had come hither with the great Earl of Cork, where it might easily be found, together with a statement of where I believed the galleon to be, in case we should not return. For, living or dead, I meant her to have the treasure.

Poor Thady watched me narrowly all that day; but towards evening his suspicions lulled, and I could see that his relief was great when about ten of the clock I put away my books and retired to my bedchamber.

After a sufficient time had passed I left the room and the house, locking the room and taking the key with me lest my absence should be discovered.

I found Tim waiting for me as we had agreed under the great oak-tree in the Long Avenue. He was carrying a hooded lantern, and a thick coil of rope was round his body. He was stamping his feet to keep himself warm, and whistling a little to keep his heart up in the piercing cold and amid the shadows.

It was not far, luckily, to the Chimney and the circle of strange stones that surrounds it and of which the country people are much afraid, deeming it a sacrificing-place of witches and devils, and I know not what other wildness.

The moon was up now, and every stone threw a blackness of shadow on the snow. As we came near we could hear the whirlpool in the Chimney that never was silent, a roaring and deafening sound as though the whole sea were imprisoned in that shaft and cried to get free.

Our plan was of no great subtlety, and never were men so lightly provided for such an enterprise. Those old boulders of the Druidic circle had favoured us. Close to the Chimney, leaning towards it as though it would pass within, was a great stone in shape somewhat cruciform.

Under its arms we knotted the rope. Nothing could hold it more steadily.

'Twill never break, Master Maurice,' said Tim. 'I have spent the day in testing it, for I would not leave my old father childless.'

With that he began to fasten the other end

about his middle; but I protested, and albeit he strove with me that he should go first, he knew me too well to stand long against me.

Yet as he knelt by the edge of the Chimney, paying out the rope to me with his two hands, his face was gloomy.

'Have patience, Tim,' said I, 'for if I come not back soon, you will follow me.'

'That will I,' said he, and his face lightened; 'though I shall have to go in the dark.'

As he lowered me over the edge I felt with my feet for any resting-place on the sides of the Chimney, but found none. The lantern was slung to the rope round my waist, and by its light I could see the slimy and dripping walls, where no foothold was possible. The upper part of the Chimney was narrow—as narrow as any house-chimney; but as I went lower and lower it seemed to widen, and presently I came to the end of the rope and was dangling in mid-air amid such a commotion under me that it was as if the very cauldron of hell were seething there. For a second or two I dangled, thinking how long I should have to wait until Tim thought of pulling me up again.

Fortunately the air of the place was pure; and if I had had any doubt that it opened to the sea, I should have been persuaded by the furious wind that blew about me, making my lantern to flicker, not less than by the fact that a gull I had startled flew in my face with a scream, and then sped upwards to the opening above.

Now, I was right sure that the gull did not enter the place from above, and it occurred to me that not far from my face might be some spot where her kind nested in the breeding season. I began to feel numb, swinging so between earth and heaven; but with an effort I set myself to go backwards and forwards like a pendulum, striving so to find what lay about me at either side of the Chimney.

Then, to my great joy, I saw by my lantern-light a ledge, and on it a drift of silver sand, by which I knew that the opening into the sea could not be far from me. The next swing of the rope brought me within touch of it, and I could see that there was a little cave retiring into the rock.

Once, twice my feet touched the sands; but the impetus of the rope swung me again over the abyss. The third time I had better luck, for I grasped with my hand a rough edge of rock and drew myself on the little ledge of sand. My first care was to free myself from the rope, lest Tim should draw me up again and my work be undone; the next to flash my lantern into that dark crevice in the wall of the Chimney, startling a great many gulls, which flew into my face so suddenly that if I had not been very cautious I might have overstepped the edge, and that had been an end of me.

But, confused as I was by the roar of waters below me and the columns of spray that rose

now in my face and blurred my lantern, I yet kept my presence of mind, and had the sense to withdraw myself into the cave, being freed of the rope, lest a vertigo should take me on that narrow ledge.

Now, when I had wiped the lantern clear of the spray, I saw that the cave—for cave it was—retired inwards, but was not closed as I had supposed, narrowing rather into a passage high enough to take a man standing; and this greatly excited my curiosity.

But before I followed my instinct to explore it I turned about, seeking for some means by which I might let Tim know the way I had gone. Then I saw that the rope was no longer there, and concluded that he must have drawn it up, finding that my weight had left it; and about this I was not long in doubt, for while I yet stared from my position of safety in the cave upon the black interior of the Chimney, a pair of brogues came in sight, and I should have known them the world over for Tim's. In an instant he was by my side.

'Why, it is a country-tale,' he said, 'that the cliff here was tunnelled by fairies. It looks more like smugglers to my mind, Master Maurice; and if it is so not much shall we find of the *Santa Anna*.'

Yet they were no smugglers but men of some earlier date that made these galleries and vaulted rooms, for what purpose is beyond anything but our blind guessing. Anyhow, it was no maze, but easy to follow, that, twisting in and out, led us at last to the great cave nearly filled with the sea, wherein what was left of the galleon lay wedged with such a force that all the storms since then had not been able to free her.

We came upon her by a passage going sharply down from above; and, lifting the lantern over our heads, we could see the crowding saints and angels of her carved poop. Within that, I knew well what I should see. I have since given that dust holy sepulture; but now we did not disturb it. A window in the poop was close to us. Into it we scrambled—we had not gone bird-nesting on the cliffs for nothing—and found there a stately saloon, or it had once been so, but now mouldering and rotten.

But a little while it took us to discern that the blackened goblets and beakers were of gold, and that there was gold plate worth a king's ransom. In that deed by which Don Miguel conveyed the galleon to my ancestor there were minute instructions as to the disposition of the ship's treasures.

'Lord, if the galleon should be uprooted now!' said Tim at my elbow; but I hardly heard him.

Beyond the bulkhead I knew were the treasure-chests full of doubloons and moidores and pieces of eight. For the present I let them be. I put in my breast an image of pure gold, studded with rubies and emeralds, for an earnest that I had found the treasure, and so we left the *Santa Anna* till we could return and enter upon that inheritance which was lawfully mine.

And return many times we did, till the treasure was in safer custody than that of the rotting ship. And that being secured at our own risk and peril, we brought hither the Abbé O'Clery, lowering him by a bucket, for we had procured better means of ascent and descent. He would come when he was told how the dead lay there unburied, and himself consecrate the place, so that, though the earth received them not, they yet slept like Christians at last. And all this we did of ourselves, and undiscovered, for that snowy Christmas none braved the cliffs of Carrigadoon; and those heathen cromlechs were always shunned by our people.

Yet long before this was accomplished—indeed, on the day following our first discovery; and I am not like to forget it, for it was Christmas Day—I carried my strange story to the Lord Fitzwalter; and when he would have mocked at me as mad, I placed in his hands that image with the sapphire eyes and the cloak set with diamonds, emeralds, and rubies. And even then, such was the man's character that he still delayed to receive me as a suitor for the Lady Nesta until I had feasted his eyes on the gold-pieces, and he realised that I was richer than Dick Damer, who had squeezed the poor that he might amass guineas.

And when that came to pass he summoned the Lady Nesta and put her hand into mine, and swore that it rejoiced him to have me as a son; and very bitter he was about Damer and his insolence that he should have looked so high as the Lord Fitzwalter's daughter. Yet I remembered that he was not insolent before I had found the *Santa Anna*; but I said nothing, for I would be at peace with my bride's father, who when he heard that we were already married but congratulated us and himself the louder. My Nesta is, happily, but little like him.

In the storms of the March equinox that year, the cromlech of the cruciform shape was somehow uprooted, and fell across the Chimney, and there it lies to this day, since it is no one's business to remove it, and it would indeed be a great undertaking; there it remains, a monument to Don Miguel and his men.

I believe these are at peace, and that none again shall see the apparition of the galleon.

## THE MONTH: SCIENCE AND ARTS.

## THE PANAMÁ CANAL.

AN American technical journal, in commenting on the recent volcanic eruptions, suggests that they carry with them a special warning to the people of the United States in connection with the long-talked-of Panamá Canal. As most of our readers are aware, there are two possible routes by which the waters of the Atlantic Ocean may be made to mingle with those of the Pacific: one by cutting through the Isthmus of Panamá, and the other by Lake Nicaragua. The authority referred to tells us that the isthmus has undergone no change within the historical period, it bears no trace of volcanic action, and there is not even an extinct crater within one hundred and eighty miles of it. Nicaragua, on the other hand, has always been the seat of seismic disturbance, and is within reach of volcanoes which have wrought much havoc in the past. 'Only sixty-four years ago, Cosequina, in the north-west of Nicaragua, belched forth for two whole days a mass of matter that, in every six minutes of eruption, according to one authority, would equal in amount the material to be dug from the canal.' Seven years later the city of Rivas, which is only five miles from the intended Pacific terminus of the waterway, was completely destroyed by earthquake. It is considered that the location of the canal in such a centre of volcanic activity as Nicaragua is simply out of the question.

## LIFTING A BATTLESHIP.

To lift a modern battleship, with its armour, its guns, and its crew, completely out of the water would seem to be an impossible task, unless indeed we were of the kingdom of Lilliput, and had a Gulliver to do the work. Our Gulliver is not of flesh and blood, but takes the form of a floating dock which has been built, for naval use at Bermuda, by Messrs Swan & Hunter of Wallsend-on-Tyne. The dock takes the form of an enormous letter U, the walls being a hundred feet apart, and long enough to shelter a fifteen-thousand-ton battleship. A pontoon deck connects these two walls—a deck which can be sunk far below water or raised above the surface by the simple operation of pumping. When the dock was tested recently, H.M.S. *Sans-Pareil* was floated between the mighty walls, and was then drawing over twenty-seven feet of water. The pumps were then set to work, and in about two hours the big ship was standing high and dry on the now exposed deck of the dock. It was then seen that the hull of the vessel was thickly coated with marine growth, thus indicating one important use for this wonder-

ful piece of naval engineering. The dock is to supersede a smaller one built in 1863. It is to be towed across the Atlantic, and has been insured by the Government to the extent of nearly a quarter of a million sterling.

## DR GRÜN'S LIQUID LENS.

A lens enclosing a liquid, instead of being wholly of glass, is no new thing, the coloured lenses in chemists' lamps being often of this description. Indeed, we may say that in principle it is as old as life itself, for the eye comprises such an optical arrangement. Lenses of this description were constructed for various scientific purposes until improvements in glass manufacture placed a better material in the hands of opticians. Dr Ed. Grün has recently patented a lens, partly liquid and partly of glass, for photographic uses, and it has the merit of being so rapid in action that he has been able with it to secure pictures instantaneously of actors on the stage. This has been done without prearrangement, the camera-bearer taking his seat in the pit of the theatre as an ordinary member of the audience. That he has been able to take quick pictures at all under such conditions is surprising; but unfortunately the lens, as at present made, has a want of sharp definition which detracts from its value as an optical instrument. If the inventor can see his way to obviate this defect, photographers will not be slow to avail themselves of such a promising aid to their work.

## LIGHTING RAILWAY TUNNELS.

Mr F. D. Black, of Gourock, has devised a system of lighting railway tunnels by means of a row of electric lamps suspended above the four-foot way which lies between the two pairs of rails. These lights are under the control of the signalman, and they are switched on by him directly a train enters the tunnel, the result being a well-lit track instead of a dark one, and consequently increased safety to travellers. There are, however, one or two considerations which seem to us to militate against the system, and the principal one is the provision of the necessary electric current in uninhabited districts. We foresee, too, the gradual elimination of the old oil lamps in railway carriages in favour of electric lamps, which can readily be turned on or off from the guard's van. On all the best-managed railways such lights are already in use, and they are switched on as a matter of course when darkness, caused by the approach to a tunnel or of the shades of night, comes on.

## SEASHORE ALLOTMENTS.

The Eastern Sea Fisheries District Committee, under the authority of the Board of Trade, are

about to try an interesting experiment on the coast under their control. They will let out portions of the foreshore of the Wash to fishermen for the culture of mussels, oysters, and cockles, on the allotment system, each allotment not to exceed five acres in extent. The lettings of these 'layings,' as they are called in the district, will be by private treaty or by auction, and the rental will be of a moderate amount, for the intention is to encourage individuals to take up small allotments, and not to let large areas fall into the hands of a few speculators. The money obtained as rents is to be expended in the general improvement of the fishery as a whole.

#### THE MANUFACTURE OF GLASS.

Much correspondence has lately been published with reference to the unfortunate state of certain branches of the glass trade in this country, owing to the limitations placed upon the masters by the men, as represented by their trade-union. American manufacturers are not handicapped in this way, and new methods of working are quickly adopted, with advantage both to masters and men. One of the most recent introductions is a new means of using compressed air in the manufacture of large articles of glassware. Hitherto it was deemed impossible, on account of the limited capacity and power of the workers' lungs, to produce a larger receptacle of glass than that represented by a twenty-five gallon carboy. A German inventor, Paul T. Sievert by name, has overcome the difficulty by a clever adaptation of the power of compressed air, and the process is fully described and illustrated in a recent number of the *Scientific American*. A glass bath, of the usual domestic pattern, such as is generally made of porcelain or more often of iron, can be turned out by this new process in the short space of five minutes; but it is right to add that the gradual cooling or annealing in an oven occupies several days. Briefly put, the new process consists in flowing a mass of liquid glass over a flat table, clamping its edges, and then, after removing the table, supplying compressed air so that the central portion drops into the form required. The table is then applied at a lower level, so as to give the plastic bath a flat bottom.

#### NEW USES FOR PAPER.

The number of uses to which paper is put is most astonishing, and new applications of this truly valuable product of human ingenuity are being constantly found. It would seem to be almost outside the bounds of possibility that the same material which is employed in fashioning a bank-note can be turned into a railway-carriage wheel or a tea-tray; but a more recent employment for paper is found in the manufacture of artificial teeth, which are said to be cheaper than those of other material, while at the same time they cannot be so easily broken, and are quite

unaffected by atmospheric changes. Paper is also now being used for foot-gear. We are quite aware that for a long time this has been done in a surreptitious manner, layers of brown paper constituting the principal parts of soles which are supposed to be of leather. But the new material which we have now in view rivals patent leather in its appearance, and is used for the 'uppers' of boots and shoes. It is perhaps better suited for indoor than outdoor work, because of its fragility; but it is serviceable. One advantage it has over its prototype is in being so thin that the apparent size of the foot is reduced. This advantage will probably commend the new material to the public more than any other, for small feet are universally admired.

#### STREET CLEANSING.

A new form of sweeping-machine is on its trial in the streets of New York. It consists of a large two-horsed cart, and behind it is a rotary sweeper operated by chains and sprockets. The rotary brush gathers up the dirt, which is carried by an endless belt furnished with scrapers into the cart above, and dropped into a dustproof receptacle. The apparatus also includes a water-tank and attached sprinkler under the control of the driver, who sprinkles the road just in advance of the brush. The cart holds two cubic yards of dirt, it can be controlled by one man, and does its work without raising any dust in the air. If we compare this clean, convenient, and quick method of gathering up the refuse from the streets with the common plan of sweeping by hand and raising almost more dust than is carted away, its advantages are beyond dispute. We trust that some such plan may be quickly adopted on this side of the Atlantic.

#### TUBULAR RAILWAYS.

Mr John Leighton, F.S.A., has forwarded to us a booklet which deals with 'Tubular Transit for London,' and which is apparently applicable to the needs of other cities and towns. The old adage, 'slow and sure,' as exemplified in the fable of the 'Tortoise and the Hare,' must be regarded as obsolete in these go-ahead days, for all our efforts are directed towards obtaining the utmost speed in getting from place to place. Mr Leighton's object in writing this brochure is to plead for an orderly system in the laying down of tubular railways in the Metropolis, and insists that their general arrangement with regard to one another should present a network, not a patchwork. So far we are quite in agreement with him, and should like to see the same orderly system extended to our streets. But with regard to design, as set out in his maps and plans, we must differ from him. He advocates the establishment of eighteen lines of underground railway, two miles apart, half of them running north and south, and the other half, at

a different level, running east and west. A more rational method, we think, would be a radial system: a wheel-like arrangement of the lines, with the hub at the Bank of England and the spokes stretching out into the suburbs. Most persons living in Greater London have business in the City, and this arrangement would present the most direct way of getting there. Moreover, the successful 'twopenny tube' already finds its terminus at the Bank.

#### METALS FOR ENGINEERING.

In a recent lecture delivered by Sir William Roberts-Austen on 'The Relations between Metallurgy and Engineering,' it was pointed out that the necessity for pumping water from mines was the main factor in the evolution of the steam-engine, and in turn the development of the iron and steel industries dated from the time when the steam-engine was employed to pump air into the blast-furnaces. The age of steel began less than half-a-century back, and since that date much attention had been devoted to the molecular structure and properties of steel. In a presidential address to the Institution of Civil Engineers, delivered in 1862 by Sir John Hawkshaw, that eminent authority asserted that if the strength of iron could by any means be doubled, the discovery would be equal to the production of a new metal more valuable than iron. Metallurgists had actually accomplished this feat with regard to steel by adding to it other comparatively rare metals. The lecturer also dealt with the importance of microscopic examination of steel, which might thus be able to reveal by its structure its past molecular history, and even the vibrations to which it had been subjected.

#### NEW PAPER FROM OLD.

Many thousands of tons of paper are utilised daily in the printing of newspapers, and it stands to reason that there must necessarily be in this immense output a large amount of waste. Besides which, a large portion of this ephemeral literature is thrown aside after perusal, and in due course finds its way to the waste-paper merchant to be ultimately converted into a lower class of paper. Many attempts have been made to convert such paper into a quality of pulp which can again be manufactured into good printing-paper; but the presence of the greasy ink stood in the way, and that source of discolouration could not be removed except at prohibitive cost. A German chemist, Herr Knopf by name, who hails from the University of Munich, has recently given a demonstration in London of a process which he has discovered by which the difficulties just detailed have been overcome. After reducing a sheet of the *Times* to pulp, which was black in colour owing to the presence of the ink, he treated it with a soap emulsion, which at once extracted the impurities,

and he then converted the cleansed pulp into a new sheet of paper. Whether the process can be worked profitably on a commercial scale remains to be seen.

#### DUSTLESS CARPETS.

The Booth system of removing dust from carpets and other household fabrics will be found of great value to all who regard cleanliness as one of the necessities of civilised life. The apparatus, which is readily adaptable to hotels, theatres, and all carpeted premises where men most do congregate, consists of a vacuum-pump to which is attached a dust receptacle and tubes which can be carried to any reasonable distance. To the end of such a tube is affixed a bladed instrument furnished with a narrow slit, which is passed over the carpet with a sweeping motion, by which action every particle of dust is sucked up. We lately saw the apparatus in action, and by way of demonstration a handful of flour was thrown on a carpeted floor and thoroughly rubbed into the fabric by energetic feet. The dust-extractor was then passed over the place, and in a few seconds no trace of the flour remained. It seems incredible that from a carpet measuring two hundred square yards in area forty-nine pounds of dust should have been extracted by this means; but we can easily believe that this is possible after seeing the apparatus at work. It should be noted that the dust is removed without a particle of it being floated in the air, and that a carpet thus cleansed, instead of being submitted to the usual beating process, has its life immeasurably prolonged. The system is being promoted by the Vacuum Cleaner Company, of 25 Victoria Street, London, S.W.

#### LOVE'S GUERDON.

LET Love be mine with all his bitter-sweet;  
His thorny roses I am fain to weave  
Into a crown to bind about my brows,  
Knowing the wounds 'twill leave.

His hands may loose the fountain of my tears,  
And flood my life with Marah's bitter brine;  
His fruit may turn to ashes in my mouth,  
Yet still let Love be mine.

Let Love be mine! What though the harvest be  
A sheaf of sorrow at the summer's close;  
I shall rejoice that Love has laid on me  
The burden of his woes!

M. HEDDERWICK BROWNE.

#### \*\* TO CONTRIBUTORS.

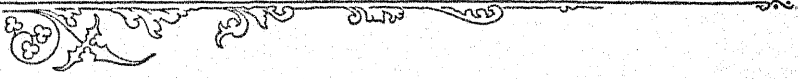

- 1st. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'
- 2nd. For its return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3rd. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, should have the writer's Name and Address written upon them IN FULL.
- 4th. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

### NEW SAMARIA.

By S. WEIR MITCHELL, M.D., Author of *Hugh Wynne, Free Quaker*; *Dr North and his Friends*; *History of François*; &c.

#### CHAPTER I.

**T**HIS is what happened to me in July 1873. It chanced in the middle of a prosperous and easy life, in which, as a banker, I had doubled the property left to me, an only child. My days had been free from money cares, and in all other ways what might be called uneventful and happy.

In looking back over the unlucky incidents I here record, I fail to see what better I could have done. One of the three or four people who have read this story of my sudden isolation thinks I might have found sooner some way of relief. I leave the reader to decide.

The West was not the West of to-day. Travel was more difficult, the post slow, the telegraph a new means of communication.

In 1871 I became the unwilling owner of certain mines in western Arkansas. They had brought ruin to two owners, and I went to the West to see what I could do with them. I told my people not to write until they heard from me, and that I should be gone three or four weeks.

On July 3, twenty miles from my destination, New Samaria, I left the unfinished railway, and on July 4 took the stage early in the morning. To my disgust, my baggage had been missing at the station. A too sanguine stationmaster 'reckoned it would turn up soon,' and I went away annoyed, anticipating the discomfort of being without power to change my clothes. My trunk turned up a month later.

I reached the new town of New Samaria at noon. I had a horrible meal, and, evidently by reason of my being without baggage, was not very cordially received. It did not trouble me. Being rather energetic, I meant to lose no time, and, without stating my errand, asked to be driven out to the mines, some twelve miles distant.

When the driver appeared with a good-looking horse and buggy he was distinctly drunk. I tried to find the landlord; he was absent. A sympathetic bystander said the road was plain; better to drive myself. Dismissing my driver, I received a pretty clear statement that I was to follow the main road to the bridge, which was under repair; then I was to turn to the left and along the river road to another bridge a mile away. After that it was a plain road: 'No fellow could miss it.'

As I was about to get into the wagon a tall man touched my arm, a liberty I disliked. He began to tell a woeful tale of how he was out of work, never had begged, would I—and so on. I said, 'Oh! go and get work. I never give to beggars.'

He said—and I thought it queer—'I wish to thunder I hadn't asked you.'

He did look pretty well used up; but I was still in a state of vexation about my baggage, and so got in and drove away. I was saluted at the hill-top by a pack of fire-crackers, and that and the face of the beggar were the last things I remember.

When I was reborn to slowly improving consciousness, it was to recognise the place I was in as new and the light as dim. I recall my first puzzle as to whether it was morning or evening. I concluded that the change of light would soon tell me, and was pleased at my own intelligence. By degrees the light increased, and with it my knowledge of my own condition. My head was bandaged and I was now and then a little giddy, and especially if I turned over in bed. My right hand also was bandaged. By degrees I saw that I was in a large, whitewashed room, in one of six beds. It was close and not over clean. My pillow smelt horribly. Two

other patients were snoring. By-and-by came a young woman neatly clad in gray linen. She said, 'Oh, you are better. How do you feel?'

I said feebly, being still rather dazed, 'Thank you, I am very weak and giddy.'

'Well, you are out of danger, the doctor says. You have been very bad.'

'Pardon me,' said I, 'are you the nurse?'

'Yes.'

'May I ask your name?'

'Why, yes; my name's Jane Wright.'

'And I am in—well—in—a—hospital?'

'Yes; but here's the doctor. I will fetch your breakfast pretty soon.'

The doctor was young, and, as I found, positive. I was becoming curious, and was beginning to feel a little more secure of my power to think and to speak.

'Oh, you are all right to-day,' said the doctor. 'Any headache?'

'No; but I have more or less vertigo if I turn over suddenly.'

'Then don't turn over. If you keep quiet, you will be about able to go out when we close for repairs on the 14th.'

'May I ask, my dear doctor, how long I have been here?'

'Since July 4, and this is the 10th.' He turned to leave me.

'Indeed! A week. Pardon me if I detain you a moment. What happened to me? I have lost nearly a week. It is an absolute blank.'

'You want to know what happened? You started out after a Fourth of July frolic to drive over a bridge with no flooring. You were pretty well set up.'

'What! I was drunk! Do they say that?'

'Yes, a man tried to stop the horse. He succeeded, but there was a smash, and you got a crack on the head, and he broke his leg. The horse had to be shot, and the wagon was in toothpicks.'

'Well,' I said, 'this is an amazing tale. I was drunk, you say?'

'Yes, so they say. I wasn't there.'

'It strikes me as comical.'

'Does it? Your idea of a joke is unusual. Wait till you see the man who let you have his horse.'

'I presume, sir, that I can pay for it.'

'Well, for a fellow that did what you did, that is rather cool. You had better keep quiet. In three days I can let you go.'

I said, 'Wait a little, doctor; there is some queer mistake. I am—I am George Woodburn, of the banking firm of Woodburn & Caruthers, Wall Street. Where is my purse? It was in my inside breast-pocket. There are cards in it.'

'Purse? There was no purse.'

'And my watch—a gold repeater?'

The doctor said, 'My good man, you are either off your head a bit or else you are playing a

little game. It won't do. I have no time to waste. Best keep still. If you get excited you will be the worse for it.'

The situation was really so odd that as he moved away I laughed outright. This hurt my head, and I reflected that his last advice was good. I said no more until the nurse came with milk and bread and butter; then I asked her, 'Miss Wright, have I been here a week?'

'Yes.'

'Was I much hurt?'

'Yes; a cut on the head and one on the cheek. But you got off pretty well: dislocated thumb and sprained wrist.'

'The doctor was in a hurry. He should have heard more patiently what I have to say. He seems to me rather positive.'

'Oh, that's because he always knows.'

'Indeed! How could he know about me? I do assure you, my good nurse, that he is strangely mistaken.'

'I wouldn't excite myself if I were you.' Miss Wright seemed unwilling to discuss the doctor's opinions.

'Thank you,' I said. 'No doubt the advice is good; but it is somewhat necessary that I should communicate with my people and settle all this nonsense as to what I am. It is rather amusing to be taken for a tramp by that doctor.'

'Oh, he only says what every one says. Mind, I don't say it. I told him it was nonsense—that tramps did not talk the kind of way you do. I don't know what you are; but you're no tramp.'

'Many thanks, Miss Wright; and kindly tell me what else is said of me. It is interesting.'

'Oh, it's all in the New Samaria *Herald*. Mr Smile—that's the landlord—says you are in with a lot of policy men.'

'That is agreeable. Is it really the case that my purse and watch are gone?'

'Well, we couldn't find a cent, or anything to say who you were. Your socks were marked with initials. We wanted to know, because we thought you were going to die.'

'One can do that without having a name. Does your doctor never believe a man in a hospital?'

'Yes, of course. Now eat your breakfast. In a day or two you will be able to go out. I must go; and don't you worry.'

I asked for the paper, which she said she would fetch.

I lay quiet all that day. Here was a pleasing scrape. I was weak, alone, presumed to be a scamp, without a cent, in a Western town where no one knew me. However, I was glad to have been so well cared for, and, after all, when once I was up and dressed I could easily arrange matters.

The next morning my head felt clearer, and I began to consider my surroundings with more

care. I sat up after a breakfast of milk and bread, and observed that I was No. 5. My only near neighbour was No. 6. He was a man under thirty, and had red hair, which was cut short and stood up straight from the scalp.

I said, 'Excuse me; do you mind talking to me a little?'

'No. I meant to, but until two days ago you have been roaring about mines and buying houses.'

'Is that so? Thank Heaven, I am getting better; pretty soon I shall be able to get out and settle things, and reward all these good people who have been taking care of me.'

'Well, you are a cool hand,' said No. 6. 'The landlord says you were drunk, and my advice to you is to get away quietly out of this town. I wish to Heaven I had never set eyes on you!'

'May I ask what you mean?'

'Mean! I caught your horse. He was going for the bridge. In a moment you would have been a gone man.'

'Then I really owe you both an apology and gratitude. But no one told me who or what my neighbour was, and so you have gone unthanked. I am most grateful.'

'Oh, that's all very well. But here I am with a leg broken and laid by for six or eight weeks, and my salary stopped.'

'That's pretty hard; but in a few days, when I get out of this place, I hope to satisfy you that your sacrifice has not been in vain.'

My neighbour laughed. 'By George! The doctor says you *can* talk, and that is all there is of you.'

'So the doctor has been gossiping. Upon my word, you and he are oddly mistaken.'

'Oh, shut up!' said No. 6. 'I know your kind.'

'I cannot reply to a man who saved my life as I would to another; but as you seem unwilling to believe me, may I ask one other question?'

'Oh yes. What is it?'

'Who brought me here?'

'Oh, some circus chaps picked you up.'

Then I understood where my purse, watch, and, as it proved, my trunk-check and cigar-case had gone.

'Well,' I said, 'I will not trouble you further. You will find out some day that you have made a mistake about me. I can very well understand why you feel as you do.'

'Oh, gammon!' said No. 6. 'I've heard all I want to hear. I am laid by for two months, and I have to pay a fellow to clerk for me in the bank. Suppose you quit talking to me.'

I said, 'Very well, as you like.'

After this I began to reflect, and when I put myself in the place of No. 6 I knew that I should have been equally sceptical. At the same time I felt a certain amused interest as to how my too unusual situation would end. The next

day No. 6 was removed, as I heard, to his own home. I learned that his name was Thomas Sedgeley. He seemed to have recovered his temper, for as they lifted him he repeated the advice he had given me as to leaving town, and seemed to take in me the kind of half-interest to which an act of self-devotion seems to pledge a man. His removal left me with no one to talk to except the doctor, who had made so decided a moral diagnosis, and the nurse, who was both civil and kind.

The day of my first talk with Miss Jane she brought me the paper she had promised; but it was not until much later that I could read. Until then my sight was doubled, and any effort to fix my attention caused a return of giddiness. I put the paper under my pillow, and waited until I could read with more ease what New Samaria thought of me.

The second day I asked for pen, ink, and paper; but my right hand was sadly cut and sprained, and I could not write a word. Miss Jane said she would write for me. I dictated a note asking my partner to arrange for a credit at the National Bank of New Samaria for ten thousand dollars. The little woman looked up in amazement.

'Ten thousand?' said she.

I said, 'Yes, that is correct.'

She evidently regarded it as an attempt to impress her with the belief that I was really what I had said I was. I added, 'If you think a little, my good nurse, you will see that my writing a letter to New York can do me no good with people here. Kindly finish it.' She said no more, and I ended the letter.

I knew that my letter could not bring me a reply for a week, and that no means I could employ would put me at once in easy circumstances. In any case, I should have to be identified before I could get money. It must have been several days before I was able to think clearly, or else I might sooner have seen my way. But, as I have said, for some time, even before I left the hospital, and for some days afterwards, all effort to concentrate attention confused me and gave rise to vertigo. I finished my letter with a brief statement of my having had a slight accident to my hand: this to explain a signature which would excite much comment in the home office. Then I said I must ask the charity of a three-cent stamp. When she returned with it I said, smiling, 'You have made an investment. What for a month will be the interest on a three-cent stamp?' She said I must still be off my head a bit, and again advised quiet. I had evidently damaged the good opinion she had had of me. However, that could not be helped, and so the letter was directed and sent. Reflecting over what had passed, I was somewhat surprised that quiet talk and civil ways should have affected so little the people with whom I had

come in contact. In fact, it made some of them suspicious; but to none did it bring conviction, as I was soon to learn.

Two days went by, and I was told that I was well enough to go out. I was really quite unfit to leave; but what else could I do? This was July 14. I was advised to live on milk and vegetables, and to avoid the sun; best not to try to use my right hand for a week or two. It was pleasingly vague. In fact, I was eager to get out and settle my difficulties. A screen was set up and I was left to dress. I was appalled. My neat gray travelling-suit was ragged, muddied, and blood-stained. My felt hat was torn half across. When I contrived to clothe myself I asked for a needle and thread and tried to repair certain rents. It resulted in sewing my pantaloons to my drawers.

The little ward was now empty, and the doctor gone on a fishing holiday. After I had been up and dressed an hour, the nurse came with my usual diet of bread and milk. It was certainly good for me, but not otherwise desirable, as I disliked milk.

I stuffed the *Herald* in my pocket, said good-bye to Miss Jane, and, a little giddy, went down a narrow hallway to the street. I looked up and down the road. It was very hot, and few people were out of doors. I remember saying to myself, 'Shall I go to the right or to the left?' when suddenly I remembered that I was penniless. Although I was weak, the comic element of my situation was at times uppermost in my mind. What should I do? For a very few days I must manage to live. But how? Returning, I rang the bell. The door was opened by Miss Jane.

I said, 'You are very hard people. I am not fit to go out.'

'I am very sorry; but what can I do?'

'That is also my question. No one believes me to be a man by accident left without money. I don't think I would believe it. I never did believe beggar stories; but you do know I am a man, and have no home, no money, and am too weak to work. I want you to give me half-a-dollar.'

'I can't give you that much; I will give you a quarter.'

'I should have said, lend me that amount.' I realised then and there the tremendous gap between competence and the outstretched hand of want. For a moment the sense of humiliation was immense; nevertheless I took the coin and said, 'That makes twenty-eight cents in all. You

believe me a tramp or worse, but kindly tell me where I shall go to get a bed. Even tramps must sleep.' Upon this she drew out another quarter and said, 'I just ought not; but I must. Some one will feed and lodge you for fifty cents. We'd keep you along till you got strong; but we shut up to-morrow for repairs. I am awful sorry.'

I thanked her. I looked back as I moved away. She was watching me. I was glad to find, as I walked on in the cooling twilight, that I was better of my vertigo. That I was a notable object was soon made clear to me. Some boys jeered at me. I went to the telegraph office. Here I asked the clerk to send a night message to my partner:

'Arrange credit at New Samaria bank at once; am without funds.—C. O. D.'

The clerk declined. He was civil but firm. He glanced at my pantaloons, and the hat confirmed his judgment. No, I had to confess that I had no abode in New Samaria and no money. A paid telegram was beyond my means. I gave that up. Again I was grimly amused. I said, 'This town thinks I am a tramp or a gambler, and so do you.'

'I do.'

'Well, I am worth about three millions. Suppose you bet the cost of a telegram on the chance of its being true. Think not? Much obliged.'

I went out. Looking back is instructive; my friend was gaily relating the tale. I hesitated where next I should go; but, still satisfied that my language and manners must be such as to get me a quiet hearing, I turned and walked to the tavern where my calamities had begun. I found the owner even too easily. At first he did not know me. When I began to defend myself by stating my case, he poured out a series of epithets which at once disposed of my modest hopes of a lodging; and, taking me by the arm, he dragged me out and threw me on the sidewalk. I was too feeble to resist. My hurt arm was no better for the treatment. Sore and furious, and more dirty than ever, I staggered to my feet, and after a little sat down in the dusk on a doorstep. A grizzled, mangy cur, clearly a canine tramp, loafed across the street, and, recognising me as a comrade, put his nose in my hand, and finally sat down to await my pleasure. Then came a man, the owner of the house, and kicked the dog and told me to get up and move on. I obeyed, the dog following me.

## BEE WAYS.

THE unfailing interest taken in the observation of bees may be explained in various ways. There is always something new presenting itself, they are a continual illustration of the imperfection as well as of the perfection of nature, and they keep their stings handy.

On one of the very hot days of August I noticed a swarm issuing from a hive in what seemed a more than usually deliberate way. When one has handled a dozen swarms in a day little things are observed that would escape the less experienced eye. This swarm kept close together, and almost at once settled on a stake supporting raspberry canes, a place from which they could be easily got into a new hive. They gathered close together, and held firmly to the spot on which they rested. The swarming-box was placed over them and a little smoke applied; but they declined to move upwards, as they naturally tend to do in such a position. The cloth saturated with apifuge was brought into requisition, and those on the outside of the cluster ran about, but few could be forced into the box above; and as soon as the instruments of terror were withdrawn they returned to the cluster and sat close.

I made up my mind to lose this swarm, though only twice in twenty-five years had swarms gone away. It was evident they had a purpose different from mine, and meant to keep to it. So I drew in my chair, put up an umbrella as a shade from the sun, and sat down to watch. Very soon half-a-dozen scouts could be seen at work on the cluster; they ran over it with great eagerness, stopping at every two inches, and, lowering their heads, clutched a bee firmly with their fore-feet and made a rapid buzzing with their wings. I knew this bit of their language meant motion; but the manner and destination I could not guess. They soon let me know, for within about two minutes the cluster enlarged like a ball expanded by air within, and the bees loosened their hold, rising into the air in mass. Up they went with scarcely a sound till they were above the trees, and then, without leaving a straggler behind, went off in a south-east line and were lost to sight in the clear blue sky. Within one minute from the expanding of the cluster not a trace of the swarm could be seen.

About a mile distant, in the direction they had taken, a turret of a mansion-house was the attraction for them. A place of residence had been looked out, and the whole movement arranged before the swarm left the hive. On a previous occasion I saw a swarm going away in the same direction; but, knowing the queen was old, and there being a slight breeze ahead, I felt pretty

sure she would alight and rest by the way; so I followed. At about half the distance to the mansion-house I found them gathered on the branch of a tree, which I cut off with a little saw carried in the pocket for the purpose; and while carrying the bees home clustered on the branch, I met the lady of the manor on the path, who refused to believe me when I said it was only a bunch of grapes from her hothouse.

It is a common enough thing for bees to look out and fix upon a place of future abode before swarming from the parent hive; but generally in the excitement of swarming all seems to be forgotten, and they allow themselves to be easily captured, and in the most docile manner enter a hive prepared for them.

It is no less certain that swarming frequently takes place without any previous preparation, and I have had them hanging for days on the high branch of a tree, and beginning to build comb there, without shelter from the weather. Why it is that on occasion some half-dozen bees will take the lead, assume the mastery, and be obeyed by the whole hive is not clear. Some time ago, while putting into a hive a lot of bees which had come four hundred miles by train, I observed those officious individuals at work. The hive had been prepared and filled with frames of comb, partly empty and partly full of honey, and I sat down to lift the bees from their travelling-box with a spoon—a long one, as might be expected. This apparently slow method, by its quietness and simplicity, I have found the most speedy in the end, and it is a very sure way of observing the queen. When the first spoonful was laid gently down at the hive-door, they soon showed they were pleased. Being hungry, and scenting the abundance within, they went in to it. The operation proceeded till nearly all the bees were inside, when an outward movement began. I applied the smoker; but it was no use. Two leaders ran over the other bees with their peculiar buzzing motion, and were obeyed. No doubt others of them were at work inside, and the whole mass of bees left the honey, came out, and rose in the air as at swarming-time, though it was the end of September and getting dark. When they alighted and clustered I forced them into a swarming-box, uncovered the frames, and by a violent shake cast the bees into the hive and closed it. The leaders lost their power, and by morning a happy family were at work. Now, who are those leaders that control the movements of thirty thousand peaceably disposed citizens, and even deprive the hungry of their food? Are they appointed by the queen, or by the general vote of the hive? or are they self-constituted officials? They are certainly strong-willed fellows, who have got the knack of controlling others, for those entering the hive

turned at their bidding, and those feasting on the opened honeycomb left it at their command. In this case at any rate their rule was certainly as much against the interests of the community as it was against the wish of the proprietor of the hive.

This rule and guidance on the part of a few bees goes on continually in the working of the hive. I have observed them inside evidently communicating their commands to the bees around. When a hive gets overheated they send a lot of the bees outside, and these will stay out and perish in the rain rather than go in for shelter till they get the order. When in such a case I have opened wide the hive door, or raised the hive from the floor and let in air, out came one or two of those 'gaffers,' who walked over the clustering bees, bent down their heads among them, and fluttered their wings, and at once some freed themselves from the crowd and walked into the hive. This may go on till one-half of those outside are allowed in and the rest still kept out, or till the whole enter the hive. Nor will those ordered out of the hive in this way on a warm day, when the workers are busy gathering honey in the fields, go and work. They hang about the sides of the hive or under it, as if waiting for the command to enter whenever they may be needed to keep up the heat. During two days in August of the Queen's Jubilee year the heat was so intense and the air so still about the hives that almost all the bees came out and spread themselves over the tops and sides of the hives—a thing I have only witnessed on those two days. The combs inside became soft with the heat and threatened to fall, as I found on gently raising the hives to prop them up from the floor and let in air all round. Though the scent of clover made the air heavy, the bees outside never joined their fellow-workers in improving the shining hour by gathering the honey; they waited till the hive was cooled, and then went in. Could this spreading themselves as a thin layer over the top and sides of the hives have in it the idea of forming a shade from the sun, and in that way tempering the heat, while hundreds were making the most violent effort to create a current of air by the rapid motion of their wings? Every movement in the working of the hive seems to have a purpose in it, and seems to be under the guidance of overseers, who at one time are walking about in the most leisurely way, and at other times are in such a desperate hurry and making such frantic efforts that life and death seem to hang on the rapid discharge of duty. Who appoints these overseers? The queen is the one mother of the hive; but I doubt whether she takes any active supervision of its affairs. I have watched her movements inside and out, but never saw anything like supervision on her part; rather she herself is continually followed and looked after by a

company of bees. She appears to be a generally helpless creature who easily loses her way when she ventures out of doors, and cannot or will not even feed herself. Yet there is rule and authority and obedience and power of communicating purpose within the hive. Who will give us a key to bee-language and enable us to read the secrets of this wonderful organisation?

There are times when it seems as if bees, like many other workers, only follow the 'rule of thumb' in their operations. They build beautiful combs, and if a number of broken pieces of comb are loosely placed together, tied with a string, and hung into the hive, they will make a capital job in joining them together and mending the broken parts; but if a round hole be made in the middle of a comb, they cannot put a patch on it or mend it up. They will fine away the cells and round the edges of it; but the hole remains. It would be rash, however, to conclude that they are without brains or unable to use them on occasion. The early summer of 1899 was cold and wet, food was scarce, and the bees could not venture far in search of it. Indeed, the garden-flowers had to be for a time the chief supply both of pollen and honey. Being a lover of the long-spurred *Aquilegia*, I had for years hybridised them, and there were thousands of blooms on the plants. Only the humble-bee with its long trunk could reach the honey-drop secreted at the end of the long spur, in many cases over two inches in length; but the hive-bee, in its time of need, discovered the honey-drop was there, and, failing to reach it by the open door, became housebreaker, bit a hole in the end of the spur, and stole the sweets. Not a bloom that year could be seen without the little hole in the spur; while the next year, being fine and rich in honey, not a single bloom was tampered with. This may suggest caution in forming conclusions from such interesting experiments as those carried on by Sir John Lubbock.

When bees are pinched for food they are careful searchers for it and quickly discover it if at all within their reach. When honey is scarce I put sugar syrup in vessels for them daily at two o'clock. Five minutes before that time a few bees may be seen on the outlook, and if the day be cold they come singly and quickly from the hive, and return at once. Three minutes after the food is down thousands are at work, streaming from every hive, and crowding the vessels; and the rapidity with which four pints of liquid will disappear has astonished many a visitor. On the other hand, if honey is plentiful in the fields the bees pay little heed to bits of comb lying about or to syrup set down for them.

Circumstances have a good deal to do both with their intelligence and their morals. In spring, when there are hundreds of mouths to feed and stores are getting low, they begin to

show a wonderful interest in their neighbours' pantries, and to test their power of protecting them. Again, in autumn, with the long winter before them, and a scantily filled house, they make desperate efforts to increase supplies. At such times they will slip in and steal from a neighbour on the sly at the risk of a broken leg or wing or a general mauling; or they may play the part of a gang of robbers and make a regular fight for food, killing or being killed as may chance. In ordinary times, however, I have seen year after year pass with a score of hives standing side by side and nothing but honest and honourable work going on. Indeed, when honey is plentiful the bees get quite careless about it. As an experiment I have made little boxes with a bit of guide comb in them, and set them outside the hive near the entrance-door, and at once the bees entered them and began to store honey there.

The season, the flow of honey, the strength of the hive, the stores laid in, the age of the queen, and the number of young being raised are all elements requiring to be taken into account in making experiments with bees. On a bright summer day, when there is the pleasant hum of plenty of work and good pay for it, the hive may be opened and examined while the bees go on with their work undisturbed. The wax-makers, clinging to each other's feet, hang in their rows unmoved, and the comb-builders may be seen walking over them and gathering up the scales of wax as they are formed, and carrying them off. At such a time the bees will walk over the hand or rest on the face in the most friendly way. Then on an autumn evening, when the honey-season is quickly closing and winter preparations are being pushed on, if you drop a large moth near the hive door, or make there the faintest scratching with a straw, a score of furious guards rush out ready to deal destruction all around. So jealous do they become at this time that they never learn to distinguish the hand that feeds them from the hand of the enemy. If their stores be low and one feeds them daily for a month to increase the winter stock, they are as ready to sting him on the last day as on the first.

The power to sting is not the least interesting thing about the bees. Among creatures generally, the male is the stronger, is the fighting animal, and the best furnished with weapons of attack or defence. The male bee is, indeed, the large and stout fellow of the hive; but he is a gentle, good-natured creature, is no fighter, and has no sting. A baby may play with him with impunity. To see him fly abroad when the sun shines and listen to the deep-toned hum he makes, one might expect great things from him; but he does no work, returns quickly if a cloud covers the sky, and never attempts to defend himself when attacked. For all the purposes of nature a score of these fellows would be more

than enough for the wants of each hive, and yet thousands may be reared, only to be done to death in the most cruel way ere they have lived more than two months. The prodigality and ruthlessness of nature are here painfully illustrated. As soon as the honey-season begins to fail and food for storing gets scarce in the fields, the hive resolve to send forth no more swarms and be content with the queen they have. That means they have no more use for males. If they have been rearing young queens, they tear the royal babies out of the cells, suck the juice out of their bodies, and toss the empty skins to the door. The baby boys are dealt with in the same way, and scores of the fat white creatures may be seen thrown out. Then an attack is made on all the full-grown males, and a dozen colonies standing side by side may be seen to begin the attack on the same day. It is a painful sight. The small worker-bees seize them by the wings and by the legs, mount on their backs and try to sting them, bite them, and hustle them till they are glad to escape by flight from the hive. Having no home but the hive, they soon return, only to experience the same treatment, till, wearied out, they drop down to die. Three of these small workers may be seen holding on to one male till one of them manages to sting him; and though he may fly off, paralysis and death overtake him. At other times the workers chase the drones as a sheep-dog does a flock of sheep, gathering them together from every corner into a compact mass, and, surrounding them, prevent them from reaching any food, force them steadily towards the door, push them outside in the evening, and keep them out to be chilled by the cold and so perish. The question whether they feel pain is often forced on the observer. If the worker-bee should by chance drive its sting into the firm part of the back or into the head of the male it cannot withdraw it, and will turn round and round so that by a twisting motion it may manage to get the sting out; but the sting remains in the male, and the twisting motion wrenches it from the body of the worker and gradually draws out its entrails, and yet the bee goes on with its movements as if unaware of what is taking place with itself. So in such a case the use of the sting brings about the death of its possessor. It is different when the sting is used on another worker-bee, for then the slightest prick seems to be enough to kill. The stung bee seems to be at once struck with paralysis, curls up, and dies.

In contrast with the male bee stands the queen and her life. The queen is the only perfectly grown female in the hive, and there is but one in each hive. She may live and reign for four years. Only once in her life she knows love, and out of a thousand suitors one only touches her, and dies, and she is rendered fertile for life. Year by year she will lay thousands of female

eggs in small cells in which the insects can never grow to maturity, and thousands of male eggs in larger cells to be reared for their short-lived existence and violent death. If queens are to be reared in a hive, the worker-bees must build special cells of larger size, and lifting an egg out of the small worker-cells, place it in the queen-cell, and nourish it there on special food. Only in this roundabout way and by this special process can a female bee be brought to maturity to be constituted queen and become the mother of a new race. This perfect female is not so bulky in body as the male, but longer and more graceful in form; and she has a sting, long, curved, and powerful. The only creature that seems to rouse her ire and compel her to use the sting is another perfect female, like herself a queen. When these two meet, if they are not restrained by their followers, they at once engage in battle to the death. She never seems to use her sting on any of the worker-bees about, and may be caught and handled with impunity.

Thus in a hive of thirty thousand bees busy at work on a summer day there may be two thousand males and one female; all the rest are worker-bees who alone do all the active work of the hive. They are small, imperfectly formed females, who live only to labour, to struggle, and to die. It takes three weeks from the laying of the egg till these imperfect females are hatched out, while the perfect female is hatched in a fortnight. The workers are the bees that sting, the defenders of the hive from enemies, as well as its providers. Their short, straight sting, with its bag of poison at the base, is a very ready and effective weapon. A bee may dart from the hive at the face, and before you can put up your hand you are stung; but in firm flesh like that of man the sting remains, torn from the body of the bee, so that it dies in the very use of its weapon of defence. The same thing may take place, as we have seen, in part of the ordinary working of the hive, the killing of the drones; and in defending the hive from common intruders,

such as mice, many bees perish in this way. On a winter day, in a severe snowstorm, I went to examine the hive doors to prevent the drift from getting too freely into the hives. The door of one hive had been left rather wide, and I felt sure there would be a mouse inside; but the blast was so severe that I could not lift the hive to look in. Very soon the hives were covered with snow; but next day I dug out that particular hive to see if my surmise was right. The warmth under the snow had made the bees active; they had discovered the enemy, and there it was stung to death. In every part of its body there were stings, from nose to tail. Its ears were full of stings, and I counted as many as thirty on the tail alone. That hive did no good, but dwindled and died out.

The bee and its ways are full of mystery. What can be the impelling motive in the life of the worker-bees? They gather the food, build the combs, nurse the young brood, defend the hive, and keep it scrupulously clean. So hard is their work in summer that about six weeks is the measure of their lives. Their wings even are worn to rags by continuous use till they fail to bear up the bee, which falls to the ground and perishes. Yet they never know conjugal love, and all their toil and care are for the children of another. Nor do they even show any affection for each other. If food is scarce they remorselessly drag the young out of the cells, suck the juice out of the body, and cast out the shell; their dead or dying neighbours they carry to the door and drop outside; and yet, while perishing from hunger themselves, they will gather round the queen and with their trunks feed her with the last drop of honey in their sacs. One wonders by what strange process of nature such a state of things could have been brought about: so much imperfection in so perfect an organisation, such devotion to the life of one female, and such cruelty to the males, and that on the part of creatures who know neither love nor the jealousy, affection, and hate that spring from it.

## PRINCE ADRIAN OF ZELL

By W. E. CULE.

### CHAPTER VI.—A MISSION TO STYRIA.

**S**O you have seen him?' asked the Countess anxiously. 'What did he say?'

Mr Barrows replied with much deliberation. Since his interview in the Hotel Petersburg he had found time to recover his self-possession, and his bearing now gave no sign of that painful experience. He had also found time to decide what portion of his story might be com-

municated to those who were awaiting his return.

'I cannot tell you that there was any final settlement—that the man will not trouble you any further,' he said. 'In fact, matters are to be left for a week, after which the difficulty will be ended one way or another. During this time we may think of some plan. At all events, you need not fear anything for the present.'

The Countess took his remark in such a sense

that her thoughts were diverted from the question of the interview. 'A week?' she said. 'I know what that means. It means that he will take time to consult his father. Plainly, the Count is not in London.'

Barrows was silent.

'I feel sure it is that,' she went on wearily, but still with an interest which she had not exhibited for days. 'The young man can do little of himself, evil though he is. It is the Count that is the brain and soul of this wrong, as he is of a thousand others.'

Then, with a sudden anger that rose in spite of her weakness, she gave way to her emotions. A flush crept into her lined and pallid face; a light came into her eyes.

'If you have ever seen Count Brode, my friend—and perhaps you saw him when you were in Styria—you have seen the consummation of human evil. Cruelty, avarice, malice—all these are in him at their worst. He makes many enemies; but he conquers them, for he is wise as well as evil. Once—only once—he fell under the Emperor's displeasure, through a quarrel with Prince Adrian; but that was the only time he took a false step. When the Prince fell he crept back into the sunshine again, and there he has remained since. But have you met him? Did you know him?'

'Yes,' answered Mr Barrows quietly. 'I met him in those days.' And after a moment he added: 'I too fell under his displeasure.'

'Ah!' said the Countess, 'is it so? Then I fear—I fear that he will hate you after this. He never forgives, never forgets.'

She was troubled by the thought, and Barrows regretted that he had said so much. But in a moment her face cleared.

'Yet what can he do to you?' she asked. 'Against you he is powerless. You are an Englishman.'

'And that is a great deal to say,' agreed Mr Barrows, rising to take his leave. 'But for the present, Countess, your mind will be at rest. Do all you can to recover your strength. We have a week to consider matters, even at the worst; and it will be hard if we cannot think of something by then.'

Hope returned to her worn face. 'Yes,' she said. 'And in a week we may hear something from friends in Styria. Who knows?'

Barrows left her without saying what he knew: that even their most faithful friends in Styria would not dare to lift a finger to assist those whose names were marked with the leprosy of treason.

When he reached his own house he went to his room, and sat down at the writing-table. In the course of many years' leisure he had acquired many trifling habits which betrayed a man of abundant time and of a methodical turn of mind. He had much to think of now, and a course of

action to mark out. It seemed to him that his thoughts were never so clear as when he was alone in his own room, with a pen in his hand and with a sheet of paper before him. It might not be necessary to write, but it was always well to be ready to jot down any point which might seem worthy of special consideration.

So to-night he took the pen and prepared the paper. Then, leaning back in his chair, he pondered the situation seriously. It was the situation which had been created by his interview with the Brodes. He saw at once that he had a choice of three courses. They were these: first, he might refuse the duel and let the Count do his worst; second, he might retire from this affair altogether; third, he might accept the challenge.

This being clear, he looked for the results of each course, beginning with the first. What would happen if, refusing the challenge, he allowed Count Brode to take his own way? What way would he take? The answer was clear enough. He would take the way he had indicated, and would ask, perhaps through a newspaper paragraph, perhaps even through the police, the question which he had asked that evening. 'This man,' he would say, 'was once secretary to Prince Adrian of Zell. Ask him how his master died! Ask him how he became possessed of the money upon which he lives!'

Mr Barrows did not take longer to consider this conclusion than he had taken to arrive at it. His face paled at the thought, and he turned at once to the second course.

He might retire from the affair altogether—this unfortunate affair into which he had been led so strangely. He could go away, taking what he could take, leaving what he must leave. The world was wide, and he could begin again elsewhere; for with his disappearance the Brodes would serve no purpose by betraying him. This, as he saw at once, was a simple and easy course. It even seemed a natural one to take. There was only one thing against it, and that was the thought of what must happen after. Count Philip's path would be open, and he must eventually win his prize. No, not win it, but seize it. 'Women are weak,' groaned Mr Barrows; 'besides, the Countess's life is a poor thing to count on. The girl will be left in an impossible position, and the Count will work cleverly. At last, her only way out will be painted for her in sympathetic colours—even by the Hadfields. That will be the result!'

It cost him much pain to contemplate it. Drawing his hand across his brows, he turned to the last course. He might accept the challenge.

He recalled the whole of the circumstances under which it had been given. He recalled the expression of his enemy's face, his very words, in the endeavour to grasp his motives. In this way he arrived at certain conclusions.

It was plain, in the first place, that the challenge was an unnecessary step on the Count's part, for Mr Barrows had been sufficiently in his power in any case. That is to say, he need not have placed his victory in this affair on the hazard of a duel. Knowing the man's nature, Mr Barrows felt sure he had been led to this step by two arguments. One was his own natural cruelty, which led him to take pleasure in simple torture; the other was the conviction that the challenge would never be accepted. For this conviction Mr Barrows knew that the Count had very good grounds.

'It was mere malice,' he decided, 'and perhaps the idea that in this way he would frighten me away a little sooner. It was giving me a choice, not between betrayal and disappearance, but between death and disappearance. At the same time he felt certain that I would not fight. There I have his motives; now for the results.'

It did not take him long to arrive at the results. 'If I fight,' he thought, 'it is certain death. With one shot the young man clears his own road and gives his father a final revenge; and the result, as far as the women are concerned, will be the same. I shall simply be throwing away my life—for nothing. No, no; he certainly does not expect me to fight!'

Now, Mr Barrows was not at all in love with life. He had no particular ties of family or affection, his income was only just what was necessary, and he had put ambition out of his career long ago. Thus the motive forces of life, which lead men to love existence and to guard it, were of very little power in his case. On the other hand, he did not like pain, and he had as much dread of death as most men, if not more than most. Besides, it would be for nothing. He would be throwing away his life for nothing.

Here, it seemed to him, was the hinge of the whole affair. To accept the challenge would be to surprise his enemy, and perhaps he would find a certain grim pleasure in surprising such a man as Count Brode. But it was too expensive a pleasure at such a cost. Yet—might this sacrifice be made to help the Countess and her daughter?

At first it seemed an unanswerable question; but something told him that he must keep to this point. Surely a man's life—even the life of such a man as himself—might be used to some purpose. Then he reflected that the best thing for those women would be a restoration to their home. Restoration!—that was the word. He repeated it again and again—Restoration! How could James Barrows, by the sacrifice of his life, restore to them what Prince Adrian had taken away—even if he decided to sacrifice it?

So he pondered, all his energies bent upon this one point, the lamplight shining on the white paper before him, and his pen gripped fast between his fingers; and the solution came at last, or at least a suggestion of a solution. It came

suddenly and vividly, and Mr Barrows started as it came.

'Ah,' he said under his breath, 'if that could be done!'

The minutes that followed were filled with pain. The course that had suggested itself involved many things that filled him with aversion. There was shame in it, and humiliation; and there was more: there was the reopening of an old wound, and an appeal to an affection which had been betrayed and outraged. But then he thought of those who were so near, and saw that the call of their need was clear and urgent.

'And,' he said at last, 'there is no other way. This is the only opening!'

So he resolved to take this way, and regarded that question as settled for the present. But its consideration had tested him severely, and it was with much agitation that he turned to himself and asked, 'Can I do it? If the way prove a good one, have I the courage, the strength, to go through to the end, knowing what that end must be?'

Here he came face to face with himself; and throughout life he had distrusted himself. Yet he realised that if he would carry out this plan he must abandon this attitude of mind altogether. He must assure himself of his own ability to pay the price, and he must not allow any distrust to creep into his mind. He began to have an idea, too, that the cause of his distrust lay entirely in the past, and that he only feared for himself in the remembrance of his past weakness. It was as if James Barrows of Welding had to struggle against the influence of another James Barrows, a creature of certain contemptible characteristics. What he must do was this: he must keep the later James Barrows to the front and in the ascendency, and let him be the actor throughout this trial. If the other creature obtained power the end would be, not restoration, but failure.

He did not try to examine himself further, or to consider the influences which made the later James Barrows a stronger being than the other. If he had done this he might have surprised himself. Instead, he dismissed the question, and set about making his plans.

All that night, however, was a time of conflict for him, a conflict in which the old came up again and again to attack the new; but the result was the same, and in the morning his plans were unaltered. Once again he consulted his time-table, this time for a longer journey; and he reflected as he did so upon the curious results of first steps. His first step had been taken only a few short weeks ago, yet he was already preparing for one from which there would be no return. After he had chosen his time, he went in to Hadfield's.

He had forgotten that the Countess was not likely to be down in the morning. Edna, however, had been stirring long ago.

'I have some news for your mother,' he said after the usual greetings. 'I have decided to go to Styria.'

'You? For us?' she asked, with a directness that was somewhat startling.

'Well,' he said pleasantly, 'perhaps I may say that. I have remembered one or two acquaintances who may possibly be able to do something for us. It is only a chance, of course, yet I do not care to despise it.'

The girl looked at him intently. It was a grave look, too, and he thought it must pierce his mask of indifference. When she spoke, however, he found that she had misread.

'You will be in danger in Styria?'

'No,' he answered earnestly; 'there will be no personal danger for me. You may be certain of that.'

His manner seemed to reassure her. He noticed that she placed implicit faith in what he told her, and remembered that she had done so from the first. This gave him a feeling of curious

and unreasonable pleasure. Her anxiety on his account also had an effect upon him, and he began to feel that the task he had set himself was less difficult than it had appeared to be. To a self-distrustful nature, the faith of another person must needs be grateful.

'I am glad of that,' she said. 'When do you start?'

'In an hour's time.'

'Then I will see my mother. If she has anything to say she will send me in to you.'

Mr Barrows returned to his own house and completed his preparations. Presently Edna brought in a note from the Countess, in which she thanked him most warmly for his efforts. She also enclosed a list of influential persons in the Styrian capital who might be disposed to help her cause.

Mr Barrows read the note and glanced at the list. When the girl had gone he tore the paper into fragments. It would have been quite useless to him.

## WITH A CORPORATION DOWN A WELL.

By W. VICTOR COOK.

It is not every day that the members of a respectable Corporation, clothed in funeral white garments, can be seen wandering about in the dim bowels of the earth like a procession of lost souls. Therefore, when such a rare opportunity occurred one bright June day one took advantage of it. On that afternoon, if anybody had wanted the Mayor of Brighton or a number of the principal officials and the most daring members of the Corporation of the 'Queen of Watering-places,' he might have searched far enough; for these gentlemen were fathoms below the surface of the green Sussex Downs, in long cavernous tunnels of white chalk, down whose wet sides the percolating water trickled in drops, and in whose cold and usually silent depths the sound of voices was confused and muffled and strange.

Brighton, and all the region round about for some miles, draws its supply of water from numerous springs deep in the bosom of the green, rolling Downs which bound it on the north. Scattered over the hills in the neighbourhood are a number of pumping-stations, where great marine engines are continually pumping up, with regular pulsations, the clear, pure water that is a source of pride to the town. Far underneath are the silent tunnels, running for thousands of feet beneath the chalk, and usually filled with invisible rivers. At rare intervals of years, however, it may happen that for a special purpose these rivers are pumped dry; and this was one of these rare occasions, for a new pumping-

station was to be opened. Few, however, of those who went over, ostensibly to see two big new engines christened, knew what was in store for them. Most of us were very much surprised when a Councillor stood forth and invited all his fellows to go to the lower regions. Of course he put it much more nicely than that; but that was what it came to. Quite a number of Councillors were anxious to go. 'Follow your Mayor!' said the Mayor of Brighton, heroically setting his foot on the steps that led to the engine-room. Courageous Councillors, resolved to do or die, followed him; and the writer, feeling that it would be a sad pity to let the Mayor and half the Corporation of Brighton be engulfed without some reliable person being present, either to record the catastrophe or to perish with them, took his courage in both hands and made one of that devoted band.

Behind the engine-room, where the great twin marine-engines were pumping, was a smaller room, where the adventurers arrayed themselves. There might be seen the Mayor clad in white cotton overalls; and his face, framed in a great oilskin hat, was set in grim determination as he made his way slowly but surely into a pair of monstrous sea-boots. Around sat or stood Aldermen and Councillors, struggling with the various items of similar costumes. The writer grabbed a costume and a shiny black helmet, and fought hard to get into a pair of the boots, but had to abandon the attempt and hurry on over the slope of the Downs to where the well-mouth gaped. Here the white-clothed company were

collected, looking like spirits surprised by the sunshine. A Councillor, with a view to possibilities, levelled a camera at us ere we vanished from human ken.

Four at a time the earth swallowed us. The present recorder, as he swung with three others in the iron bucket over the diminishing perspective of the well, had the gratification to see that he was corded in with the Medical Officer of Health. This knowledge was very comforting when the Councillor with the camera leaned over the giddy brink and facetiously inquired, 'Any messages for friends?'

The word was given, and the strong little steel rope that held the bucket began to run out. Down, down, down. The sides of the well sloped upwards above us with that curious appearance of slanting caused by the circumstances of the perspective. Looking down over the side, one saw the blackness below gradually take shape, and presently the bucket swung down into a circle of candle-lights, in the hands of those of the party who had descended already.

Soon we were all supplied with candles, and, guided by the engineers, filed off ghostly along a lofty tunnel of pallid chalk. At the side of the narrow, squelching footway of wet chalk flowed still narrower water-channels, perhaps six feet in depth. The sense of that vast mass of chalk hanging above grew a little less oppressive to the imagination after the first few minutes, as we wandered on in search of a 'fissure.' Then somebody (voicing a general sentiment) wanted to know what would happen if the great pumping-machinery up above were to stop. The guides politely informed the inquirer that in that case the water would cover the footway in a few minutes, would be up to our knees in a quarter of an hour, and over our heads in about an hour! In a few hours the lofty twenty-six feet passage through which we were walking would be full, and the water would have risen many feet in the well.

The water was rushing in all the time through these same 'fissures' that we were looking for, and presently found. Here and there in the chalk walls along the narrow footway, either above or below the level of the track, would appear a cleft in the chalk, through which the water was pouring into the side-channels in a steady stream or in a rushing, splashing cataract, according to the size of the fissure. One such cataract was foaming right across the whole width of a passage, barring all progress in that direction. The roar of it sounded weird and mysterious down here under two hundred feet of solid chalk.

Always the direction of the flow was towards the sea. When a pumping-station is commenced, boring is made from above to the depth at which it is judged water is to be found (which of course must not be below sea-level, for the water will

not flow upwards), and then the cutting of the chalk passages or 'headings' is commenced. By-and-by the heading will cut through the course of some underground flow of water, and the water will begin to fill the heading and mount into the well. Then the pumps come into play, and Brighton has got a new supply of water.

There were other experiences in store besides fissure-gazing. Piloted by the engineers, the Mayor and Councillors picked their way down to the end of a smaller tunnel, some six feet high, where a few little round holes were bored deep in the chalk. These holes were filled with charges of tonite, a violent explosive which a knowing member of the party declared was equivalent in power to 'No. 1 dynamite.' The party, after a momentary peep, retreated respectfully before the spectacle of 'No. 1 dynamite,' and coming to another passage making a V-shaped angle with the first, they retired to the utmost extremity of the V to see what they should see. With unexpected suddenness it was upon them: a shattering report like the crack of doom—a deafening, stunning shock as if the world were in collision. Then everybody looked nervously round to see if everybody else were still there, for the candles had all been instantaneously extinguished by the shock. Nobody was missing, and the thick chalk held solid about us still. We breathed again, re-lighted our candles, and mutually communicated sensations. But there was more coming, and it was a bigger charge this time, too. 'Are you all ready?' sang out the chief engineer. One gentleman thought he would prefer to be on the upper Downs when the next explosion happened. However, on learning that any one going out of the sheltered passage would risk serious injury to his health, by being blown headlong to earth by the wind of the explosion and bombarded with huge masses of flying chalk, he resigned himself; and we all stood and wondered if anything could go wrong anywhere, and whether in one of those silent seconds that were slipping past we should be blasted into a confusion of chalky paste. *Bang!* The massy earth seemed to quiver around us; sense for a moment was annihilated; a gust of cold air rushed up the passage, extinguishing the lights; and—ah! could it be possible that we were still alive?

Somebody asked if there were any more coming? The chief engineer said, 'No;' at which the writer, for one, is not ashamed to confess to have experienced a certain feeling of relief. We wended our way again along that passage and the next, to where the holes had been bored for the tonite. All along the passage the atmosphere was heavy with the fumes of the explosive, though there was very little smoke. At the end, where we had stood a few minutes before, the solid chalk was gouged away to a

depth of some feet, and the face of the chalk in the direction of the discharge was crushed for some six feet farther as soft as powder. Powdery, too, to the touch, were the masses of chalk that had been hurled along the floor of the passage, and even the hard flints embedded in it crumbled to dust between the fingers. But even in the close vicinity of the explosion the chalk side-walls stood firm. The nature of chalk allows of a close approach to the scene

of blasting operations that might be dangerous in the case of coal.

Gathered once more at the bottom of the well, like souls waiting to be reborn, our white company looked gladly towards the tiny patch of light far above, that showed where the upper world was basking in the summer sunshine. Four at a time, upward now, the crane at the top hauled the party back to light and life and warmth.

## THE PARLIAMENTARY RESTAURANT.

By HENRY LEACH.

STEPHEN'S is the happy possessor of many reputations apart from the most public one of the excellence of the legislation which it has the privilege of making.

The younger and more up-to-date generation—and especially that section of it which sits on the Government side of the House, and revels in wealth and social prestige—does not feel altogether at liberty to subscribe to the old declaration that the House of Commons is the best, or at least one of the best, clubs in London. There is, after all, a certain amount of conservatism about the club arrangements of St Stephen's, whereas Pall Mall has tramped gaily onward in the path of luxury, ease, and expense. Besides, to the good old-fashioned Tory, the House, considered from the purely club point of view, has rather lost caste since the forces of Labour first began to make themselves felt. The old country squire who, in the intervals of sport, had represented a division of his shire to the best of his ability for a quarter of a century, found disagreeable contemplation in the possibility, as he saw it, of the fragrance of his choicest cigar commingling in the atmosphere of the parliamentary smoking-room with the heavy stench of the thickest and blackest twist. Of course these things never happen in real parliamentary life, for the truth is that the Labour member, when once he finds himself on the cool green seats of Westminster, develops a taste for the pleasures of life which would do his toiling and subscribing constituents a world of good to see. Especially after his humble dinners at home does he appreciate the merits of the Commons' *chef*. I met one of them I had known aforetime, only a few evenings after his triumphant return, in the lobby; and the first remark to which he gave utterance after greeting was—in great enthusiasm—'By Jove! you should just have seen the dinner I have had here to-night for half-a-crown.' Without doubt the House is a positively epicurean Walhalla to the Labour member; but those smart young bloods whom I mentioned in beginning, who have been trained to appreciation of

the Pall Mall cooking, and have often dallied with the expensive rarities of 'Prince's'—well, the home comforts of the parliamentary club do not always come up to their most exquisite standard. They say that stomachs are not what they used to be—and there is something in that—and that they must be so very careful as to what they eat. So with these is the House not now considered to be the very best club in the Metropolis; yet, nevertheless, to the rank and file of members it still has a reputation, and a goodly share of that reputation is awarded to the restaurant department, which is at least one of the most interesting places in London to those who have the smallest curiosity concerning the personal side of the high political life.

Now, lest it may be imagined that there is anything of real disparagement in these preliminary remarks, let me say at once that that high dignitary the Cabinet Minister often considers the House quite a good and proper place in which to take his food. There are exceptions, and I believe that it is on record that the late Mr Gladstone had been a member of Parliament for upwards of half a century before he took a seat for the first time in the dining-room; but Mr Gladstone was not an epicure, and he had reasons of his own for this abstention. In the chamber and its precincts the Cabinet Minister, as befits his political dignity, must preserve a certain aloofness; and he need not stay away from the dining-room because of mixing there with the vulgar mob of ordinary and unofficial members. His aloofness may still be satisfactorily preserved. As a matter of fact, there are two or three dining-rooms; and custom has ordained that a particular one of these, though not actually set apart for the official member and the Cabinet Minister, shall be considered their own private dining preserve, and the common member of Parliament, therefore, very rarely intrudes himself. Only, a member, having once graduated by right of rank to this apartment, always afterwards—so it is held—maintains his right, even though with the inevitable changes of Governments he may have fallen from his

high official estate. Ex-Ministers dine second class no more, except by choice. In this holy of holies is also one spot even more sacred still; for there is a table which is reserved for the members of the Cabinet of the day. Here, of evenings when the House is sitting, so many of them as were able and so disposed have been wont to sit round the oval board, and talk what is disrespectfully called, by those without the pale, Governmental shop to their hearts' content, till the House was warning to its night's work, and duty made its call to the Front Bench. If only wood could speak, what a tale could be told by this simple table of the final planning of historic orations, of the settling of details of policy, of the concoction of political thunderbolts! Better, after all, that it is dumb, for the prandial confidences of the Minister are not for the knowledge of the nations.

It may seem strange, but is true, that in the House of Commons they feed the Cabinet Minister at the same price in the same way as they do the honourable but humble member, who for the most part dines in a room which may be called the general room, but the particular designation of which is the Strangers' Room, because it is here that people who are not even members may be brought to dine. In practice it has naturally become the most common resort of the hungry member of Parliament of every nationality and of every hue and shade of political opinion. Yet some arrangement is naturally preserved; for members group themselves here just as they do in the field of political battle; and it is taken for granted, or at least it seems to be, that the precept that outside the Chamber itself there are no political divisions does not apply to the Commons' dinner. Therefore, there assemble at the different tables parties of the Toriest Tories, Tories of the more progressive type, Liberal-Unionists, Liberal-Imperialists, Liberals of the centre, Nationalists and otherwise of the Irish section, and so on. Here, again, will also be found a lively party, half parliamentary and half lay, who are for the hour regarding Parliament as a restaurant in the fullest sense, and from whose thoughts there is nothing so far as Bills and debates, and nothing so near as the latest Pinero play. Yes, there are the Irish here, although the remaining dining-room of the trio has been called the Irish Room, and is to some extent regarded as the Irishmen's own restaurant in the House. In these matters the sons of Erin like to preserve their solitary independence, just as they do in others with which this article has no concern; but lest it should ever come to pass that usage held that there was any place in all Westminster to which they had not the right of entry, as conferred upon them by the suffrages of a suffering people, they all make habitual use, as has been said, of the Strangers' Room. I do not pledge myself that this is the spirit of their practice; but it is the playful view taken by

many of those poor mortals who have not the honour and privilege of belonging to the noble race. To these dining-rooms in this new session comes to be added another, completing what must be admitted to be a very comprehensive series. We have had, as you see, the official room, the room for everybody, and the private members' or Irish room. Obviously one more was still wanting: there was no room designed exclusively for the visitor—the wealthy relative, the influential constituent; the person, in short, whom the member of Parliament feels it to be a duty and a delight to honour at the parliamentary table. In the new room, as I understand it, only the stranger, with, of course, his parliamentary host, is to be admitted.

Such is the latest advance of the Kitchen Committee, which is animated very largely with the spirit of progress. '*Nil desperandum*' is its motto; and, what with this and the competition between Governments, there are honourable members who profess to believe that before they are gathered to their fathers they will dine at Westminster to the sweet strains of a parliamentary orchestra, hidden behind a curtain or perched up in a gallery, a musical accompaniment being of the essence of the perfect dinner. For, it must be noted, the Kitchen Committee comes and goes with the Government, and while it lasts it is practically omnipotent as far as the kitchen and refreshment-rooms of the House of Commons are concerned. Why, not so long ago it was solemnly invested with the power 'to send for persons, papers, and records'—which is surely giving these amateur restaurateurs a most lordly autocracy. But though this great committee is a party affair, it is non-party in constitution, for there are upon it such Radicals as Mr Broadhurst on the one hand, and such Irishmen as Mr William Redmond on the other—a fair sprinkling, in fact, of divers political and other tastes. The spirit of emulation leads the committee each session to attempt something greater than before; and thus it comes about that my Labour friend may smack his lips over a dinner of courses that has not cost his party funds more than a single half-crown. The committee has achieved more than that. For but a shilling the hungry member may lunch from a half-pound steak, with two vegetables and bread thrown in, and a sufficiency of cheese; whilst for three shillings a really good dinner may be enjoyed.

The member's beer is ridiculously cheap, and he gets excellent wines and cigars at practically store prices. Once upon a time the House did its wine business through a wine-merchant, or rather through many wine-merchants, and a most curious state of things arose. Bottles take up much room, and room is very expensive in London. The brilliant idea occurred to these traders that the House of Commons might just as well be used as an auxiliary storing establish-

ment as any other place; whilst it had this advantage, that it would probably be quite easy to 'bounce' the legislators out of rent. So it happened. Nominally, a score of wine-merchants stored their vintages at St Stephen's for the use of the members, all wine to be paid for as used. Actually, they were kept there for the convenience of the vender. What was used by the members had to be paid for at fancy prices; and whenever the value of any particular vintage went up, as values will do, the merchant's cart was round at Westminster betimes, and the rare wine was disposed of elsewhere. Nowadays the House stocks its own wine-cellar; and not long ago, in great form and ceremony, it proceeded with the christening of its own whisky-vat. How times have changed! Once not even a sandwich could be purchased in the House for love or money; then, again, the Bellamy meat-pies had a reputation beyond compare; then, by degrees, the House progressed to the steak and chop stage, and so onwards and upwards till there came the rich cut off the joint at popular prices; now, anything. And it is confidently declared that the tariff of the House is at least 50 per cent. below that of any first-class West End restaurant.

The committee has a *fidus Achates* in a salaried manager, who must surely have the most anxious time of all the restaurant managers in the world. I remember Mr David Moss, a quondam manager, telling me, in a serene moment just at the close of his three years' service, that every session in the House took a couple of years off the manager's life. There are times when this burdened official has to work eighteen hours a day, and he must exercise control over a staff of eighty or a hundred assistants, with sometimes thirty or forty extra waiters. When the House is comparatively free from excitement, and is exercising a calm and proper regularity in its habits, all is well, and the manager may find some joy in living; but nowadays these may hardly be accounted normal times. It has sometimes been largely a question of whether the House were counted out or not counted out at dinner-time.

Supposing now that the manager had in his wisdom prepared dinner for two or three hundred members, and the House all of a sudden rose and dashed off home at a quarter past seven, as it has been known to do. There was then, perhaps, not a single dinner eaten in the dining-rooms, and the funds were the loser to the extent of thirty or forty pounds at least. For the avoidance of such contingencies, as far as possible, the manager has to make himself a student of debates, their possibilities and probabilities, in the matter of length. Even the Chief Government Whip himself has sometimes no better idea than the manager as to whether a parliamentary wrangle on a particular occasion will last an hour or will last all night;

and, coming to his own conclusions, the lord of the kitchen has sometimes to take his courage in both hands and run a dreadful risk. He decides, say, that the House will not last till dinner, and, rather than risk the throwing away of all the good things designed to feed a flock of hundreds, he prepares no dinner at all. It is a bold move, which can have no justification save in its success, and which even then can bring no glory. Between six and seven on the dinnerless day the manager strolls along the lobby just a little nervously. Seven o'clock strikes, and the House is still sitting; when at a quarter past it remains so the manager feels considerably alarmed. The terrors of the situation would be too much for contemplation if a hungry House were to clamour for dinner and there were no dinner for it. At seven-thirty—still sitting—he begins to feel a shakiness in the legs; five minutes later his colour goes; and at seven-forty he has broken out into a cold sweat. He now drops into a nervous contemplation of the various methods of respectable suicide, when—hurrah! God bless the Parliament of the King!—the House has risen, and the manager has not a stain upon his character! This has happened more than once; and again, when a long and important speech by a Minister is prolonged about dinner-time, and there are delicate dishes prepared which will spoil with a few minutes' waiting, the manager is far from happy. The new rules of procedure, however, may alter much of this, as they certainly will many others of the dining arrangements and customs of the House.

There is the all-night sitting to be reckoned with as well, for the member of Parliament does not sit all night through without being fortified for the task, and obviously the kitchen cannot keep an all-night supply of victuals on hand, 'on spec.' as it were. The worst of it is, that when the emergency suddenly presents itself the shops are all closed, and the kitchen is at the not always tender mercy of the hotels and the clubs for its extra supplies. One time when the state of affairs was ominous, the manager had in the late hours to take to a cab and scour the west for food. He came back laden with modest necessities: two thousand eggs and nine hundred pats of butter, with extra supplies of bread, sugar, coffee, and tea to match; but when the supper needs of the members were satisfied they still went on sitting, and it gradually dawned upon the chief that breakfast would be needed. So away he went again in a growler, and returned with a cargo of fish; a second journey yielded the required bacon, and a third a few gallons of milk; and they were all needed, every bit and drop of them. No, like the lot of the policeman, that of the manager of the House of Commons restaurant is not a happy one.

The grand scale upon which the St Stephen's restaurant is conducted may, however, be best

appreciated by a consideration of the total volume of its business for a period. Only in this way may the country understand the feeding capacities of its faithful legislators. They are truly amazing when thus considered in the bulk. If it is not beyond the mind to do so, try to imagine twenty-one thousand luncheons, thirty-three thousand dinners, seven hundred suppers, forty thousand teas, and six thousand meals served at the bars standing-up-wise, for the honourable member is in such a hurry at times that he must needs refresh his inner man in this primeval or City fashion. There you have over a hundred thousand meals, and those figures represent what was consumed in the Commons last session, when the financial turnover was some sixteen thousand pounds. Half the money was spent in provisions pure and simple, and three thousand pounds disappeared in wages and salaries; whilst nearly four thousand pounds went down to the wine account, and about four hundred and fifty pounds to cigars.

Then, in my examination of the figures which are before me, I make a curious discovery, which is that the member of Parliament, in contradistinction, I should imagine, to most others of His Majesty's subjects, both drinks more and smokes more when the weather is showing a tendency towards heat, and body and mind a corresponding tendency towards languor; for I find that whereas the members in the cool months of April and May were satisfied with a hundred and fifty pounds' worth of cigars, and just about ten times as much wine, in June and July, when they were caparisoned in flannels and straw hats, they smoked away nearly two hundred and forty pounds, and tickled their palates with wines for which a sum of over two thousand three hundred pounds sterling was paid. The secret, perhaps, is to be found in the fact that the London season is then in full swing, and that Westminster at such a time is not the least favoured of places of entertainment. Certain it is that of that enormous aggregate of forty thousand teas the ladies, if they would, could tell a pretty tale—a tale of silvery speech and sunny smiles, and of the ardent gallantry of the faithful Commons as they idled on the terrace by the Thames.

This is indeed a hunger-making story, and it will be but a small consolation to our dear constituent readers to know that their representatives at Westminster do not pay for quite all the good things that they get, but that they, the constituents, have unconsciously to help them out when the time comes to settle the bill. For in the rows of figures which show the cost of maintenance of the fabric and form of Parliament may be discovered an annual item of some two thousand pounds, which is a subsidy of which the Kitchen Committee is in receipt that it may be able to make ends meet. The stern economist, the elector who rates of public

want and public waste, must needs be told in a hurry now that the committee really does its best, and that, gathering up the refuse fragments that remain in the kitchen, after the manner of a thrifty housewife, it sells them for aught it may get, and faithfully puts down in the half-year's accounts seven pounds.

So does the parliamentary restaurant flourish, and so whilst the member of Parliament remains so very human as he is to-day will it continue to do so. It is a wise principle of the day that no good government was ever yet performed upon an empty stomach, and Westminster would have lost a charm if the Spartan manner of diet by any curious set of chances ever became the vogue. Conceivably, also, it might have lost some members.

#### MY LIBRARY.

HOME of the lofty thoughts of those  
Immortal ones whose works repose  
'Twixt tawny calf and vellum old,  
And creamy sheets that dainty hold  
The fantasies of poet-minds,  
The monkish lore that velvet binds  
With 'broideries rare, by fingers wrought  
In convent cells, and pious thought.  
And on the parchments' musty face  
Rich colouring the letters trace:  
Emblems of Hope and Faith and Love,  
The Virgin, Child, and Holy Dove,  
With pigments bright and gold o'erlaid,  
And blazonries which never fade.  
The classics in their ancient tongue  
Recall the time when once was sung  
The Orphic hymns, Homeric lays,  
And deeds of valour, in the days  
When men the hard with laurels crowned,  
The goddess throned on holy ground.  
The ancient Bibles, bossed with brass,  
With rude inscription tell who pass;  
The children's names, by parent hand,  
Alone in faded ink withstand  
The fleeting tenure of each year,  
Speaking aloud to living ear  
Of loves which, formed, so soon dissolve  
In higher realms where souls evolve.  
Sifters of problems, wrapped in gloom,  
Evoke the echoes of life's tomb.  
The clam'rous notes of new-born rhymes  
Bespeak the force of modern times.  
Bright lines of scholars and of wits,  
How rich their vein, how easy sits  
Their courteous speech! each precious page  
Recalls to us the Golden Age.  
No more the studious hush of life,  
The clashing strokes of worldly strife  
Ring out upon the stormy day.  
In strident notes they seem to say,  
'Gone are the peaceful days of yore,  
The faiths of old shall be no more;  
But in the brilliant rising sun  
What was attempted shall be done.'

### WELLINGTON'S GREAT CONCENTRATION CAMP.

By Captain the Hon. H. N. SHORE, Author of *Three Pleasant Springs in Portugal*.

**W**HAT short memories we have! How otherwise can the fact be explained that, while the subject of concentration camps has been widely discussed, no reference is made to the greatest concentration camp within recent centuries that history records? Has the British nation forgotten the immense camp formed at Lord Wellington's suggestion during the winter of 1810 outside Lisbon, while the French army was lying at bay before the Lines of Torres Vedras? Why, the concentration camps of South Africa pale into insignificance before that one; and the people who feigned to be horror-struck with what they called the 'barbarities' of the system of concentration camps, and whined and shrieked alternately over the supposed sufferings of the occupants of these refuges in South Africa, should have turned back a few pages of history and read of the hardships the poor Portuguese peasantry endured in consequence of an edict which had been dictated by stern military necessity. Let us also take note of the fact that the Portuguese were not a bitterly hostile people, who had maltreated, insulted—ay, and even spat in the face of women and children of our own flesh and blood, and whose protectors had abandoned them to fight against us, to lay waste our territories, and to pillage our property. They were our allies who had received our troops with enthusiasm, treated them with kindly hospitality, and whose fathers and sons, brothers and husbands, were even then fighting shoulder to shoulder with British soldiers against the common enemy.

To grasp the full significance of the enforced migration of the inhabitants of Estremadura in the autumn of 1810, we must recall some of the circumstances which rendered necessary so dire a calamity. Masséna, one of Napoleon's most capable Marshals, had just crossed the frontier of Portugal, at the head of an immense army, for the purpose of driving the 'English leopards' into the sea, and simultaneously fixing his talons so deeply

into the soil of Portugal that no armed resistance could ever again loosen his grip. The storm had been long foreseen by Wellington, and every precaution that either wisdom or experience could suggest was taken to meet it. Recognising the futility of attempting, with his inadequate resources, to resist the overwhelming force Masséna had in the field, Wellington developed a plan which had long been maturing in his mind—a plan which for boldness or magnitude has rarely been surpassed in military annals. This, briefly, was to convert the Lisbon promontory into an impregnable citadel; and, by devastating the entire country to the northward, deprive the investing army of supplies. From this project there sprang into existence the celebrated Lines of Torres Vedras, which stopped and eventually beat back the vast host destined by Napoleon to weld Portugal into his chain of conquered states.

A man of less nerve and genius for war than Wellington might well have quailed before the gathering storm, and asked his Government whether it was worth while sacrificing a few thousand British soldiers in a hopeless cause. Wellington, however, was cast in a sterner mould. With a full recognition of the tremendous issues at stake, and the grave significance of the approaching invasion, he set his back to the wall, and, with a truly splendid fortitude, rebuked the craven Government of Portugal, encouraged the Ministers at home, and faced the task before him with a heroism which, in these neurotic days, seems almost sublime. In short, Wellington rose to the occasion as few British generals have ever risen to an equally momentous crisis before or since. As the great historian of the war, Napier, truly says, it was a design of 'terrible energy'; and, to make it yet more effective, the inhabitants of the province within the sphere of operations were required to destroy their mills, remove their boats, break down their bridges, lay waste their fields, abandon their dwellings, and

carry away their property. In short, the province of Estremadura was to be laid waste; and the devastation was to be effected by the sufferers themselves.

The design bore the impress of a master-mind which had grasped the vital issues at stake in all their complex bearings. Think of the iron will and the unconquerable resolution that could enforce that stern decree while conducting the retreat of an army before a vastly superior enemy! Could England have produced another general capable of conceiving such a design, and then carrying it through in spite of every obstacle which a timid Government at home, and a lazy, corrupt, and spiteful administration on the spot, could place in his way? Probably not. All honour, then, to the man who, at that awful juncture, saved the Peninsula and with it the European continent from falling paralysed under the iron heel of that insatiable despot, Napoleon.

Then what praise can be too great for the touching fidelity with which the peasantry of Estremadura observed the edict of banishment and the destruction of their homes? History may be searched in vain for an example of nobler behaviour, of truer patriotism, or of a more pathetic picture of resignation. Happily for the cause of European freedom, there were no shrieking sentimentalists to follow in their train and to unnerve the authorities at home by voicing the woes of the suffering refugees. What would have been the fate of the Peninsula, of Europe, and even of these islands if the campaign had been shaped by our modern 'stop-the-war' shriekers who would grovel under the heel of the veriest monster of wickedness and cast aside every shred of self-respect rather than sanction the shedding of one single drop of blood or the striking of the mildest blow in self-defence?

This migration of the inhabitants of an entire province, including the populace of one of the chief cities of Portugal, commenced with Masséna's invasion; but it only assumed definite shape after the battle of Busaco, when the Portuguese, perceiving the futility of trying to stem the flood of invasion, declared that 'the English were for the sea, but the Portuguese for the land.' In short, there was no one in a position to estimate the chances—whether in the Regency at Lisbon, in the Ministry at home, or even amongst Lord Wellington's personal staff—but was convinced that the game was up, and that a few weeks would see the British army on board its ships in the Tagus. All this shows how incapable even those nearest to Lord Wellington were of fathoming the depth and the power of that master-mind, or of appreciating the iron will that dwelt in so slender a frame.

The fidelity of the poor Portuguese peasantry received a pathetic illustration during the progress of the battle of Busaco, when, as Sir William

Napier tells us, a Portuguese orphan girl, of about seventeen years of age, and very handsome, was seen coming down the mountain and through the midst of the French army, driving an ass loaded with all her property. She had abandoned her dwelling, and now passed over the field of battle with a childish simplicity, totally unconscious of her perilous situation, and scarcely understanding which were the hostile and which the friendly troops, 'for no man on either side was so brutal as to molest her.' The whole history of the war offers no more touching picture than this. The episode stands out all the more brightly in contrast with the folly, the incompetence, and the downright treachery of the miserable wretches who had been pitchforked into the Government offices at Lisbon.

With the arrival of Lord Wellington's troops at Coimbra, the appalling horrors of the retreat commenced in grim earnest. Yet only one short year had elapsed since these very troops were welcomed with almost frantic enthusiasm by the inhabitants of this great city, who regarded them as deliverers; and now they returned as fugitives, flying before the conquering hosts of the great Napoleon, and driving all before them.

From the stern drama of the war two scenes present themselves with a vividness which not even the lapse of over ninety years has sufficed to dim. One was the gathering of the British army under Sir Arthur Wellesley at Coimbra in the spring of 1809, preparatory to its advance on Oporto, and the expulsion of the French from Portugal; the other, the retreat of this same army the following year, through this very city, onwards to the Lines of Torres Vedras. The dramatist's wildest flight of fancy could scarcely have devised two more strongly contrasted situations.

The appalling misery of that retreat on the Lines of Torres Vedras in the autumn of 1810 was unparalleled. Even our own historians have glossed over the sickening tale. In truth, the full measure of the distress of the peasantry of Portugal during all those long years of warfare with a fierce and relentless foe has never been fully realised. The narrative would be so vast in its scope and so absolutely revolting in the details which diligent search would disclose that no one would care nowadays to draw aside the veil of oblivion which time has mercifully thrown over it. Nevertheless, we may get a very fair notion of the occurrences if we will search through the masses of long-forgotten war-literature—histories of the campaigns, officers' journals, and personal reminiscences—wherein, amidst much that is of purely antiquarian or professional interest, we ever and anon come across descriptions which, for realistic power and gruesome interest, might vie with the productions of some of our most accomplished 'war correspondents.' Jotted down while the impressions were fresh in the mind,

these personal reminiscences carry us back to the days of the war. Once more we seem to hear the tramp of feet, the rumbling of the guns and carriages, and see all the confusion that accompanies the retreat of an army; while, above all this, we seem to detect that long-drawn wail of thousands of innocent, suffering creatures of all ages who are being urged on, day after day, by firm but kindly British officers, appalled at the misery from which there is no escape, and doubting the wisdom and justice of the edict they had to enforce.

There is scarcely a rood of ground between Coimbra and Lisbon but is associated with some affecting or tragic episode in that enforced migration. Even now it is impossible for any one to traverse the scenes of so much suffering and woe, or even to read of it, without his sympathies being touched and a feeling of utter detestation evoked for the author of it all—that truculent monster, Bonaparte.

To return to our story. So confident was Masséna in his power of crushing all opposition, and so buoyed up were his troops with the prospects of plunder which the cities of Coimbra and Lisbon seemed to hold out, that the invading hordes dashed forward with but fourteen days' bread in their haversacks; and this supply was exhausted before even Coimbra was reached, owing to the check which Masséna most unexpectedly met with at Busaco—an engagement alluded to by a certain school of writers as 'a political battle.' Until further supplies could be obtained, most of the French soldiers had to subsist on Indian corn, with which the haversacks of the prisoners and the wounded were found to be stocked. Masséna had set out as a conqueror. He was repulsed at Busaco, and little divined the troubles that awaited him at every step of his advance. On his arrival at Coimbra two days later, where he had hoped to refresh his troops and replenish his magazines, a second great disappointment awaited him. This he bitterly describes in a letter to Berthier, dated Coimbra, 4th October 1810, which was intercepted: 'The enemy burns and destroys everything as he evacuates the country. He forces the inhabitants to abandon their homes on pain of death. Coimbra, a town of twenty thousand inhabitants, is deserted. We find no provisions. The army is subsisting on Indian corn and vegetables which we find remaining on the ground.'

Napoleon, at a later period, seeking to excuse the miscarriage of his carefully laid plans, referred in the *Moniteur* to Lord Wellington's retreat as having been conducted 'avec une barbarie unique et inconnue dans nos guerres Européennes'—a remark, by the way, which came with a peculiarly bad grace from the slaughterer of prisoners of war in Egypt, and at a time when the inexcusable atrocities of Soult's retreat from Oporto were still fresh in people's minds.

From the accounts of British officers who were present during this terrible retreat, we learn that the Lisbon roads were blocked up with wagons, carts, mules, horses, and bullocks; mothers, their eyes streaming with tears, carrying their screaming infants; young women of genteel condition, on foot and in tears, separated in the crowd from their families; men with heavy hearts, but in silent sorrow; and evidences of trouble and confusion everywhere. 'Coimbra,' says one account, 'was left literally a desert;' for the inhabitants of this wealthy and populous city, after removing all they could themselves carry, requested the soldiers to take the rest, and were actually seen to throw the remaining provisions into the Mondego rather than leave them for the invaders.

The misery entailed by this exodus exceeded anything witnessed in the course of Sir John Moore's disastrous retreat on Coruña. Moreover, the sufferers were the peaceful citizens who but the year before had shown the utmost kindness and hospitality to the troops they now saw fleeing before the victorious French, leaving the poor Portuguese, as they themselves believed, to their dreadful fate. War's ironies could hardly have devised a more tragic situation or one more painful to both troops and civilians.

Lord Londonderry, describing what came under his own observation, says: 'Spectacles more afflicting than the prompt obedience on the part of the Portuguese presented it were hard matter even to imagine. Crowds of men, women, and children, of the sick, the aged, and the infirm, as well as of the robust and the young, covered the roads and the fields in every direction. Mothers, with their infants at their breasts; old men, scarcely able to totter along, made way chiefly by the aid of their sons and daughters; whilst the whole wayside soon became strewn with bedding, blankets, and other sorts of household furniture, which the weary fugitives were unable to carry farther. Those who forsook their dwellings forsook them under the persuasion that they should never behold them again; and the agony which such an apprehension appeared to excite among the majority exceeds any attempt at description.'

Colonel Tomkinson tells us that 'the whole road was covered with families of the first rank in Coimbra, walking on foot with bundles on their heads. I went into one or two houses,' he continues, 'which the people had only left in the morning. We found sheep, turkeys, geese, and fowls in greatest abundance, and table-linen, shirts, with every other kind of thing, left in the houses for the enemy. Not an inhabitant remained behind. A person in Coimbra went back to fetch some gold chains left behind in mistake, and never again saw her family.' The Colonel then goes on to explain that, in consequence of the short time allowed to the inhabitants for removing their goods, some had not time to remove

any and many not one-half of their property ; besides, as many of the carts had been taken for the use of the troops, their owners were left without conveyances.

Perhaps the most painfully realistic picture of this dreadful retreat is that touched in by Sir William Napier. He says : 'As the inhabitants had unfortunately delayed removing their property till we were actually on the march through the town, the hurry, fright, and confusion were beyond description, and I never witnessed so heart-rending a scene. Beautiful women and young children, the aged, the decrepit, the sick, the poor, nobles and peasants, all in one dense mass of misery, wretchedness, and confusion ; some barefoot, others crying ; women tearing their hair, with loud lamentations and calling on every saint in the calendar for protection ; and all drenched with rain, the weather being bad. And to crown all, when we, who were the last of the troops, were passing the prison, which was also the mad-house, the unfortunate inmates, prisoners and maniacs, were all at the grated windows rending the air with wild shrieks of despair at seeing the whole population of the city driven before us through the gate ; and these wretched creatures being all locked in, and a fire having broken out in some houses close by them, they with reason expected every moment it would communicate with the prison, and that they must all perish in the flames ! British officers and soldiers could not stand this sight, and we soon broke open the gates and let them loose. The maniac, the murderer, and the thief were turned adrift without a moment's hesitation or an instant's thought, by which many a villain of the deepest dye was again let loose upon society and escaped the punishment due to his crimes.' He feelingly adds : 'I could not help cursing war and all its dreadful attributes, and inwardly feeling that I was myself one of the instruments by which so much misery was inflicted on a poor, guiltless race of inoffensive human beings, who were being scourged so severely, for what ?—the inordinate ambition and personal aggrandisement of a ruthless soldier, Napoleon Bonaparte !'

How exactly these remarks—with a few alterations in names—apply to the recent situation in South Africa will at once strike every honest reader ; and in both cases the real authors of all these miseries were safely ensconced in distant corners of Europe, poisoning the public mind and flooding the press with their abominable lies !

Face to face with these appalling scenes, was it surprising that many thoughtful officers should feel doubts as to the wisdom and the justice of the measure which had brought all this misery to pass ? Lord Londonderry, for one, says : 'At the moment there were few amongst us who seemed not disposed to view it with reprobation ; because, whilst they condemned its apparent violation of every feeling of humanity and justice, they

doubted the soundness of the policy in which it originated. But there can be no question now that this very measure, more perhaps than any other, preserved Portugal from subjugation and England from defeat.'

Unfortunately, Wellington's designs were but imperfectly executed. Portions of the territory were never cleared. Nay, according to Napier, 'the inhabitants remained ; the mills were little injured and quickly repaired ; and there were ample means to have carried off ten times the quantity of provisions left for the enemy, which could not then have remained a week before the Lines, and his retreat would have been attended with famine and disaster.' Who was to blame for this ? According to Napier, it was the 'criminal conduct' of the miserable intriguers installed at Lisbon that 'really nourished the war.' It was their worse than negligence that wrung from Wellington the bitter cry, 'It is heart-breaking to contemplate the chance of failure from such obstinacy and folly.'

The autumnal rains had set in with their accustomed torrential force long ere the advanced guards of the army had entered the Lines, intensifying the sufferings of the wretched fugitives to an incredible degree, and greatly impeding their progress ; and thus, with accumulating horrors, the human torrent rolled southwards. On the 5th of October—a week after the migration had fairly set in—a British officer commanding at Torres Vedras wrote : 'Everything is in confusion : the people are all running away, and a string of men, women, and children, in cars, on animals, and on foot, crowd every road to Lisbon. No one will believe that the army will halt till it reaches St Julian [at the mouth of the Tagus], and all order and authority is beginning to be lost.' The influx of such a host of destitute and starving creatures raised the gravest apprehensions in Lisbon. The number of people that had to be nourished was estimated at three hundred thousand, irrespective of about one hundred and twenty thousand troops ; and the task of providing food and shelter for this great multitude throughout the winter was a gigantic one. Nevertheless it was accomplished.

All classes united in the endeavour to mitigate the sufferings of the poor creatures to the utmost of their power. 'The inhabitants of Lisbon,' wrote an eye-witness, 'particularly those of the higher ranks, received the emigrants from the provinces with open arms, and contributed in every possible way to their relief. People of all ranks and even characters were united in a common sympathy with their suffering compatriots. Persons but little suspected of generosity or of possessing tender or generous feelings showed both compassion and bounty on the present melancholy occasion.'

Yet, strange as it must seem, Lisbon, after the first alarm, became, as it were, intoxicated by a

strong feeling of security: the result of the inevitable reaction after recent weeks of awful suspense. 'There never was a period,' wrote a British officer who was a witness of what he described, 'when this city was more crowded with objects of misery, or when provisions were more extravagantly dear; yet at no time had their theatres been better filled, their societies more gay and brilliant, than when seventy thousand vindictive enemies lay within sixteen miles of the city, panting for the plunder of it. It is but justice to add,' he goes on, 'that everything which prudence and humanity could suggest was done by the inhabitants of Lisbon to alleviate the public misfortune. Charitable institutions were set on foot, and food was daily distributed to such of the fugitives as were necessitous and helpless, while labour was provided for the others.' Nor was the British nation backward in showing its sympathy with the stricken subjects of its 'ancient ally.' The House of Commons voted for the relief of the poor sufferers a sum of one

hundred thousand pounds; while a sum at least equal to this was raised by voluntary subscriptions; and the money was very judiciously employed in the purchase and freighting of such things in Great Britain as the Portuguese were most immediately in want of. A large additional sum was subsequently sent from England with a view to resettling the peasantry on their derelict farms; and a joint Commission, partly British and partly Portuguese, was engaged for several months in examining claims and apportioning the award. And the sequel? A Lisbon paper which boasts of a large circulation and considerable influence recently referred to England as 'that nest of pirates who have never come to Portugal without carrying away far more than they brought'!

So Lisbon was saved, and with it the cause of European freedom; but at what frightful cost the world will never know. Great Britain still bears the burden of that tremendous contest in her National Debt.

## PRINCE ADRIAN OF ZELL.

### CHAPTER VII.—BARON QUINZELL, IMPERIAL CHANCELLOR.

MR BARROWS reached Paris as an unconsidered unit of a curiously mixed company of travellers and early holiday tourists. There he spent as little time as he possibly could, taking the first opportunity of continuing his journey. Fifteen hours later he arrived at Graaden, and sought quarters in a small hotel much favoured by travellers of an unpretentious description.

In the evening of that day, and not till then, he set about his business. He had taken care to arrange his programme beforehand, making all the necessary inquiries in a way which proved that he had not forgotten what he had learned so many years before. His first act was to proceed to the official quarter of the city, to the residence of the Imperial Chancellor, Baron Quinzell.

Here he was received by a couple of dignified servants with the very natural rebuke that 'His Excellency was not receiving visitors.' Mr Barrows, however, was not to be repulsed.

'His Excellency will consent to see me,' he replied in Styrian, though with a distinct English accent. 'I will wait.' And he handed one of them a sealed note, which he had evidently prepared in view of such a check as this.

His assured manner had the effect he had intended. The note was taken in, and as a result the visitor was conducted to a small waiting-room, where he sat alone for some fifteen minutes. Whatever his business might be, it was evident that the Chancellor did not wish to give his

servants any impression of its importance. After that time he was told that he would now be received.

The Chancellor Quinzell was one of those men of whom it might be said not only that speech had been given them to conceal their thoughts, but also that a countenance had been given them in order that they might conceal their feelings. Plain, alert, imperturbable, it had been said that he had never been surprised. During his reign as Chancellor he had distinguished himself by the way in which he had brought order and rule out of the chaos of Styrian parties, and combined a resolute firmness with a policy of conciliation and consolidation. He had a genius for seizing adverse circumstances, and treating them in such a manner that they seemed to have been foreseen, and often proved to be circumstances of fortune rather than of difficulty; and this was the best proof of the quickness with which he grasped the features of a new situation, and decided exactly where he should stand with regard to it. In addition to these gifts, he possessed a charm of manner which even his enemies acknowledged, while it had been claimed for him that he preferred a straight course to a crooked one whenever there was a choice to be made between the two.

At the time of Mr Barrows's entrance he was dictating to a secretary, and he did not pause when he saw the stranger upon the threshold. The last direction was given, and then the third person silently left the room. The Chancellor turned to Mr Barrows, picking up a note from

the table at the same time. It was the note which his visitor had sent in.

'Mr Barrows?' he said questioningly. 'From England?'

It is difficult to say what kind of reception the visitor had expected; but it was quite plain that he was immediately put at his ease by the one he received. He advanced a little.

'Yes, your Excellency,' he replied.

The Chancellor glanced at the paper again. 'You have written a name here, sir. You say that you come upon the business of a man who has long passed away.'

'Yes, your Excellency. I feared that you would not see me unless you knew that I had some claim upon your time. I felt that that name would be remembered.'

The Chancellor glanced at the paper yet once more. Then he tore it across several times with great care, his plain, strongly cut features quite inscrutable. As he turned back to Mr Barrows he might have been, for all that his face betrayed, examining an applicant for some minor official post or questioning a secretary upon some trifling matter of detail.

'Yes,' he said; 'naturally that name would claim my notice. Then what is your business, Mr Barrows?'

It was evident that Mr Barrows had trained himself well; also that he had made up his mind to be as plain and direct as possible.

'It is this, your Excellency,' he said, with just a trace of nervousness in his speech. 'I have come from England on behalf of two exiles, ladies from Lusitania. I speak of the Countess Hamar and her daughter. I have an appeal to make to the Emperor on their behalf, and I ask you to procure me the honour of an interview with His Majesty.'

There was a pause.

'An interview with His Majesty!' echoed the Chancellor, as if he were considering the suggestion with some surprise. 'That is not easy to obtain.'

'It is never difficult to your Excellency.'

'Further, Mr Barrows,' the Chancellor went on, heedless of the remark—'further, such an interview would remind His Majesty of an unpleasant incident. In one of his advanced age this is not to be desired.'

So far the interview had been of the smoothest, for the statesman was simply feeling his way to a full understanding of the situation. Now, however, it became closer. Mr Barrows seemed to admit the force of the objection by his greater earnestness.

'That, Excellency, is a point which I have considered. Only the greatest necessity makes me ask this thing. My purpose is to save two innocent and friendless women from the hands of a powerful and unscrupulous enemy. An interview may give His Majesty pain; but there is very much at stake. I ask for

an hour; but I am giving all that I can give—my life!'

Checked by his rising emotion, he stopped suddenly. But the busy mind of the Chancellor had been at work, and not a motion had passed unheeded, not an allusion but had been marked on the instant. Before the last sentence had been spoken it is probable that he had guessed correctly at the identity of the 'powerful enemy,' and that from this knowledge he had gained a fair idea of the general situation.

'Then your purpose,' he said, 'is——?'

'Restoration,' answered Mr Barrows softly.

'Restoration?' echoed the Chancellor. 'Ah!'

He surveyed his visitor calmly. It was the survey of one who is accustomed to judging and appraising his fellow-men, and one who leaves no possible motive unprobed in his search for cause and reason. Mr Barrows thought of another point, which he had passed too lightly.

'As for His Majesty,' he said, 'I have hopes that my action will serve to heal an old wound.'

The Chancellor asked another question. 'And what if you cannot have this interview?'

'That,' was the reply, 'is in your Excellency's hands.'

Perhaps the statesman liked the answer. Apparently he had no more questions to ask, for he stood silent, his hands at his back, his eyes turned towards the table littered with writing, his face in shadow, but with the soft glow of a shaded lamp falling around it from behind. For Mr Barrows it was a long and anxious pause.

It was broken suddenly. 'To-morrow,' said the Chancellor thoughtfully, 'you shall have your answer. You may come here by eleven o'clock.'

'I thank your Excellency,' said Mr Barrows.

The interview was over. Instead of calling a servant, the Baron, without a word, conducted his visitor from the room, and then led the way from the main corridor into a smaller one. This brought them to a side-door facing a deserted street.

'This is a better way,' said the Chancellor. 'To this door you will come to-morrow.'

That was all. Mr Barrows passed out, and the door closed silently behind him. Making his way back through the quieter streets of the city, he returned to his hotel, and passed the remainder of the evening in his room.

He spent a night of restlessness and anxiety. One part of his trial had now passed, and it had passed in a better manner than he had dared to hope; but he saw that the way was not yet clear. In dealing with statesmen nothing must be taken for granted, and nothing regarded as certain until it had been accomplished. Yet he knew the reputation of the Chancellor, and, indeed, knew a great deal more; and all that he knew, as well as the incidents of the interview, gave him a certain confidence. That keen and able brain would weigh this matter in its every

aspect, and would sift it thoroughly. It would number the points as they rose, good and evil; and exactly as the numbers stood at last, so would his action be. Mr Barrows thought he had put his case in such a way that it was a strong case; but he tormented himself all night with the thought that it might have been stronger. For instance, might he not have used a name instead of the phrase 'a powerful and unscrupulous enemy,' knowing, as he knew, that the Chancellor and Count Brode had no sympathy with each other? Yet on full consideration he felt that he had done wisely not to use a name.

As it was, his impression of the Chancellor as one statesman stood in opposition to his knowledge of diplomatists as a body, and this gave him a very troublous time before morning came. When he went to keep his appointment it was with a doubtful heart and a hesitating step.

On reaching the house, however, he found that he was looked for. The door opened as he reached it, and a mute servant ushered him into the cabinet. There he found the Chancellor waiting.

His greeting was answered briefly. Then came the other answer.

'I have seen His Majesty, Mr Barrows. He has consented to grant you an interview this morning.'

Watching the effect of this abrupt announcement, the Chancellor saw relief and some other emotion—could it be gratitude?—appear in his visitor's face. 'Come,' he said an instant later, 'we will go at once.'

He led the way, and Barrows accompanied him in silence. They passed into the gardens of the Chancellor's house, which were very extensive; for this quarter of the great city was entirely devoted to official purposes, containing not only the Government residences, but also the Congress buildings and the Imperial Palace. Mr Barrows knew that the Chancellor's house was that which stood nearest to the palace, and saw that his ordeal was close at hand.

Presently they reached, at the end of the garden, a door, which the Chancellor opened with a private key. A short covered way brought them to another door, where an armed sentry stood on guard. He saluted the Chancellor, who opened this door in the same way. Mr Barrows followed, and found himself standing in the imperial gardens.

They lay utterly deserted in the morning sun-

shine, silent save for the murmur of fountains and the cooing of numberless doves. As the two entered Mr Barrows had a glimpse of the palace in the distance, rising white-fronted upon a series of terraces, brilliant with flowers and gleaming with statuary. It was only a glimpse, however, for his guide turned into a walk which led them away from the palace at right angles, and which was sheltered by tall shrubs. In a few minutes they reached a small summer-house, standing where several paths converged.

'His Majesty,' said the Chancellor, 'will see you here. If you please, you will wait until he comes.'

He led the way into the building, which was simply furnished. They looked round in silence. Then the Baron faced his visitor.

'Bearing in mind the pain of associations—remembering what His Majesty has suffered, and his advanced age—you will be discreet?'

Mr Barrows breathed deep. 'I will be discreet,' he answered quietly.

That was the last word. The Chancellor walked away, taking a path towards the palace.

If Mr Barrows had found the night of uncertainty trying, this period of waiting in the midst of silent sunshine was much more so. One difficulty had vanished, only to give greater prominence to the next; and he was face to face, sooner than he had expected, with that which was the most difficult part of his adventure. He had time to realise this while he waited; and the realisation threw him into a state of agitation which boded ill for the fulfilment of his pledge to be discreet. He paced the chamber unevenly, now pausing to move a chair, now bending over the table to examine with unobserving eyes the books scattered upon it. All the while he strained his ears to listen, and turned again and again to glance at the turn of the path which the Chancellor had taken.

The moments passed slowly—all the more slowly, it seemed, because of the stillness; and they were moments during which he lived intensely; but at length his straining ear caught the sound of footsteps. As soon as he heard them they seemed to strike loud upon the stillness. Breathlessly he watched the turn in the path.

Then an old gentleman in gray, tall and military in figure, but with the unmistakable stoop of age, came round the corner and approached the summer-house.

## SWIMMING: IN PEACE AND IN WAR. WITH PERSONAL EXPERIENCES.

By KARL BLIND.

**I**S it not extraordinary that in a country like England the noble art of easily and rapidly moving with your hands and feet through river, lake, and sea should be so strangely neglected among the mass of the people? In a sporting column I recently read:—

'The deterioration of swimming in the south of England is becoming more marked every year, and no serious efforts are being made to arrest the process. The difference in style between swimmers from the north and those in the south is apparent to the inexperienced eye. All the championships are in the hands of the northerners. Many reasons for this state of things can be adduced. Swimming is better taught in the north of England. In the south there are few teachers of proved ability. Attendants have been employed who have been unable to swim. It is no cause for wonder that boys—hundreds of them—taught by poor instructors should develop bad, ugly, and indifferent methods of progression.'

In the next paragraphs of that sporting communication no mention is made of river, lake, or sea, but merely 'public baths' are referred to, and, in a single line, 'a few free open bathing-places.' This in itself is curiously noteworthy. It looks as if swimming were merely a question of bodily exercise in a closed building—not in the natural courses of water under the canopy of the sky, and often amidst circumstances of wind, weather, and dangerous currents calculated to tax the presence of mind of the swimmer to the utmost. Yet that is a paramount consideration for the true devotee of this athletic art—an art invigorating in the highest degree in peace, and frequently most serviceable in war, when streams are to be crossed. The English soldier, however, is not—unlike the soldiers of foreign armies, where there is universal service—compelled to learn swimming.

As to the difference in style between swimmers from the north of England and those in the south I cannot speak, never having had anything to do with the subject in the way of competition. This, however, I may assert with a degree of regret, that every good swimmer from the Continent, when coming here, has but too much reason to express surprise at finding that so very healthy and useful an exercise is far less practised in this country than one would expect among a people of islanders, nurtured, or at any rate surrounded, by the deep.

Only quite recently, again, I had such an

experience. A young relative of mine, an Oxford student—English by race and birth, but partly brought up abroad—confessed to me that he was rather taken aback at the apparent neglect of swimming among his countrymen in general, and at the poor show even those who evidently are conversant with the art make in the sea; professionals and a few men trained for competition, of course, excepted.

When, a great many years ago, I first came to England, I was even more astounded. I had swum in the Rhine and the Neckar, and in the German Ocean, and I was positively dismayed on seeing the state of things here. No doubt matters have considerably bettered since, especially even among women. Still, there is the largest margin imaginable for further improvement. Every year since 1854 I have been at the seaside in the south, the west, and the south-east of England, and on the coast of North Wales, generally for six weeks, and often for two months; swimming every day, irrespective of weather, mainly at high tide, either before breakfast or before one o'clock. Once, at Hastings, I got, not exactly to my pleasure, among a dark shoal of dolphins that suddenly rose, and from which I had to swim away with the utmost speed. At another time I experienced much difficulty in avoiding the tentacles of numerous slimy creatures in the bay of Llandudno, one of which, when I had got back to the bathing-machine, I actually found sitting on the steps; not to speak of masses of troublesome jelly-fishes which lately appeared at Eastbourne.

I merely mention this to show that I have had good opportunities for observation in every way. All the more so because, from the interest I have taken in the subject since boyhood, I frequently make it a point, when out of the water, to watch those that are in, either from the shore or from the pier, which for years I took as my starting-point.

Now, what has always struck me, and still strikes me unpleasantly and quite incomprehensibly, is that a race so brave—I mean both men and women, boys and girls—and one so zealously given to athletic pursuits, is woefully failing, in more than one respect, in what might be assumed to be one of its native elements. Excellent rowing there is, no doubt, in boats; but what about rowing your own body with its natural oars?

First of all, a strange shyness has to be mentioned as to going into the water at all unless there be a somewhat favourable temperature. If the air is ever so slightly fresh, you find

almost invariably that the beach is nearly deserted. Even young fellows then go by preference to an indoor public bath! To my amazement I have seen young friends, former university students, who as boys had been brought up at an educational establishment at the seaside, and who had learnt swimming at a public bath, actually going in summer, at the very same seaside place, quite regularly to the public bath, until, partly by coaxing, partly by taunts, I made them come out into the open salt-water.

If the weather is a trifle cold, I have found by long experience that you generally have the beach almost, or sometimes quite, to yourself in the early hours of the morning—say, at six-thirty, seven, or even eight o'clock. The few who venture in are continually heard to exclaim, 'Bitterly cold!' when the water is just pleasantly fresh. I trust I will be excused—as I have, after all, a good object in view—for mentioning that under these circumstances I have often asked myself, 'Are the Teutonic Anglo-Saxons really changed so much—nay, have they become such a shivery race as to make one conclude that they had been transplanted here from some Southern clime?' There are, it need not be said, a few eccentrics who bathe in the open throughout the year, either in ponds or in the sea, even as there are abroad some who have the ice broken for themselves in rivers for the same purpose. But this does not affect the general state of things, which to my mind amounts to a mystery.

For the better encouragement of those who show such strange timorous coyness as regards the coldness of the sea-water, it may be said that it is often warmer than the temperature of the air seems to indicate. Only a quick, hearty dip or plunge is wanted to overcome the first feeling. No one can become a truly efficient swimmer—that is to say, in the way of being able to meet great danger in case of need—who does not make it a point to go in day by day, thus becoming conversant with all the various moods of the sea or of rivers. Not only have ebb and flood to be studied; but also the extremely changeable quality of sea-water has to be coped with. There are days when you shoot, as it were, like an arrow through the water, so light and rapid is the carrying power it possesses, in spite of the calmness of the surface, and quite irrespective of the state of the tide, whether high or low. There are other days when you are pulled back, as it were, as by a magnetic force.

On some days the bitter saline contents of the sea are stirred up more powerfully, as may easily be felt when you get a gulp of them into your mouth by choppers or breakers, which from too frequent repetition may become dangerous to life. On other days the water is far less bitter.

All this is probably the result of strange disturbances at the bottom of the sea. I have frequently asked others as to their experience in that respect; but they were generally rather astonished at hearing these facts mentioned. Even the easily ascertainable fact that the water of the German Ocean—that great herring-pond, which seems to be properly salted in advance for that useful fish—is more strongly briny than that of the Channel did not seem to have struck them.

Here we come to another question which is in close connection with the foregoing: Why do those who evidently can swim well venture out so little, preferring to hug the shore, and so missing all the proper training which comes from such special studies as are necessary in the variable element we have to deal with? The answer I always got was that they 'fear getting the cramp.' I cannot understand it, unless a person is foolish enough to go into the water soon after a meal. A really skilful swimmer, even if he got cramp in the legs, would not be quite at the mercy of the waves. He must be able to lie on his back perfectly still, whether with his arms stretched along the legs, like a piece of wood floating, or with arms akimbo, or spread out in cross form in case there were heavy waves. The fact that this is quite easy, that man can float without making the slightest movement, ought to give confidence to those who are nervously inclined. By nature man can thus swim. It is only the faint-heartedness of many which makes them grasp convulsively and incessantly at the unstable water. Thereby they destroy its carrying power, which in the sea, it need scarcely be mentioned, is very great—much greater than in rivers.

From what is usually called 'cramp,' but which in medical science would be attributed to another cause, I have known a young man, a remarkably fine-looking German from the Baltic province of Kurland in Russia, to be drowned near me at Eastbourne, at the head of the pier, where he had gone in. He went under whilst I had just begun dressing. His disappearance was only observed after some time. There was no boat near; but even if there had been one, his whereabouts could not have been detected. As his body was only washed ashore, near the Burlington Hotel, three days afterwards, I confess I felt rather a dislike to going in again at that particular spot until the corpse had come up. It was not a pleasant idea that you might possibly strike upon the dead man in jumping from the pier. At the inquest it was ascertained that he had plunged in immediately after a heavy breakfast. No wonder he lost his life.

Years ago, while swimming at Brighton from the beach to the pier-head, I met a young man who had swum the same distance. It is

certainly not a very great feat. Still, it interested me, considering the rarity of the occurrence, to find out the man's nationality. So I engaged him out there in a little conversation. His first word showed me, by his pronunciation, that he was not an Englishman but a Frenchman. We therefore went on for a while in his own language, and then parted. In France, as in Germany, swimming is actually more generally practised than here. Historically speaking, we know since Caesar's time how much our people were given to that healthy exercise. In Germany, swimming is compulsory in the army; and quite right too. It is a means of preserving many a soldier's life in campaigns in which rivers have to be crossed, often in a hurry, when there is little time for pioneers' work in the way of laying pontoons.

Thinking of such possible warlike emergencies in a nation's life, one feels somewhat annoyed at the sight presented by a mass of swimmers, or rather bathers, either in the open air or at public baths. Every year you may observe boys and men at the seaside clambering upon a board moored near the shore, exposing themselves for many minutes to the gaze of those on the beach; then diving; clambering up again, and sunning themselves once more; and so on until they return to their machines. They scarcely do anything else. In public baths you may see many using the spring-board in a similar way, diving nearly the whole time, to the discomfort of swimmers. It is most absurd. How much better could they employ their leisure!

Never have I, during all the long years I regularly stayed for months at the seaside, seen any one treading water. It is a most excellent and useful exercise, to be done either with arms held aloft or with hands on the hips. When I have been treading water at some place where I had not been before, the attendants generally became alarmed. I remember one occasion when the bathing-woman of the place shouted, 'Jim! Tom! the gentleman is a-drowning!' and excitedly wanted the appliances for saving life to be brought down. As it was full-tide near a strongly sloping shore, I could only smile at the unnecessary hubbub, and calm the excitement by a deprecatory wave of the hand.

Once I asked a professional performer at Eastbourne, who really did wonderful feats from the pier before an admiring public, whether he would tread water next day, holding his clothes above his head. I told him that, to my surprise, I had never seen any one treading water in this country. It need not be said that this feat, too, may prove useful in war. Nor is it difficult if you hold your head well back. The professional promised to do the trick next day, but never did!

If there is a heavy sea on you seldom see

a man swimming through the surf; though going in, with proper calculation, is by no means so dangerous as it appears, if you dive under a breaker and quickly come out on the other side. Coming back only involves some peril. But if you have presence of mind to calculate and watch for the comparative lull which usually happens after six or seven tremendous waves—whilst you are tacking to and fro in the meantime—and if you are nimble enough then to rush quickly out, the performance is quite feasible and affords as much pleasure to the resolute swimmer as any other athletic 'close shave.' Sometimes, it is true, I have been thrown on the shingle by a pursuing wave of angry Nereus; but I always managed, amidst the blinding spume, to scramble out uninjured—excepting a few unimportant abrasions now and then. The satisfaction of thus dodging the tricky sea-god is not to be despised. But the exercise is highly useful in case of a shipwreck, when there are heavy surging breakers near the shore.

Curiously enough, also, one never sees any one swimming with one hand, the other being held aloft. Yet this again is not difficult even in the heaviest sea. I need scarcely say how useful the practice would be in trying to save a drowning person, or in case one arm had been hurt in shipwreck.

On one occasion—the only one when I was in great and imminent danger, though I had swum for ever so many years in the heaviest and stormiest seas—the ability of breasting the waves with a single hand stood me in good stead. It was in the Lake of Geneva thirteen years ago. I had forgotten that the Rhone, the most rapid river in Europe, runs through the lake. Not noticing a red-painted buoy which is set as a limit for swimmers, I went far beyond.

Unfortunately, I had not brought my own short, elastic bathing-drawers with me, but had to use long ones lent to me, which were to be tied with a string. When I had proceeded for some distance the action of the rapid Rhone water loosened the string and I tried to fasten it again whilst treading water. I found it impossible; no sooner were the drawers tied than they again became loose. Then I attempted to fasten them whilst floating, but presently was shot far away through the enormous current. At last I tried to slip them off altogether, but this too became impossible. So I held them with one hand, and, swimming with the other, attempted to return. But I found the current almost insuperable—so much so that for a moment I doubted whether I ought not rather to make for the shore, out of the Rhone current, instead of for the starting-point, which was a bathing establishment. The thought, however, that I might thus suddenly strike upon a hidden sharp rock—as I did once, rather unpleasantly.

on the Devonshire coast—held me back. So I struck out once more with might and main for the starting-point, but soon found that I could not make any headway. I became breathless and exhausted. A false pride, which I could not overcome, prevented me from shouting for help. Nor would my voice, had I done so, perhaps have been heard.

In this plight I at last held out one of my arms, all the while swimming, or rather being driven backward by the current, with the loose drawers hampering me badly. Far in the distance this was seen. The head attendant, who had watched the unusual case, concluding that I was in danger, came to my rescue with a boat. I was already too exhausted to clamber into the boat, and could only grasp the rope. On landing I spat blood for some ten minutes.

My wife, who, with my sister-in-law, had observed the whole affair from afar on the terrace of an hotel, had no idea of the peril I had been in. She felt no alarm even when I occasionally seemed to disappear for a while, being accustomed, as she said afterwards, to such evolutions from our stay at the seaside.

I mention these personal experiences simply to show how necessary it is for those who wish to become really good swimmers, able to save themselves or others in cases of emergency, and also in cases of shipwreck or of boat accidents, to practise continually, each time

they go into the water, swimming with one hand, floating motionless, swimming on the back either with feet or hands only, treading water, and so forth.

After all, gaining championships and prizes in competitions at public baths, or during annual regattas under favourable conditions of tide and weather, is no proper substitute for one's own training to full efficiency and presence of mind under the most adverse circumstances.

Englishmen are excellent rowers, bold mountain climbers, fearless explorers of unknown lands. Why should they not become, in the mass of the population, better swimmers—and I will at once add, also more given to fencing and shooting—instead of devoting themselves almost exclusively to cricket and football, which, in a moderate way, are certainly very good as open-air games? I have for many years often preached on that theme to young English friends; but it seems useless. In this respect much might be done in public schools by those who have a right understanding of the matter.

I will only add that in a country where there is so much lung complaint, no better exercise could be had than swimming, which widens the chest, and therefore produces more room for the breathing organ. So I end this well-meant appeal, in more than one sense, with the ancient Greek warriors' enthusiastic exclamation: 'Thalatta! thalatta!'

## NEW SAMARIA.

### CHAPTER II.

Y sense of the comic was fast leaving me. I went into a drug-shop and asked where the president of the bank lived. The man in charge said it was a mile out of town, and I was told the way. Then I

said I was just out of the hospital and weak; could I rest a little?

'Why, yes.'

I sat down. He asked where I came from.

'New York.'

'What's your business?'

'Banker.' I related my story.

Then the man said, 'I wouldn't make it all so big. You ought to write novels.'

'I knew you would not believe me.'

'I don't, and I've got to shut up.'

Then I moved on again and kept moving, like a famous boy in a certain novel. I walked out of the town in the darkness, and on to a country road, feeling better and wishing I had a cigar. At last I got over a fence and found a lot of heaps of hay. On one of these I lay down, thankful for the warmth of a July night. I

slept well, and, waking at dawn, saw a man standing in front of me. I knew him at once. It was the man who had begged of me as I was entering my ill-fated wagon. He had a rake in his hand.

'Hullo!' he said; 'better get up. The boss will be along, and he's rough on tramps.'

I rose with some difficulty. The man gave me a hand, and said, 'You look right bad. What's wrong?'

I told him I had been hurt and was just out of a hospital. He did not recognise me, which was not surprising. The notion came to me that I would see if a fellow-tramp would believe me. I said, 'If I tell you a queer story, will you think it is a lie?'

'Why should I?'

'I am not a tramp. I am a rich man, but no one here believes it.'

'Well, why not? I was rich once. I had five thousand dollars once.'

'Indeed! And it is all gone?'

'Oh yes—old story—bad years, mortgage on farm, and busted. No work, and took to wan-

dering. I got a job ten days ago. When you get that fortune back do you remember Thad Petersen. Got any money?' 'No.'

'Well, here's ten cents.' I took it. He had asked; I had answered, 'No;'; now he it was who gave unasked. I thanked him, and as I walked away he cried after me, 'Round the turn there's a house. There's a nice woman lives there; guess she'll give you a bite.'

I went on. I began to see how hard it was to tell a true story so as to be believed. I concluded that, as I meant to make my tongue secure my breakfast, I would fall back upon fiction. I went up to the open door of the little cottage, and smelt tobacco. This had the double effect of giving me a terrible desire to smoke, and of making me sure that a man was within, and that I was, therefore, less secure of a meal than I should have been without the too critical charity of my own sex. I knocked with the timidity of the hungry. A very young woman came out of the back room. 'What is it?' she said.

I replied, 'I am an unfortunate man just out of the hospital. I have a wife and nine children; the youngest is blind, and my wife is sick.'

'Poor thing! How old is she?'

'About twenty-five.'

This seemed to strike the woman as comical. She laughed aloud. 'Well, you are certainly a very lively liar. Aren't you the man that got drunk and drove poor Mr Smile's horse into a circus, and broke my husband's leg, and told him you were a banker and worth three millions? Oh dear! but you can fib, and you don't do it well. I could fib better; and, oh my, that poor wife and nine children at twenty-five years of age!'

Upon this she fell into a chair and laughed herself into prodigality of tears. At last she said, 'Wait a bit. It won't keep. It's too big a joke. I'll fetch you some milk and bread, but I must tell Tom first.'

With this she fled, laughing as she went. Then I laughed too and sat down on the stone steps, relieved to know that my comrade in calamity was incapable of active hostility. When the woman came back she was so ashake with this cherished joke that the milk was spilling over.

'Good heavens!' I said, 'don't spill that milk.'

'Well,' she said, 'it's my milk, I do suppose.'

Humility and hunger suggested a modest 'Yes, ma'am.' I swallowed the milk and bread while she stood and watched me. 'Would you like more?'

'Yes, ma'am.'

She went away, and came back with a pitcher of milk and a half-loaf of bread, and again

studied my performance with amused curiosity. I thanked her warmly and was about to go away, when it occurred to me to further test this amiable, merry woman.

I said, 'How would you like to lend me five dollars?'

'Not at all. Five dollars, and Tom in bed for weeks! You must really think me a fool. What would you do with five dollars?'

'I should get a good dinner, smoke a good cigar, and wire to New York.'

'To that lady of twenty-five years old, the mother of nine? Now, I would. She'll be right anxious.'

I was fed and rested and gay—sure soon to be altogether at ease. I laughed and said, 'Suppose I were to tell you my true story. It would be worth—now, what would it be worth?'

'Well, twenty-five cents.'

She put it in my ready palm. 'I promise you a true story. I am a rich man; I am here on business. I was never drunk in my life. The horse was frightened and ran away; the rest I do not remember. I lost my purse, watch, and cigar-case.'

She shook her head. 'Do rich people travel without baggage?'

I added the sad tale of a lost and stolen check. Then I said, 'It sounds too complete, doesn't it?'

'No. A liar and a tramp would have been more cunning. You are not a real tramp. You may be worse, or better.'

'Suppose on the faith of your doubt you invest to the extent of a dollar. It might pay.'

'You are no tramp, that's sure; and if you are lying or not I cannot tell. Wait a little.' She was back in a moment. 'Tom says he doesn't believe a word of it, but that you must be pretty badly off, and I was to say he was sorry—I am too—and to give you a dollar.'

I took it, well pleased, saying, 'You ought to tell me not to get drunk on it.'

'I was going to.'

'People usually do,' I said as I was about to leave her. 'You have been really very good to me. It is unfortunate that no one believes me, but that does not alter my obligation to you. Some day you will be thankful that you fed a hungry man.'

'But I am always thankful for that.'

I said, 'Good-morning, madam.'

'Oh, good-bye.'

I went away down the road with the remnants of my loaf, missing the dog, which had left me the night before to forage for himself. The air was cooler, the country pleasant. I wandered into byroads, or sat and considered ways and means of bettering myself. I did steal four pears (they were lying near the road). I watched some boys fishing in a mill-race, and gave useful

sporting advice. One of them gave me an aged apple—a russet. After they had gone I sat down by the mill-stream, ate a little stale bread, and—from habit—feeling for the absent luxury of a handkerchief, became aware of the newspaper in my breast-pocket. It was only a fragment—a small half-sheet. I settled myself on the grass with some curiosity as to this bit of biography. I still have the paper. It ran thus:

‘OVERWHELMING CATASTROPHE.

DRUNKEN HORSE-THIEF—ATTEMPT TO STEAL  
MR JOSEPH SMILE’S MARE.

‘Yesterday a man without baggage arrived at the Washington Hotel and hired a man to drive him to the mines. He got rid of the driver on some pretext, and drove himself down the hill. There he collided with the Boss Elephant of the circus, smashed the wagon, killed the mare and a monkey, lamed a zebra, and broke his own head. Our distinguished young financier, Mr Thomas Sedgely, the cashier of the bank, stopped the horse and saved the life of the horse-thief at the cost to himself of a broken leg. The circus people carried both men to the poorhouse hospital. Mr Smile has the sympathy of his fellow-townsmen. The man may recover. His injuries probably saved him from the prompt punishment of a justly infuriated community. Mr Sedgely is doing well.’

I began to see, as I read this over, that my future in New Samaria was not to be unclouded. Assuredly, as a statement of facts, the report lacked accuracy; but if a newspaper were always accurate what would there be left to say next day?

On this Saturday evening I went back to the town and spent thirty cents on a luxurious supper. I bought two two-cent cigars and a box of sulphur matches, and then returned to the country and my hay-heap hotel. No tobacco was ever so good. About nine next day, being Sunday, I smoked my second cigar and counted my cash: fifty cents from the nurse, ten cents from Petersen, twenty-five cents from Mrs Tom, one hundred cents from ditto—total, one dollar eighty-five cents. Of this thirty cents had gone to sustain life and four cents to make it cheerful. I could have wired to New York; but then I must live, and it seemed well that I should keep up my strength, and my hunger was that of a convalescent.

As I sauntered into town I saw my grizzled dog slaking his thirst at a wayside stream, where I stayed to wash my bandages. I dried them and replaced them with difficulty. As I entered the town, the dog at my heels, I heard a church bell ringing. I am sorry to say it only suggested the brilliant idea that here was a place where I could rest. I went into the bare brick chapel with the want of assurance bred of being ill-clad

and of the treatment to which I had been subjected. I did not expect to be received with that eager hospitality which in city churches so warmly welcomes a disreputable-looking man; but by good luck it was very hot, and the congregation was scanty. I entered a well-cushioned pew far back and near to the door. No one came to my pew. When the service began I arranged my cushions and enjoyed comfort unknown for days. I slept through the sermon, which seemed to me quite too brief.

I think my canine friend missed me, for just as the sermon began he scratched at the door of the pew. It was not my business, and I let him amuse himself. Some one told him to get out, which order he apparently mistook, for he walked lazily along the aisle and went up into the pulpit. The preacher, in apparent uneasiness, asked some one to remove that dog. My tramp did not wait, but, conscious of being unwelcome, went down the middle aisle and out of the church. If there be a religion for dogs, he had not found it here. After this I fell asleep, as I have said.

I spent ten cents on milk and bread, and priced a pipe; it was beyond my means. After this mild meal I once more retired to the country. I found, as I expected, that I could not telegraph on the Sabbath. I recall that latter half-day as the only one in which I felt at all bored during this Bohemian time.

Resolved on economy, I tried two farmhouses before I could get as much as a crust, and it was eight o'clock when I persuaded an old woman that I needed help. I drank her sour milk and retired to the bank of a brook, where I ate my remnant of bread, finding it pleasant under the willows.

I meant on Monday to wire my office, but foresaw that, do what I might, I should still need some one to vouch for my identity. Altogether the outlook was not reassuring. Somewhere about 7 P.M. I felt a drop of rain and saw threat overhead of more to come. The Inn of Out-of-Doors is pleasant enough when skies are fair in mid-July; but the absence of roof may prove uncomfortable. I got up and looked about me. Then I took off my ragged hat and looked at it. Why I do not know, except that I saw Joe Jefferson do it in playing Rip Van Winkle. I laughed as I recalled my home and my stables and the club and the busy life of my office. I was beginning, however, to acquire a certain respect for my ability to overcome the difficulties of my curious isolation, and, indeed, at times to enjoy what I knew to be only temporary misfortune.

I wanted a dry shelter. I knew better than to try the barns; the dogs of Samaria were by no means amiable. Then I remembered the church. It was nearly dark when I entered the grave-

yard. It was supper-time, and no one was near. I found a window at the back which opened with ease; and, climbing in, I closed the sash. By the fast-fading light I saw that I was in what seemed to be a modest study. Here were half a hundred books, a desk, sermon-paper, and, above all, a lounge.

I was soon at ease. The time for an evening service went by. I began to think how pleasant it would be to write a sermon and leave it for the parson's use. Then I began to be conscious of a want. If only I had a pipe, a cigarette, a cigar. I think this was a suggestion due to the stale odour of tobacco, which revealed one weakness of the gentleman who had that morning so soothed me into slumber. Perhaps—oh, strong-winged hope!—perhaps he keeps here his pipe and his tobacco!

I came upon a glass petroleum lamp set on a table, and longed to light it; prudence prevailing, I resisted the temptation. Amidst the increasing gloom I began a search, conducted chiefly by touch. If I were found opening drawers and desk I would surely be convicted as a burglar; but no one was near. By-and-by, on a chair, shut in a book, I found a short pipe: I suspected what book it was, but shall never say. I had a kind of joy unknown since, as a boy, I ate my first stolen green apple. I came next upon a small bag of tobacco in the second drawer from the top on the left of the desk. Not to be seen of any, I sat on the floor; and, having sulphur matches in slabs, I lit my pipe. I sat still with my back to the wall, deliciously comfortable, while overhead the rain roared on the roof. I was soon to learn a lesson as to the limitations of human happiness.

I heard a noise within the church—steps. I learned long after that the good clergyman was apt to enter his study by this way. I stuffed pipe and tobacco into my pocket, and in the darkness dropped a row of matches. Awkward from weakness, I stumbled across a chair, put out a saving hand, and knocked over the petroleum lamp; it fell with a crash. I smelt the stuff just as I saw a yellow flash, and knew that I had set my foot on the matches. I understood at once what must happen. I snatched at the matches as the sulphur flamed up. It was too late. My hand was in the oil, and the flame caught my soaked bandage. The oil was all over the floor in a moment. I threw up a sash and jumped out, smothering the burning bandage with my coat-tail, and ran for my life through the darkness. It was raining heavily. When across a dozen fields I pulled up, well blown, and looked back. The wooden addition to the church was blazing, and the side windows of the main building were glowing with ominous red. It was a very fine, complete, and undisturbed fire; but I did not enjoy it. I was in the eyes of Samaria a tramp, and probably a horse-thief.

Now I had burned their church up—or down, as you like to put it. I was really terrified at the prospect of what might happen to me if my involuntary arson became known. Who would believe me?

As I smelt horribly of petroleum, and as my bandages were evidently scorched, I thought it as well to conceal this material evidence of guilt. I tore off the outer rolls and put them in the brook and piled stones on them. I needed them; but the need not to wear them was the larger need.

The night was long and wet. At last, completely soaked, I lay down and fell asleep. I shall not dwell on my misery. I had made a great escape, and was thankful; moreover, I had—good heavens!—I had stolen a pipe and tobacco—oh, enough for a week. I discovered this at dawn. Properly speaking, penitence should have been accompanied with unwillingness to profit by my crime.

I lighted a pipe to assist me in the settlement of this problem in morals. I only clouded counsel with the pleasant results of wickedness. It takes at least four hours of the sun to dry clothes on a man. I never before knew that.

About ten on Monday I drove a hard bargain, and had for breakfast, at a cost of seven cents, a bowl of milk and bread as usual. Thus reinforced, I went past the smoking wreck of the church, reflecting on my amazing connection with the ruin, upon which many comments were being made by a loitering crowd.

I found my telegraph-man and asked him to write, as I could not use a pen. He grinned and said, 'What is it this time I am to wire?'

I said, 'To Woodburn & Caruthers, 3 Wall Street, New York. Wire credit, New Samaria Bank, ten thousand dollars. Use numbers.'

He said, 'That would be, at fifteen cents a word, one dollar and twenty cents.' He seemed to think it a grim joke.

I had now a capital of fourteen cents.

After this I went to the bank, attracting some attention by my raggedness. The bank appeared to have been once a small brick chapel, now converted to the use of Mammon. It had a look outside of melancholy indefiniteness, but within was prosperous with varnish and paint. I saw no one but an old, very bald man perched on a stool behind bars.

I said, 'I want to see the president.' Upon this the bald man became abruptly excited.

'Don't have no tramps here. You get out, and pretty quick, too.' His unlooked-for alertness was emphasised by a revolver, which he laid on the counter.

I said, 'I will keep away from the counter, but it will do no harm to hear what I say.'

'Well, what is it?'

'You will get a wire from the Eleventh National Bank, New York, crediting me, John Woodburn,

with ten thousand dollars. I will come back about half-past two.'

As I reflected on my appearance I said to myself, 'What will the man say?' My statement was calculated to tax the credulity of man or banker. I was pale, in rags, dirty, with plasters on my face and the remnant of a dirty bandage on my right hand.

'Yes, you'd best come then. If I was you I'd have made it thirty thousand dollars. Set-up job.'

'I thought of wiring for more,' said I.

This seemed to excite the bald man, and he let loose on me such ingenuity of epithets as a mule-driver would have envied. I left him unanswered. My vocabulary is limited. I bought one cigar, and inspected the town.

I had learned much in the last four days, and had added volumes of varied knowledge to the library of memory. I never in my life believed a beggar's tale, and now that no one credited mine I was amused and, I may add, instructively astonished. My funds were down to twelve cents. I was now well used to my extraordinary outfit, and took little note of the attention I received, except to wonder why the dogs so mistook a gentleman as to bark at his toilet. But the dogs of New Samaria seemed to share the prejudices of their masters. I spent three cents on milk, and was sure that under this simple diet I was fast gaining strength and freedom from vertigo. I was thus reduced to a capital of nine cents.

## THE ASS IN REPORTEE.

IT requires a residence in the East to appreciate the ass at its true worth. There, in place of being used as a synonym for a dolt by a Dogberry or Carlyle, its patience and contentment, prudence and reflection, are extolled. It is only under civilisation that it is despised and neglected; because, as Buffon well observed, we possess a more powerful and noble animal in the horse—a truism that the following anecdote goes to prove: The then Duke of Newcastle, in conversation with the witty author of *Tristram Shandy*, observed that men of genius were unfit to be employed, being generally incapable of business; when the wit sarcastically replied, 'They are not incapable, my lord duke, but above it; a sprightly, generous horse is able to carry a pack-saddle as well as an ass; but he is too good to be put to the drudgery.'

In electioneering humour humble Neddy has figured prominently. Many years ago an old freeholder at Hythe, who was something of a hawker, went about in a donkey-cart. He was a Tory (colour, dark blue). During a general election, the night before the polling-day, some wags painted the old man's donkey light blue, the Whig colour. Nevertheless the old man drove his painted donkey up to the polling-place, and cried out, 'A plumper for ——' (the Tory candidate). Asked for whom his donkey voted, he replied, 'Oh, he votes for the other side, as the other asses do.'

At a recent contest a ready answer secured one lady canvasser a Conservative vote. She had fluently advanced several reasons in favour of her candidate to a grumpy elector, who told her she could talk the hind-leg off a donkey. 'Well,' she replied, 'it would give me much more pleasure to drive you to the polling-station than

to the hospital.' The retort so tickled the voter that he promised to support her side.

Somewhat similar was Rowland Hill's rejoinder when he read from his pulpit an anonymous letter reproaching him with driving to chapel in his carriage, and reminding him that this was not our blessed Lord's mode of travelling. He then said, 'I must admit that it is not; but if the writer of this letter will come here next Sunday, bridled and saddled, I shall have great pleasure in following our blessed Lord's example in that as in all other matters within my power.'

Another neat example of implication is the following: A young fellow, meeting a gentleman much older than himself at the house of a lady to whom both were paying their addresses, took the liberty of sarcastically asking his rival how old he was. 'I cannot tell you my age exactly,' was the reply, 'but I have always understood that an ass is older at twenty than a man at sixty.'

The late Archbishop Whately administered a like rebuke to a youthful A.D.C., who, dining at the Castle, Dublin, had accosted the Archbishop after dinner with the remark, 'I understand your Grace is very fond of conundrums. Can your Grace tell me the difference between an archbishop and a donkey?' 'Give it up,' said the Archbishop after a pause. 'An archbishop has a cross on his breast; a donkey has a cross on his back.' 'I say,' said the Archbishop after another pause, 'Mr A.D.C., can you tell me the difference between an A.D.C. and a donkey?' 'I cannot tell,' replied the A.D.C. 'Nor for the life of me can I.'

One of the best repartees of Dr Richard Busby, from many points of view the greatest English schoolmaster that ever lived, was provoked by one of the perverts of the time of James II.,

the famous Father Petre, who had been under him at Westminster. Busby asked him why he had changed his faith. The quondam pupil replied that 'the Lord had need of him.' 'I have read the Scriptures pretty diligently,' said Busby, 'and never read that the Lord had need of anything but once, and then it was of an ass.'

In the early days of the seventeenth century a foremastman belonging to a man-of-war, on being promoted, for good behaviour, to be a boatswain, was ordered on shore by his captain to receive his commission at the Admiralty Office. Thither Jack went, and he thus humorously described his reception: 'I bore away large for the Admiralty, and on entering the harbour espied a dozen or two quill-drivers. I hailed them. Not a word said they. "Hullo!" again said I. Not a word said they. "Shiver my top-sails, but what can this mean?" said I. Then I took a piece of gold from my pocket, and holding it up to my peeper, "Hullo!" said I again. "Oh, hullo!" returned they. "So so, my boys," cried I, "you are like Balaam's ass, are you? You could not speak until you saw the angel" (an old English coin then current, value ten shillings).

Another application of this Biblical narrative is related by Abraham Hayward, Q.C., in his essays on *The British Parliament: Its History and Eloquence*. He tells us that in the debate on the Bill for the repeal of the Occasional Conformity and Schism Acts in the House of Lords in December 1718, it was very warmly opposed by Atterbury, Bishop of Rochester, who said 'he had prophesied last winter that this Bill would be attempted in the present session, and he was sorry to find he had proved a true prophet.' Lord Coningsby rose immediately after the Bishop, and remarked that 'one of the right reverends had set himself forth as a prophet; but, for his part, he did not know what prophet to liken him to, unless to that famous prophet Balaam, who was reproved by his own ass.' The Bishop, in reply, said, 'Since the noble lord hath discovered in our manners such a similitude, I am well content to be compared to the prophet Balaam; but, my lords, I am at a loss how to make out the other part of the parallel. I am sure that I have been reproved by nobody but his lordship.'

It is reported that the late Sir Frank Lockwood was in Yorkshire defending a man who was accused of stealing a donkey, when a witness for the prosecution declared he beheld the whole proceedings from afar. 'Now, my man,' quoth Mr Lockwood, as he then was, 'you must be extremely careful in your statements. You say you watched this affair from afar. Tell me, now, how far can you see a donkey to really know its points?' 'Just as far off as I am from you, maaster,' replied the yokel. And the great Q.C. subsided.

Though not strictly, yet so nearly akin to, a witty retort, the following notice, which, according to *The Annual Register* of 1807, was posted in a conspicuous place in North Shields, befits the subject in hand: 'CAUTION!—Whereas, several idle and disorderly persons have lately made a practice of riding on an ass belonging to Mr —, the head of the Ropery Stairs: Now, lest any accident should happen, he takes this method of informing the public that he is determined to shoot the said ass, and cautions any person who may be riding upon it at the time to take care of himself, lest, by some unfortunate mistake, he should shoot the wrong animal.'

The latest sample that has come under notice occurred last December in the House of Commons; and it can hardly be construed into even a veiled compliment to our generals in South Africa. Mr Powell-Williams, answering Mr T. Bayley, stated that according to the latest returns the number of horses landed in that country was one hundred and seventeen thousand seven hundred and thirty, and of mules sixty-four thousand seven hundred and thirty. Whereupon Mr Healy asked, 'Can the right honourable gentleman state how many asses were sent to South Africa?'

#### WAITING THE TIDE.

THE Sea is calling, calling; but I cannot hear its cry.  
I only hear the falling of the echo ere it die;  
But gladly would I follow, wherever it may be,  
The land beyond the sunset, or the shores of Memory.

I've heard the same winged whisper, in the twilight of  
the morn,

Ring from the shining altar of the east ere day was  
born;

And in the deepening dusk I've seen, where burned  
the west in flame,

A hand that wrote in phantom guise the symbol of a  
name.

Oh, winds that wander, wander, to the east and to the  
west!

I pray you bear me yonder to the island of my quest,  
Where the melody that's spoken is the song we thought  
to hear

From the lute that earth has broken in her fevered fret  
and fear.

Ye have heard that song enchanted, for ye bear it on  
your breath,

Though like a lilt, ghost-haunted, from the dusky hall of  
death.

Perchance I best shall hearken only in that twilit hall,  
Or the shadows all may darken, and I never hear at all.

Oh Sea! give o'er your crying, if I must but wait the  
tide;

Oh Wind! cease wanton sighing, since the world is all  
too wide:

I'll learn a stoic wisdom till the Time-sprite sails with  
me

To the land beyond the sunset, or the shores of Memory.

### TOWN RESIDENCES OF CABINET MINISTERS. INTERESTING HISTORICAL REMINISCENCES.

By WILLIAM SIDEBOTHAM.

**I**T has been truly observed that a stranger will seek in vain in London for palaces of the nobility such as abound in Rome, Florence, and Naples—structures which bespeak their patrician ownership, and have each a history of its own as old almost and as full of matter as the city of which it forms a part. This is probably owing to the fact that the power of the aristocracy of England in the Middle Ages was not so great as that in other European countries, while their rural tastes tended to keep them from taking such an active interest in civic duties as was displayed by the nobles on the Continent.

However, *omnia mutantur*, and so we find that in the sixteenth and seventeenth centuries many of the aristocracy had become the possessors of residences in the City so as to be in touch with the merchant-princes whose power and military prowess had such a predominant influence on the destinies of the nation. Many of these residences were occupied by their distinguished owners up to the Wars of the Roses; but from that time forward the aristocracy gradually migrated westward—first to Lincoln's Inn Fields, Soho, and Bloomsbury; then to St James's and its vicinity in order to be near the Court of the 'Merrie Monarch' at Whitehall and Parliament. A few of these residences still exist, and serve to recall the time when King Hal indulged in his mad pranks, and Charles II. habitually resorted *incognito* to the taverns of the City.

It is difficult in these days to picture Whitehall and Parliament Street (which are now chiefly occupied by large Government Offices) and Downing Street (the official residence of a number of Prime-Ministers, and now occupied by Mr Balfour) as the centre of the 'royal diversion' of the cock-pit, which was erected there by a crowned head for the more

magnificent celebration of that bygone sport, cock-fighting.

Many interesting scenes have taken place in Downing Street since it was established by Sir G. Downing, who has been described as 'the maker of English history,' for at much risk he saved the life of Charles II. He was an American by birth, and came to reside in Cambridge. Appointed to the position of Secretary to the Treasury in 1667, when the office of Lord Treasurer was put in commission on the death of Lord Southampton, he gave his name to the 'greatest street in the world.' At that time there were several large houses at the upper end overlooking St James's Park. For a considerable period there seems to have been little, if any, change in the character of the street, as is shown by the following advertisement which appeared in the *Daily Courant* on February 26, 1722:

'To be lett together, or apart, by lease, from Lady Day next—Four large Houses with Coach Houses and Stables at the upper end of Downing Street, Westminster, the back-front to St James's Park, with a large Terras Walk before them next the Park. Enquire of Charles Downing, Esquire, Red Lyon Street.'

It is not generally known that, although all royal proclamations and diplomatic papers are dated from 'our Palace at Whitehall,' for nearly two hundred years the headquarters of the Government have been at No. 10 Downing Street; here the Cabinet Councils are held when the Prime-Minister is a commoner, and the home and foreign policy of the Government decided. The house belongs to the Crown. George I. gave it to Lord Bothmar, and on his death George II. offered it to Sir Robert Walpole, the Premier; but he would only accept it for his office as First Lord of the Treasury, and it has since remained the official residence of the holder of that post.

Lady Walpole died there in 1738, and four years later Sir Robert went to reside in Arlington Street. It was to No. 10 Downing Street, too, that the great Lord Chatham was taken after his fatal swoon in the House of Lords.

William Pitt, his famous son, occupied this residence when he became Premier, and wrote his celebrated letters in reference to his attachment to Lord Auckland's eldest daughter, Eleanor Eden, in 1787. Pitt seems to have entertained the highest regard for Miss Eden, recognising, however, not only his financial difficulties, but that his health was shattered. It is somewhat remarkable that in all the correspondence which took place on the subject between the Great Commoner and Lord Auckland, the name of Miss Eden was never mentioned. Eventually the lady married Lord Hobart, afterwards the Earl of Buckinghamshire, and it is stated that when Pitt was informed of the event it almost broke his heart.

Among other illustrious personages who have lived at No. 10 Downing Street or used it for parliamentary purposes, besides those already mentioned, are Lord North, Lord Grey, Aubrey de Vere (the last Earl of Oxford), Lord Melbourne, Mr Disraeli, and Mr Gladstone. The building has no architectural features worthy of note; indeed, according to modern ideas, it is distinctly unattractive. The rooms, however, are large, and contain, *inter alia*, an old gilt state chair and other interesting relics.

Up to the beginning of the nineteenth century Downing Street—which, although its reputation is world-wide, is a short, narrow thoroughfare—contained a number of lodging-houses chiefly used by the Irish and Scotch members of Parliament. In one of them Smollett the historian, on the death of Dr Douglas, took up his residence as a surgeon, but with what success is not recorded. These houses were gradually pulled down to make room for the Government Offices; and eventually the house now used as the official residence of the Chancellor of the Exchequer was acquired, but much has been altered since it came into the possession of the Government. Its chief claim to notoriety is the fact that it was the residence of Mr Gladstone when he was Chancellor of the Exchequer; and it was here that he gave some of his famous breakfasts, which were at that period a very popular means for promoting an interchange of ideas. Of late years this practice has gradually fallen into desuetude. Probably the greatest historical event which took place at Downing Street was the signing of the preliminaries of peace with France in 1801; and many issues of great importance have also been decided here, the memory of which are enshrined in history.

The only other Cabinet Minister who by virtue of his position has an official residence is the First Lord of the Admiralty—a post now held by

Lord Selborne. This is situated in Whitehall, near to where Charles I. was beheaded. As two hundred and fifty years have since elapsed, and as extensive alterations have been made from time to time, the actual spot on which the execution took place is uncertain; but there can be little doubt that it was witnessed from old Wallingford House, which occupied the site of the present Admiralty. It may, therefore, be taken for granted that Lord Wallingford's family saw the regicide strike the fatal blow and the man who assisted him hold up to the spectators the King's head streaming with blood, and also heard the loud cry, 'This is the head of a traitor!'

Wallingford House was the scene of many historical events. After the death of Charles I. it was used by Cromwell; and, subsequently, Villiers, Duke of Buckingham, was born there. Having spent an immense fortune, the latter died in very unenviable circumstances, as will be seen from the following lines written by Pope:

In the worst inn's worst room, with mat half hung,  
The floors of plaster, and the walls of dung,  
On once a flock-bed, but repaired with straw,  
With tape-tied curtains never meant to draw;  
The 'George' and 'Garter' dangling from the bed,  
Where tawdry yellow strives with dirty red,  
Great Villiers lies. Alas! how changed for him,  
That life of pleasure and that soul of whim!  
Gallant and gay in Cliefden's proud alcove—  
The bower of wanton Shrewsbury and love;  
Or just as gay at Council, in a ring  
Of mimic statesmen and their merry king:  
No wit to flatter left of all his store,  
No fool to laugh at, which he valued more.  
There, victor of his health, of fortune, friends,  
And fame, this lord of useless thousands ends!

The residence of the First Lord of the Admiralty adjoins the main building, and is a spacious house. Here he conducts all his official business and prepares the naval estimates. There is a door communicating with the Admiralty, so that the First Lord can be in touch with all the officials. The elevation of the main building is built of brick and stone, and in the centre is a tetrastyle Ionic portico with projecting wings. In the interior is a large hall with numerous offices. When Nelson was killed at Trafalgar his body was brought to this country, and lay in state for several days at Greenwich. It was, the day before the funeral at St Paul's, conveyed to the Admiralty, where it was placed in the large room on the ground floor.

For upwards of two centuries the houses in Arlington Street, Piccadilly, have been occupied by distinguished personages, and many of the important events which have taken place there are recorded in history. The street is now famous because one of the houses in it is the town residence of the late Premier, Lord Salisbury. The house which he occupies—No. 20—was rebuilt by his lordship, and therefore it is only

noted for the political events which have taken place there during recent years. It is interesting to recall the fact that the old Marchioness of Salisbury who was burned to death at Hatfield in 1834 was for many years one of the leaders of smart society, and her Sunday evening receptions in the old house at Arlington Street were a feature of the London season. One of the interesting events which took place in this street was the quarrel between Lord Nelson and his wife in reference to Lady Hamilton. Mr Hazelwood (Lord Nelson's executor) in a letter to Sir H. Nicolas records the circumstances as follows:

'In the winter of 1800-1801 I was breakfasting with Lord and Lady Nelson at their lodging in Arlington Street, and a cheerful conversation was passing on indifferent subjects, when Lord Nelson spoke of something which had been done or said by "dear Lady Hamilton;" upon which Lady Nelson rose from her chair and exclaimed with much vehemence, "I am sick of hearing of dear Lady Hamilton, and am resolved that you shall give up either her or me." Lord Nelson with perfect calmness said, "Take care, Fanny, what you say. I love you sincerely; but I cannot forget my obligations to Lady Hamilton or speak of her otherwise than with affection and admiration," without one soothing word or gesture. Muttering something about her mind being made up, Lady Nelson left the room and shortly after drove from the house. They never lived together afterwards.'

Among those who have lived in Arlington Street were Horace Walpole; Lord Dorchester, with his daughter Lady Mary Wortley Montagu; the Duchess of Cleveland, after the death of Charles II.; and the Duchess of Buckingham, widow of Villiers, the second Duke of Buckingham; while, according to Pepys, a sister of Milton was married from there.

It would be difficult to find a mansion in the Metropolis which from an historical or political point of view is more interesting than Devonshire House in Piccadilly. From the time when Georgiana, the beautiful Duchess of Devonshire, held her court there, and received the homage of Fox, Burke, Sheridan, Fitzpatrick, and other eminent personages, down to the present day, this noble residence has been, so to speak, the rendezvous of the leaders of society and politics. There is nothing striking in the exterior of the building, the elevation being distinctly plain. The interior of the house is magnificent from every point of view. The rooms, which are large and well proportioned, are furnished in the most lavish style; the decorations are of the costliest character; the picture-galleries contain the *chefs-d'œuvre* of British and foreign artists; the library is rich in every department of literature; and the grounds at the back are beautifully laid out. The house, which now contains one of the most elaborate

staircases in London, being constructed of marble and alabaster, with balustrades of solid crystal, was erected in 1735 for William Cavendish, the third Duke of Devonshire.

It is not generally known that there is or was a secret underground passage between Devonshire House and Lansdowne House in Berkeley Square. This was used by the first Duke of Devonshire during the Revolution of 1688, of which he was one of the leaders. The present Devonshire House, it may be explained, occupies the site of the old Berkeley House, which the first duke occupied. His Grace, who was formerly Earl of Devonshire, was raised to the dukedom for the active part he took in the Revolution.

For nearly two centuries members of the Devonshire family were identified with the Whigs, and every prominent opponent of Pitt was welcomed at Devonshire House. In 1784 the Tory party used every endeavour to defeat Fox, who was a candidate for the representation of Westminster. Nearly the whole of the other London parishes had given their verdict, and the two parties were almost equally divided; whereupon the beautiful Duchess of Devonshire, with her sister Lady Duncannon, set themselves to gain the suffrages of the outlying voters. According to Sir N. W. Wraxall, 'these ladies, being furnished with lists of the outlying voters, drove in their carriages to their respective dwellings, sparing neither entreaties nor promises. In some instances even personal caresses were said to have been permitted in order to prevail on the sulky and inflexible; and there can be no doubt of common mechanics having been conveyed to the hustings by the duchess in her own coach.' By this means Fox beat Sir C. Wray, his opponent, notwithstanding the efforts which were made on behalf of the latter by the Countess of Salisbury. After the election, which was one of the most exciting recorded in history, an immense procession, composed of Fox's supporters, proceeded to Devonshire House, where a distinguished company, including the Prince of Wales, had assembled. Here the successful candidate made a speech, and the mob dispersed.

In addition to the many political events which have taken place at Devonshire House, mention should also be made of the splendid entertainments which have been given there. The balls have been graced by the presence of numerous members of the royal families of Europe; while the private theatricals have never been surpassed in magnificence.

Lord Lansdowne, the Secretary of State for Foreign Affairs, occupies the splendid house which bears his name in Berkeley Square. It was built in 1765 for the Earl of Bute, who, when made Premier by George III., brought the war between France and Spain to a conclusion by the Treaty of Fontainebleau—an act which was so extremely unpopular in this country that it was

suggested that he had either received a handsome present from France for signing the treaty, or that he had invested largely in the public funds just before peace was declared. The public indignation was so great that Lord Bute was compelled to retire into private life. He sold the mansion to Lord Shelburne, afterwards the Marquis of Lansdowne, for twenty-two thousand pounds—about three thousand pounds less than it cost.

The latter died in 1805, and the *Times* in recording the event said the principal cause of public regret for his demise was that only a fortnight before his death he had declared his knowledge of the Junius secret; and yet among his papers was to be found no indication that could lead to its discovery. He was succeeded by his eldest son, the Earl of Wycombe, whose first act on coming into possession was to sell almost all the literary and artistic treasures which his father had accumulated with so much love and labour. The greater part of these were dispersed under the hammer of the auctioneer, many of the pictures going to enrich the National Gallery, the Grosvenor House, and other collections. The Lansdowne manuscripts were kept together, being purchased by the British Museum; while the gallery of antique marbles was the sole portion of the collection for which the Marquis showed any appreciation—his opinion being expressed in the fact that he purchased it from his father's executors for six thousand pounds. He died in November 1809, and was succeeded by his half-brother, the third marquis, whose first care was to purchase the antique marbles from his sister-in-law, and at Lansdowne House they may now be seen, some of them—as the 'Youthful Hercules' and the 'Mercury'—justly considered the finest statues of the kind that have found their way to this country. As for the pictures, when the Marquis succeeded to the title, there was not one in this great mansion, with the exception of a few family portraits; but Lord Lansdowne set himself to the formation of a gallery, which now comprises a very large collection of great interest and value, but miscellaneous in character, no school or master predominating, unless it be Sir Joshua Reynolds.

Park Lane, in which are the residences of two Cabinet Ministers—Lord Londonderry, the Postmaster-General, and Mr G. Wyndham, the Chief Secretary for Ireland—was originally called Tyburn Lane. Here once stood the Tyburn turnpike; and up to a comparatively recent period the thoroughfare was distinguished by its rural appearance. Park Lane is now considered one of the most fashionable residential quarters of London. Londonderry House, formerly Holderness House, at the corner of Hertford Street, is the residence of the Postmaster-General. This noble building, which was built in 1850, is regarded as one of the finest town residences in the Metropolis. It commands a fine view of Hyde

Park, and contains a magnificent picture-gallery, including portraits of British and foreign monarchs of the present century. There is also some priceless statuary by several of the great masters.

Three other members of the Cabinet live in Chelsea—Lord Balfour of Burleigh, the Secretary for Scotland, at 47 Cadogan Square; Lord James of Hereford, Chancellor of the Duchy of Lancaster, at 41 Cadogan Square; and Lord Cadogan, Lord Lieutenant of Ireland, at Chelsea House, Cadogan Place. These residences, having been built within the last twenty or thirty years, possess no historical interest. Chelsea House, which is the finest mansion of the three, was rebuilt in 1874. The principal rooms are most elaborately furnished, and one of the most noteworthy features is the main staircase, which is of Sicilian marble. The manor and estate of Chelsea came into the possession of the family through the marriage of the second Lord Cadogan to Elizabeth, daughter and co-heiress of Sir Hans Sloane. On the death of the latter the manor was divided between the two sisters, Lady Cadogan and Mrs Stanley; and when the Stanley family became extinct the whole of the property came into the possession of Lord Cadogan. Sir Hans Sloane's magnificent collection of books, manuscripts, works of art, &c. had previously been purchased by Parliament, and led to the establishment of the British Museum, the greatest national collection of treasures in the world.

The remaining members of the Cabinet, with two exceptions, have their town residences in places which are not remarkable in any way. The two Cabinet Ministers to whom I refer are Mr Brodrick, the Secretary of State for War, who resides at No. 34 Portland Place, and Mr Akers Douglas, the First Commissioner of Works, whose town house is at No 113 Mount Street. The residences themselves, however, are 'unknown to fame;' their importance lies in the fact that their immediate surroundings are of historic interest. Portland Place is one of the widest thoroughfares in London, and at one time was the most fashionable residential part of the West End; even now some of the houses are occupied by peers and other eminent personages. Lord Foley, who formerly owned a house on the spot now occupied by the Langham Hotel, was a friend of the great Lord Mansfield; and it is stated that the latter owned his success in life to this distinguished nobleman; for when he was studying for the Bar he was very poor, and Lord Foley, evidently seeing that he would eventually make his mark in the world, made him an allowance of two hundred pounds a year to help him to 'keep up appearances' until he could earn a sufficient income for himself. His unparalleled success at the Bar justified the opinion of his lordship, for his first case made his reputation as an orator, and within two years he was conducting appeals in the House of Lords,

eventually becoming, as is well known, the Lord Chief-Justice of England, and one of the greatest masters of jurisprudence that this country has produced.

In Mount Street (which owes its name to the fact that in 1643 a fort was erected there in the line of fortifications hastily drawn round the suburbs by order of Parliament when an attack was expected by the royal forces) was the celebrated coffee-house called 'The Mount,' from which Laurence Sterne dated many of his love-

letters to Mrs Draper and other well-known society ladies of the period.

Many other interesting events connected with the London residences of our Cabinet Ministers might be recorded, but enough has been stated to prove that although, compared with the town houses of Continental statesmen, they may be inferior from an architectural point of view, yet in historic interest and the important part they have played in the political life of the country they are unequalled.

## PRINCE ADRIAN OF ZELL.

### CHAPTER VIII.—IN THE IMPERIAL GARDENS.

On that morning the Emperor of Styria might have been mistaken for some British country squire making a tour of inspection in his grounds before the hour of luncheon. Yet his was perhaps the most striking and most pathetic figure in European politics, the man whose troubled life had been, for some score of years, the chief link that bound the constituents of the united empire under one sceptre. His private story was one of many sorrows and disappointments, while his crown had been described as one of the thorniest in the world. Many supposed that it was only in the work of governing that the Emperor found a relief from the troubles of his private life, and that a thorny crown was therefore some kind of compensation; but it is possible that these did not realise that here was one who saw that he had been given a great part to play, and had the spirit to play it greatly.

He came up the path slowly, looking to right and left; and he was within a yard or two of the threshold when he first looked before him. Then he saw Mr Barrows.

The latter had subdued his nervousness by a great effort. Standing beside the table, he saluted the Emperor and submitted to a quick but searching scrutiny. Age had not even dimmed His Majesty's faculties, for constant and tremendous use had kept them keen in spite of time. After that one look he sank into a chair. Mr Barrows remained standing, and the table was between them.

'You are the Mr Barrows?' said the Emperor placidly. 'And you wished to see me?'

Their relations during the interview took all their colour from that quiet question. 'Yes, your Majesty,' answered Mr Barrows.

'I understand that you have some communication to make in the matter of the Hamars. I am ready to hear you.'

Leaning back in his chair, he laid his walking-cane across his knees and waited. Mr Barrows had long prepared his story, but naturally found

a difficulty in beginning it. He was about to open an old wound.

He began at last, huskily; but his voice gained firmness as he went on.

'Your Majesty's kindness is very great. In speaking on behalf of the family of Count Hamar, I feel that I am dealing with a painful subject.'

He paused; but the Emperor, though he was listening closely, gave no sign. Therefore Mr Barrows continued:

'Quite by accident, or perhaps by the hand of God, I found some weeks ago that the Countess Hamar and her daughter were friendless and helpless in London, the Count having died there in exile. I found also that they were being pursued by a relentless and powerful enemy. This enemy had accomplished their ruin at home out of malice; but their ruin was not enough. In order to profit more fully by their situation, he had followed them even in their exile.'

Again Mr Barrows paused. The Emperor had turned, his face darkening perceptibly.

'Be careful, sir,' he said.

Mr Barrows was sufficiently pale, but he showed an unexpected courage. 'I will be careful, your Majesty,' he said, 'speaking only what is necessary, and what I know to be true.' And with that he resumed:

'When I saw this, I remembered that the prime cause, or one prime cause, was Prince Adrian of Zell, by whose influence Count Hamar had been led into disloyalty; and I felt that if he had lived to this day he would have seen it his duty to do, for those helpless women, anything he might be able to do in atonement. I felt also that there was some such duty even upon myself, through my connection with the Prince and my knowledge of his affairs; therefore I offered the Countess my protection, and found her a shelter. Her enemy, however, still pursued her, and at last I resolved to appeal to him in person. In seeking him I came face to face with one I had not thought to see, one who knew a secret which placed me in his

power. He was also an old enemy of mine, and it was his nature neither to forget nor to forgive.'

Mr Barrows's voice faltered slightly at that point. It recovered its firmness immediately.

'This man was relentless. He gave me a choice. I must either abandon those whom I wished to protect, or I must face the chances of a duel—a duel, not with him, but with his son. I may tell your Majesty that there would be no chance for me in such a contest as that, even if I chose to face it; therefore the result would be the same, as far as his victims were concerned, and for me much worse.'

The level tones of the speaker now seemed to have a slight vibration in them. The shadow was still upon the Emperor's face.

'There seemed to be only one thing to do—to move out of the way. At this point, however, I remembered your Majesty's kindness and your unfaltering justice; and it came to me that I might appeal to that justice on behalf of those who were suffering for the faults of—of my dead master. But I knew well that Prince Adrian owed a debt to the name of your Majesty's House, and that debt his life. He cannot now pay it; but I thought that another, and that other his companion in fault, might take the debt upon himself instead. And if he did so, I thought that he might ask one thing of your Majesty: protection for the helpless. As far as it might lie in his power, he might make restitution.'

The voice sank at the end of the story, until it was little more than a whisper. When his story was done Mr Barrows stood waiting, one hand resting upon the edge of the table.

Several moments passed in a constrained silence. The shadow had now left the Emperor's face; but it had been replaced by a slight smile, not of pleasure but rather of a bitter amusement. There was some trace of this in his speech.

'Then, if I understand you, you wish to make what amends you may to the Salzberg honour. But in doing so you also wish to make a bargain with the Head of the House?'

Mr Barrows flushed. He might have appreciated the Emperor's directness, even if he did not like it.

'There is much to be said for your plan,' His Majesty went on reflectively. 'The only way in which Prince Adrian could have shown his sense of what was due to honour would have been by making some atonement of this kind. He failed to do it; and perhaps the only person well fitted to take his place is his fellow-conspirator and his companion.'

The words were well enough, but the tone was not promising. Mr Barrows heard the words, but took more notice of the tone. Suddenly the Emperor turned and faced him fully.

There was a ring of anger and indignation in his voice.

'But, my friend,' he said, 'there are two or three points which you have forgotten to take into consideration. You are not well acquainted with the Salzberg honour, and you failed to notice them.'

Mr Barrows shrank before the look that pierced him, the keen scorn in the old man's eyes. He looked as guilty as he had done in the presence of Count Brode.

'One thing is this,' the harsh voice went on: 'you have forgotten that honour is not to be bought and sold. Another, you have forgotten that Prince Adrian's debt to that honour stands quite apart from the question of the Hamars. It is owing in any case. Yet another, you have forgotten that kings do not bargain!'

Three blows, where either of the three might have been enough! The Emperor rose from his chair, but he did not remove his gaze from Mr Barrows's face. He had given his answer; he had said all that there was to say. His rising was a sign that the talk was finished.

Mr Barrows knew this, and saw that his one opening was being closed. Perhaps he valued it the more because he was losing it; perhaps despair gave him the last species of courage. He spoke again, stammeringly.

'Is this—is this my answer?'

'It is your answer,' was the brief reply.

Still there was a moment left—a moment, during which they faced each other before parting. 'The debt,' cried Mr Barrows—'the debt shall be paid. Your Majesty shall know when it is done, and the rest shall be in your hands. It is all I can do.'

There was a note almost of defiance in his appeal. He searched the Emperor's face with eager eyes, heedless of his own words, but knowing well his own meaning. In the moment that followed he thought—and how often this thought came back to him in the next few days—he thought he saw a slight sign of hope, a trace of softening, a dimness, as it were, falling over that look of keen scorn. Then he received a sign which he could not disobey.

'I thank your Majesty,' he said, 'for hearing me; and he passed out into the sunshine.'

He went hurriedly down the path by which he had come, unable to decide, such was the chaos of his thoughts, whether he had failed or succeeded. At the first turn of the path he found some one waiting for him, pacing slowly to and fro. It was the Chancellor.

They walked together towards the door, passed out beyond the silent sentry, and so into the other garden. Not a word was said until they came to the side-door of the house, by which Mr Barrows had entered an hour before. The parting was to be a hasty and informal one.

At the last, however, there was a pause, just

as Baron Quinzell was opening the door. Mr Barrows remembered what was due to him.

'I am grateful for your Excellency's help,' he said earnestly.

The Chancellor bowed in reply. Then, as if moved by a sudden impulse of kindness to this pale and shaken guest, he held out his hand. Men said that Quinzell never acted on impulse; but perhaps this case was an exceptional one. Mr Barrows went out, and the door was closed behind him.

The Chancellor lost no time in returning to the gardens. He found his master still sitting in the summer-house.

'He is gone?' asked the Emperor absently.

'Yes, sire.'

The Chancellor stood at the other side of the table, and looked at the Emperor with thoughtful eyes. Perhaps he was wondering whether this thing had been worth the doing; for he saw that the opening of an old wound had been a painful matter. Now that his emotions had died away, the Emperor looked feeble and exhausted.

'I gave the only answer I could,' he said. 'I had not kept that idea of honour so long to give even a jot of it up now. And yet—and yet—— But it was a strange thing. Of course he will not do it, even if the case be as you think; but there is the idea, the aspiration. And that is something, Quinzell.'

'Yes, sire.'

'Sometimes I think that honour cannot fail entirely in one of our House. Its call must be heard, sooner or later. It failed in Adrian; but now, you see, it cries out—it cries out even from his grave.—But there, Quinzell, I leave this to you. You will see to it, and let me know the end. Let us go in.'

He rose wearily, and they left the place together. The Emperor leaned on the other's arm, as he had learned to do in more than one sense during recent years. So they went up slowly towards the palace.

In the meantime Mr Barrows was making his way back to his hotel, whence he immediately departed for the railway station. He made no attempt at first to think of what had happened, for another matter was now pressing. The week which Count Brode had given him was passing swiftly, and he must reach home before it ended. He could find time for thought during the journey.

When the time for thought came, it brought him anything but comfort. He saw, first, that he had failed in his mission, for he had not obtained the assurance he had asked for. Then the scornful words of the old Emperor echoed in his mind, and again and again he felt the humiliation of the moment in which they had been spoken. But he remembered, too, that although he had not obtained a pledge he had given one;

and as soon as quiet consideration came, he wondered what had made him do it. He had come here to offer a sacrifice in return for a promise, or rather to obtain a promise in return for a sacrifice! In the event, he had pledged himself to accomplish the sacrifice without obtaining the promise. The Salzberg honour was an inexorable code. He must do the whole thing!

His moods varied. At one time he suffered the keenest shame, and blamed himself utterly for his folly in undertaking such a cause. He would abandon it now, and take the alternative of recommencing life in some other quarter of the world, where he could once more, and this time for ever, cut himself free from old ties and follies. This mood would pass, and he would recall, with some gleam of hope, the more favourable signs. There was that look which he had seen in the Emperor's face; there was the Chancellor's grip of the hand—surely a significant thing at least. Perhaps the opening was still there after all. Then there was the pledge he had given under such a curious impulse. Honour he had considered a thing apart from him; but—— And then he thought of the Emperor himself, so old and so pathetic a figure, with his high standard of action and his life of disappointment and tragedy. Under the influence of these thoughts he changed his plans; and when to these was added the thought of those who awaited his return, he almost felt that only one course was possible to him. His life was of no value to any one; here was a chance—just a chance—of making it finally useful. He would take that chance!

His journey was as long as it was wretched, and he did not reach his house until the early morning of the sixth day. At that hour the place was silent, and after he had let himself in he went directly to his own room. It was there that he had come to his decision before, and it was there that he must go through the struggle again.

Weary from sleeplessness and travelling, it was in vain, however, that he tried to arrange his ideas and find a conclusion. Torn between doubt and resolution, racked by the deepest uncertainty, he sat for over an hour without result. Then his housekeeper, who had heard him enter, came down and prepared a hasty breakfast for him; but as soon as this was over he returned to his chair. There was no time to lose. He must write to-day, accepting the challenge, or he must go!

After a while he was startled by a light tap at the window. It was Hadfield, who, passing on his way to the office, had glanced in to see his neighbour sitting in his favourite place.

Mr Barrows opened the window. 'So you're back,' cried Hadfield. 'But how ill you look!'

'Do I?' said Mr Barrows. 'Well, it has been rather a rush, you know.'

'I suppose so. How did you get on?'

Mr Barrows hesitated. 'Oh,' he said, 'fairly well, I think; but I'll tell you all about it later. How is the Countess?'

Hadfield beamed. 'Well, the fact is,' he said, 'she has been making progress. Perhaps it was because of you—the thought, you know, that somebody was really doing something for her. She will be downstairs early to-day, in the hope of seeing you back.'

'Ah! Then I shall go in soon. Good-morning.'

Hadfield saluted with his cane playfully, and passed on. Mr Barrows closed the window, and found that the encounter had steadied his thoughts a little. He took a turn in the garden, and this had a further good effect. In due time he went in to see his neighbours.

They had been awaiting him, as he found when he entered the little dining-room which had been given up to their use. The Countess lay upon the couch, but she rose to meet him with a flush upon her wasted face.

'So you have come back?' she said.

'So I have come back,' answered Mr Barrows, quietly.

He turned to speak to Edna, who gave him a look of welcome. Then he sat down.

As he did so, he realised, with intense relief, that his indecision was passing away. Perhaps the period of doubt had gone; perhaps the presence of the two much-wronged women was itself enough to restore him to that mood in which he had faced a great ordeal. Or perhaps there was an atmosphere here which was capable

of strengthening weakness and raising a man to his best levels.

'Well,' he said slowly, 'I think I have been able to do something for you. I have seen—I have seen the Chancellor.'

Before they could recover from their surprise he went on: 'I thought it best, Countess, to go at once to the highest place. Nor was I wrong, for I think I may say, now, that there is hope.'

Still looking into his face, the Countess smiled. But at the same time the flush died from her cheeks, and she sank back upon the cushions. Edna moved swiftly to her side.

'Ah, my friend,' she said, 'you must forgive me. This news is so good! I had almost begun to fear—indeed, I have sometimes dreamed it—that we should never see Lusie again, never see our home at Cronia.'

'That is all past now,' said Edna softly.

'Yes,' added Mr Barrows. 'I think it is all past now. You must grow strong in readiness. I must not tell you, yet, what the Chancellor said, as I may have to go away again soon; but he was willing to listen, and he was courteous. Soon there may be more to tell you; but you must leave it all to me.'

The Countess smiled gratefully. 'Fully we do so, dear friend,' she said, 'until we can repay you all. But are you going so soon?'

Mr Barrows had risen. There was no sign of uncertainty in his answer.

'For the present, yes. Perhaps I shall come in again later. This morning I have to write a letter.'

## SOME HEBRIDEAN SUPERSTITIONS.

UAIN'T survivals of the more primitive forms of superstition may still be found in various parts of Britain. The more remote the district and the less exposed to contact with the outside world, the greater is the chance of the old-time fancies persisting. Such conditions are well supplied in the Hebrides, and notably in Lewis, the most remote of the island-group.

Lewis is a district at present in a state of transition. A visitor finds its villages made up mainly of typical crofters' houses; but among these he will usually find one or two with modern gables, windows, and chimneys. This may be taken as an emblem of the general condition of the district: the new has intruded on the old, and the most time-honoured manners, modes of life, and even forms of thought are being gradually transformed by the contact.

Contrasts sometimes emerge so startling as to bewilder the stranger. Stornoway, the capital of

the district, is no sleepy country village, as might be supposed, with an indolent interest in the parish pump; but, as the casual visitor discovers to his astonishment, a very advanced little town, even as those things are reckoned in the south, with an interest of the keenest in the larger politics of the Empire. Yet within half-an-hour's walk of the town, and within sight of the stately pile of Stornoway Castle, one may find the chimneyless and all but windowless houses where the human and the bovine still sleep beneath the same roof. Go farther out into the rural parts, and you may observe with an eye curious, if not indignant, a woman dragging a harrow over the new-ploughed croft, while overhead the telegraph-wire sings in the fresh breeze. Surely here, if anywhere, the centuries meet, and

Old and New

Welter upon the border of the world;

and here, in the midst of fourteenth century conditions, lives a peasantry of good physique, of

high mental ability, respectable, God-fearing, and law-abiding, with a strongly developed self-respect and a racial intolerance of adverse criticism.

Among such unique conditions there naturally lingers in their customs and modes of thought much that is fascinating and strange; but it is the purpose of the present article to confine itself to a few of the superstitions that, in spite of church and school, still survive among certain of the people in the remoter districts.

Nor need those readers who are free from the particular fancies to be mentioned be too ready to lift the eyebrow in scorn. Superstition always dies hard. How many dinner-companies could one find to-day of cultured people where there are not two or three members who would shudder to spill the salt or would feel uncomfortable in a party of thirteen? There are dozens of little superstitions still widely distributed among us: one man will not pass under a ladder, another does not care to turn back for things forgotten, and a third will not begin a new undertaking on a Friday. The difference between these ideas and the belief in fairies and witches is rather one of degree than of kind; the one person goes the length of believing in good and bad luck, the other goes further and tries to account for it by imagining that behind the luck are certain supernatural agencies friendly or hostile to the person affected.

Most of the instances to be considered fall into one of two classes: those relating to magical remedies for the cure of sickness in men and animals, and those connected with witchcraft.

The visitations of sickness and disease are more or less mysterious at all times, and it is natural that a good many superstitions connected with their cure should still remain. One of the most widespread of these beliefs is that relating to the cure of 'king's evil' through the influence of a seventh son or daughter. Many people still believe in its efficacy; but the method of procedure varies in different districts. In some cases the 'seventh son' dips his hand in water, which is then used to wash the sore; or he may rub the part affected for a certain number of times or on seven successive mornings. When the treatment is not successful the failure is easily explained away by the suggestion that the sickness was not a genuine case of 'king's evil,' but some other disease like it. A similar instance is related of an attempt to cure rheumatism in the back by making the patient lie prone on the floor while a seventh son stood on the part affected. A feature to be noted here is the use of the mystic number seven, which has had such prominence in the history of popular superstitions. Interesting cases are those where disease is treated as a personal entity—as, for example, in the attempt to cure a tumour by threatening it with an axe. The feeling which prompts this method of treatment carries one

back to childhood days, and through that to the remote childhood of the race.

The regular washing of a wound with water, which is likely in itself to have curative effects, has been often associated with a supernatural or magical element. Adder-bite, for instance, is by some supposed to be cured if the wound is washed regularly with warm water in which has been steeped a serpent-stone. This is a round, bluish stone which, according to one account, is found in the serpent's hole, and which has in its centre a perforation made by the young adder. Another method of cure was for the person bitten to make as speedily as possible for the nearest running water; when, if he reached the stream before the adder, and bathed the wound in it, his hurt was healed. In one district a glossy-black stone, with a perforation similar to that mentioned, was found in the churchyard, and has been used to cure toothache. This was done by holding in the mouth for some time water which had been poured through the hole in the stone. Attempts have been made to cure a dog's bite by bathing the wound with water in which the dog's teeth had been previously washed. The homoeopathy suggested here reminds one of the toper's phrase, 'a hair of the dog that bit him.'

Probably children everywhere have traditions of their own about mysterious methods of destroying warts on the hands. In one part of Lewis the method recommended is as follows: A tiny piece of stolen meat is taken, or, failing that, eighty-one joints of straws. The introduction here of the other mystic number, nine, may be noticed in passing. The meat is buried secretly in the ground and covered over with a stone in a place not reached by the direct rays of the sun. The slow decay of the meat or of the straws, providing they are not disturbed in any way, is accompanied by the wearing away of the warts. Another method of cure is for the person affected to bathe the warts in a pool in the water of which the moon's rays are reflected.

Where every family keeps one or more cows, and where the cuisine and comfort of the household largely depend on the supply of milk, it is natural that some of these magical remedies should relate to the diseases of cattle. The sick animal has sometimes been given water to drink in which a gold coin had been placed. When gold was not available—which we can well imagine was frequently the case—silver might be tried instead. Some time ago the writer was told by a gentleman who recently resided in the Lews that he had with much persuasion secured a set of 'witch stones' from their owner as a curiosity. These were certain smooth stones of a dark colour that were regarded in the district as having curative properties. One evening after dusk he was much surprised to hear that a

respectable woman of the village had come tapping at the kitchen window to prefer a request for the use of the stones to cure a cow of hers which was ailing. At first he demurred; but on the woman earnestly pressing her request, he at length gave her the stones, which were duly used for the cure of the sick cow, and afterwards returned as stealthily as they had been obtained.

Another recent instance of a similar belief was furnished in a breach of the peace case which came before the Sheriff Court at Stornoway in July 1899. During the course of the evidence one woman belonging to a village near Stornoway declared that another woman had said that if she had had 'the tooth' she would have put it down the witness's chimney and have set fire to the house. Further questions from the Bench elicited from her and other witnesses the following facts about the 'fairy dog's tooth': It was larger than a man's tooth, and one end of it was red and the other end beginning to decay. Water into which it had been dipped was used for the cure of sickness in men and animals. Even the simple holding of the tooth had curative effects. Two of the witnesses had themselves paid a shilling for the privilege of holding the tooth, and one of them had taken it from one village to another to heal some sick cattle. Water in which it had been placed for a time was given them to drink, and as a result of this treatment they recovered. It came out in the course of further evidence that the tooth was believed to have been given to the great-grandfather of one of the witnesses by 'something' which met him one night when he was on his way home from Stornoway.

Much fairy folklore still lingers in the district, and some of the tales of the little 'dwellers in the mound' and their ways are delightful. How far any of the people still really believe in the existence of fairies is more difficult to settle; but the incident about to be related is reported to have occurred so recently as last year. Near a village on one of the sea-lochs are rocky cliffs, and from these on a certain Tuesday evening was heard the sound of the bagpipes. From the nature of the place it seemed impossible that the sounds heard could be of human origin. The only other explanation was the supernatural one. The horrified listeners sent word to the village of the strange occurrence, and forth came certain of the elders accompanied by a crowd of those who were curious enough or brave enough to venture near the spot whence proceeded the uncanny music. On arriving the elders read portions of the Scriptures, including the account of the Temptation, and offered up lengthy prayers. After about two hours spent in this manner the people returned to their homes. The exorcism had evidently been successful, as the sounds were heard no more. Two days afterwards one of the

elders, with three other persons, was down at the beach engaged in painting a fishing-boat, when a mysterious sound of knocking was heard from the inside of the boat, which rocked from side to side, while the mast trembled. The other boats near, to which this one was fastened, gave no sign of sharing in the movement. The men, it is reported, dropped their tools and ran home. The explanation offered by some of the villagers was that the fairies, angry at being driven from the cliff, were doing some secret damage to the boat with the intention of causing a disaster to the crew when they had set out for the fishing. Whether this part of the story had any sequel or not the writer has not yet learned; but one can easily imagine that if any mischance happened to that boat during the fishing season an explanation in accordance with the previous occurrences would be readily forthcoming.

Perhaps the most firmly embedded superstitions, and at the same time the most objectionable in their effects, are those relating to witchcraft. The belief that certain persons, usually old women, can bewitch animals and things holds its place tenaciously. This is especially the case in connection with cows. When a cow has been bewitched the milk becomes of poor quality and ceases to yield cream. It was at one time a belief, now almost obsolete, that if any woman had borrowed a burning peat with which to kindle her fire, and if little butter came at the lender's next churning, the butter had been taken away under the guise of fire. A borrowed churn which yielded little butter when returned was supposed to have been bewitched when out of its owner's possession. Only those who have experienced at first hand the vagaries of a hand-churn, in their attempts to make butter rise in it, will understand the strength of the temptation to relieve the churner's mind by a facile supernatural explanation of what depends on such a complicated set of conditions as temperature, quality of milk, and manner of churning.

The powerful hold which fancies such as these still have on the minds of the more ignorant section of the people in the remoter districts may be best gathered from an authentic instance that occurred quite recently. In an assault case tried in Stornoway Sheriff Court in November 1899, and reported in the local newspaper, the following interesting points came out in connection with the current belief in witchcraft. In a township in the northern part of Lewis a cow belonging to a certain woman, whom we may call Mrs. A., had been giving a poor quality of milk, and the notion became current that the cow had been bewitched by a neighbour-woman, whom we shall call Mrs. B. On two occasions when Mrs. A. was driving home her cows the particular animal mentioned broke away from the others and made for Mrs. B.'s house. This seemed to confirm Mrs. A.'s suspicions; and on the second occasion she

ran after the cow, calling out, 'What makes my cow go to that house to-night and last week more than to any other house in the place?' meaning thereby, as she explained herself, that her cow 'was going after its own'—that is, after the substance of its milk which had been taken away by Mrs B.'s witchcraft. Mrs B., hearing the disparaging remarks, called out her husband, and then followed the assault which had given rise to the trial.

In his defence, Mr B. said that when he heard the rumours about his wife he got three of 'the constables' of the township to come and examine his cow's milk to see if it were any richer than usual, as would be the case if the substance of Mrs A.'s cow's milk were present in it. He also said that previous to this there had been a talk of Mrs A.'s cow having been bewitched by a Mrs C., and that Mrs A. had gone to Mrs C.'s door and poured out some of the cow's milk there in the

hope of breaking the spell. On being asked how many witches there were in his township, he said he thought there were two or three. At the close of the trial the Sheriff-Substitute told the witnesses that it was time such false notions were given up, that there was no such thing as witchcraft, and that he hoped they would cease to believe in it. Mrs A. dissented from his lordship's opinion, and said she could not believe there were not witches, and that she was sure there were, in her township at least.

This very recent case shows what a strong and living hold these superstitions still have on some of the people, and how they become mixed up in the most unfortunate manner with their social relationships; and, when indulged in, cannot but destroy their friendly feelings toward their neighbours. It is difficult to realise that such a state of things exists within the limits of Britain at the dawn of the twentieth century.

## NEW SAMARIA.

### CHAPTER III.

**I**T was warm when, close on three o'clock, I re-entered the bank. As before, the bald man was alone.

I said, 'Have you heard from my firm and the bank?'

'Well, about that I can't say.

There is a telegram to credit a man named Woodburn with ten thousand dollars.'

'Well?' I saw his doubt.

'You sent a wire? They say at the office a tramp sent a wire for ten thousand dollars. I took it as a joke, or that you were off your head, the way you were after killin' that mare. Now, you want the money?'

'Yes. Not all at once.'

'But it's darned ridiculous. I don't know if you're you or if it's a set-up job.'

'Well,' I said, 'suppose I clear your head a little. Look at the telegram; it has a number at the beginning and one at the end.'

'That's so. It's pretty suspicious.'

'Very good. Look at the telegram. The first number is made up of the day of the week, the 2nd, and of the day of the month, the 17th. That makes 19. Isn't that so?'

'Yes, that's so; but how you knew it darned if I know. All arranged, I guess. Set up in New York.'

'No matter. The last number is four times the first; that is 76. We do this to prevent telegraphic misuse of our name. Of course we change it from time to time.'

The bald man was a queer thing to see. His scalp moved back and forward in a sort of tic, and the two quill pens in his ears moved with the scalp like undeveloped wings.

'You've got to be identified, and right well too. Any fool would know that. Knowin' about the numbers don't identify. You can't plunder this bank that way.'

'But would they have wired you if I were not known to be here?'

'You may be you, or some other you, and I don't pay a dime on such evidence.'

'You are, of course, wise to guard your bank; but why not wire your correspondents in New York, and ask them to inquire? Isn't it worth while? I'—

'No, it isn't. You go and get a man to say you're you; then we can talk. I've got to look out. I'm only here to keep house like till that red-headed fool Tom Sedgeley gets back. There ain't no use of discussin' it.'

I said, 'Very well,' and went away. The situation was, as I had anticipated, serious. I could not see any speedy way out of it. The completeness of my isolation amused and annoyed me. I was worth millions last month; to-day I was possessed of seven cents. What I had hoped was that the wire would excite enough of interest to cause reasonable inquiry. The bald cashier was, on the whole, right. In his place the same objections would have occurred to me, or to any business man; but I should have found it worth while to have corresponded by wire with the New York bank, and so settled the matter. This he would not do. As for myself, I had asked for too much. I should have wired for a hundred dollars. A beggar in rags asking for ten thousand dollars was certain to excite distrust. I had made a foolish mistake.

Tramp-like, the ease and freedom of the country drew me. It is relatively uncritical and unsuspicious. I turned to it as if by instinct, and wandered out along the only road which led away from the river and into the rich prairie-lands. My resource was to see what I could get out of the little woman who had helped me. On the way I saw my ten-cent benefactor, Petersen, raking hay in a rather lazy fashion. I hailed him, and we sat down to talk.

'Getting on, cap.?'

'No; but do you listen to me.'

He said he would.

'I've no need to lie to a fellow-tramp.'

'Oh, I'm not the genuine article, and you're not a tramp at all.'

'No, I am not;' and I related in full my adventures.

'Gosh! and you're the man I asked to help me. You were just getting into a wagon. I didn't suspicion you were the man. Clothes make a heap of difference. Suppose it's all true. What are you going to do? You can't work.'

'No, I can't even write a letter. The nurse wrote for me, but'—

'Well, I don't see what you're to do. Let's go to the circus. It only costs ten cents for a back seat, and it's too hot to work. I'll pay,' he said, when I confessed that I had only seven cents.

The recklessness of the notion captured my fancy. I was acquiring the carelessness of the true tramp. We went along talking. Evidently he more or less accepted my story; but how completely he believed I could not tell, nor did it much concern me. Something would turn up. I thoroughly enjoyed the show, and especially a clown, who was anything but sober—a circumstance which gave breadth and flavour to his jokes, as the applause showed. When it was over we went to see the animals behind the tent. This required five cents apiece, which my comrade paid. A little later we met the clown in the lessening crowd. Petersen asked him what time it was. He pulled out my watch, and said, 'Six o'clock.'

'By George!' I cried, 'that's my watch,' and foolishly caught his arm. He drew back with his left to hit me, when Petersen seized his wrist. The brief struggle called a crowd around us, the clown crying out that these tramps wanted to steal his watch. One of his acrobatic friends kindly suggested tar and feathers, when a burly man of six-feet-four shouldered the crowd aside, and, explaining that he was the Sheriff, asked what was the row. The clown stated his case. The big man considered his powdered face, and then turned to me with:

'Well, what's your side?'

I said, 'I was hurt in an accident, and my watch was stolen, and'—

'Oh yes, I know. You tried to steal Smile's mare, and got too drunk to do the trick.'

'Mr Sheriff,' I returned, 'this is a queer town. Why the mischief it is called Samaria I really do not see. The man that named it must have lived to be disappointed. I have had every kind of misfortune, and no one either helps me or believes me.'

The crowd became noisily injurious. The Sheriff cried, 'Shut up, you fellows,' and looked down on me with a slowly maturing smile. 'You've got the floor. I propose to listen.'

I thought that I had at last found a real Samaritan, and asked the clown, 'Now, what kind of a watch is it?'

The crowd was pleased. The Sheriff enlarged his smile.

'Yes, Mr Clown, what kind?'

'Why, gold, of course.'

'Give it to me,' said the big man. He quietly took it and waited while the clown reluctantly released the gold chain from its buttonhole attachment.

'Your turn,' said the Sheriff to me.

'Good,' I said, and put a finger on a button as the watch lay on the Sheriff's broad hand. The watch struck six-thirty. The crowd was still better amused, and applauded. 'Now,' I said, 'inside is the number.'

'We're getting right warm,' said the Sheriff. 'Now, Mr Flourface, what's the number?'

'Why, there isn't a man in this crowd who can tell the number of his watch.'

Several gentlemen in boots and wide-awakes said, 'That's so.'

My friendly Sheriff turned and said to me, 'Your play.'

I was dumb with horror. I could not recall the number. An hour before, or after, it was in my mind. Now I had mislaid it. The effort, the annoyance, and the excitement made me feel slightly giddy. I managed to say, 'Can't remember,' and swayed against Petersen.

'Drunk, by George!' said the Sheriff. 'I think I'll adjourn this court. Mr Clown's case is bad. He doesn't own that watch. The other man knows all about what that watch will do. But that proves nothing. Anyway, he couldn't honestly own a watch like that. Just look at him. I shall keep that watch until the rightful owner appears.' He put it in his pocket.

The crowd, by this time grown large, applauded, and there were various comments on my looks, and proposals as to what it was advisable that a town of public-spirited Samaritans should do with a drunken horse-thief.

The Sheriff cried out, 'None of that! Shut up and squander, you fellows,' then took me by the arm and so through the crowd.

'Now,' he said as again I reeled, dizzy and faint, 'you'd best get out of this and find work. We don't want tramps around this town.'

Petersen had slipped away. It was near to sunset. I was alone, without friends, without money; defined variously as horse-thief, drunkard, policy-agent, and tramp—and I had burned a church. I walked on slowly, a few yards behind the great bulk of the Sheriff, asking myself what next I should do. Should I speak to him again? At this moment he pulled a handkerchief out of his pantaloons pocket, and with it came something which fell unnoticed by him on the sidewalk. A few steps brought me to it. I picked up a five-dollar note. Now, I also had the habit of carrying notes in this careless way, and more than once had lost them just as he had done. It was a case for doubt. Absolute Honesty presented a claim to be heard. Hunger in several varieties said, 'Get a dinner, a cigar, a good mug of beer, a clean bed, and wire everybody, and then, later, return the loan.' Honesty and her twin sister, Accuracy, said, 'Kindly define a loan.'

I resolved to obey the habits of a life and return the note. I was a moment late; a man caught me by the arm and called the Sheriff. He turned and came back. The man said, 'Didn't you drop somethin', Sheriff? I was crossin' the street and saw it. This chap's got it.'

The Sheriff remembered, felt in his pocket, and missed the note. I was meanwhile offering it and explaining. The big man said, 'Well, you're a trifle behind time.'

I protested in vain. Neither man believed me, and I was thankful to be let off with additional advice in very distinct and picturesque variations upon the normal tongue of my country.

I turned about and went again out into the farm-lands in search of my Hay-Field Inn. I was hungry, and so weak that I was glad to rest once more at dusk on the still ungathered and damp hay. Too weary to go half a mile to beg milk of the wife of my partner in calamity, I lay in the deepening gloom and considered my moral frailty. I felt that with continuity of hunger I should succumb before repeated temptation; and while weighing this matter I fell asleep.

I awakened at dawn, and, despite keen hunger, felt better. A little later I set out to find Petersen at the farmhouse a field away. I lingered about, and it was after six when I met him.

I said, 'For Heaven's sake get me something to eat. I am half-starved.'

He said, 'You wait.'

He came back with two cold chops and some stale bread. I fell upon these viands with eagerness.

Thus refreshed, I said, 'How did you get these? Who gave them to you?'

'Gave? Oh, that woman don't give; I took them.'

'Oh!' I made no moral reflections upon this method of feeding the poor.

Petersen looked on with satisfaction. At last he said, 'You can't go on this way. How's your hand?'

'Bad.'

'Let me fix that bandage.' As he replaced it he added, 'And your head—how's that?'

'Better—much better.'

'Sit down. Let's smoke.'

We sat and talked. When I gave him tobacco he said I must have been extravagant. I admitted that.

My object now was to talk my comrade into a mood either of generosity or recklessness. I retold my whole story, and as I went on he listened with now and then a not unkindly comment. At last he stood up, and, looking down on me as I sat, said, 'You're leadin' up to somethin'. What is it?'

I thought it shrewd, and said, 'I want you to go into a speculation.'

'Well?'

'Lend me ten dollars.' Petersen considered me curiously for quite a minute in absolute silence.

'Well, now, that's queer; you're a bit changed since that day you wouldn't help me. I didn't mind it so much. I saw that drunken driver had got you riled. I got work here at the farm. The boss knows my people. It's a fine farm. I've quit knocking about. As to helpin' any darn nonsense like you're a-saying, I can't if I wanted to. I've got two dollars and I'm owed four; that's six, and that's all.'

'Would your boss advance wages?'

'He might.'

I hardly know to-day how I won that man. Certainly I talked my best. At last he said, 'It's right confusing and it's a big gamble. You're no tramp. You say you're rich. I've been poor enough to believe anything. The poorer you are the more you believe. The richer you are the more you doubt. You wait here.'

He was gone an hour. On his return he threw a ten-dollar note in my lap. I said, 'Thank you, my good fellow. You have builded better than you knew.'

'Don't know as I understand you. If you mean it's a big gamble, that's so. I kind of believe you, and I sort of don't. Anyhow, it's done, and I ain't goin' back on it.'

How he arranged matters with his employer I forgot to ask. I was in haste to see what I could do with my borrowed capital. I had gone a few yards when he called out:

'Hullo, there!' I turned. 'Look here, mister, I'm a-trustin' you. Don't you forget, if you're swindlin', that it's my Minny you're robbin', and Becky too—and *Becky*.'

I laughed. 'You never did as good a day's work as this.'

'Maybe,' said he, and then shouldered his hoe and went on to his work. I wondered at the man's faith, or was it a wild form of charity, or, as he said, a gamble?

In the town I found a clothes-dealer, and after much bargaining came out in an ill-fitting tweed suit, with my old rags in a bundle. I meant to keep them. My shoes were good, my head-gear hopeless. I had now one dollar and nine cents. I got breakfast for a quarter of a dollar, and had eighty-four cents left. With this I walked bravely into a barber's shop. I was studying in a mirror my face with its unshorn stubble and red scars, when behind me I heard the Sheriff say, 'Hullo! you here yet?'

I had acquired courage with clean clothes. 'Mr Sheriff,' I said, 'if you will wait until I am shaved I will tell you the number of my watch and some other things.'

The Sheriff could wait; he took a paper and sat down. When I was shaved clean, had my hair cut, and my face washed, I said, 'May I have a word with you?'

The Sheriff looked me over. 'Why did you want me to wait until you were shaved?'

'Because you will believe me the better the less I look like a tramp.'

'That's so; does make a difference. Suppose you come along with me.'

I went with him. He said no more until we came to a comfortable wooden house. 'Come in,' I followed him. 'Now,' he added, 'you sit down.' He left me, saying, 'Be back in a minute.'

I reflected as I took a seat that chairs are luxuries. I can still see the flowery ingrain carpet, the centre-table with four books placed symmetrically, the glass-covered artificial fruit, the sparrow-grass greenery in the chimney-place, the half-dozen rocking-chairs. When I looked up and on the wall recognised the deathbed of Daniel Webster I knew whence the big Sheriff came. He returned with a wholesome dame of large person, her face aglow with kindly curiosity under a mass of rather rebellious white hair.

'Now, I'm right glad to see you. I told Joe those circus men robbed you. I always said so. When they were here last summer they stole Jeremiah. Men that would steal a tortoise-shell cat blind of one eye would do most anything.'

The true Samaria was indoors. A mongrel dog, two women, and an alien tramp had been kind to me.

The Sheriff broke into her rush of talk. 'Sit down, wife. We've got to hear what Mr—What's your name?'

'Woodburn,' said I.

'We've got to hear Mr Woodburn.'

'The watch is No. 2222,' said I.

'That's so,' said the Sheriff. 'But how came you to disremember it?'

'Now, Joe,' said the wife, 'that's real silly. Why, I forgot just now to say Jeremiah had six toes on his left hind-foot and a mole on his lip. Why, you just scared the man so he couldn't remember.—Sheriff used to scare me, Mr Woodburn, just a little.'

'Boot's on the other leg nowadays,' remarked the Sheriff. 'Fact is, I just brought you away to hear about that watch. You see it does look queer all round; but sure as I live those circus fellows are up a tree.'

'Fellows that would steal a tortoise-shell cat would'—

'Hush, my dear,' said the Sheriff, 'this gentleman's got the floor.'

Thus encouraged, I told very quietly the story of my journey, of my arrival in New Samaria, and of all I was able to remember of my later haps and mishaps. At the close I said, 'If you will wire to St Louis in my name to Mr Garvin, president of the Third National Bank, to reply at once, and that I have been slightly hurt and need him here, you will get an answer immediately and the man next day. Tell him not to alarm my people.'

'I guess that musical watch is yours,' said the Sheriff. 'You talk to the missus. I'll go and wire your man.'

We had an answer within five hours. Until my friend came I enjoyed the hospitality of the Sheriff, but did not leave the house. I was shy of New Samaria. When on Wednesday morning Mr Garvin came, it was really difficult to persuade him that I had been a tramp, a beggar, and suspected of being a gambler and horse-thief.

'Why, Woodburn,' he said, 'give a dog a bad name and he will starve.'

'No,' I said, 'give a man a dirty suit of clothes and his character is gone.'

When I related my temptations and how I had committed arson he was delightedly amused.

'My dear Woodburn,' he said, 'with some small exceptions, you have pretty well illustrated the decalogue.'

I said that I had.

My financial affairs were soon set upon a firm basis, and the Sheriff undertook to arrange for me some other matters of which I shall say a word later.

Mr Garvin was well known as a correspondent of the New Samaria Bank. He dropped in with the Sheriff and mentioned that a friend of his, whom the Sheriff would identify, might present a large draft for deposit—some ten or fifteen thousand dollars. The gentleman owned some mines and needed money to arrange matters.

Of course, all was now clear enough. On Thursday I left the Sheriff and Mrs Sheriff.

They promised to keep secret the end of my adventures. I was too uncomfortable to tempt the talent of local tailors, and went away to St Louis to refresh and clothe the inner and the

outer man. I was not done with New Samaria. Indeed, who, in my condition, could have stood out against such inviting opportunities for requital?

## 'BULLS' AND 'BEARS'

By W. H. WILLIAMSON.

HIS article has nothing to do with natural history. These 'bulls' and 'bears' are tame; they are not annoyed by the waving of red—in fact, they frequently wear the colour. The 'bears' occasionally

put their heads into a wasps' nest and get stung, and the 'bulls' sometimes run against a brick wall and damage themselves. These and a few other things apart, the 'bulls' and 'bears' of this article may be considered human beings like ourselves. Let us see what the dictionary says: '*Bull*: one who nominally buys stock on the speculation of its rising in value. *Bear*: one who contracts to deliver stock at a certain fixed price, on a specified day, in contradistinction to the "bull," or he who contracts to take it; the interest of the former in the intervening time being that the stocks should be depressed (as the bear pulls down with its paws), and of the latter that they should rise (as the bull throws upwards with his horns). [Stock Exchange.]'

I write for that numerous class that so frequently asks, 'What is a "bull"?' and not for the man who knows. The explanation of the dictionary is clear; but I will make it more intelligible by a few illustrations.

The great business of the Stock Exchange is an unceasing speculation on the rise and fall of prices. This rise and fall is like the ebb and flow of the sea in this, that though it goes on continually nobody can predict with certainty the precise point that the flow will reach or at which the ebb will stop; and so men stand upon the beach before the ocean of Stock Exchange prices and bet upon the high and the low water-mark of the financial tide.

Now for examples. The £1 shares of the Aerated Bread Company are sold for about £14. The £100 ordinary shares of Allsopps were sold in July 1901 for between £40 and £50. Why this difference? The reason is that the Aerated Bread Company earns most excellent dividends; Allsopp & Sons do not. If, for some reason or other, people ceased to eat aerated bread, we should naturally expect to see the price of Aerated Bread Company shares fall, because we should anticipate the dividends earned by the company to be less; and if Allsopps' beer were suddenly demanded by everybody everywhere, the price of Allsopps' shares would rise. It is because people claim to foresee the rising and

falling of shares in the manner we have described that there are found 'bulls' and 'bears' on the Stock Exchange.

Let us return to Allsopps. In 1892 it was possible to buy £100 of Allsopps' stock for £12, 10s. That seems very cheap. The explanation is that there seemed little or no prospect at that time of the company earning dividends. In 1887 these same shares—£100 nominal value—were sold at £180! Even in 1900 they were as high as £130, and as low as £50! Now, let us see what the 'bulls' and 'bears' would have done here. Many people must have said when Allsopps' were quoted at £12, 10s., 'That business appears to be going to the dogs. I won't put any money in it.' Others said, 'Allsopps can't go to the bad altogether. £12, 10s. seems a small price for £100 of stock. I will buy while it is so cheap. It will probably rise in value—say to £20 or £30 or more, in which case I can sell and make a profit.' That man in his way is a 'bull,' for according to our definition he 'buys stock on the speculation of its rising in value.' Now, suppose a man had bought £500 of Allsopps' stock (really five £100 shares), he would have paid, at £12, 10s. per £100, just £62, 10s. for stock *nominally* worth £500! Let us now grant the price of the shares rises to £50. The man thinks it is a good opportunity to sell, and for each share for which he paid £12, 10s. he receives £50—a profit on each share of £37, 10s. As he had five shares, his profit is £177, 10s. Had he had one hundred shares his profit would have been £3750!

All this just explains what a 'bull' is and may do, but no more. People who speculate largely on the Stock Exchange do not always pay for stocks and shares when they buy them; they frequently wait till settling-day, and then receive or pay according to whether the transaction has been a loss or a gain.

Now, let us see what a 'bear' is, and how he acts. We will still use Allsopps' as our illustration. In 1900 these ordinary shares, as we have seen, dropped from £130 to £50. Suppose our speculative man, noting these shares at £130, said, 'I don't believe the shares will go higher; if they move at all they will drop, so I will sell.' But, the reader may ask, if he has no Allsopps', can he sell that which he hasn't got? Yes. This is how he does it: he finds somebody who thinks Allsopps' worth buying at £130—in other

words, a 'bull.' He says to the 'bull,' 'I would like to sell you one hundred Allsopps' ordinary.' The 'bull,' thinking they will go up £1 or £2 or more, since they have been to £180, says, 'Yes, I will buy one hundred Allsopps' ordinary at £130.' That is the bargain. It is in reality a bet. The 'bull' bets the price will rise by settling-day; the 'bear' bets it will drop; the stake is the rise or fall from £130, multiplied by the number of shares agreed upon—in this case one hundred. If at settling-day Allsopps' are quoted at £120, the 'bear' has scored a victory, for the 'bull' is going to pay him £130 for what can be bought by the 'bear' in the open market at £120, so the 'bear's' profit is £10 multiplied by one hundred, which is very satisfactory.

This will allow us to understand the great excitement that raged recently in New York and London—and generally in the large towns of America and Great Britain—in respect of American railway shares. These shares suddenly began to rise. People thought they would go higher and higher till unheard-of figures were reached, so they bought hoping to sell again at a profit. They were mostly 'bulls,' and the sellers were people who did not think there was any reason to suppose the shares would rise. The story is now old. The shares of some of these American railways mounted and mounted. Many people bought in the morning and sold in the afternoon, having realised a small fortune by the transaction. We had tales of waiters rolling in wealth, ballet-girls turned financiers, bootblacks becoming rich in an hour, and big-wigs banking millions. Then suddenly there was a panic. This is what happened: people there were in plenty who saw there must be a reaction—a fall, and they waited for the psychological moment—the moment when the tide seemed highest—to play the 'bear.' They sold, and hoped for a fall so that they might buy at a lower price. A heavy fall—a slump—did occur. I will quote a few stocks, the figures representing dollars, not pounds:

Stock.	Highest in that Account.	Lowest in Slump.	Fall.
Atchison .....	92½	60	32½
Baltimore and Ohio .....	121	90	31
Erie .....	43½	30	13½
Louisville .....	112½	90	22½
Milwaukee .....	194½	140	54½
New York Central .....	173	149	24
Union Pacific .....	133½	85	48½

Surely there was jumping enough to satisfy the most excited gambler. Now, let me explain how some 'bears' were hit so hard. They sold Northern Pacifics hoping for a fall. Some sold at 80, some at 120, some at other prices; but Northern Pacifics, instead of falling, rose. There was a reason for this. It happened that two great syndicates were struggling for supremacy in the management of this railway, and conse-

quently wanted to obtain a majority of the shares. So quite an unlooked-for cause was sending up the price of Northern Pacifics. The syndicates bought greedily, and the 'bears,' fondly imagining that they would be able to buy at a cheaper rate, sold with an equal willingness; but the syndicates grew greedier, and Northern Pacifics took mighty strides. They went to 300; but nobody had any actual shares to deliver! The 'bears' had sold by promise; but now there was nobody with any shares to sell, so the poor 'bears' were in the position of having sold and being unable to buy. Now, a 'bear' must buy if required. The syndicates might have said to the bears, 'Deliver the shares you promised to deliver.' The 'bears' would have replied, 'We can't; there are no shares on the market.' 'Oh yes,' the syndicates might have said; 'we will sell you shares.' 'For how much?' the 'bears' would ask in fear and trembling. 'At \$1000 a share.' That was the collapse of the 'bears.' Of course the above was not exactly the conversation, for the circumstances were extraordinary. An arrangement was agreed upon, and by it the 'bears' were allowed to reckon the market price at \$135, and pay the difference between that figure and the price at which they sold. A man who sold at \$100 and bought at \$135 lost \$35 a share. If he had sold ten thousand shares he lost \$350,000! No wonder there were great gains and losses—and failures.

#### THE SUMMER SONGS.

WHEN the rosebuds are unfurled  
There is music in the world  
All day long.  
It is whispered by the trees  
As they rustle in the breeze,  
And its song  
Lends a mystery unknown  
To the ever-restless moan  
Of the seas.

In the summer-time of life,  
In the pauses of the strife,  
There's a song.  
It is sweet beyond compare,  
And its cadence fills the air  
All day long;  
It is borne across the seas  
By the sympathetic breeze,  
Everywhere.

But the roses fade away,  
And the longest summer day  
Soon is past.  
Life and all that it portends—  
Hope, ambition, friendship, friends—  
May not last.  
Yet though other things be vain,  
Still those summer songs remain  
To the end!

ARTHUR DEMAIN GRANGE.

## SIXTH SERIES.

### PORTUGUESE CONTRASTS.

By C. EDWARDES.

**P**ORTUGAL fascinates for its incongruities as well as its sweet air and lovely scenery. Only two or three centuries ago it could afford to squander millions on what may be called a nation's *articles de luxe*; now it has to rummage its very corners for assets which it may hypothecate to the rest of Europe for a few hundred thousands of ready-money. It is rather pathetic, if you view the matter from the standpoint of a cosmopolitan publicist; but the average Portuguese bears his burdens with smiling serenity and a shrug. Far be it from him to blame his king for the dismal plight of his country. Is not Portugal a constitutional monarchy, in which the sovereign cannot be held responsible for bad government? To be sure; and both the king and queen are excellent, good-hearted human beings, who would do their utmost for the people. Those rogues who hold the reins are the criminals. It is a pity they should be so weak and unscrupulous; but probably, if they were sent to the right-about, their successors, whether as the king's servants or the nominees of a republic, would prove just as unsatisfactory. What would you have? And, moreover, when you come to think of it, the rascals are not wholly without conscience. They refused the other day, for instance, to cater to the depraved appetites of the race and accept the solid sixty thousand pounds which were offered (of course by the usual syndicate) for the privilege of establishing gaming-tables at the pleasure-resort of Estoril. Such a sum, as a free gift towards the nation's needs, would have been extremely useful. Extremely indeed, when it is remembered that the especial effort to raise a little money virtuously, by the issue of Vasco da Gama stamps in 1898, brought in less than forty thousand pounds. Europe and the stamp collectors in other continents did not show the interest in those beautiful little printed labels which was, perhaps unreasonably, expected of them.

No. 247.—VOL. V.

The argument might be carried on somewhat elaborately. Where will you find such pride of birth as among the grandees of this half-starved little kingdom, already tottering towards national chaos? And where so magnificent a State monument to the memory of a mere man of letters as that to the historian Herculano in the cloisters of the Belem Monastery in Lisbon? Yet Herculano was no flatterer of the national character: one is more than disposed to conclude that he reckoned the Moors, whom the Portuguese cleared out of the land, the equals at least in civilised qualities of his own forefathers. Still, there he lies in the cool, beautiful cloister, supported on six pensive lions; and while reading his tombstone lines—'To Sleep? Only the cold and senseless corpse sleeps; the soul flies to shelter itself at the feet of the All-Powerful'—one hears the soothing babble of the three hundred orphans supported by the State in the monastery buildings adjacent. Visiting these fatherless little ones themselves at their lessons or their midday meal, one is astonished at their comeliness in a land not famous for the beauty of its human stock, and is impressed by the comfort and cleanliness of their environment. Old prejudices die hard. We have had it so engrained in us that the Portuguese are a pack of unsavoury slovens and thieves that plain proofs to the contrary, howsoever abundant, confuse rather than convince us. For myself, I should feel inclined to blush for the candid criticism of any enlightened Portuguese traveller in Great Britain who put pen to paper about his experiences in our midst. He would assuredly return to his native land a cheated, derided, and disgusted man.

Portugal was a sad spendthrift in the past, and those of her people who have leisure to reflect about the subject are naturally not gay of heart. She gave us Bombay and other territorial trifles when Charles II. condescended, for his pocket's sake, to wed a Portuguese princess. That started us on our Asiatic career. They were so delighted

[All Rights Reserved.]

AUG. 23, 1902.

with this alliance in Lisbon in those days that the people went about the streets crying, 'Viva the King of Great Britain!' Portugal had plenty of spare cash then, due to that ill-managed goose of Asia which laid golden eggs for her exchequer. Plenty of cash, but precious little national common-sense. Not satisfied to pluck this same goose for the benefit of an alien and competing nation, she squandered her accumulated millions most absurdly. She ought to have built ships and looked to her fighting-men; but she built monasteries instead, and grew impractically devout. She had so much filthy lucre in her vaults that she scorned to be particular to a million when a new edifice was on the stocks; nor did it matter overmuch if the building that was being raised had no human furniture assured to it. Take Mafra, that commanding barrack a score of miles north of Lisbon. King John V. wanted an heir, and made a vow that if Heaven gave him a son he would 'change the poorest into the most magnificent monastery in his dominions.' That was in 1717. The present vast block was duly consecrated in 1730. On two of its sides it measures seven hundred and seventy feet. Its enormity may be imagined from the fact that it contains eight hundred and eighty rooms, four thousand five hundred doors, and nine courtyards; that fifty thousand men were at one time employed upon it, of whom one thousand three hundred and thirty-eight died in the temporary hospital attached; that one of its stones took a hundred yoke of oxen to transport it a few miles in six days; and that a small fortune in gold and silver coins lies still buried beneath its numerous foundation-stones. The monastery church is majestic and empty, like the monastery itself, save for the few hundred soldiers who are quartered in it regally. All Portugal's army could be reviewed on its roof; and you shall find nothing but lizards on the hot stones of its porticoes, and only strenuous charwomen on their knees in the church. This is a specimen of Portugal's absurd extravagance; and by-and-by the great earthquake came and pointed the moral so forcibly that there was no longer an attempt made to justify it as a useful achievement. In the local guide-books it is fitly called 'The Monument of Mafra'—a monument of sovereign imbecility. The descendants of the subjects of John V. are content to save their money by begging vestas from the opulent stranger when he and they concurrently aspire to the luxury of a cigarette. They do it with finished grace; but it is somewhat touching nevertheless. A few minutes later you may chance to see your amiable petitioner in the nearest café, snatching up the newspaper hot from the press and the outer sunshine. He turns immediately to the fatal column headed 'Cambio' (the Exchange), and more than probably immediately afterwards says something vigorous, including mention of the devil, and throws the paper

down with a shrug. The pound sterling has of course gone up a score or so of reis in the night.

But in spite of their present irritations and limitations, the Portuguese live their lives with decorum and dignity. One may add also, with comfort; for even the Government cannot deprive them of their glorious climate and the fertility of their land. With a penny you may buy bread and a handful of the best sardines in the Atlantic, and another penny will provide as much wine as you ought to crave at a draught. This explains much. It writes the people down as philosophers, on the whole. Not of the ignoble kind either. The State railway carriages may be, as some are, poor, rotten, dust-ridden things, and the rails themselves apt to shake the teeth in one's head; but you will find white walls in the cottage interiors and much scrubbing of the floors everywhere. The factories in the towns buzz with talk and laughter, and with the sounds of industry besides. In the north, where the country is matchless in its combined natural beauty and cultivation, you see the people at their shuttles early and late. It is an old-fashioned sight, but eminently picturesque; and the work suits them. They keep open doors, and often the loom is right on the threshold, so that they can see and be seen to perfection. A stranger is a godsend to them; not altogether of the dancing-dog kind, yet a little of that. They are so illiterate still that it does not take much to excite their wonder; and they value kindness in others by no means the less that they are so ready to show courtesy and respect even on the most trivial occasions. At Amarante, where the French left broad blood-smears a century ago, I found it advisable to visit the barber. The barber spent great part of an hour in artistic manipulation of my moustache (no prodigy, be it said), simply and solely, it appeared, for social purposes. The townsfolk strolled in and out, with bows and gentle comments on my foreign boots, clothes, &c., and the barber enjoyed himself. But he would not insult me afterwards by appraising his labours in sordid cash terms. If I, as a stranger, of experience (presumably), was satisfied with his work, he would leave its valuation to me.

One sees next to nothing in Portugal to shock sensibilities as in other Southern lands. Animals are treated humanely. Even a Dutchman of Broek would like to see how the milk cows of Lisbon are stalled adjacent to the shops that sell their produce, iced or otherwise. The cleanliness is absolute; the tiled floors and walls do one good to look at, and the brass fittings are mirror-bright. Where the cow has its calf for companion, the youngster may be carefully saddled with a red-and-white blanket that appears to have just come from the wash. The mere thought of our own dear rural cowsheds and the adjacent farmyards in every county of the land cannot

comfortably be entertained in contrast with this picture of everyday life in Portugal's metropolis. From Algarve in the south, moreover, to Valença in the north, all the roads are suitably provided with drinking-fountains, quite as much for beast as for man.

I was considerably struck one day at Margaride—a village in the Douro district—to read in its inn this admonition: 'Women of doubtful reputation not admitted.' Were there any such? I inquired; for I had likewise been impressed by the conspicuous industry of the local ladies either at their looms or spudding among the vines on the perfumed hill-slopes, and it seemed to me that such industry could leave no leisure for misconduct. The innkeeper, however, was quite consolatory. There were, he hoped, none such. He was new at the house, that was all, and wished to enhance his own character. He may have spoken truth, or he may have preferred to beguile me rather than candidly besmirch the good name of the neighbourhood. Anyhow, the public intimation was interesting.

So, too, is the fact that during a two months' tour in all parts of the country north of the Tagus I saw no one intoxicated save a certain female monster who cut capers by the railway station of S. Marco de Canavezes one morning for a whole hour pending the arrival of the train. She was contemplated by a dozen or more others, who expressed nothing but sorrow and shame for her plight. Their shrugs were in admirable taste, coming after futile endeavours to persuade the wanton to act a more seemly part. She cursed and sang ribald songs (while the nightingale also sang from the trees hard by), and danced with her long highlander's pike until the train came. And for the ensuing forty minutes I listened to the apologies of one of the others, my *vis-à-vis* in the journey, for this shocking spectacle which we had both been condemned to witness. 'Coming from such a great and civilised country as England,' he said, 'you may well wonder that a poor creature can so far forget herself. Probably you never saw so deplorable a sight elsewhere. But the pitiable creature had walked far in the night, and the wine was strong, and so'—I had little to say in comment. I thought my thoughts and stored phrases and accents for my own future benefit.

On this moral theme it may not be amiss to report a little experience at my Lisbon hotel. I found myself the table associate of a gentleman who did his obliging utmost to amuse and instruct me in my native tongue. Afterwards he was disappointed because I could not conveniently spend the evening with him in the town. His 'So long' of parting was cordiality itself after mention of 'to-morrow.' But before I left the hotel I was touched on the shoulder by a servant and invited forthwith to see the proprietor. This gentleman and his son were agitated. They

assumed that I was French, and they warned me solemnly to beware of any intimacy with the man who had eaten his soup at my elbow. 'He is a certain Englishman, and it is to be feared a man without principle. We have had complaints about him from others. He obtains money from them, monsieur, and does not pay it back.' I thanked them and went my way; but circumstances prevented me from ascertaining if my compatriot was as diabolical as he was believed to be. The average Portuguese will, in his simplicity, freely confess that he cannot hold a candle to the average Englishman for craft in self-seeking. It is something to his credit in these days that he does not seriously attempt to be much worse than honest; he leaves such aspirations to his Government and foreigners. It explains, too, his excited fussiness when even the rumour is whispered that negotiations have been resumed for the sale to Great Britain of Portugal's landed estate in South Africa. His pride is hurt in the thought that his necessities should so greatly degrade him; and also he has little doubt that we shall get the better of the bargain by much.

It is due to Portugal's pleasant incongruities that the stranger may, if he will, enjoy so good a time in Portugal. I need say no more about the money-gift which is presented to him if he be wise enough to step ashore in Black Horse Square with British pound-pieces in his pocket. That subject has been sufficiently treated. In Biblical terms, having much already, more is given to him; nor need he be thick-skinned and feel scruples when he considers the poverty of his benefactor. It is an unwilling generosity, confessedly.

Passing this delightful anomaly, which on the instant adds one-half or two-thirds to his capital, let me speak of the roads and the interior of the country generally.

The conveniences of travelling in Portugal are not in themselves remarkable, except on two conditions. If you go through the land in a hired carriage, like the gentleman on his travels a century ago, you will be enchanted; the landscapes are so varied. You drive through pine-forests that seem immeasurable, chasing and being chased by gorgeous butterflies. But the pine-forests end and bring you to the hills and mountains and rivers, great and small, in which trout and barbel may be seen in shoals. With the heather-crimson on their green, the mountains are more than gay. They may be high enough to hold snow-spots even in June, like the Estrellas and the Gerez; or they may be divinely wooded like so many of the ravines north of the Douro, with the roads terraced a few hundred feet above the river-bed as if especially for the good of the happy traveller in the old style; and then, again, you drop to the cultivated lowlands, with the scent of vine-blossom omnipresent, and the hedge-rows a sublime tangle of aloes, flowering geraniums,

mesembryanthemums, red and yellow roses, and honeysuckle, not to mention such familiar friends as foxgloves and (in the damper spots) the forget-me-not. There are orange and lemon groves, also sweet in their season, and olive-woods and fig-trees galore. I have eaten my fill of white-heart cherries from the roadside trees near Chaves in the extreme north, and white mulberries in the midlands. Such trees are not without beauty. In the highlands the hills are laced with crystalline streams, and there is bracken enough under the chestnut-trees to remind one of our homeland covers. At Cintra the luxurious growth of beautiful things bewilders. The hedges here are of heliotrope, as well as roses and geraniums. In gardens like those of the late Sir Francis Cook, trees and plants equatorial flourish alongside smooth grass lawns worthy of Oxford's colleges. Still driving, you may get among the rice-fields of Estarreja and the flats of Aveiro, cut up by canals on which big boats with sails as precious as those of Venice and her lagoons drift under the blue sky towards the blue sea on the horizon. Then you pass into more pine-forests, with their warm, resinous odour and their cool shadows; a red road now instead of snow-white, with little crimson bluffs here and there, and with little blue boxes nailed against the larger tree-trunks, begging for coppers to help the poor souls in Purgatory—the poor souls themselves painted above the box in the midst of soaring red flames. You meet peasants of many kinds, mostly smiling. Even the young ladies and old women, who are barelegged and walk with their frocks up to their kneecaps, seem very happy. They may have fish or fruit on their heads, and be knitting while they walk, or they may be urging the domestic calf or piglings to market. They are in good spirits, anyway; and so are the beggars, who are sure to

be importunate if you slip into a town on a great saint's day—an occurrence bound to happen twice a week or so. Some of these beggars, viewed with the eyes and mind of the North, are grievous sights. They are lepers, twisted wrecks, and blind; but, in spite of the worst, they are not unconscious of the pure, sweet air of Portugal, and its caressing sunshine, and they have stomachs which it is a pleasure to them to fill. Further, they do their begging with a good heart, because they know that it is not wasted toil. A vigorous hour or two of declamation and they are provided for until the next saint's day. You in your carriage may end your day by an impressive entry into some such nobly terraced city as Coimbra, where houses of all the colours of the rainbow rise in tiers, studded with gardens from the golden sand of the river towards the purple crest of the wooded hill it graces; and the next day you will have similar landscapes and experiences, with a difference. This is the one condition on which you may travel gloriously in Portugal.

The other appeals to the cyclist. With a cycle or a motor-car, Portugal seems to me little short of being the ideal pleasure-ground of Europe. You get the same sensations, of course, only more of them to the twenty-four hours; and, with curious little interspaces of badness, the roads themselves are of a gradient and surface comparable to the best of our own roads.

It is true that in summer there are such imps in Portugal as mosquitoes, fleas, and even bugs; but they might be much more numerous even where they are met at all. Moreover, you may, if you please, consider their attentions a compliment. 'It is your blue blood, senhor, that draws them to you,' I was informed gravely by my landlord in one village when I descended to breakfast after a campaigning night.

## PRINCE ADRIAN OF ZELL.

CHAPTER IX.—MR BARROWS KEEPS AN APPOINTMENT.

**W**HEN the letter had been sent there was a brief delay. In forty-eight hours the answer came, and then Hadfield was taken into consultation.

'Have you arranged for your holiday yet?' asked Mr Barrows.

'My holiday? No, I haven't. At our office we go in turns, you know.'

'How soon could you go if it were really necessary? Could you go, say, on Monday?'

Hadfield was naturally surprised, for it was now Tuesday. 'Why, yes,' he said, 'I dare say I could make arrangements. Our fellows are a very obliging lot. Besides, it is quite early yet, you know. Why do you ask?'

'For this reason. If you can go on Monday, I

should like you to go with me to the Continent. I am going on that day, and shall require a companion. I think first, of course, of you. Indeed, if you do not come I must go alone.'

Hadfield waited for explanations. 'It is not exactly a picnic, however,' said Mr Barrows. 'The fact is, I want your assistance in a rather delicate matter. I am going—I am going to fight a duel!'

He made the announcement with a smile. 'Jove!' cried Hadfield. 'A duel? With that young Brode?'

Again Mr Barrows smiled. 'Why, you have guessed it! It is exactly that. You see, Hadfield, things on the Continent are not as they are here. Duelling is still a custom in France, in Germany, and even more so in the Styrian

Empire. One of the most frequent causes of duels is, of course, a dispute about a woman. Now, curiously enough, I have placed myself, almost unconsciously, between this young man and the woman he wishes to secure. Consequently, by the custom in Styria, he is entitled to challenge me. As the phrase goes, "Honour will not be satisfied" without the crossing of swords or the popping of pistols.'

'But you have appealed to the Chancellor,' cried Hadfield. 'Is this necessary after that?'

'Quite as necessary, according to the code. My appeal to the Chancellor concerns, of course, the restoration of those ladies to their home. My affair with Count Philip is a thing apart; yet the first will scarcely be complete without the second, for it is well, if possible, to comply with a national custom, and to give this young fellow what he would call "satisfaction." It is all that he will get, I hope.'

Hadfield was perplexed, and could only stare at his surprising neighbour in bewilderment. 'No doubt,' Mr Barrows went on, 'it will all seem very silly to you. So it is, of course, to any ordinary, sensible Englishman. But I, you know, have lived in Styria, and have even held some kind of position there, so that there is a certain claim upon me. If I may put it so, as a one-time Styrian I may be called upon to fight a duel; as a present-day Englishman I have the privilege of laughing at the absurdity of the custom. And laugh I do, even while consenting to take part in the affair.'

'But—but is it only a laughing matter?' asked Hadfield.

'Is it a laughing matter?' echoed Barrows. 'Why, my dear fellow, what do you think? Haven't you read accounts of present-day duels?'

Hadfield's face cleared. He remembered the amusement which the latest political duel in France had given him.

'Oh,' he said, 'it's a mere matter of form, isn't it? I think I have heard.'

'Yes,' replied Mr Barrows; 'this will be a mere matter of form—nothing more.'

He drew a sheet of notepaper from his pocket. 'You see,' he said, 'after I had visited the Chancellor I consented to meet this sensitive young man; and as it was to be a mere matter of form, I was content to leave all the arrangements in his hands. I wrote to him to that effect, and this is his answer.'

Hadfield took the paper. Its message was clearly and briefly written, in English:

'Saint Claud is a small fishing-village and watering-place near Treport. There is one hotel, the "Seine," where you will find us at any time during the coming week. Everything can be arranged there.'

'Publicity is not at all necessary,' said Mr Barrows. 'Indeed, an ordinary, everyday Englishman would feel very uncomfortable if it got

about that he had been making himself ridiculous in this way. If you can arrange to be free, we can go over there together for the week, and carry out this business without trouble and with expedition. But it must not be whispered to any one else.'

'No, of course. If the women guessed it they would be alarmed. They would not understand,' said Hadfield, who was beginning to find a certain attraction in the idea. It was, at least, an adventure; and he saw how effective would be the announcement in the office that he was obliged to ask for his holiday thus early 'because of urgent business on the Continent.'

In this way the arrangement was completed. Hadfield mentioned it to his wife, who, being now heart and soul in the cause of the exiles, was only too pleased to know that her husband was to do something useful in the matter. In the evening he was able to say that he had interviewed 'the office,' and would be free to go; and then Mr Barrows told the Countess that he would have to return to the Continent on Monday, and that he was taking Hadfield with him.

'Then you have heard something?' she cried.

'Yes, Countess, I have heard something.'

'I do not wish you to tell me,' she went on, 'because I trust you so fully. But is all going well?'

Mr Barrows looked at her reassuringly. 'All is going well. Indeed, I hope that this one journey may be enough.'

'If so,' said the Countess, 'we may soon be in a position to repay some part of our debt. You have done much for us, for no other reason than that you knew Mathias long ago. It is much for little—a small cause for such great services.'

Mr Barrows considered gravely. 'Countess,' he said in a low tone, 'let me say now that your view is too generous. I wish you to remember always that I am doing nothing more than trying to right a wrong. The cause of my action is, first, the idea of restoration—a just restoration to you of the happiness of which the folly and sin of my master, Prince Adrian, deprived you. That is my purpose.'

The Countess smiled kindly. 'Oh,' she said, 'but you must not say that! You are not responsible for another man. Are you doing it because—because you once loved him?'

There was a long silence. 'I cannot say that,' was the grave answer. 'There is no doubt that I once loved him. After that I hated him—hated him bitterly; and then I tried to forget him. When this is over—when this wrong has been made right—we may all forget him indeed.'

Another long silence fell. 'Let us speak of something else,' said the Countess presently. 'I am glad that you are taking this young man with you. He is to be trusted. And his little wife—what a heart of kindness she has shown us! Do you know what we shall do? When

we go back we shall ask them to come and stay with us a while at Cronia. They will see that we can be grateful.'

Mr Barrows smiled. 'You could not do anything that would please them more,' he said.

Now that the time was fixed, he was obliged to make his own final preparations. The book of his quiet life at Welding was shortly to be closed, and he left nothing undone in order that the *Finis* so soon to be written might be neat and clear. There must be no loose threads, no doubts in the minds of his friends as to his intentions. This necessitated a visit to a solicitor, and a little legal business; but he hurried it forward as much as possible, and it was all concluded on the Saturday before his departure.

During those days he saw much of the Hamars. The relations which had grown up between them were naturally intimate, and he saw no reason why he should not enjoy them to the full. Their confidence in him was in itself a stimulus, and he felt that he needed it. In their presence he found that the extraordinary thing he was about to do became natural and ordinary enough, and, indeed, the only thing possible. It was when he had left them that the struggle began again.

On the last day he spent the evening with them in the garden. Towards the close he chanced to find himself alone with Edna.

If he had cared to observe, he might have found that it was the daughter's face which always rose first before him when he thought of those whose cause he had adopted. He had, however, quite failed to analyse his sentiments; and even if he had analysed them, the resulting suggestion would have been scouted with ridicule.

'To-morrow at this time you will be on the other side,' she said suddenly. 'When do you expect to be back?'

'Back?' he said; and, as before, he found it impossible to answer her with anything but truth. 'I cannot tell you that.'

'What? You cannot even say what you think?'

'No. I cannot even say what I think.'

She was perplexed. As he looked at her he forgot the point upon which they had met, and wondered whether even the vilest of men would not be glad to give much more than a useless and purposeless life to put this woman out of the evil reach of the men who pursued her. The thought came to him again that she was very beautiful, but that her beauty was quite as much of the spirit as of the person. Her chief charm looked out from her eyes, and it was not merely a beautiful girl that looked him in the face, but a woman of heart and knowledge.

Then he saw that she had turned her eyes away. 'Do not mistake me,' he said hastily. 'It is not because I do not wish to tell you. It is because I cannot.'

Her answer gave him a thrill of pleasure. 'I

know that, Mr Barrows. I was only afraid that you might go into danger for us.'

Acting upon a sudden impulse, 'If you fear that,' he said, 'you can pray for me;' and fearing that he might betray too much, he turned the conversation into another direction.

That was his last day in Welding. Next morning he went in to bid them a hasty farewell, and before noon the two men were on their way to Dover. Hadfield was in high spirits and infected with the charm of an adventure; and even if he did no greater good, he at least prevented his companion from being left too much to his own thoughts.

They crossed the Channel in brilliant sunshine, when every respiration seemed to be a veritable breath of life. Hadfield moved eagerly about, intent on seeing all that was to be seen and learning all that was to be learnt, for he had never even crossed to Calais before. Seated in a corner of the upper deck, Barrows looked out and breathed the fresh air. The day and all that was about him spoke of life, and man's natural love of life began to move within him. It did not change his resolution, but it produced a bitterness which presently found expression in words.

That was when Hadfield had ceased his wanderings to enjoy a quiet cigar in his friend's company. 'If there's one thing I've learnt lately,' broke out Mr Barrows suddenly, 'it is the folly of thinking that you may be done with your sins. Bury them as deep as you like, they'll have to be up some day; and the chances are that they'll come up at the time you least expect them.'

'Oh!' said Hadfield vaguely.

'Yes. I knew a man who buried his sin out of everybody's sight in a nameless grave. He buried it so deep and well, and covered it so carefully, that at last it seemed as if the whole world had forgotten all about it. After many years he chanced to go into a graveyard one day, just to look at the nameless graves that were there, and to plume himself upon the cleverness and completeness of his burying; but somebody—it does not matter who—had found his sin, and had painted its name large upon a cross, for every one to see. It was the first thing he saw, and as soon as he saw it he knew that it was calling upon him for reparation.'

He paused. 'That was rather hard luck,' said Hadfield, candidly out of touch.

Then another mood fell upon Mr Barrows, and he spoke in another tone. 'Hard luck?' he said. 'Perhaps so; but, after all, perhaps not. Sometimes it seems to me that such a thing as that would be the best thing in the world—an only chance. They tell us in these days that the true aim of punishment is not vengeance, but the salvation of the sinner; and it might be much the same in such a case as this. Perhaps in this way a poor fool may be given the only means of getting near straight again. If he fails—if he

refuses to take it—he goes deeper; but if he can take it he may find rest at the end, or something like rest. The only thing is, to have courage to take the chance.’

‘Just so,’ agreed Hadfield placidly. ‘That is the point.’

Having thus relieved his feelings, Mr Barrows changed the subject; for there was certainly enough to talk of on that day without discussing sin and punishment. In due course they arrived at Calais, and proceeded immediately to make their way down to Saint Claud.

## THE ROYAL KIDNAPPER.

By T. R. THRELFALL, Author of *Philippi the Guardsman*, *The Sword of Allah*, &c.

THOUGH some men may think themselves shabbily treated by nature in the matter of inches, they can take comfort in the fact that unusual stature occasionally entails serious hardship. This was especially the case during the reign of Frederick William of Prussia. So determined was he to secure exceptionally tall men for his regiment of giant Grenadiers that from 1713 to 1740 no man of unusual stature was safe anywhere in Europe. When he failed to cozen, bully, or bribe his brother-monarchs out of their sons of Anak, his recruiting-officers audaciously kidnapped the unfortunate men. It mattered little that these high-handed proceedings occasionally brought him to the brink of war, or that kings expostulated and statesmen wrote him lengthy despatches; he always blustered and procrastinated until the patience of his correspondents was exhausted, when he was invariably allowed to retain the lengthy ‘bone of contention.’ For a quarter of a century he was the bogey of Europe. Like vigilant spiders, his recruiting-officers laid their traps everywhere. Three hundred ransacked Austria, while considerable numbers penetrated every corner of Russia, Spain, and Turkey. However, the bluster and threats of the great martinet did not always protect his emissaries. Two were hanged in Holland, several were imprisoned in England, many were chased out of France, and elsewhere they had to adopt disguises in order to evade the popular anger.

The occupation of the giant recruits was as varied as their language. Abbé Baptiste, the Italian, was officiating at the altar when he was called aside, a bargain struck to the advantage of the Church and the poor, and thenceforth the worthy priest appeared in all the glory of the grenadier uniform, with its blue red-faced coat, cream-coloured tight trousers and vest, white gaiters, and eighteen-inch pointed parti-coloured hat whereon the double eagle was prominently displayed. Then the Great Joseph, a gigantic monk, was induced to join by the grant of a large sum of money to his Tyrolean monastery, in addition to five thousand florins for himself. On the other hand, the capture of a great Dutch wagoner was a more difficult matter. Seized by

the recruiters, he was hurried to the nearest inn, his horse and wagon being left in the road. The tempting arguments of beer and money failing to induce the heavy-witted carter to enter the Prussian service, he was forced at the sword's-point on to a hot stove, and it was only when he had been half-roasted that he consented to become a grenadier. A Swedish wagoner eight feet high, however, proved more complaisant; but, alas! he was too stupid to learn the drill, and when expelled the regiment he died of starvation in the streets of Berlin. The lynx-eyed recruiters next discovered a German giant nine feet high on exhibition in Paris. A bargain was soon struck, and Müller was added to the three thousand colossal warriors.

As this royal drill-sergeant had an army of eighty thousand effective soldiers, his favour was naturally sought by his brother-potentates. They soon ascertained his weak point: ‘He who sends me tall soldiers,’ Frederick William declared, ‘may do with me whatever he likes.’ Acting on this, the Emperor of Russia, the King of Poland, and the King of Sweden sent him their Goliaths, and consequently stood high in his regard. On the other hand, whoever disappointed him in this respect was eternally disgraced.

Though this eccentric king was in domestic matters a miser and a tyrant, he spent fabulous sums in recruiting for his giant Grenadiers. He expended nine thousand pounds to secure one man; while John Kirkland, an Irishman, cost him two thousand two hundred pounds.

While spending fortunes on his hobby, the Prussian monarch was living like a German pedlar on brown bread and pickles; the royal children, amongst whom was the future Frederick the Great, being half-starved. On one occasion they petitioned their father, in fear and trembling, to give them more carrots and cabbages for dinner, these being the dishes with which they were most familiar.

Although Frederick William starved his family and thrashed his subjects, he treated his big Grenadiers like petted children. He had each man's portrait hung in his great gallery, he superintended their clothes, he ordered them the best food, and when he was ill he had parties of them brought into his room to perform their

drill. Assured, like President Kruger a century and three-quarters later, that Providence was particularly interested in him, he could quote Scripture on occasion. A devout correspondent drew his attention to a passage in Deuteronomy to show that he was wrong in stealing even his own subjects; but the king, with unaccustomed wit, responded by quoting a verse from 1 Sam. viii. 16: 'And he will take your men-servants, and your maid-servants, and your goodliest young men, and your asses, and put them to his work.' Despite this, however, he placed the theologian a long way behind the grenadier. On one occasion, while he was discussing some important matters with several bishops, a messenger entered to announce a serious calamity. 'What!' gasped the king, sinking pale and faint into a chair. 'Yes,' added the messenger, 'the tower of St Peter has fallen in.' 'Oh,' responded His Majesty, with a great sigh of relief. 'I feared the grenadier Glasenap might be dead.'

With an imperfect knowledge of the laws of heredity, he sought to perpetuate his race of giants by marrying them to the tallest women he could find. However much the principal parties objected, the king gave the word of command and the knot was tied; but occasionally he caught a Tartar. While riding one day through the woods of Potsdam he met a splendid specimen of a Saxon maid on her way from service to her distant home. After closely questioning her, he asked her to leave a note for him at the barracks, and accompanied the missive with a dollar. Now this generosity on the part of the royal miser aroused the girl's suspicions; but, wisely feigning compliance, she proceeded on her errand. On nearing the barracks, however, she met a very ugly old woman, and induced her to take the note, giving her at the same time the dollar. When the officer on duty opened the letter he read: 'Marry the bearer to Macdowal the Irishman. — FREDERICK.' Although the unfortunate man, who was one of the tallest and handsomest of the Grenadiers, protested and struggled, the order was emphatic, and in a short time he was firmly united to the willing old witch. The mistake was not discovered until Frederick William made his usual inquiries next morning, when, happily for the Irishman, he took immediate steps to obtain a divorce.

The devices of the recruiting-officers to entrap the wary giants were often ingenious and romantic; but happily the victims seldom met with the sad fate of the Jülich carpenter. While passing through the little town of Jülich in Prussian Rhineland, one of the veteran spies saw a very tall carpenter. A brief conversation with the young man soon convinced the rascally recruiter that it would be useless to attempt persuasion or bribes; so, giving out that he was a trader, he asked the workman to make him a very long box. On calling a couple of days later he expressed

the opinion that the chest was not six feet eight long. 'Oh, I'll soon settle that,' responded the carpenter. 'Why, I'm six feet six inches myself, and I'll guarantee I can easily get into the box.' As Hompesch, the sham merchant, still expressed doubts as to the length of the box, the unsuspecting carpenter laid himself down in it, when the recruiter promptly placed the lid on, and before the surprised workman could effect his escape the wily recruiter had whipped a rope round the chest. The next moment he called in several assistants who had been hiding on the premises, and the box was promptly carried to a wagon in readiness just outside the town, with which the party drove rapidly away. Alas! on opening the chest at the frontier they found that it had been turned into a coffin, for the unfortunate carpenter was dead.

The enormous profits of the recruiting-officers might well stimulate them. From 1713 to 1735 the sum of one million seven hundred and fifty thousand pounds was expended in securing giants, and the greater part of this went into the pockets of the unprincipled emissaries. In 1731, for instance, Frederick William paid one hundred and forty-five thousand dollars for sixty men, although his recruiters had only expended ninety-seven thousand three hundred and eighty dollars. Had the Grenadiers been available for war, some shadow of excuse might have been found for this enormous expenditure; but the king shuddered at the thought of exposing his animated treasures to the risks of the battlefield.

Once the royal grip closed on a giant there was no escape. Some mutinied, and henceforth appeared in the ranks with cropped ears. Deserters were soon laid by the heels, and even the most obstinate were ultimately converted by imprisonment and starvation. This creator of the conscript system cared nothing for souls or brains or humanities; he wanted living automata, and he got them.

His surrender of the gypsy Mateko afflicted him more than his old enemy the gout. Madened at the adroit manner in which this tall, handsome, well-proportioned gypsy had been snatched from him, he would awake from his troubled sleep grinding his teeth with rage or indulging in the ponderous German oaths of which he had such a choice assortment. Then, to make matters worse, he could not even discuss his trouble with that repository of his State secrets, Prime-Minister Grumkow, lest that scoffing, crafty, hard-drinking statesman should sneer at him and hint at failing mental powers.

The recruiters had stumbled across this treasured gypsy in one of the thick-wooded valleys of Lower Saxony. Mateko was certainly very poor and very ragged, and never saw a gold-piece from year's end to year's end; but he was free and happy, and laughed at the heavy bribes of the baffled recruiters. When foiled in their

attempts to win him by fair means, the latter resorted to their well-tested kidnapping devices, only, however, to find themselves checkmated on every occasion, for the tribe to which Mateko was attached were numerous and watchful, and on several occasions they made the recruiting-officers run. Then diplomacy tried its hand, and lady-loving King Augustus having given consent, the enemy appeared in force in the gypsies' valley; but, with true prophetic instinct, the dusky wanderers stepped over the border into Bavaria, where they figuratively put their tongues in their cheeks at the Saxon detachment, and baffled diplomacy had to whisper anew in the ear of kings. Presently his High Mightiness of Bavaria essayed to capture the bashful Mateko; but, with the agility born of wandering and poaching, the latter calmly crossed the frontier into the little state of Saxe-Coburg; and when this became too warm he passed on to Saxe-Weimar, and then patronised in turn half-a-dozen independent German states, for at that time the centre of Europe was as full of independent little kingdoms as Threadneedle Street is of financiers.

Unfortunately, love proved Mateko's undoing. He had given his heart to a little, fair-haired, blue-eyed Saxon girl, who could no more be induced to leave her home and become a wanderer than a sitting hen can be made to leave its nest. Alas! it was with him as with Samson. The claims of love proving irresistible, after a few weeks' absence he was constrained to visit his pretty little Gretchen secretly. Here he was unfortunately seized by the recruiting Philistines and carried in triumph to Potsdam.

Never did a young eagle prove more untamable than Mateko. He flouted the drill-instructors, snubbed the king, ignored the officers, thrashed his more insolent comrades, kicked his imposing hat about his cell, and tore his uniform into ribbons. Though flogged and fed on bread and water, he appeared to prefer that treatment to drill. Possibly this arose from the fact that his old gypsy mother, who was esteemed the chief of fortune-tellers in Transylvania, and who was generally credited with the possession of remarkable powers, managed occasionally to croon some of her weird ditties under his prison window.

However, Mateko's obstinacy only made the king more determined to tame him. When the latter's numerous offences were reported to His Majesty, he would swear vehemently and stamp his gouty foot on the floor, and then swear more loudly than ever with rage and pain. Thus matters continued until July 1731, when Frederick William proceeded to Northern Prussia on his long-projected elk-hunting expedition. This was the only pleasure he allowed himself outside his fantastic military duties, and he thoroughly enjoyed it because of its cheapness, for he invariably quartered himself on some of his reluctant nobles, and compelled the better classes of the province

to buy the venison or pork derived from his sport.

Having by means of his thirty overworked horses and his score of underpaid grooms traversed the great forest-clad plains in his dingy, creaking coach, he halted for a time at Fischhausen, and killed sixty elks. He then resumed his journey towards Pillau, where a miserly noble had prepared a feast for the still more miserly king; but the feast grew cold as the king grew hot, and when at last his destination was reached he had neither appetite to eat, wit to use his stick, nor breath enough to swear.

Soon after leaving Fischhausen an ominous change took place in the weather, and presently low mutterings of distant thunder told the fat, choleric, gouty king that he in turn was about to be bombarded by forces against which his royal stick was impotent.

Soon after midday the storm assailed the royal party with pitiless fury. A myriad blustering, mocking voices echoed through the forest, and a profound darkness, only broken by the most vivid flashes of lightning, settled upon the landscape and made progress impossible. In vain the king swore, the grooms shouted, and the horses struggled. The wheels of the heavy coach stuck fast in a deep rut, and made common cause with the storm. Worn out at last with their exertions, the noble attendants suggested that His Majesty would be safer if he took refuge under one of the trees. Now, although Frederick William essayed to make heroes on a large scale, he was certainly not one himself; and when he understood that danger threatened him he suppressed his oaths, and after gasping for a moment like a fish out of water, fell forward into the arms of his servants, and was ingloriously carried to the shelter indicated, for by this time one of the ponderous horn-lanterns had been lighted.

Leaving their royal master in this fancied security and to the doubtful pleasures of his own reflections, the party returned to the coach. Presently they were all engaged pulling and shouting without giving thought to the king, who soon had more than enough to engage his attention. He had only been seated a very short time when he became aware that a little old woman was standing beside him. Though the light from the lantern was blurred and uncertain, yet he could see that the aged crone was bent and brown-complexioned, that she had a hump on her back and a crook in her hand after the manner of traditional witches, and that her fiery eyes were as malicious as those of a baffled wolf. Though a rigid Protestant, the king, in his confusion, made the sign of the Cross and attempted a prayer; but he sadly mixed this up with words of command and guttural German oaths. Having delivered his soul more or less to his satisfaction, he relapsed into wondering and frightened silence.

The old woman, however, did not keep him long in suspense, for during a lull in the storm she screeched in his ear, 'Marry, good-day, sweet king. 'Tis well to meet your Majesty alone in the forest; but, alack! this is a dangerous place, for ere long the lightning will blast this tree, and kill all who may be beneath it. Will the kind king take shelter in my poor hut?'

Under ordinary circumstances Frederick William would have sworn to the old crone and struck her with his ever-ready cane; but he was speechless with fear and surprise. The next moment a vivid flash of lightning struck a tree about twenty paces off, and also showed him a little hut under the shelter of a great oak. Scrambling to his feet with greater haste than he had displayed for years, he passively allowed the beldame to drag him to the dwelling referred to, and as she had thoughtfully secured the lantern, they had no difficulty in entering. The hut was miserably poor, and only fit at the best for a temporary shelter for foresters and charcoal-burners. A square stone evidently did duty for a table, a couple of logs served as chairs, and a heap of leaves in a corner sufficed as a bed. Pointing to one of the primitive seats, the crone invited him to sit down; and, as the king was in no mood to refuse, he silently obeyed. Presently she croaked, 'Ay, though 'tis poor 'tis good enough for the accursed gypsies. Yet Mateko would sleep sounder here than on the soft beds at Potsdam.'

Realising that he had been led into a trap, the king was on the point of calling for help when ten strong fingers suddenly grasped his throat from behind, and compressed it so tightly that he could not utter the slightest sound. He instinctively raised his hands to loosen the grip, when they were seized and swiftly tied behind him, and a thick cloth was firmly tied over his mouth. His legs having also been securely fastened, the old gypsy said, 'There, we're safe enough now; but be quick, lads.'

A couple of stalwart young gypsies now stepped forward, and while one produced an ink-horn and a quill-pen from his capacious pouch, the other drew his dagger and critically felt the point. Then a sheet of pilfered royal paper was spread on the stone table, after which one of the men unfastened the king's hands, while the other held his dagger threateningly over the royal breast.

'Good Romany lads!' cried the beldame exultantly, 'if he doesn't write as I tell him, plunge that dagger into his heart.—Now, your High Mightiness'—and she gave a mocking curtsy—'write out an order to the officer in command of the Potsdam Grenadiers to release Mateko the gypsy instantly, and also to furnish him and the bearer with a good suit of clothes, three days' food, and fifty marks apiece, as well as a couple of the swiftest horses to be found in the royal stables. Come, quick!'

With a defiant scowl, Frederick William shook his head and settled his shoulders firmly against the side of the hut. He was, however, soon brought to a more complaisant mood, for one of the gypsies seized him by the throat and swore that if he did not instantly sign the order the dagger would be plunged into his heart. Then the king, realising that the man would carry out his threat, seized the pen and was about to write, when the woman cried, 'No tricks to trap us! We have seen a royal order before; and thou shalt die if this is not written correctly.'

Foiled in his attempt to delude his captors, what could the king do but sign?

After a careful inspection and a satisfied chuckle, the old crone exclaimed, 'But to make all doubly certain, we must have his signet-ring.'

A fierce threat that if he did not hold his hands up they would cut his fingers off resulted in the ring promptly changing hands.

'Away, lads, away!' screeched the beldame triumphantly, after the men had tied the king's hands; then blowing out the light, she threw open the door, and with a cackle departed. Securely tied to the wall of the hut, the monarch, after exhausting himself in vain struggles, sat savagely gazing towards the dark forest. Deluded by a lull in the elemental war, he began to hope that the storm had passed, and that he would soon be released, and he ground his teeth as he anticipated the vengeance he would wreak on the wretches who had outraged the divinity of kings by binding and gagging him, as well as by robbing him of one of his giants. His thoughts were, however, interrupted by a tremendous crash of thunder reverberating through the forest. The next moment a thunderbolt struck the great tree under which he had so recently sheltered, and completely shattered it. One portion of the forest monarch struck down three of the king's horses and scattered the royal servants in every direction. Impressed with the belief that they were being assailed by demons, the panic-stricken grooms and nobles fled, shouting with fear, while the horses broke their traces and dashed away.

Fully an hour elapsed ere the attendants mustered up courage to return. By this time the storm had spent itself, and the glinting sunbeams showed them that the stricken tree had been the one under which their royal master had taken refuge. Concluding that he had been killed, the babbling, grief-stricken servants sought for his remains; but to their dismay they could not find the slightest trace. At last one of them casually entered the hut, and was well-nigh startled out of his wits by discovering the king bound and gagged, and grunting and panting with impotent rage. When freed from his bonds his Prussian Majesty indulged in such a variety of oaths as surprised and shocked even his oldest servitors. At the

same time he plied with vigour a stout ash stick he had picked up, and this greatly soothed his feelings, and made the limbs and shoulders of his servants ache for a whole week.

After horses were obtained, the day was far spent when Pillau was reached. Although for hours the considerable garrison had been waiting under the blinding rain to be inspected, Frederick William forgot to indulge his mania in his keen desire to lay the hated gypsies by the heels. A couple of messengers were immediately despatched bearing an order countermanding the release of Mateko, and also to arrest all the gypsies in the kingdom. Satisfied now that the sacrilegious miscreants could not escape such a widely spread net, he sat down with the governor and other choice companions to a night's carousal.

Alas for his subsequent peace of mind! The king had not fathomed the craft of the gypsies. As the royal messengers were proceeding through the forest, some six hours' journey from Pillau, their horses were shot down, and they were left to trudge hopelessly to the nearest town, some twenty miles distant. Though they obtained animals there, they had lost so much time that on arriving at Potsdam they found that the spurious messenger (who was attired in royal livery) and Mateko had been gone some hours.

An immediate pursuit was, of course, organised; but it was of no avail, for Mateko and the gypsies

generally had disappeared as effectually as though the earth had opened and swallowed them up. According to Romany tradition, however, the principal actors escaped into Holland, and succeeded in reaching England. Here, at any rate, they were safe, for it was one of the standing complaints of the Prussian monarch against this country that he was not allowed to exercise full liberty to recruit for his giant regiment.

Frederick William never forgave the gypsies. A few wanderers were captured some years later, and these were well flogged and driven out of the country with every expression of contempt and hatred. At last they all shunned Prussia as though it were plague-ridden.

When the end came, and the royal kidnapper was summoned by Sergeant Death to attend the last muster, like the commonest clodhopper, he called his ill-used and oft-thrashed son Frederick to his bedside, and gave him much advice, wise and otherwise. 'Sithee, Fritz,' he gasped, 'an a woman, young or old, looks at thee with cunning or saucy eyes, and tickles thy ears with soft speeches, or pretends that love and ambition can sit on the same throne, then she's a gypsy, and thou shouldst hang her forthwith. Ay, lad; every pretty lass is more or less a gypsy.'

Happily for the future of the German race, the Great Frederick did not see fit to follow this advice.

## NEW SAMARIA.

### CHAPTER IV.

ABOUT August 20 a neatly dressed gentleman arrived at the hotel in New Samaria with his baggage in good order. He—that is, I—was quite sure that no one would see in him the tramp who had cost the town so dear. The time that lay between my two arrivals had taught me many things which, but for my accident, I might never have known. I do not regret it. Clothes elevate or morally lower. I was myself once more.

The landlord was very civil when I said that I wanted to be driven to the mines. He recalled ruefully that drunken horse-thief who had fooled him and ruined his best horse. However, he would himself drive me. On the way I heard all about myself. It was not flattering.

'Why, sir, I had hardly set eyes on that man before I reckoned that he wasn't all right, but he had a sort of high way of talking as if he was somebody. It kind of took me in. I never thought he was tight. That horse was the quietest beast. Well, he cost me about four hundred dollars—darn him!'

I said it was hard.

The mine business was simple. There had been loose management and some fraud.

The next day I went to the bank. There was the bald man, his scalp still in motion, the two quill-pens over his ears moving. The Sheriff was with me; but at my request he loitered outside.

I said, 'Mr Baldwin, here is a draft for fifteen thousand dollars, which I desire to deposit, and against which I shall draw.'

The bald man said, 'Grayshuss! it's Mr Garvin's bank! I don't know. Who identifies you?'

I called the Sheriff, who reassured the cashier. I asked about the clerk whose leg I had incidentally broken. The bald man said he was—I think he said—a socker at figures, and confessed to his own total inadequacy as to making things balance in the last week. However, he gave me a cheque-book, and I returned to the Sheriff's and put on the torn livery of my tramp-life, to the joy of my host, who so much desired to see the end of my comedy that I had to slip out the back way to escape his company.

I was much surprised to find what a sense of freedom I acquired with my ragged costume. I went along gaily, reflecting on what moral

changes total absence of garments would bring to a man in a climate warm enough to make their absence agreeable. My tramp-life had not left me without other matters for personal reflection. As I said before, I had never had a reasonable want unsupplied. Indeed, I had been very far from a self-made man. My week of experimental autufacture had been a rather humbling proof of my incapacity; but, as every fellow is charitable concerning himself, I found excuses for my failure in my physical state, and, alas! in my rags and beard.

At this moment, being well out of town, I saw my former comrade, Petersen, leaning idly against a snake-fence, his rake beside him, his pipe in his mouth. He was wiping the sweat from his forehead with his shirt-sleeve.

'Hullo!' said I. 'Hot?'

'Hullo! Where in thunder have you been? Guess the Sheriff took you up for lying about that watch. I suppose my money's drawin' interest?'

'It is.'

He grinned.

'Never expected to see you again.'

'Well, here I am, and my watch too.' I pulled it out as I spoke.

'Gosh! Got it? You done it well that time.'

'No, it is mine. I say, old man, why don't you settle down and work for yourself?'

'Why don't you?'

'I am thinking of it. Suppose we buy that farm and work it, you and I?'

'You and me? When I see that farm I'll answer. But darned if you ain't a queer chap! What are you up to anyway? Did my ten dollars buy that farm?'

'Would you work?'

'Would I? You try me.'

'Well, to-morrow at twelve o'clock you are to go to the bank. You will find the Sheriff. Ask if he has that farm around anywhere. He'll be in the bank at noon. Now, don't stay away. I told you a tale once; you half-believed it. At least you did not call me a liar. Do as I say.'

'I'll do it; but it's like a real theatre play. A farm! and my Minny! It makes a fellow sweat. I don't know what you're up to; but if you've a mind to fool me'—

'Well, you will go?'

'Oh, I'll go sure enough. But mind, if'—

I went down the road enjoying my comedy. The front door of the cottage was still open; but seeing Mr Sedgeley in a hammock under the trees, I went boldly forward. The little woman, very pretty and looking girlishly young in a white gown, was reading aloud—*The Pathfinder*, I think. I said, 'Good-afternoon, ma'am.' The man got up on his elbow and said things about tramps. I listened, comfortably conscious of his disability. Seeing that I made no reply, he came to an end. Upon this I said, 'You ought

not to talk that way to any one; and, really, the wealth of opprobrious language on tap in New Samaria is rather surprising.' As my man of the red head and broken leg began anew, his wife said, 'Do be quiet, Tom,' and to me, 'What do you want?'

'Ten minutes' talk.'

'Well, what is it?'

'You made some time ago an investment of one dollar and twenty-five cents.'

'I hope it will prove profitable.'

'Don't forget, too, the pitcher of milk and a half-loaf. I should like a bill, an account, if you please.'

'What nonsense! You have made Tom very cross, and I know it is bad for his leg. I have no more money for you and no milk, and I do not fancy such jokes.'

'I have made out an account myself. If you will call at the bank at twelve-fifteen to-morrow, and ask for a letter for you'—

'What on earth does all this mean?' roared the husband. 'Is this fellow cracked? Get out of this, or—oh, darn that splint!'

'Will you go to the bank?' I said.

'No!' roared Tom, 'she won't.'

'Yes,' said madam, 'at twelve-fifteen I shall be there.—Why, Tom, what can be the harm?'

'Good-bye,' said I, assured that nothing would keep that woman from doing what I had asked her to do.

At twelve next day the Sheriff and I sat waiting in the small room at the back of the bank office. I was now again in my decent clothes and clean shaven. I heard the bald man tell Thad. Petersen to find the Sheriff right in there. I sat still at a table writing. The Sheriff, hugely pleased with the play, said, 'Your name's Petersen?'

'Yes, that's my name.'

'A gentleman, a friend of this man here'—indicating my back—'has given you a farm.'

Petersen looked at him with big blue eyes of steadfast doubt, and gently shook his head in negation. He said no words.

'There's the deed.'

Petersen, anxious and flushed, took the deed of gift. He glanced at the Sheriff and then down at the paper, hesitating as he slowly opened it and spread it on the table. I kept a side watch, as yet unrecognised.

'What's all this?' said Petersen. "'For and in consideration of the sum of ten dollars," &c., "the party," &c.' He looked up. 'But it's my boss's farm, two hundred acres. It can't be; it's impossible.'

'Yes, it's all right, Thad,' said the Sheriff.

'And he'll move out?'

'He will.'

'And I'll move in?'

'You can.'

Petersen said, 'Scuse me, Mr Sheriff, it's

weakenin'.' He sat down and fell into intent study of my deed of gift. We were silent. At last he looked up and said, 'Look here; it ain't no joke?'

'No,' said I, turning. 'Don't you know me, Petersen? You helped a starving man, whom no one else believed. You were a real Samaritan.'

'I did, by George! and you're the man, and it was true.'

Petersen caught my hand and said, 'Just to think of it! Minny and me and sister!'—his voice broke—'and Minny!'

I said, 'That will do. It's all right.'

If it gave him the pleasure it gave me he was well repaid. He rose, saying, 'You won't go till I see you again. I've got to wire Rebecca'—he went out—'can't wait.'

The Sheriff said, 'That's worth the price of admission, Mr Woodburn. Oh, here is Mrs Sedgely.—How do ye do? How's Tom? This gentleman wants to see you.'

The little woman said, 'Good-morning, sir,' and looked at me, puzzled.

I said, 'Mrs Sedgely, a little while ago—a week or so—you made an investment. Here is a statement of the transaction. A tramp asked for food and money. You gave both. It seems to be unusual in Samaria. Here is the account. I am in your debt as follows: "To one mug of milk, to one slice of bread, to one pitcher of milk, to one loaf of bread, to one dollar and twenty-five cents," all put out at interest. There has been a rise in values.'

'What does this mean, Mr Sheriff?' said the bewildered woman.

'You'll soon see,' said the sheriff; and I went on:

'There is the product of your investment. Mind, this is yours, not Tom's.'

She looked at my cheque. 'Why, it's five thousand dollars, sir. Is it for me—mine?'

'Yes,' I said. 'And you may ask Tom if he will go out and run that coal-mine for me.'

She looked at me and said, 'Oh my!' and sat down and cried, sobbing out, 'And we were in debt, too, and—and— It can't be true. We never had any luck since my baby died. It can't be true.'

'You can have the money now,' said the Sheriff, 'and it is as true as your own kind heart.'

I said, 'Now go and tell Tom not to swear at me. I will call this afternoon.'

Next I went alone to the dirty little building known as the Town Hospital of New Samaria, a part of the poorhouse. I found the doctor in a disorderly little office talking to my friendly nurse.

I said, 'I have called to say a word or two.'

Would I sit down?

'No. Doctor, I am the gentleman who was cared for here after an accident on July 4. I was robbed by the circus people and left helpless on your hands without a penny.'

The woman smiled and the doctor said, 'Is that so?'

'Yes; I am a New York banker, as I then said. You can find out about me from the Sheriff if you are still in doubt.'

The doctor hesitated a moment, and then returned, 'I suppose you are going to say I might have believed you. I didn't, and I would just like to ask you if I had begged of you anywhere, and told you such a yarn, and looked like such a tramp—now, sir, in justice to myself, I'd just like to know, would you have believed a word I spoke?'

'Upon my word,' said I, remembering many vain appeals to me, 'I do not think I should. However, the nurse did.'

'No, not quite,' said she.

'Yes, a little,' said I.

'But she's a woman,' said the doctor.

'Thank God for that, and for her. I was taken good care of, and we won't quarrel over the rest. My case was well managed, too. Send me your account to the hotel. I will pay it. And don't make it small. I am really grateful for what you did. As to what you said, it did no harm. By the way, Miss Jane, you lent me fifty cents.'

'Oh no; I gave them to you.'

'I am fortunately able to return them with interest; and let me add that if ever you need a friend I shall be at your service.'

She took the envelope, looked embarrassed and curious, and slowly tore it open. 'Oh, I can't, Will, I can't—can I? Why, it's a thousand dollars!'

'No,' said the doctor decisively; 'you did not earn it.'

'What the deuce have you to do with it?' said I.

'Well, we are to be married next week.'

'Of course,' said I, 'I ought to have made it clearer. It is a wedding present.'

'That makes all the difference in the world,' said the lady. 'I thank you—oh! ever so much.—And it will make things so easy, Will.'

I escaped, a little overcome by the comfort and joy I had given. I left her seated and unequal to further expression of her thanks beyond 'Oh, oh, sir!' The women of Samaria seem to be much given to tears.

I settled with the landlord for the horse and wagon, and promised to forget his hasty temper. The town has now a neat little cottage hospital and the Sheriff a gold repeater. My wife says it has all been fatal to my character, because now I believe every tramp and feed every beggar who wanders to the door of our country home.

I did hesitate a little about the church. Finally, however, I sent a confession and a large cheque to the parson, with a meerschaum pipe and a request to be allowed to keep the briarwood I had stolen. When this became known several Western editors

desired me to come and burn down their old churches, and finally threw doubt on the whole incident; others said I had set fire to the church and paid for it afterwards in order to advertise my firm.

I brought home with me that Samaritan dog which crossed the street to contribute the charity of acquaintance. He is free to do as he likes, but he will go nowhere with any one but me. He is known as Tramp, and is a dog of picturesque

habits. At times he is absent for a week, and may come home lean and scared or plump and lazy.

For a year Tramp was the instant friend of every ragged scamp who appealed at my door for aid, but by degrees association with the educated class entirely altered his views, and of late it is impossible for a beggar to come near our gates, because of Tramp's dislike to the ill-clothed or to the human members of a class to which he once belonged.

## SOME FAMOUS GAMBLERS.

By H. NOEL WILLIAMS.

So long as the world lasts, so will men—and women too, for that matter—continue to gamble, openly if they are permitted, and behind locked doors and barred and curtained windows if the law endeavours to restrain them.

In the violent reaction against Puritanism which followed the Restoration, gambling became rampant throughout the country, and reached a fearful height at Whitehall, where the ladies of the Court indulged their passion for play as freely as did the men. Nell Gwynn and the Duchess of Portsmouth, the king's mistresses, used to play for very high stakes; and the latter on one occasion lost eight thousand pounds to the niece of Cardinal Mazarin, which success must have been peculiarly gratifying to the Frenchwoman, as they were rivals in the royal favour. The exploits of these ladies were, however, quite put into the shade by those of Lady Castlemaine, another of the king's favourites, who frequently won and lost enormous sums. We have it on the authority of the omniscient Pepys that in one night she won fifteen thousand pounds and in another lost twenty-five thousand pounds, and was in the habit of risking one thousand pounds and one thousand five hundred pounds on a single cast.

During the eighteenth century the passion for gambling permeated all classes, from the duke who won and lost his tens of thousands at Almack's or Wattier's to the very gravediggers who, like those in Hogarth's famous picture, dined for coppers with the gravestone as their gaming-board. So universal, indeed, was the craze that even stern moralists like Dr Johnson seem to have looked upon it with an indulgent eye; indeed, the Doctor is reported to have said that in his opinion 'no man was the worse for a flutter.'

The famous dandy Beau Nash, 'the King of Bath,' for many years was enabled to live in great style mainly through his success at play. He seems to have behaved with a generosity almost quixotic when Fortune smiled on him.

On one occasion a young nobleman lost to him his whole fortune: his estates, his houses, and even his horses and carriages; and Nash—who, it may be remarked, had won the money fairly enough, for he never condescended to any of the disreputable practices so common at the time—cancelled the whole debt on condition that the loser should pay him five thousand pounds whenever he chose to claim it. To Nash's honour it must be recorded that he never claimed this sum till after the nobleman's death, when the executors paid it without demur. At another time, when he had won two hundred pounds at a single throw, a poor ruined gambler standing by murmured, 'How happy that would make me!' 'Go and be happy, then!' cried Nash, and tossed him the money. After the suppression of the gaming-tables at Bath, Nash, whose only source of income they had been, found himself reduced to comparative poverty. The Corporation of Bath, however, proved itself not ungrateful to the man who, whatever his faults may have been, had practically made the fortune of their city. They voted him a pension of ten guineas a month during the latter years of his life; and after his death, which took place at the patriarchal age of eighty-seven, ordered a full-length statue of him to be erected, and caused it to be placed between busts of Newton and Pope, thereby eliciting from Lord Chesterfield, the famous wit, the following lines:

This statue, placed the busts between,  
Adds to the satire strength;  
Wisdom and Wit are little seen,  
But Folly at full length.

The author of this epigram was himself in early life much addicted to 'the pasteboard and bones.' He was also in the habit of playing billiards for very high stakes, and on one occasion became the victim of a Mr Lookup, a professional gambler, under amusing circumstances. Lookup, having won several games when they were playing level, asked the nobleman how many points he would give him if he put a patch over one eye. Now, the wily Lookup had some years before lost the sight of one of his

eyes in an accident; but of this fact Lord Chesterfield was, of course, unaware; and indeed to the casual observer one eye seemed as perfect as the other one. His lordship therefore readily agreed to give him five points; and, Lookup having duly covered up his sightless optic, they resumed play, with the result that Lookup won as easily as before. As Chesterfield had backed himself heavily, he lost a considerable sum of money. At last the nobleman threw down his cue in disgust, remarking that he thought his adversary saw as well with one eye as with two. 'I do not wonder at it, my lord,' replied the unabashed Lookup, 'for I have seen only out of one eye these ten years.' With the money he won from Lord Chesterfield, Lookup built some houses at Bath, which he named Chesterfield Row.

Great as was his passion for play, Chesterfield never allowed it to interfere with his ministerial duties, and both when Lord Lieutenant of Ireland and Under-Secretary of State resolutely refused to allow a gaming-table in his house.

In his last days he seems to have conceived a positive horror of gambling; and in bequeathing his property to his godson, Philip Stanhope, he inserted this clause:

'In case my said godson, Philip Stanhope, shall at any time hereinafter keep, or be concerned in keeping of, any racehorses, or pack of hounds, or reside one night at Newmarket, that infamous seminary of iniquity and ill-manners, during the course of the races there; or shall resort to the said races; or shall lose in any one day, at any game or bet whatsoever, the sum of five hundred pounds: then, in any of the cases aforesaid, it is my express will that he, my said godson, shall forfeit and pay out of my estate the sum of five thousand pounds to and for the use of the Dean and Chapter of Westminster.'

One of the most notorious gamblers of that or any other age was William Douglas, Earl of March, afterwards the fourth Duke of Queensberry—'Old Q,' as he was familiarly termed. His eccentricities are amusingly portrayed by Thackeray in his famous novel *The Virginians*. Says Lord Chesterfield in presenting Harry Warrington to his lordship:

"My Lord March has not one but several devils. He loves gambling, he loves horse-racing, he loves betting, he loves drinking, he loves eating, he loves money, he loves women; and you have fallen into bad company, Mr Warrington, when you lighted upon his lordship. He will play you for every acre you have in Virginia."

"With the greatest pleasure in life, Mr Warrington," interposes my lord.

"And for all your tobacco, and for all your spices, and for all your oxen and asses, and for everything that is yours."

"Shall we begin now?" says his lordship.

Lord March then offers to bet Warrington odds

of four to one that the latter will outlive his mother, Madame Warrington, and level money that he, Lord March, will outdistance him in jumping. In fact, there was nothing under the sun which this extraordinary man would not make the subject of a wager, from the speed of two racehorses on Newmarket Heath to that of two flies crawling up the window-pane at Almack's. On one occasion he made a large bet that he would, without the assistance of horses or carrier-pigeons, send a message fifty miles within an hour, and this he effected by having the message enclosed in a cricket-ball, and then stationing a number of expert cricketers along the road, who passed the ball from hand to hand, and so covered the distance within the time stipulated. At another time he made a wager of two thousand guineas that he would cause a pig to run a mile without stopping, and without being either driven or led. To do this he procured a young pig, which he placed in a sty with a trough just outside, to which it was regularly let out. Every day the trough was removed a little farther from the sty, until at length it was placed a mile away from it. Nearly two months were thus spent in training the animal; and, on the day appointed for the decision of the wager, immediately the sty-door was opened out rushed the pig, and without once stopping covered the mile which lay between it and its dinner, and won the duke his money.

When a mere lad of twenty-one, he and his bosom friend George Selwyn, the famous wit, put all the money they possessed into a common fund, and each stood surety for the losses of the other. 'Make your mind easy,' writes March to Selwyn in answer to a letter of the latter's complaining of his ill-fortune at play, 'for I have three thousand pounds now at Coutts's. There will be no bankruptcy unless we are both ruined together.' A few days later, however, it was Selwyn's turn to come to the rescue, for we find March writing to say that he 'had lost his match and was quite broke.'

'Old Q' died in 1810 at the age of eighty-six; and, as he left nearly a million sterling, his gambling propensities, unlike those of so many of his contemporaries, would appear to have had no detrimental effect on his patrimony, but rather the reverse. Moreover, he seems to have been unusually shrewd; for Wraxall, who knew him intimately, affirms that 'he had received from nature the keenest common-sense of any person he ever knew.'

In the early years of the reign of George III. the gambling mania was at its height. It was quite a common event for a gentleman to lose over ten thousand pounds of an evening. Sometimes a whole fortune was lost at a single sitting. There was hardly an elder son among the men of fashion who had not bartered his inheritance to the Jews to obtain the funds where-

with to gratify his taste for faro and quinz. 'The young men of this age,' says Horace Walpole, 'seem to have made a law among themselves for declaring their fathers superannuated at fifty, and then disposing of the estates as if already their own.' The two Foleys traded so largely on their expectations that they were paying interest on their loans to the extent of eighteen thousand pounds a year between them. The Damers coolly notified their father, Lord Milton, that they owed seventy thousand pounds; and when the old lord refused to pay their debts, the eldest son blew his brains out in a tavern in Covent Garden. Lord Colebourne and his brothers squandered their whole patrimony, and then persuaded their widowed mother to mortgage her jointure to provide them with the sinews of war.

Among all that reckless crew none played so recklessly or so deep as Charles James Fox, the celebrated Whig statesman. When a friend once asked him what was his favourite occupation, he replied, 'Gambling and winning.' 'And what next to that?' pursued his interrogator. 'Gambling and losing,' replied Fox. It was, indeed, the excitement of the game which fascinated him, not the greed of gain; and as long as he had enough money left to stake on the next round he cared not a jot whether he won or lost. He began playing hazard at Almack's one evening—where, it may be mentioned in passing, the lowest stake permitted was fifty pounds—and did not leave off till five the following afternoon. On this occasion he was a loser to the extent of eleven thousand pounds. His elder brother, Stephen Fox, afterwards the second Lord Holland, lost a similar amount two nights later; and Charles, not to be outdone, 'dropped' ten thousand pounds the following night. So that in three nights' play the two young gentlemen—the eldest not yet twenty-five—lost thirty-two thousand pounds. So notoriously bad was Charles Fox's luck at the gaming-table that it inspired a wag to write the following lines:

At Almack's of pigeons I am told there are flocks,  
But it's thought the completest is one Mr Fox;  
If he touches a card, if he rattles a box,  
Away fly the guineas of that Mr Fox.  
He has met, I'm afraid, with so many hard knocks  
That cash is not plenty with this Mr Fox;  
And he always must lose, for the stoutest of locks  
Cannot keep any money for this Mr Fox.

Fox, however, does not seem to have been a loser at games which required a certain amount of skill, such as whist and picquet. It was his losses at hazard which ruined him, and it seems tolerably certain that the 'immoderate, constant, and unparalleled advantages' gained over him at the gaming-table were the result of unfair play. In order to pay his gambling debts he had recourse to Jewish money-lenders, and jocularly called the back sitting-room where the sleek, thick-lipped descendants of

Abraham used to wait for him his 'Jerusalem Chamber.' His friends—more especially Lord Carlisle, who on one occasion advanced seventeen thousand pounds—lent him large sums; and it is said that at times, when in need of a few guineas, he would even borrow from the waiters at Brookes's. Money, however, went with him as ice melts on a hot plate; and when in 1773 a son was born to his elder brother Stephen, whose delicate life had hitherto alone intervened between him and all the wealth which Lord Holland as Paymaster-General had filched from the nation, not all the eloquence at Fox's command could avail 'to still the raging Jew,' and the crash came. His creditors swarmed down upon him from all sides, and the astute Lord Holland was called upon to disgorge no less a sum than one hundred and forty thousand pounds out of his ill-gotten wealth to save his idolised son from ruin. Altogether, it would seem that at this stage of his career his relatives must have found 'The Black Boy,' as the author of the *Letters of Junius* calls him, a pretty handful; but then what else could they expect when Lord Holland himself had taken Charles when a boy to Spa, and supplied him with money to stake at the gaming-tables there, and afterwards had permitted 'Old Q.' to be one of the lad's mentors?

The miser John Elwes, who would starve himself to save a shilling, was much addicted to high play. He and a party of friends once played two days and two nights without intermission; and, the room being a small one, the players were nearly up to their knees in cards before they had finished. On this occasion he lost several thousand pounds. Although Elwes frequently won immense sums, it is probable that when he died he was a heavy loser by play, as he made it a rule of his life, from which nothing would induce him to depart, never to ask a gentleman for money, and thus many large sums which were owing to him were never paid.

#### BELLS IN THE NIGHT.

THE clear angelic voices of the bells

Ring through the night—bereft of even a star—

And call to wandering souls, alone, afar,

From that great deep of love which ever wells

To pour on dust-dry hearts cool waves of peace.

There is no light to point the heavenward way;

The bells ring out, in clamorous joy at play,

And summon prisoned souls to claim release.

At your first note all evil spirits fly;

Your rhythm unlocks the gate of memory

That opens radiant vistas of dead years;

Illusive sorrow melts like cloud away.

Ring in, glad bells, joy's everlasting day;

We hail ye through a mist of happy tears.

### ST PARTRIDGE.

By 'SANSTERRE.'

**I**T is only the favoured few that can afford to keep the first great festival of the sportsman's year—the 12th of August. Grouse-shooting is a pastime that year by year is growing more expensive, and nowadays even a small moor costs a large sum of money to rent, particularly if it has a reputation for sport.

The 'bonny brown bird' is in quite a different category. The pursuit of it, although at times and in certain ways expensive, yet *can* be managed by those whose means are not commensurate with their love of sport. The season, too, opens at a time when many people take their autumn holiday. After being hard at work all the summer, either with professional or business cares and worries, paterfamilias grows jaded from close application, and after despatching materfamilias to the seaside with the olive branches, what wonder is it that he bethinks himself of a half-forgotten but at the same time pressing invitation to spend a week or so with a friend of bachelor days in Mangelwurzelshire—or, say, Norfolk—in pursuit of such sport as the carefully preserved manor can afford?

After many an apparently unnecessary stoppage—how slowly the train seems to travel on such occasions!—the panting engine draws up at the well-remembered country station, and a glance over the palings shows a neat dogcart waiting patiently for the expected visitor. Then come hearty greetings, as gun-case and portmanteau are stowed away carefully by the expectant porter; and even as the train slowly steams out of the station the reins are shaken, and Sultan, with his head towards home, settles into a swinging trot which promises to cover the intervening four miles in about twenty minutes. How pleasant is that drive in the cool, clean country air! The big bright moon is showing above the tops of the trees, and a mist is hanging over the meadows, through which the river winds

in its tortuous course, promising a fine hot day for the morrow, on which the campaign opens. How much each of the two friends has to say! What a number of questions are asked and answered! Mutual friends are duly inquired for, messages are given and received, prospects of sport are discussed, old memories revived; and all too soon a sharp turn brings into view the comfortable home of the country host.

'Here we are!' he exclaims, as the horse pulls up of his own accord at the white gate. 'Confound that boy! he has forgotten.' At this moment the gate swings on its hinges, and the vituperated lad appears, his head hardly showing above the post. Inside, a hearty welcome from the aged father and mother of mine host awaits the visitor, and very shortly the four are gathered round the hospitable board, which is laden with rustic fare.

Dinner over, and the prospects of sport on the morrow once more discussed, a move is made by the two friends for the smoking-room, a cosy little den, where, with pipes and sundry tumblers of well-matured 'Scotch,' the evening passes all too quickly.

The magic 1st of September dawns bright and clear. Harvest has been early, and most of the fields, if not quite all of them, are denuded of their crops. Shapely stacks round the homestead tell of grain stored for future use, and bright green tops of mangold and turnip promise plenty of covert for unsuspecting *perdrix*. At nine o'clock the keeper makes his appearance. A weather-beaten veteran he is, who for forty years or more has not failed to accompany first his old master and then his master's son on the opening day. The old retriever is let out, and greets first one and then the other of the little party in effusive fashion. 'Jet knows as well as we do what is on,' exclaims the host to his friend as they start.

'This way, if you please, gentlemen,' says the old keeper deferentially, at the same time opening the gate into a fairly large stubble-field. The

days of reaped stubbles have long since departed never to return. Then the cream of the sport was to be obtained over pointers knee-deep in the stiff straw. Now the reaping-machine or the self-binder shears off everything, quite clean and short, so that there is little or no hide for the resting covey, nor shelter from the still oppressive rays of the autumn sun. But the birds will linger for a time where they have been feeding, and it is little short of wonderful how the covey will squat on the almost bare ground until, with a loud *whir*, and sundry vociferous directions from the old birds in *perdris* language to the as yet inexperienced brood, the whole bunch take wing simultaneously when the shooter approaches too near. Therefore, in the early part of the day at all events, the stubbles must be patiently walked in the hope of driving the birds towards the turnips or mangold or seed-clover, where there is plenty of covert for them, and where they may be expected to rise within range. Backwards and forwards the party move with military regularity, wheeling at the hedge, and so covering the whole of the field; the guns at each end of the line, about thirty or forty yards apart, with the keeper in the middle; Jet, of course, at her master's heels, where she walks sedately, taking as keen an interest in the proceedings as any of the others. Quite in the early part of September a shot or two may be obtained on the stubbles, particularly if the land has been allowed to lie quite quietly after the corn is cleared off; but after a very short experience of the effect of the murderous tubes, the birds will learn to look out for their enemy, and will take wing long before the sportsman comes within range, flying to the—as they think—safe haven of cool broad leaves which will conceal them so well.

In the middle of the field is a large pond, surrounded with trees which overhang the water, and here a pair of wild-ducks have made their home and reared their brood. At night they have fattened on the corn by which they were surrounded, while in the daytime they have rested and splashed amongst the rushes growing at the edge of the pond. There are ten of them, the keeper says—fine birds and strong fliers all of them. On drawing near the pond the shooters separate, each approaching from a different direction, while the keeper goes boldly to the edge and begins beating the bushes with his stick. To the visitor is assigned the most likely side, and as he drops a couple of fat young mallard—one to each barrel—with a sounding *thud!* on the hard ground, he feels that life is indeed worth living, and his spirits rise proportionately when he reflects that months of close application to work have not deprived his right hand of its old cunning.

One day after partridges must of necessity be very like another. On this occasion both guns are keen and genuine sportsmen and good shots.

As covey after covey rises during the day, the sharp *crack! crack!* of the smokeless powder rings out, and many a plump young bird takes its last flight. They are both shooting for sport, and not for the bag; consequently no attempt is made to kill off whole coveys by persistently following them up after shooting the old birds at the first rise. The ground has been carefully preserved for years; the season has been favourable; the attention of the old keeper and his man has been hearty and persistent; so that shots are frequent, and by one o'clock all are glad of a rest. The welcome sight of the luncheon-basket under the shade of some spreading trees in the corner of a sloping plantation is greeted with acclamation. The enforced sedentary habits of the visitor are not conducive to an extra long walk over the uneven ground, while his farmer friend, seasoned by exposure to sun and wind, and hardened by healthy exercise, seems as if he never would be really tired. How pleasant to all concerned is that short midday rest and refreshment! Even Jet seems glad of a little respite, while the old keeper cheerfully empties the contents of his game-bag to be packed on the luncheon-cart and so conveyed home. How delicious are the rolls and sandwiches; how cool and refreshing the home-brewed—pure malt and hops, and not a headache in a barrel of it! Luncheon over, time is taken for just one pipe and a little desultory chat before the campaign is renewed. Then, after packing up what is left, and with orders to look on the trunk of a certain tree on his way home where a hare or two and some rabbits are hanging, the lad in charge of the cart sets off, and the sportsmen once more go on the war-path.

With varying success they traverse field after field, until—in the case of the visitor—tired nature can do no more. 'Hold, enough!' is the cry, and tracks are made for home. There, after just one cup of tea and a short rest, a warm bath and a complete change of raiment are very welcome, and serve to dissipate any feelings of languor that the unwonted exercise may have caused. Then dinner, when the octogenarian father, unable now to take an active part in the sport he still loves so well, has to be enlightened as to the day's proceedings, and merry jest and harmless banter, comparing olden days with the present, keep the conversation from flagging. Many an oft-repeated tale—new, possibly, to the visitor—does the old man call up from his well-stocked memory: stories of good shots and bad shots, of his son's first experiences as a school-boy sportsman, of clever retrievers by clever dogs; and so the time slips unheeded by until the listlessness of the visitor points to the fact that he is already half-asleep, and is longing to be completely so.

'One pipe—only one, upon my honour,' pleads the son; and, with a hearty good-night to the

aged couple, a move is made for the 'den,' where that last pipe is duly enjoyed, and then off to bed to sleep the sleep of the tired!

How different a day like this to that which nowadays falls to the lot of the partridge-shooter! Now there is an army of beaters, counterbalanced by an army of guns. Places are allotted by ballot, the guns conceal themselves as best they can under the hedgerows, while the beaters spread round the country and drive the birds over. Undoubtedly very considerable skill is needed on the part of the shooter to give a good account of cartridges expended. The birds are thoroughly frightened, and fly very fast; and it takes a deal of practice to kill a right and left out of the approaching covey, then to receive a fresh gun from a skilful loader and repeat the performance before the birds are out of range. Still, old gunners say that there is not half the real sport in shooting driven birds that there used to be when shooting over pointers or setters and walking after the quarry. Possibly the changes in the system of farming and the

improvement in guns and ammunition are in a measure largely responsible for the altered methods. Moreover, no one will deny that the system of driving has improved the stock of birds in many ways. The old birds, coming first, get killed off, and so the stock is kept young and vigorous. But, as one advanced in years, and who has enjoyed many a good day both walking up birds and shooting at them driven overhead, the writer is obliged to confess that, so far as his taste is concerned, the alteration is not necessarily an improvement; and even now, although unable to stand a long day's walk without experiencing very considerable fatigue, to say nothing of the feeling of walking about during the latter half of the day with some one else's feet on, and those very uncomfortable, yet one day's genuine walking up birds would be preferred to two days' driving.

Ah, well! there must be differences of opinion.

The present season promises to be a fair one in most districts; and it only remains to wish the readers of these lines straight powder, good sport, and plenty of it.

## PRINCE ADRIAN OF ZELL.

### CHAPTER X.—THE EXCELLENT PLAN OF COUNT BRODE.

**S**AINTE CLAUD, having none but the simple attractions of nature to recommend it, was utterly unknown to the great host of holiday-makers. Shopkeepers and modest folk from neighbouring inland towns formed the bulk of its visitors, with a small number of discriminating persons of a better class, who had either discovered the place first by accident or had been recommended to it by friends. Those who came once came often; for, however few its attractions were, they were certainly cheap and permanent. The place was excessively clean, the bathing was good, the sands were extensive, and the people were not yet over-perfect in the fine art of living upon strangers.

The character of the Hôtel Seine was quite in accord with its surroundings. It was an old, whitewashed building, standing some three hundred yards from the village, on a small cliff. It had been used as a school until quite recently, when the Minister of Education had ordered the erection of something more suited to modern requirements. What education had rejected enterprise had secured; for a clever young man from Paris had taken over the old school, and had expended upon it unlimited ingenuity and a limited capital. Walls had been taken down, partitions run up, out-buildings added, windows enlarged, and, last but not least, a name selected. The result was fairly creditable, and

the Hôtel Seine had gradually drawn to its doors the more select of Saint Claud's admirers.

When Mr Barrows and his companion arrived, late in the evening, they received a profuse welcome from the clever young man from Paris, now scarcely so young and much more portly. Being clever, he saw at once that it would be too great a strain of politeness to call them milords, wide as the term might be. 'Messieurs,' therefore, were profoundly welcome to his house, the only good house in Saint Claud. Did Messieurs intend to make a long stay? They did not know? Ah! then, they must breathe the air of this delectable place, and see the comforts which the Hôtel Seine could offer them. No; it was yet early, and visitors were few. There were only two other guests at the 'Seine' now, but more were coming.

They were conducted to their rooms, and presently came down to a long, low, and very comfortable dining-room. A submissive-looking waiter attended them; and when they had instructed him, they stood at the window together. The window looked out upon a modest garden-plot, but a broad, well-worn path on the right led to the sands below. Out across the sands stood the white cottages of the village, barely distinguishable in the falling dusk.

'A jolly quiet little place,' said Hadfield.

'Very,' answered Mr Barrows.

Then two men turned into view on the path leading up from the beach. One was tall and

broad-shouldered, the other of medium height and slender frame. Mr Barrows turned from the window and sat down at a table.

Two things then happened at the same time. The submissive-looking waiter entered again, bearing with infinite care a large lamp. Close upon his heels came Philip Brode, his tall form well filling the doorway; and behind him came his father. The first thing they saw was the face of Mr Barrows, the lamplight full upon it; the next was Hadfield, turning from the window with genuine interest in their entry.

It was a rather awkward moment, and at first even the Count seemed at a loss. Then he spoke to his son:

'Mr Barrows, Philip. Here is Mr Barrows.'

Philip gave a nod of recognition, and moved off to a table. The Count smiled at Hadfield.

'My friend, Mr Hadfield,' said Barrows briefly. 'Count Brode, Hadfield.'

The Count bowed pleasantly, and joined his son. Hadfield sat down with Mr Barrows, and the waiter, having arranged the lamp to his satisfaction, went out once more, to return with what they had ordered. A few minutes later the other table had also been served.

It was a curious affair at best; to Hadfield it was amazing. He had supposed that the meeting of the two parties would be a somewhat tragic affair, and had wondered much what his own attitude should be. Instead, there was nothing more than an ordinary meeting of acquaintances, followed by the very ordinary function of supper at tables separated but a few feet from each other, and with a plain, commonplace waiter hovering within easy call. He felt inclined to rub his eyes.

There were further marvels. The silence in the room was rather constrained, or at least the Count seemed to think so. He began to speak, and kept up a light and occasional conversation, which was not the less interesting because it was light and occasional; for this evil old man—as Hadfield had learned to regard him—was a master of the tongue. Even against his own will the young fellow was drawn into the talk, and now and again Count Philip joined, though the art of conversation was evidently not in his equipment. So the moments passed quickly, and, what was more surprising still, pleasantly.

'Barrows told me,' thought Hadfield, 'that this affair was to be only a mere matter of form, and no doubt the Count looks at it in just that way. I expected a thunder-and-lightning scene, but I had forgotten.'

So he argued himself into what he considered a sensible mood, feeling, indeed, some surprise that Barrows was not a little more free also. Perhaps, however, it would hardly be the thing for the two principals to treat the business so lightly as that. Form was form after all, even if it were nothing more.

His conclusions were confirmed when the Count turned his chair and moved it towards them, making a distant third at their table. Supper was now over.

'Perhaps,' he said, 'it would be well to speak of our little affair now, since we are together. Pardon me, Mr Barrows; but would you leave it to Mr Hadfield and myself, or shall we speak of it in company?'

Mr Barrows answered at once: 'I think we may speak of it together, and this time is as good as any.'

'Decidedly,' agreed the Count, and he made a sign to his son, who at once joined them. Then, leaning forward in his chair, he spoke in a lower tone, so that the waiter should not overhear; but the difference in tone made no difference in the pleasantness of his manner.

'First,' he said, 'I have to explain our choice of this place. It seemed to us, gentlemen, that it would be best not to have any public attention for our affair, such as would be given to a duel under ordinary conditions. The thing could be done quietly, and if it should happen that any injury befell, it seemed to us best to let it have the appearance of accident. You see the benefits of this?'

Mr Barrows nodded. The Count smiled and bowed.

'While considering this point,' he went on, 'I thought of Saint Claud. It happens that an acquaintance of mine—it matters not who—came to this place some four years ago with a sick daughter who needed rest and quiet. It was very slow for this person, but he chanced to be an expert with the pistols; and in those days of idleness he was in the habit of going out to the rocks beyond the hotel and making practice there. This was an interesting pastime for empty hours, and several other visitors were drawn to take part in it. In brief, it became quite popular, and the tradition remained after my friend had left. I have ascertained from our host that even last year some of his guests amused themselves in this way; and after hearing this we remarked that it would suit us also. Accordingly I sent to the nearest town for pistols and a couple of air-guns, which arrived this morning; and it would be the most natural thing in the world if you chanced to join us on one or two occasions at pistol practice.'

The Count paused, smiling. 'And this little business,' he then went on, 'can easily be arranged for an evening later in the week—some time when we shall have no spectators. It can all be done in just three minutes—and honour will be satisfied.'

His amused expression fully confirmed Hadfield's opinions. There was silence for a moment; each, apparently, waited for another to speak.

'That is our little plan, gentlemen,' said the Count. 'What do you say of it?'

Mr Barrows made an effort to reply. 'It will do as well as any other. It is very ingenious. Is there anything more?'

The Count took the question as a hint. He rose placidly.

'Nothing more,' he answered. 'The rest can be settled another time. It gives us pleasure that you approve.'

All rose at this point, and the two parties separated, the Count and his son withdrawing towards the window. 'We will take a walk on the sands, Hadfield,' said Mr Barrows carelessly; and they passed out to the hall. Hadfield looked back as they reached the door, wondering a little at his companion's curtness; and as he looked back he found that Count Brode was watching their departure. The suave old gentleman gave a friendly nod, and it would have been very far from Hadfield's mind just then to suggest that there was anything cruel or hawk-like in his face or expression.

They took the path leading down from the cliff. It was now late, and the sea and sands lay in a misty moonlight which seemed to emphasise the stillness. Two fishermen, walking from the sea towards the village, conversed as they walked, and their voices could be heard in distinct tones. Their shadows kept pace with them, gigantic and grotesque, at their feet.

Hadfield had an idea that Mr Barrows preferred silence, so he offered only one remark:

'What do you really think of the plan?'

'It is a very clever plan,' said the other, 'yet very simple. Yes, it is a very good plan.'

And he saw that it was. Four gentlemen, staying at the 'Seine,' amuse themselves with pistol practice. One evening an accident occurs, and a ball goes home to its place. There is some little commotion locally; but there is no breath of suspicion, for Count Brode is a gentleman above suspicion. In the result one obscure Englishman is laid aside, and an obstacle is smoothed away; also, an old score is cleared off the records.

Mr Barrows saw that his enemy had arranged

to give him what might be described as a dog's death, and nothing better. And it would be nothing more if his faint hope proved in the end to be unfounded, for then all would go for next to nothing.

The thought was too unnerving, and he tried to thrust it aside. His only source of courage was the remembrance of those for whom he was acting in this way, and the reflection that victory was possible—just possible. So he kept this before him as they crossed the sands in silence.

Count Brode and Philip watched them from the window, the younger man with the sullen look that was almost habitual to him.

'So he came to Saint Claud,' he said suddenly. 'You thought he would not.'

'Ah, yes,' answered the father, 'he came. But to come to Saint Claud is not to face the pistol, Philip. There is a difference.'

There was a brief silence, during which Philip exercised his thoughts. 'Why do you so hate the man?' he asked presently. 'I detest him myself because he has interfered, and I will kill him for it; but you have something else.'

'Yes,' said Count Brode slowly. 'I have something else. He opposed me long ago, when Prince Adrian lived. You shall know all that later; but now—now you shall pay both accounts.'

'Yes,' agreed the young man. 'I will see to that. There will be no difficulty afterwards?'

'None. He has even been considerate enough to bring a companion, to help us to make things smooth. That is very well. All is very well.'

So said the skillful plotter, smiling as he watched his victim move among the shadows across the sands. Yet, if he had said all, he might have admitted that all was not quite as well as he had expected it to be. Not that he was in any degree dissatisfied with things as they were; but Mr Barrows had come to Saint Claud. That fact introduced into the affair—although he had made every preparation in view of it—just that element of the incomprehensible which every skilled plotter hates and fears.

(To be continued.)

## HAREM-LIFE IN CONSTANTINOPLE.

By MOYA B. FALKNER.

**I**N spite of railways and telegraphs, Cook's tourist tickets, and the familiar figure of the dusty, panting globe-trotter, Turkey defies impertinent investigation, and still remains a land of mystery and romance.

Here the 'unspeakable Turk' continues to shift all disagreeable duties to other and broader shoulders; here the guides still show the oubliettes in the Old Seraglio into which unhappy ministers

with too keen an appetite for reform were thrust, and where unruly beauties were hurried to the keeping of the blue Bosphorus that laves the crumbling walls. 'Time is made for slaves!' and no free man or woman will stoop to its exacting sway; it has ceased to exist for all practical purposes, and the Oriental scorns its modern offspring, the time-table, and goes to the quay or station at haphazard to wait long hours for the next boat or train. At Adrianople, where customs

are still more primitive, women rush frantically to the station in the dawn, and when told that the express is not expected till the evening, sink contentedly into a seat, with the exclamation, 'Thanks be to Allah! we are in time.'

Yes, Turkey is still a fairyland of enchantment, where happiness costs little (provided that you are not an Armenian), and all misfortunes, from the breaking of a coffee-cup to the ruin of an entire family, are endured with Oriental stoicism, and the formula old as the hills: 'It is the will of Allah! Kismet!' In Turkey we breathe the very atmosphere of mystery and illusion, sandal-scented and redolent of the *Arabian Nights*. For aught we know, that swathed figure attended by obsequious slaves may be a Circassian beauty dragged from her mountain home, that old dealer a necromancer disguised, and we half expect to see a fierce genie emerge in a pillar of smoke from the stones beneath our feet.

Each home—whether it be a gorgeous palace with marble pillars and low broad steps washed by the azure sea, or a miserable ruined hovel roofed with *tentles* or old petroleum-cases that can scarce keep the rain from the heads of the shivering inmates—has alike its *harem-lik* (women's apartments), jealously latticed and impenetrable to the most curious stranger. Each woman, be she princess or peasant, issues from the sanctuary of home shrouded from the outer world in draperies concealing face and form; and, until extreme old age has set in, never ventures alone or unattended into the street, however poor or destitute she may be.

Both rich and poor exhibit the same jealous clinging to the privacy of their domestic life. It is considered the height of ill-breeding for a man to inquire for the health of a friend's wife or female relative, no matter how intimate is his footing with the master of the house. Male visitors are received in the *salam-lik* (men's apartments), a reception-room quite distinct from the rest of the house; indeed, many of the richer pashas prefer separate houses for *salam-lik* and *harem-lik*, connected by a door or covered way. Only a Moslem of the most advanced views, probably one who had degraded himself in the eyes of his compatriots by marriage with a low-caste European, would be seen either driving or walking with his wife in the daytime. If they meet in the street, and the keen eyes of the man should identify his 'property' in some conventionally swathed figure, he passes without sign of recognition; although on reaching home he will submit the terrified woman to the severest cross-questioning as to her errand. Needless to say, mistakes are sometimes unavoidable, and violent domestic scenes often the outcome of these supposed encounters, for the Turks are proverbially the most jealous of nations. I have known a gentleman of advanced views, and holding a high position in the Government, refuse to speak to his wife, or even allow her to enter the

same room with himself, for three days, preferring to dine and sup in a tent pitched in the garden, on account of suspicions founded on an alleged afternoon call!

Turkish fathers and husbands may be divided into two great classes: those who are old-fashioned or *eski* (literally 'old'), and those who, having obtained some modern culture themselves, allow their womenkind to reap some of the benefits in extended liberty. The former class cling to the faith and customs of their forefathers, and look with loathing and contempt on all such innovations as railways, books, and all Western learning. Electric light is still abhorrent to them, from the obvious connection between 'dynamite' and 'dynamos'! They read little save the daily *Moslem Gazette*, which is carefully edited by the censor till it truly resembles food for babes, and reeks with fulsome flattery of the half-divine Padishah! Others read the French edition of the *Levant Herald*, where everything of a dangerous nature is suppressed by the fatherly hand of the Government. Turks who are *eski* retain their old-fashioned dress—a long, loose overcoat, wide-flowing trousers, and collarless silken shirt. They bind a voluminous turban round the red fez, and cultivate a long beard, symbolic of the dignity and privileges of the superior sex. All the ceremonial ablutions are most scrupulously observed; and during the forty long days of Ramazan no food passes their lips, no drop of water soothes their burning thirst in hottest summer, from the hour 'when a man may tell a black hair from a white one,' until the sunset-gun booms out the welcome signal of release.

If you enter the house of such a man—and it is not easy to win your way there until you have proved that friendship and not curiosity is your motive—you will find it the pattern of neatness, with clean white mats and snowy boards. Cleaning goes on every day and all day, and the elder women, with their heads bound with wonderful turbans fringed with tiny silken tassels, alternately scold and coax the hurrying servants or slave-girls. The latter go barefoot, and are clothed in one simple cotton garment, girded nearly to the knees while at work. It is considered immodest for a woman to expose her hair to a man's gaze; so they twist a black or coloured handkerchief round their heads; and, as they are forbidden to go into the *salam-lik* unveiled, they have always a number of long white veils, made of a sort of butter-muslin, hanging near the door. These they snatch up and fling over the head, tucking the end in or tossing it over one shoulder if a member of the other sex appears suddenly.

Nothing is more puzzling to the visitor at a Turkish house than the complete disregard of time. This is really, of course, regulated by sunset, which is always twelve o'clock, summer and winter alike. Dinner is the great event of the day, and

it usually takes place at twelve or one o'clock (Turkish time), when the daily work is done. It is not, however, distinguished by that unflinching regularity that one meets with in Western lands. As the Turks frankly confess, they like to eat when they are hungry, and not when it suits the convenience of their servants, in Frankish style. This, though at first blush it sounds fairly reasonable, in practice resolves itself into being obliged to eat when the head of the house is hungry! You may have no appetite, it is true; but remonstrance is worse than useless; your plate is heaped with choice morsels from your host's with friendly prodigality, and in a short time it becomes quite natural to feed at one o'clock one day and at ten in the morning the next!

It is not the custom for men and women to sit at table together, except in houses where Frankish habits have been adopted; but none the less is dinner the chief daily consideration of the lady of the house. As guests are always self-invited, and arrive with bedding, servants, babies, &c., after giving about an hour's notice of their intention, it will be inferred by housekeepers that to keep the larder properly supplied in a climate where scarcely anything will keep overnight is no light task. Soon after sunrise the cook goes to the bazaar to perform the onerous duty of buying the day's provisions. His sex generally precludes the possibility of an interview with his mistress, who, until the day is far advanced, loves to lounge about in a *déshabillé* that shall be nameless, her bare feet thrust into slippers, and a flower stuck in her wisp of hair. Then business is begun as follows: The kitchen door is opened a few inches, and the lady stations herself on one side on a cushion or chair, armed with pencil and tablets. The cook ensconces himself on the other side, with a greasy slate, upon which are scrawled hieroglyphics which he himself is at a loss to interpret now that the excitement of the fray is over. Each article purchased is placed on a tray, and pushed round the door by the cook, who is supposed to avert his head carefully each time. However, as long as the face of the lady remains unseen, it is immaterial how much of her lightly clad person is visible. Thus are the accounts audited, fresh orders given, and bad language freely interchanged.

The evening meal is preceded by a slight repast consisting of nuts, salad, toasted cheese, sliced cucumbers, and bits of bread, with smoked fish (*cheiros*), washed down by glasses of *mastic*, a potent spirit. This is served on the veranda, or under the rose-bushes of the garden in early summer, and a hush of great contentment generally pervades the family circle as, fortified by this preliminary, they wait for dinner. This meal consists of from six to ten courses, or even more, many of them being simply vegetables stewed in oil. Tomatoes or French beans form an ingredient

in most of these dishes, and a favourite dainty is *peppéri*, a sort of large peppercorn with the inside scooped out and stuffed with rice, chopped mutton, and spices. Cucumbers, stuffed—though not with pearls as in the historic fairy tale—make a frequent appearance, and cakes soaked in honey and weird mixtures of jam and fruit are served up for dessert. A delicious dish is a fruit *compôt*, delicately iced; and there is great variety in their cookery when the strange flavours are once appreciated. However, the last dish before the sweets is like the laws of the Medes and Persians, invariable: boiled macaroni with tomato sauce and grated cheese; or *pillaff*, the national dish, which is a very appetising stew of rice, with chopped mutton and chicken. At first one wonders why such a very substantial dish is produced last; but I, for one, was not left long in doubt, for with my earliest introduction to Turkish life and manners my charming host explained, in most fluent and melodious French, that this was *pour la santé*; because, when as much as possible of the other dishes had been consumed, it served to 'fill up the corners'! Let any reader try this hygienic plan for himself!

The dress of the Turkish lady at home, as I have hinted, is simplicity itself. Often it is composed of a loose cotton or muslin wrapper, rose and yellow being the two favourite shades. Green seems to be only permitted to those who have the honour of counting themselves among the descendants of the Prophet, and their name is legion. In warm weather the women sometimes discard stockings, and display their pretty pink-and-white toes without embarrassment; nor do they clothe themselves with a multiplicity of garments. The hair is too often disfigured with henna dye, which, though it produces a deep auburn or red tint at first, soon causes patches of yellow, green, and gray to appear; and at an early age the multi-coloured crop falls, and the owner, becoming perfectly bald, seeks refuge in the all-concealing turban. Hair-brushes are almost unknown, and a very coarse comb alone is used; which perhaps may account for the fact that the hair is so seldom glossy or well kept.

It forms a matter for deep regret, from the artistic as well as the antiquarian point of view, that the lovely old costume of silken trousers, full to the ankle, gauzy vest, wide sash, and embroidered zouave no longer forms part of the modern Turkish lady's wardrobe. The slaves still sport it as a fancy dress on grand occasions; and I believe it lingers within the Seraglio walls when the pampered beauties take a patriotic freak; but would-be 'French' atrocities have usurped its place in feminine hearts, and the old-world charm is fled. Every self-respecting Turkish lady wishes her acquaintances to believe that her dresses have come direct from Paris, and that her jewels and silks have cost more than

those of her neighbours. Like her sisters all the world over, she dresses, not to please men—who, save her husband and nearest male relatives, can never behold this magnificence—but to make her dearest friends green with envy. A young Turkish woman is generally plump; and sweet food, baths, and want of exercise soon render her absolutely corpulent; but her slave must lace her as tightly as possible into a pair of bursting corsets when she contemplates a visit or receives her friends. Then her small feet are compressed in high-heeled shoes, in which she can only just totter, and which are really dangerous amid the uneven stones and precipitous descents of Galata or Stamboul. Her hair is frizzed, and usually badly burnt in the process, and white powder is smeared thickly over her dark skin. The eyes are touched with *kohl*, a preparation less harmful than its European substitute; an eyebrow-pencil and rouge is added to taste, but sparingly, as the modern Turkish lady is deeply learned in the lore of third-rate French literature, and wishes to appear *toujours un peu souffrante*! Lastly, a silk or satin dress, of brilliant hue and in barbarous imitation of Parisian fashion, is donned, and all the available jewels of the fair owner disposed about her person, preference being given to diamonds and huge emeralds. Over all this magnificence is spread the *tchit-tcharf*, a large garment closely resembling our old-fashioned rain-cloak, erroneously called the *féridji* by indiscriminating Giaour menfolk. It is cut in two pieces, a full skirt and a triangular piece draping the head and body to the waist, where it is gathered very fully and set into the band at the back. It is tightly pinned behind the head with hairpins, and the hair worn flat or coquettishly dressed in a knob under the silk to give a stylish contour. The *tchit-tcharf* is looped up at each side to allow the arms free play, and black, dark blue, and purple are the customary colours for a lady of rank. Servants and the poorer classes wear bright shades or even pure white. Even the poorest endeavour to beg, buy, or borrow a silk *tchit-tcharf*; for the woman who can only afford cotton is scorned by her own sex. The difficulty of walking in such a garb is considerable, and on the rare occasions when I have donned these ample wrappings, together with the thick black veil which hangs down and completely covers the face, I have felt half-smothered. This veil is obligatory for women of the better class when in town or up the Bosphorus. It is amusing to watch the *arabaji* (cabman) turn away his face as he opens the carriage door, lest a chance breeze should lift the gauze and disclose an inch or so of chin; still funnier when the wearer is a Giaour woman in disguise!

In the country, and when driving in a closed brougham, the more transparent *yashmak* is worn. It consists of a strip of white gauze drawn over the face, but leaving the eyes, and usually the mouth

and chin, uncovered. It is considered less modest than the black veil, but has the immense advantage of softening and beautifying the plainest features, whilst a pretty face looks absolutely enchanting under its filmy folds. This fact has contributed to its survival in spite of all obstacles.

The ladies of the Sultan's harem use the *yashmak* when driving. They, in common with all dames of high rank, are attended by hideous black eunuchs, resplendent in frock-coat, lemon kid gloves, and diamond scarf-pin; for these creatures are the vainest of the vain, and their masters freely gratify such weaknesses as long as they repay this indulgence with absolute fidelity and watchfulness. Size and ugliness are much esteemed, and command a high price in the market. These blacks ride on showy horses, one on each side of the carriage windows, or one is mounted on the box to guard the beauties within. From the interior comes a flash of bewildering loveliness: dark languishing eyes, brilliant sheen of silks, a floating cloud of lace and gauze, and a haunting smile. Then the radiant vision vanishes, the guard presents arms, the great palace gates fly open, and close again behind the curvetting steeds; and a muttered curse or savage scowl from the sentry reminds the dreaming stranger that it is not wise to stare too closely at the favourites of his Serene Highness or a rich pasha's wives, whatever your age or sex!

Friday, the sacred day of rest, affords the best opportunity for viewing Turkish beauty. In the magnificent avenues, by the 'Sweet Waters of Europe,' the women drive, or flit up and down the river in long yellow *kaiques*—the gondola of Constantinople. Here the young diplomatists, the aides-de-camp of the Sultan, and all the flower of Moslem manhood show themselves. They bestride superb Arab stallions, and excel in all the tricks of horsemanship. With arched neck and flowing tails, their chargers caracole, bound, and gallop over the wide plains and adjacent hills. It is rumoured that here the watchful blacks sometimes fail to notice a flower tossed from a jewelled hand. Stories have been whispered to me of oranges flung into a passing carriage with billets-doux tucked close under the fragrant skin, and of tiny bouquets arranged in ardent floral language. Whether true or not, it is at least certain that all young Turkish women coax their husbands to allow them to drive to the 'Sweet Waters' on a Friday. A large palace or *kiosque* stands there in the woods; but it is unused save for an occasional picnic of the ladies of the Imperial Seraglio. Within these high palace walls and closely latticed windows, in many a prison in that fairyland, the women drag out the most monotonous of existences.

Marriage is the girl's one object, her one dream, from the day when she first puts on the veil of girlhood. Matches are arranged by means of an old woman whose profession it is to keep herself

informed of the dowries and positions of all the marriageable maids and bachelors of the neighbourhood. Photographs are sometimes exchanged, and I know of one case where the bride of thirteen was allowed to inspect her bridegroom with a pair of opera-glasses; while he in his turn was permitted to gaze at his *fiancée* unveiled through the glass door of his future father-in-law's conservatory. After marriage the poor child—for she is usually little more—is bullied by her mother-in-law if it be a combined household, or bored to death by ennui if she is alone!

The education of the modern Turkish girl is less wholesome, because less domestic and more superficial, than under the old régime. The little girl grows up passionate, selfish, and capricious, without even the most elementary idea of self-control. Many French novels of the worst type have led her to hate her quiet, secluded life, and she has a morbid longing for such adventures as she has read of and imagines are the lot of all free women. She gathers up her robes in the street lest she should brush against the 'barefaced Frankish woman,' but secretly envies her liberty. She is a child without the innocence and freedom of childhood, a girl without girlhood's happy freedom and romance. Wifehood and maternity bring no sense of their sacred duties and responsibilities, and her little sons know instinctively that for help and advice they must not apply to her.

It is rumoured that one of the Sultan's numerous daughters is now being educated in Paris, and that she learns rapidly, playing the piano with taste and feeling; but I cannot vouch for the truth of this report. One lady of my Moslem acquaintance, and only one, was really expert with her needle. She possessed a sewing-machine, and could turn out a white piqué coat and skirt in a style that many a European woman might envy.

In general, Turkish ladies have a great love for practical jokes of the most childish kind. A young doctor I knew was frequently sent for by a young princess upon the most frivolous pretexts. He was the only man she might see and speak with unveiled, and she took every advantage of her opportunities. Sometimes she ordered his coffee to be flavoured with salt, and clapped her hands and shrieked with delight at his disgusted face. Sometimes she dipped his handkerchief in the ink, and flicked his face with the dripping rag. On one occasion she offered her hand and heart to the young medico, who declined with as much politeness as the circumstances permitted of.

It is true that slavery has been legally abolished; but the traffic goes on in secret much as before. These slaves are often dressed most picturesquely, and when visits are paid they stand behind their mistress's chair for hours. Some of them are very fine women. I remember one

African with yellow skin and great pathetic eyes. She was dressed in a long robe of yellow cotton that matched her skin, her grand bust half bare, and wore great bracelets and waist-belt of gold. She would fold her arms across her breast and gaze out into vacancy motionless as a bronze statue for an hour at a time.

In most households there is a small room where unruly slaves are shut up or whipped. The Turks, however, seem very sensitive concerning Frankish opinions on such cruelties. I know of a little boy of twelve who forbade his mother and grandmother to have the slaves flogged while his English governess was in the house, 'because it made her sad'! A Moslem husband can divorce his wife by repeating a simple formula before two or more witnesses on three several occasions, but all the dowry must be returned. However, if the wife has no parents or relatives able to support her, the husband cannot legally put her away. 'Ah, how happy you English women are!' said a pretty young woman to me with tears in her dark eyes. 'Your husbands cannot take another wife when you lose your beauty and grow old. Mine has promised me he never will; but he is a man, and how do I know?' A world of tragedy lay, thought I, behind those simple words! It is only fair, however, to say that a modern Turk has usually only one wife, or at most two. The reason is, probably, that polygamy is unfashionable, and also very expensive, as by the Koran a man is bound to give each one an equal amount of presents, jewellery, &c., and even a carriage and horses each, or one in common!

Eating sweetmeats, smoking cigarettes, scolding the slaves, and talking scandal are the chief diversions of the Turkish lady, with now and then a visit to a low-class theatre; and her physique, and with it that of the race, is rapidly deteriorating for want of fresh air and exercise. Happy is the woman poor enough to be obliged to do her own marketing, and who yet retains a reverence for the faith of her fathers, visiting the mosque, where the coolness and quiet, the atmosphere of prayer, soothes the tired nerves and raises the heart above all petty daily cares. But, alas! the much-disputed question as to whether woman is the possessor of an immortal soul has left its mark on the female population. They have ceased to base any great hopes on such an uncertainty, and live, feed, and behave so like the 'beasts that perish' that to the flippant modern Turk it seems that if endowed with souls at all they must be so small as to be scarcely worth the trouble of saving! Is it wonderful that all thoughtful Moslems say, 'Our women are not yet ready for reform'? All reform for them must come from within, and the soil is not yet ready for the sowing: we confess it sorrowfully enough.

## A MATTER OF ART.

**I**N Treporth, Art was spelt with a very large capital letter. Not that the Treporthians loved Art for Art's sake. The case, indeed, was quite the contrary, for the fisher-folk constituting Treporth's aboriginal community regarded with carefully disguised scorn the painters who paid them good coin of the realm to act as models, the visitors who came from afar in search of literary material, and the tourists who, following in the train of the others, ransacked the picturesque tumble-down houses of the little town in search of 'bits' of old furniture, crockery, and curios.

From the material side, however, Treporth quite saw how Art was money in its purse or in the stocking-heels, and in the cracked teapots which were the equivalents thereof. The trouble was that the boom could not last; and old Sarah Samble voiced the general opinion as she held forth on the subject to Mrs Mary Hancock, her next-door neighbour.

'Tis not to be denied,' she said as the two conversed from their adjoining doorsteps, 'that them artises comin' tu Treporth have been better for us nor the biggest shoal o' pilchers the boats ever fetched tu harbour. I've a sold my poor dead man's uncle's clock, that's been under the bed we slept on this twenty year, for five goolden poundses.'

'An' Johnny Friday, 'e wouldn't ha' gone above five shillin',' commented Mrs Hancock.

'That 'e wouldn't. 'E says last time I had it out, "Put a hammer through her, missis," 'e says, "an' I'll give three pennies the pound for the old brass in she." An' I've gotten ten shillin' apiece,' the old woman went on, 'for them chiney cups an' saucers was left by my mother's cousin Martha Anne Toms; 'sides as much for a broken carved chair frame as the chicken roost on in the yard. An' you, Mary Hancock,' she concluded, 'must ha' done nigh-hand as well?'

The other nodded. 'Middlin' ways,' she acknowledged curtly, not being a woman of many confidences.

'But what I sees,' Mrs Samble continued volubly, 'be that none o' us has got more that them artiss people 'll buy; though why they won't take the good new gilt-and-green tea-set I has, in place o' them other done gimcracks, beats an honest woman tu tell. Now, I've naught left fitty for them, savin' that old cloam jar my sister's husband's brother brought from Italy, an'—'

'You ain't got call tu complain, same as some,' her neighbour interrupted, 'for you 'm got Jenifer. They 'm all for makin' her pictur', an' pays her well for sittin'; though, by what I sees, she's mostly took standin' up.'

'An' I won't have Jenifer long neither,' retorted Mrs Samble grumblingly. 'See her there now a-talkin' tu a furriner; she'll be goin' off soon, sure 'nough.'

The speaker nodded towards where, in the sunshine on the other side of the narrow street, a young man, evidently a 'commercial,' from the sample-case he carried, stood talking to a tall, handsome girl, attired in the picturesque costume common to Treporth's womenkind.

'Her might du worsen,' remarked Mrs Hancock, with evident reference to the girl's companion. 'That there Mr Biddley she 'm wi' be traveller for t' big makers as the shops gets their cloam from. He must do good trade, for he does be here constant—specially lately.'

'Look at that now!' ejaculated her friend; 'an' me not knowin'—Jenifer bein' that close. I be goin' tu have a talk wi' 'e.'

She moved out and down towards where the couple stood.

'Jenifer!' she called shrilly as she approached them, 'why be 'e a-standin' clatterin', chatterin' there, when Mr Vanholt be 'specting of 'e. The gentleman wouldn't keep 'e if 'e knawed.'

The girl tossed her shapely head indignantly at this pointed reproof, but walked off; and her grandmother turned to the man.

'Maids take a deal o' huntin' after,' she commented in casual fashion; then, more earnestly, 'Come 'e in along now, an' taste my guseberry; 'tis a comfortin' liquor of a hot day.'

Biddley accepted the invitation with alacrity.

'That I will, Mrs Samble,' he said heartily. 'I've often heard the fame of your wine.'

Which was scarcely the case. However, when it was placed before him on the table of the tiny parlour, he not only swallowed the condiment as though he liked it, but further sacrificed veracity by saying he did so.

'You 'm in the cloam trade?' queried his hostess when she had duly acknowledged her guest's commendations.

'Yes,' the man replied, 'with the Pekin Patent Pottery Company—biggest people in their line in the country. A good berth I have; he added in what seemed an unaccountable outburst of confidence.

'See that now!' exclaimed Mrs Samble, 'an' me just dyin' to get a 'pinion concernin' this jug—'tis fair providential, as they says up tu chapel.'

She stretched out her hand as she spoke, and took from behind the window-curtains—where it was placed in view of the street—a gracefully wrought vase of antique shape. Its very simplicity and the purity of its outlines proclaimed its age, and the visitor examined it with interest.

'What might that be worth, now?' the old

woman asked. 'A friend-by-law o' my sister's, bein' a sailor, fetched it from Italy.'

'Maybe a sovereign,' returned the young man. 'It looks to be a curious old piece. But I'm only a salesman,' he added apologetically, 'not a connoisseur.'

'I knows you can't be sure,' returned his hostess, making a bold effort to comprehend the last word; 'but, though you'm in the cloam trade, I misdoubt you'm nowadays skilled in it. Mr Vanholt—a real American gentleman, as is paintin' Jenifer's pictur—he offered me three poundses no furdur back nor yesterday for she.'

'For the vase?' queried Biddley amazedly.

'Not for the maid,' retorted the old woman somewhat tartly; 'but what I said to Mr Vanholt I says to you: I've been 'customed-like to see the jug there, an' I won't take no money for it, unless so be I can get another the same—cheap.'

She looked at Biddley; and Biddley, with something of a smile about the corners of his mouth, looked at her. And so for a space there was silence.

'I could,' the visitor said slowly at last, 'let you have a vase which no one in Trepoth could tell from this, for half-a-crown—on one condition.'

'If you'd make the pair four shillin',' responded Mrs Samble, 'it might be an order to you.'

'We wouldn't quarrel about that,' the traveller answered a little impatiently, 'provided I had the promise of your good word with your granddaughter.'

'Lawks a-mussy!' the old lady cried, her hands going up with simulated astonishment. 'Be you after Jenifer, then?'

'I love her, Mrs Samble,' Biddley answered with obvious earnestness; 'and if she'll have me, I could make her comfortable as my wife.'

'Jenifer will please hers'n,' she said; 'an' it'll not be me will stand in the way of 'e. But I'll look for a threepenny luck-money off them pair o' jugs.'

To which modest proposition the suitor agreed with an outward willingness hardly in keeping with his unexpressed opinion of the old woman's greed.

The vases, however, duly reached Mrs Samble by parcel post; but no person save the recipient knew of their arrival, for she had specially stipulated that the package should bear no outward indication as to its contents or sender. The reason for this might have been found during the next visit of Mr Cyrus Vanholt to the old woman. The American was a bright youth of twenty or so, the only son of a rich father, and as such possessed of more money than experience. He was supposed to be studying art in Europe, and had drifted to Trepoth in the track of one of its most advanced exponents.

'I've been a-thinkin',' Mrs Samble said to him

on the day of the arrival of the parcel from Biddley, 'that if you could see your way to six poundses for that jug I wouldn't say but I could do wantin' she.'

Vanholt was standing beside the window and took up the vase referred to.

'I reckon you're on top at a deal, Mrs Samble,' he laughed; 'but, as I want the thing, and think it real old Etruscan ware, I must pay the price.'

He drew a handful of notes and gold carelessly from his pocket, and laid the amount on the table. Jenifer, who was standing by, opened her soft brown eyes in astonishment.

'If you'd come across the pond,' remarked the visitor, who was watching her, 'I guess you'd find dollars a deal more freely handled than in this old rookery.'

'I wonder you stay in it,' retorted the girl, stung by the implied reflection upon her native place.

'Can't you guess why?' he returned swiftly; but as she turned away her flushed face without answering, he went on.

'Can you come to the studio now?' he asked in more business-like tones. 'I want to get that purple-black tint in your hair, and calculate the light is just right.'

Jenifer understood nothing of tints; but to be paid for sitting still was, in her view, much preferable to scrubbing her grandmother's floors for nothing. Therefore she concurred, and the pair went off, Vanholt bearing the vase.

To his surprise, when he performed the wholly unnecessary duty of escorting Jenifer to her home some hours later, another, and identical, vase occupied the place of honour in the window.

'I found un in t' cupboard,' Mrs Samble explained as she saw him look at it. 'You can have she, an' welcome, if you'd like a pair.'

For answer the young man drew out his money and paid down the same sum as before; then, carrying the vase, he made his way back to his rooms, meditating deeply. And next day, when he passed Mrs Samble's window and saw the prototype of his previous purchase again there, he smiled knowingly.

'Sure 'nough!' exclaimed Jenifer's grandmother as she ushered Vanholt into the parlour, 'tis surprisin' how things be found when a body b'ain't lookin'. See now ef I didn't go fetchin' another of thiecy jugs out o' t' old cloam oven.'

'And I guess you're a seller?' queried Vanholt.

'I'm nowadays anxious,' responded the other quickly.

'I'll take it at that,' returned the artist; 'and I reckon I'd best show my hand, Mrs Samble,' he went on, his face full of boyish eagerness. 'I'll take as many of these vases—which are not all Etruscan, I'll bet—and no questions asked, if you'll get Jenifer to marry me.'

If Mrs Samble had had any anticipation of such a declaration, she concealed it well.

'Patience have us!' she exclaimed with astonishment. 'You'm not serious, Mr Vanholt. The maid be no wife for the likes o' you.'

'That's my lookout,' he retorted. 'All I want from you is your good word. I've asked Jenifer, but she sits on the fence—won't say one way or another. You'll do what you can for me, won't you?' he pleaded.

The wooer deemed he had found the old woman's weak spot by his offer to purchase the vases, and was disposed to congratulate himself upon the delicacy with which he had taken advantage of it, whilst refraining from complaining of the trick played upon him. And certainly Mrs Samble's attitude strengthened these beliefs.

'Jenifer should be proud, sure 'nough,' she said simply, 'and if so be as anythin' I say can persuade her tu be made a lady o'—why, in course I'll say it. And, seein' you'm wishful for more o' them jugs, I'll try tu find 'em for 'e. I knows a man as goes that same I-talian v'yage reg'lar—maybe he has some by him.'

Thus, for the time being, all parties were satisfied. As Mrs Samble put it later on to Mrs Mary Hancock:

'I du believe,' she said confidentially, 'tis not onpossible tu find cloam fitty for them artises, for all the ways of 'em be past findin' out. I'll tell 'e the saycret some day, Mrs Hancock.'

It was Biddley who prevented the fulfilment of this neighbourly promise. He had willingly supplied one pair of vases at a price below cost for the sake of ingratiating himself with Jenifer's relative; but when the order was repeated weekly—which was the extent to which Mrs Samble's conscience permitted her, as she herself supposed, to plant them upon the willing Vanholt—the traveller felt his pocket unduly touched, and combined business with pleasure by unexpectedly visiting Treporth, to put the price-matter right and renew his suit.

When he knocked at Mrs Samble's door it was Jenifer who answered him, and he persuaded her to accompany him into the parlour without calling her grandmother.

'You must know, my dear,' he said lightly when they were alone, 'what has brought me back. I could not live without seeing you, Jenifer—I really could not. You'll give me a plain answer this time—won't you?' he urged more seriously.

There was a look of her ancient relative about the girl as she answered.

'If you mean whether I'll marry you,' she began boldly, 'I shall'—

This was enough for Biddley. He tried to pass his arm round her waist; but as she shook herself free the door opened to admit Mrs Samble, ushering in Vanholt. He had just called, and the old woman, supposing his errand comprised the customary purchase, was talking volubly, regardless of his silence.

'I has another for 'e,' she was saying, 'an' the ter'ble trouble I've had tu find un you'—

She stopped short, perceiving the other visitor; but her presence of mind did not forsake her.

'Marnin', Mr Biddley,' she resumed after a momentary pause, and with a look of intelligence to which the traveller responded blithely. 'You'm come about the jug too, same as this gentleman? But 'tis promised to he, and I never goes back on a promise.'

'You are a bit out, Mrs Samble,' Vanholt broke in, with a glance towards Jenifer in which anger and reproach mingled. 'I hold stock enough in your goods, and called to tell you so.'

The girl stooped to whisper into her relative's ear, and the old woman gripped her hands together in wrath.

'You'm said "No" tu Mr Vanholt!' she ejaculated shrilly. 'Patience have us! Are 'e 'spectin' the king on his throne tu wed 'e, maid? Are'—

It was Biddley who interrupted this outflow of anger.

'Not the king, Mrs Samble,' he said suavely, 'but your very humble servant, whom Jenifer has just made happy by promising to marry him. As for the vase, of course I'll take it back willingly, and the others too.'

Of the three answers which this speech called forth that of Vanholt was the loudest.

'Great Scot!' he exclaimed, 'so you are the drummer for the imitation Etruscan ware. Of course I knew all but the first were modern; but I didn't calculate you were in the running for the lady,' he added bitterly, 'at what must have been a big profit off the thirty dollars each I paid.'

'I had no profit,' the irate Biddley snapped back. 'My price was four shillings a pair.'

'An' Jenifer,' interpolated Mrs Samble, simultaneously with the American.

'And not Jenifer,' the girl succeeded at last in saying. 'When you came in, grannie, with Mr Vanholt, you interrupted me as I was telling Mr Biddley here that I shall not marry him. Harry Sponson'—here she coloured hotly—'that's home on leave from the *Thunderbolt*, asked me last night, and I said "Yes" to him. We're to be wed as soon as he's made a petty officer.'

'I be feared, Mrs Hancock,' said Mrs Samble next day to her neighbour, 'that I can't give 'e that saycret; but I'll tell 'e this much, that them artises doesn't pay big money for cloam and sich-like for itself, but for what they gets by it. I be goin' tu sell no more tu none o' 'em; I've a-gotten my share, and Jenifer, seein' her be makin' a marriage I thinks well on, 'll have my money when I'm gone. So if you, Mrs Hancock, or the rest in Treporth, likes tu sell old rub-bitch tu the artises, you'll not find me in your ways. I allus likes tu be neighbourly.'

## THE MONTH: SCIENCE AND ARTS.

## THE CAMPANILE OF ST MARK'S.

HE fall of the famous Campanile of St Mark's, Venice, is not only a great calamity to that ancient city, but it is the loss of an architectural treasure which will be deplored by artists all the world over. Before these words appear in print it is probable that sufficient money will have been subscribed to rebuild the tower which has figured again and again upon the canvases of Canaletto and many other painters. But a new erection cannot give back the associations connected with the old one, and it is a question whether the resolve to rebuild the tower is a wise one. The collapse of the building seems to have been due principally to old age, and to neglect of timely reparation. It was ascertained in 1885 that its foundations were perfectly secure, although they consisted of a double layer of logs, laid crosswise upon one another and resting upon piles driven deep into the black clay which underlies the city of Venice. This woodwork was found to be in a perfect state of preservation. It is satisfactory to note that the crack in the tower which gave warning of its dangerous state enabled precautions to be taken which prevented any sacrifice of life.

## FIRE RISKS.

A recent fire in London, which was unhappily accompanied by the loss of several lives, has called renewed attention to the adequacy of the Fire Brigade. No one doubts the bravery of the men who are continually risking their lives in the work of saving others, but there is a complaint that the weapons supplied to them with which to vanquish their all-devouring foe are insufficient for the terrible work in hand. More especially the escape-ladders are not long enough to reach the upper floors of modern buildings. But is it quite fair to throw the onus upon the Fire Brigade? We think not. Every builder, every occupier, and every employer should see to it that means of escape from fire exist in the premises under his control. The Brigade will do their best to extinguish a fire when it occurs, but by the time they arrive there should be no necessity for escape apparatus.

## OBSOLETE WEAPONS.

Improvements in lethal weapons are so rapid that the very best of one time is quickly superseded by something better a few weeks or months later. The last two decades have seen quite a revolution both in small-arms and in ordnance, while at the same time black gunpowder has gone out of use, in favour of high ex-

plosives possessing many times its energy. When dynamite was regarded as the best type of these modern explosives, as for many purposes it still is, it was quickly found that it could not be safely fired from an ordinary gun. A special form of air-gun was therefore brought forward by Captain Zaliuski which would hurl huge quantities of explosive with most disastrous effects. At a cost of about a million dollars the United States Government established a battery of these compressed air-guns at Sandy Hook. This battery has just been sold for one-fiftieth of the amount it cost, the reason being that since its establishment in 1893 explosives have been discovered which can be safely fired from high-power guns, which have a far greater range than Zaliuski's air-tubes. The pneumatic guns did all that was expected of them, and they have been displaced, not because they failed, but because better implements are now available.

## THE VALUE OF FOODS.

We once heard an intelligent child complain that 'all the nicest things to eat seem to be unwholesome.' If that child, now of a larger growth, should happen to light upon the report of a lecture delivered lately before the South-West London Medical Society by Dr Robert Hutchison he will rejoice greatly, for the lecturer demonstrated that many nice things have a very great dietetic value. He condemned many of the much-belauded patent foods, and showed that upon analysis they compared very unfavourably with meat, eggs, milk, and sugar. 'A pound of honey at ninepence,' he said, 'is a better source of sugar than a pound of malt extract at three shillings.' And, speaking of cod-liver oil as a means of administering fat, he remarked: 'In cream you get a more valuable substance, because ordinary cream contains more than 50 per cent. of fat, and butter fat is as easily digested and absorbed as the fat of cod-liver oil, besides being much more palatable and considerably cheaper.' The lecturer also spoke highly of the value of chocolate and Everton toffee, because in both you get a combination of fat and sugar without water. Unfortunately it is difficult to make people believe in the great value of a diet within their reach. They will turn away from such commonplace things as milk and eggs, and go to any amount of trouble to procure costly preparations having only a tithe of their value as food. The lecturer's good opinion of cream, honey, chocolate, and toffee will be received with enthusiasm by the rising generation, if not by their elders.

## THE DISCOVERER OF COAL-GAS.

The discovery of coal-gas, which for nearly a century has been our principal source of artificial

illumination, has generally been credited to the Scotsman Murdoch, then at Redruth in Cornwall, in 1792. But according to recent researches it would seem that there is a prior claim to the discovery by Professor Minckelers, of Limburg, Holland, who anticipated Murdoch in the preparation of carburetted hydrogen—to give our household gas its right name—by nine years. According to the story now put forward by the *Journal of Gas-lighting*, Professor Minckelers was experimenting as early as 1783 with a view to finding a cheaper gas than hydrogen for inflating balloons, and by heating coal-dust in a gun-barrel he produced the now familiar gas, and lighted his lecture-room at Louvain with it for some years. It is now proposed to erect, by public subscription, a monument in honour of Minckelers at his birthplace. It may be added that he was appointed professor of natural philosophy at the University of Louvain when only twenty-three years of age, and that he published there in 1784 a memoir dealing with the production of coal-gas. Becher in Germany (1680), and in Britain Clayton (1739) and Lord Dundonald (1786), had obtained or used lighting gas derived from coal.

#### ARTIFICIAL CLAY.

An artificial clay is being used in Germany for various decorative purposes, and for the manufacture of imitation stone, tiles, gutters, &c. It is composed of sand, chalk, cement, liquid glue, and petroleum, which are mixed together in certain proportions. The result is a plastic mass which can be moulded, and which subsequently acquires great hardness. The surface of the composition is quite smooth, it will not absorb moisture, it is fireproof, and can be tinted as desired by the addition of pigments. The tests made with this material at the Technical Experimental Station at Charlottenburg have proved satisfactory. As the ingredients can be mixed without the aid of machinery, builders in a small way of business can use the material with economy.

#### WAR CASUALTIES.

Now that the war in South Africa has happily been brought to a close, we are able to count the terrible cost in men's lives. The total number of deaths is close upon twenty-two thousand, exclusive of five hundred men who died after their return home. There is a certain amount of satisfaction in regarding these grim figures; for, considering the vast army sent out and the time covered by the war, they compare very favourably with the number of deaths in past struggles between nations. To go no farther back than the Crimean war, which covered a period only one-half as long as the South African campaign, we find that the casualties were less by only one hundred and sixty-three men, while the total force engaged was only two-sevenths of the army

now returning from the East. It has lately been pointed out by Colonel Boyle that if the mortality in South Africa had been on the Crimean scale, something like seventy-five thousand men would have found their graves on the veldt. The improvement is, of course, due to the splendid state of efficiency of our field hospitals and of the supply and transport departments of the army. We have at present no definite information as to the losses on the Boer side, but we may feel certain that had the war occurred in Crimean days there would have been no concentration camps for the wives and children of our late enemies, and the deaths among non-combatants alone would consequently have totalled up to an awful figure.

#### OIL PASTELS.

The Paris correspondent of the *Times* recently gave an account of a new system of oil-painting, which seems to have made a sensation and to have met with favour in the French capital. It originated in the desire of M. Raffaelli, a well-known painter, to simplify the necessary mechanical manipulations of the palette so as to leave the artist's mind concentrated, without disturbance of ideas, upon the work before him. To attain this end he has, to use his own words, 'contrived to put oil-colours in small solid sticks like crayons,' which he rubs against the canvas, wood, ivory, or paper upon which the picture is traced. There is no mention of brushes, and we gather from the account published that in practising the new method these are altogether discarded. If this be the case, we venture to think that the new system will not meet with cordial support among artists generally. Some there are who obtain wonderful effects by a masterly use of the palette-knife; but the majority of artists naturally regard the brush as their most valuable ally, and they will laugh at the notion of relinquishing it in favour of a stick of paint.

#### 'TUBE' VENTILATION.

As in the near future locomotion in our cities will be carried on to a great extent by means of tubular railways, a very important point has arisen with regard to the effective ventilation of such underground tunnels. When these tubes were first projected we were assured that ventilation would be necessarily of the most perfect character, for each train would fit the tunnel so well that it would drive out the foul air in front of it, and draw in fresh air behind it. This plan would no doubt have worked well had it been carried out, but in the two electric lines already laid in London the up and down tubes merge into one channel at several of the stations, so that the same air circulates through each. Tests recently made on the Central London Railway showed a high percentage of carbonic acid gas, especially in the carriages which at certain times of the

day are terribly overcrowded. When we consider that this gas is the product of human lungs, and that it may be, and probably is, accompanied by organic matter and micro-organisms, it will easily be understood that the atmosphere may be more deadly than the choking sulphur-laden air of a tunnel traversed by coal-burning locomotives.

#### THE GERMAN ALCOHOL INDUSTRY.

For some time the German Government have been doing their best to promote the use of alcohol for domestic and industrial purposes, and have lately offered valuable prizes for a draught wagon, suitable for military and other purposes, which shall be driven by an alcohol motor. To understand this development of the alcohol industry it should be remembered that Germany has no native petroleum, and is dependent for petroleum and its products upon foreign countries, which in case of war might be closed to her. But alcohol can be readily made by German farmers from potatoes, or from the crude molasses which is a refuse of the raw beet-sugar manufacture. In this way alcohol becomes an important agricultural product, and in the early part of the year an exhibition was held at Berlin with the object of showing how 'spiritus,' as it is called in Germany, can be usefully employed for cooking and heating purposes, as well as a source of energy. The alcohol used for these purposes is, like the methylated spirit sold in this country, rendered unpalatable, and is duty free. The quantity consumed in Germany last year for technical purposes amounted to more than thirty million gallons.

#### EARTHQUAKE RECORDS.

We have lately heard much of the wonderful manner in which earthquake disturbances are registered very often at places remote from their centre of activity. Thus the seismograph invented by Professor John Milne, and kept at his home in the Isle of Wight, has been known to record earth vibrations which had their origin at the other side of the world. The main feature of the instrument is a slender rod of steel about a yard long, which is attached to a solid upright, the two being arranged like the mast and boom of a ship. At the end of this delicately balanced horizontal rod or pendulum is a tiny plate of brass with a slit in it parallel with the boom itself. This crosses a similar slit at right angles to it in the top of a box which contains a slowly travelling ribbon of sensitive photographic paper, and by means of a lamp and mirror a beam of light is sent through the crossed slits on to the paper below. So long as the boom remains perfectly still, the record traced on the paper by the light takes the form of a continuous line; but when the delicate rod is caused to vibrate, this line is interrupted by lateral thickenings. As the paper tape is marked with hours and

minutes, the exact time when any earth disturbance takes place is plainly indicated.

#### WHAT IS PEMMICAN?

Half a century ago, we are reminded by the *Canadian Magazine*, the preparation known as pemmican was of such importance to the scant population of the North-West that it might be regarded in the same light as wheaten bread is looked upon by the civilised nations of to-day. Pemmican was made from buffalo meat at a time when those animals roamed over the plains in unnumbered herds. The term, which should more properly be written pineekon, is a Cree word signifying something made with fat. To prepare it buffalo meat was cut into thin steaks, dried in the sun, and then beaten to powder and mixed with fat until it assumed a dark solid mass. This was put into sacks, sewn up, and jumped upon until it was solid and nearly as hard as a boulder. When required for use, enough for a meal was chopped off the mass with an axe, sacking and all, and it could be eaten raw—in reality partially cooked by its long exposure to the sun—or boiled or baked as taste might dictate. It was nutritious and kept well. The strange thing about pemmican was that if properly prepared it never became tainted, a property it doubtless owed to the pure and dry atmosphere of North-West Canada.

#### SELF-DUMPING RAILWAY TRUCKS.

The business of constructing a high railway embankment is, under usual circumstances, a very tedious operation, as any one must know who has had an opportunity of watching the toy-like trucks each discharging its little load of earth at the end of the gradually extending ridge. In America they have a much quicker method of accomplishing the work, and use, instead of trucks holding each about a cubic yard of earth, a self-dumping truck containing from ten to twenty-five yards of material. By the action of a lever the contents of one of these huge steel trucks can be dropped from the bottom or from either side at a moment's notice. In crossing a valley it is customary to run up a rapidly constructed wooden trestle bridge, sometimes one hundred and fifty feet high, and on this temporary rails are laid. This bridge carries the dumping-cars, which are emptied where required and bury the woodwork in the act of building up the earthen embankment. The earth is brought from the nearest cutting or gravel-pit, and the work proceeds with extraordinary celerity. Instantaneous photographs showing the entire process are reproduced in a recent number of the *Scientific American*.

#### ELECTRIC TYPEWRITER.

A new form of typewriter was recently exhibited in London, and gives promise of wide application.

In most typewriters much has to be sacrificed in construction to give lightness of touch, so that the strain upon the fingers of the operator shall be as little as possible. In the new typewriter, which is known as the 'Blick,' after its inventor, Mr Blickensderfer, the slightest touch is sufficient to operate the keys, for the electric current, which can be borrowed from the nearest lamp, does the actual work after the necessary contact has been made. The stroke of the machine is thus independent of the worker, and each impression is of such strength that uniformity of printing is assured. No extra work is entailed in duplicating, the pressure entailing no additional demand upon the operator. Other valuable features are the automatic carriage return and spacing facilities, which save much time.

#### HINTS ON BOOK-MAKING.

To those who believe they have a message to the world to which it ought to listen, to those who wish to win their way in literature, and to publishers, authors, and printers of every degree, *Some Notes on Books and Printing*, by Charles T. Jacobi, managing partner of the Chiswick Press, London, may be heartily commended. This is an enlarged edition of a book twice previously issued; and, as it is doubled in size, it may also be termed doubly useful. Guidance is afforded here as to the best method of preparing manuscript for the press, and as to printers' corrections, which, if followed, will save worry and after disappointment. The Index (without which no genuine book should ever go forth), type, margins, methods of illustration, papers (of which there are twenty samples given), sizes, binding, methods of publishing, and copyright are all discussed in a sensible and practical way. Mr F. Howard Collins contributes the chapter on 'Index,' and has otherwise given valuable help in the preparation. Mr Walter Bontall adds a very luminous account of modern 'Methods of Illustration,' in which the preparation of cheap process-blocks, without which our cheap illustrated books and magazines would be an impossibility, is fully explained. The article 'Copyright' has been revised by Mr C. R. Rivington, of the Stationers' Company. Here is a golden, if a somewhat humbling, sentence worth keeping in mind: 'In these days of hurriedly written newspaper reviews, it is useful to make the preface *thoroughly* explain the author's object in writing the book; for be it hinted to the budding author that in some cases this is the *only* part of the work read by the reviewer.' Electrotyping, stereotyping, and moulding of type are all explained; and the samples of type, which occupy over forty pages of the book, will be found of great service. Mr Jacobi has taken a passage from Ruskin's *Sesame and Lilies* and set it in every type, to show the size and general effect of the different fonts. There is also a glossary of bibliographical terms. This

book is truly what it pretends to be, 'a guide for authors, publishers, and others.' Even the 'others' may learn that authorship, printing, and publishing require experience, training, and ripened judgment and skill, and that, like Dogberry's version of reading and writing, they do not exactly come by nature, as many seem to think.

#### AN INNOVATION IN DINING.

A representative of the *Times* records that, acting upon instructions received, he recently ordered a dinner from Distributing Kitchens (Limited), 121 Victoria Street, naming the hour and giving his address, some two miles distant. Ten minutes before the appointed time there arrived a neat metal case, specially heated in an ingenious fashion, containing what may best be described as a 'nice little dinner' for two, at a cost of five shillings a head (which would have been three shillings and sixpence if his house had been within the company's regular 'radius'), with all the equipment of the dinner-table, down to the cloth itself. Soup, fish, cutlets, potatoes, curry, and a sweet, all admirably cooked, appeared and disappeared. There is no doubt, he says, that there is a great future for any organisation which will enable bachelors and single ladies, to say nothing of families whose cooking arrangements are out of gear, to dine at home without the slightest trouble beyond that of laying the table; and it should be good news to such persons that such an institution exists. There is nothing to be done, it appears, save to order, to eat, and to pay. The agency does all the rest, and the prices are, as his case shows, moderate.

#### AT TROUTBECK.

All nature longed for rain; the mountain rills  
Were silent many days; the fields were brown,  
And from the moorland pastures on the hills  
The bleating of the thirsting sheep came down,  
Monotonous and plaintive through the night,  
Until, at dawning of the mist-clad day,  
O'er all the topmost peaks the trembling light  
Swept slowly in pale pink and gold and gray.

Then sudden swirled a wind up from the sea,  
Bearing upon its wings the drifting rain;  
The streams soon sang in rippling minstrelsy,  
The parched grass, refreshed, revived again,  
The faded flowers drew colour from the sod,  
The lambs that drank looked up in thanks to God.

JAMES BOWKER.

#### \* \* TO CONTRIBUTORS.

- 1st. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'
- 2nd. For its return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3rd. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, should have the *writer's Name and Address written upon them in full*.
- 4th. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

## SIXTH SERIES.

### MR MORRIS'S HAT.

By C. EDWARDES.

IN TWO PARTS.—PART I.

**I**T may have been due to my indiffer-ent sight or to the third glass of sherry I had drunk at luncheon. Providence was the very last cause to which I should in that moment have looked with reproach—reverent, I hope, yet sincere—for such a result. If it had been any one else's hat I should have tried to laugh it off genially, with the usual easy 'promise to pay.' But Abiathar Morris's!

Slater, K.C., nodded compassionately towards Mr Morris, whose heavy profile was outlined against the back of the red-leather arm-chair in which he faced the fire. The old gentleman's head was thrown well back and his mouth was open. I would sooner by much have sat down on a hedgehog.

Slater understood my anxieties. He knew that my feelings towards Mr Morris were not merely such as a bank manager may be expected to have for a rich and punctilious customer. He knew about Gladys. He had written a play in the days of his youth, and might be supposed further to have a more than average acquaintance with human nature. He was extremely doubtful whether Mr Morris would ever consent to accept me as a son-in-law. 'That kind of fellow,' he had said, 'regards an only daughter as an asset or a chattel, to be realised, when he pleases, at full market value.' Slater had taken my word for it that Gladys was beautiful. He was sorry for it, for my sake. In his cynical opinion, the fact almost doubled her market value.

There were seven or eight other men in the smoking-room.

With a sinking heart I lifted the forlorn object. It looked like a relaxing concertina. Two or three ungenerous chuckles drifted towards me amid the smoke of cigars. Mr Morris was ex-

travagantly fond of his personal appearance; not conceited, but foppishly particular. I had heard him once exclaim to the hall-porter, 'Good gracious! is that a hair on my coat, Williams? For Heaven's sake, fetch a brush!' He was the kind of man who would receive my apologies in killing silence and leave the room my mortal enemy. Especially in the circumstances, for I knew instinctively that he yearned for any plausible excuse to say to Gladys, 'The man you, in your ignorance, suppose you love, my dear child, is not only a commercial adventurer, but a clumsy fool; and so there's an end of it all.'

My reflections were of the most rapid kind as I stood with the wreck in my hand. Suddenly a sonorous snore broke (nay, undulated) from the chair before the fire. The next moment Slater, K.C., was at my elbow.

'You're in luck's way, Hartley,' he whispered. 'Let's have a look at it. Capital, indeed! Deverish's place is quite near. Come along. We'll manage it if we're quick.'

I don't know how Slater did his walking to the door, but I know I went tremulously on tip-toe, thick though the Turkey carpet undoubtedly was. Those other fellows grinned as though it were the most amusing of commonplace misadventures. They were not behind the scenes. But to me it was as if my future life depended on the softness of my footsteps.

'Now then,' said Slater when we were in the hall, 'a cab and the hat-shop will soon put things normal again.'

The hall-porter seemed to smile all over his uniform, right down to his boots indeed, at the sight of the hat. Little things amuse small minds, as we all know.

'Mr Morris's, I can see, sir,' he said.

'Then, hold your tongue,' I said, pressing a half-crown into his pliable palm.

He thanked me and glanced at the clock.

'I was to get him a cab at a quarter past two for the Bank,' he continued.

A quarter past two! That allowed us twenty minutes, no more. Williams blew his whistle shrilly at my bidding. A lack-lustre, familiar face looked at me appealingly from the base of the steps. The giant Chang might have looked up in the same way and not have obtained recognition at that moment. Confound the 'growlers.' Where were they? Usually three or four came up at a call; now not one was in sight.

'Whistle again, man—and yet not too loud—that is, whistle just loud enough,' I said, much agitated as I remembered how piercingly as a rule these cab-calls reached us in the smoking-room. It were an ironical mischance, indeed, if Mr Morris were to open his eyes, yawn, and look for his hat as the result of our very endeavours to do our business while he slept.

The lack-lustre object down below touched its hat. Then I noticed it. It had been one of Mr Morris's own clerks, a poor residuum of respectability named Bowers. Drink had done for him: his carmine nose, pale face, dishevelled hair, and faded clothes all bore witness against him. More than once of late I had found the poor fellow hanging about the club door. I had even caught Mr Morris giving him a sovereign and some sad head-shakes. There is no harm and perhaps no credit in saying that I had given him something small myself.

'Anything I can do, Mr Hartley?' asked poor Tom Bowers faintly.

'Why, yes,' I replied. 'Run and fetch a hansom fast as ever— But stay,' it seemed wise to kill two birds with one stone, 'take this hat to Deverish, in New Bond Street. Know it?'

'I do, sir,' said he eagerly.

'Get an exact duplicate—exact, you understand, but *new*, of course. Here's a sovereign. Put this one on your own head afterwards. It will block out by-and-by. Hurry, man, hurry! Everything depends on speed.'

Tom Bowers rushed up the street. He stopped a hansom a hundred yards off, looked back; I nodded strenuously; he got into it, and—I breathed with relief.

Slater, K.C., meanwhile enjoyed himself by my side. He was not ordinarily what you would call a mirthful man; but when I turned towards him he was smiling serenely.

'Reminds me of my younger days, Hartley,' he was kind enough to say. 'As a poor hungry devil in Gray's Inn, I'd have made a little *Comedy of a Hat* out of it. The start's first rate, and that's always half the battle.'

I tried to smile sympathetically. I felt I owed him that much civility; besides, his father and my grandfather had been very intimate. But my smile was strained. I was listening tensely for

the voice of Mr Abiathar Morris. The very worst thing of all that could happen would be his abrupt apparition behind me before the new hat had arrived. I knew perfectly well he would find it more than convenient to treat my conduct in the sequel as an attempt at deception, and a gross piece of impertinence into the bargain.

'Good-bye,' said Slater quietly, and he slipped off down the street.

He slipped from my mind also. I had nothing in the world to think of just then but Tom Bowers and the hansom. Even the Bank was forgotten, though I am the most methodical of men and accustomed to re-enter it punctually every working afternoon at about one minute past two o'clock.

A step behind me positively disturbed my nerves. The laugh that came with it might have proceeded from Gladys's father in a condition of dangerously repressed wrath. But it was only young Henshaw, the Foreign Office clerk.

'He's still snoring; can't you hear him out here? Well, I'm surprised. I am really. He's emptied the room,' said young Henshaw flippantly.

'Oh, has he? Thanks very much,' I said.

It occurred to me to return to the hall and make of the hall-porter a deeper confederate still.

'Williams,' I said, cavernously I fear—my agitations were worth the word at any rate—'if you see any one about to enter the smoking-room do your best to stop him. Or at least warn him not to wake Mr Morris.'

The hall-porter turned his well-trained eyes towards the clock.

'Oh, never mind that,' I said. 'I'll make it worth your while, even if he is late. But I don't think he will be.'

'Very good, sir,' said the man.

It seemed to me that Tom Bowers would never return. I am aware that my anxiety must seem extremely ridiculous to the cold-blooded reader who has either long passed or not yet reached his 'Gladys' days. It *was* ridiculous; granted completely. But at the time I had a vague fancy that even Williams realised the tremendousness of the situation. Slater did, of course. The tension had been too much for him, and he had gone away.

At last!

The hansom came down the street like the traditional wolf on the fold. Forth jumped Tom Bowers, with excitement beaming even from his sufficiently bright nose, hat-box in hand, and Mr Morris's ruin on his head.

'Quick, man,' I whispered. I tore off the lid of the box, dropped this at the feet of the hall-porter, turned the handle of the smoking-room door, and—all was well.

He still looked like a sleeping and snoring cameo. I put the hat on the chair and retreated. The revulsion of feeling was so keen in its effects

that I could not smile all at once to answer the hall-porter's smile. I murmured something or other, paid the cabman, who was at once requested by Williams to stay for Mr Morris, glanced about for my humble ally, wondered why he had vanished so delicately, and hurried away to the Bank.

Doubtless, Tom Bowers was, in his own opinion, adequately rewarded for his services by the crushed hat itself.

All was well.

Mr Evans the cashier was slightly surprised at my unpunctuality. He did not, of course, say so; he looked it. But little I cared for that. With a light heart, I went on into my private office and prepared to cool down gradually into an automaton until four o'clock.

If Mr Morris drove up in the course of the next few minutes, and asked for me, I should of course show a reasonable amount of pleasure in seeing him. If he did not ask for me, but did his business with the second cashier, so much the better. I did not particularly want to face the old gentleman in *tête-à-tête* yet.

It was exactly a quarter to three when Gladys's father was again brought forcibly before my mind.

Wilberforce, the second cashier, then came to me with a letter bearing the business stamp of Morris Limited. It was addressed to me, in Mr Morris's handwriting, and was as follows:

'DEAR MR HARTLEY,—Pray oblige me by cashing the enclosed cheque for £10,000 (ten thousand) in £100 notes, and sealing the parcel for bearer. —Yours faithfully,

'ABIATHAR MORRIS.'

I feel rather ashamed to confess that my first impulse on reading this commonplace epistle was one of joy. The little affair of the hat and my part in it were obviously not disclosed to him. But the very necessary instinct of professional caution then rose uppermost.

'Who brought this?' I asked.

'One of Mr Morris's lads—young Bowers, I think,' was the reply.

The unfortunate Tom had a young son in the office from which he had fallen. Mr Morris's clerks often brought cheques to be credited to his account or to be cashed; the latter sometimes for considerable sums.

I gave the letter to Wilberforce, who raised his eyebrows when he had read it.

'Ten thousand!' he exclaimed.

But the earlier exhilaration in reaction returned upon me.

'You must cash it, of course, and obey his instructions,' I said. 'Mr Morris may be imprudent, but we mustn't risk offending him. Besides,' I added, 'I was aware that he was sending or coming for some such purpose.'

It did not occur to me to ask why he had not driven up in the cab that had been kept for him at the club. One's engagements often get inter-

fered with. Some engagements, indeed, seem made only to be broken.

'Very well, sir,' said Wilberforce. He left the room and duly delivered the sealed parcel to the boy.

Probably I should have thought no more about the cheque had not Mr Evans by-and-by made a point of mentioning it. He came to me, in fact, to discuss it.

'Rather strange of Mr Morris to send for such an amount?' he observed, as he scrutinised the signature of the cheque.

'Perhaps so,' I assented.

'It is undoubtedly in his handwriting,' Mr Evans proceeded, with what appeared to be reluctance. 'I suppose you didn't see him by chance at the club to-day?'

'I did happen to do so,' I said. 'We exchanged no words, however. We had not the opportunity.'

Then I also examined the cheque again. I felt no inclination to tell my colleague that I had only seen Mr Morris asleep. But an idea flashed to me. The cheque would be a highly precious pretext for calling at Wellington House that evening after Mr Morris's dinner hour. He would appreciate the prudence which prompted the inquiry, and I should see Gladys.

We both lived at Brondesbury; and although as a rule I preferred to stay in more lively parts of the Metropolis until a time most unsuitable for social calls in the suburbs, this evening I would not do so.

'I'll see Mr Morris himself to-night,' I said, ending the colloquy.

The hours that intervened before I found myself at the rather stately door of Wellington House, Mr Morris's lavish residence, were on the whole comfortable hours. I had hit upon a hopeful vein in my temperament, and I worked it for all it was worth. Why should Gladys's father continue to 'hum!' and 'ha!' if this very evening I pressed my desires upon him? The manager of a branch of the Bank of England might surely regard himself as no contemptible candidate for the hand of a rich merchant's daughter, assuming, as I knew I might assume, that the lady herself favoured him.

Another thing. Mr Morris, in that letter accompanying his cheque, had addressed me as 'Dear Mr Hartley.' The agreeable change from the stereotyped 'Dear Sir' had not made its proper mark on me at the time. Now, the more I reflected about it the more I liked it.

I rang the bell with a sense of invigorating confidence.

'Mr Morris finished dinner?' I asked, with a calmness that would have delighted me if I could have viewed it impersonally.

'My master is—much hupset, sir,' replied the man dolefully.

'Upset! Why, what's the matter?' Was it

possible that he had discovered the change of hats?

'He came home early, sir—not quite himself; and— Perhaps you would like to see Miss Morris?'

Should I or should I not? My heart again made a coward of me. I turned to go, with some ordinary expressions of sympathy; then hesitated, and—saw Gladys herself cross the hall.

'Who is it, Benson?' she called out, and the next moment her hand was towards me, there was the welcome I loved in her eyes, and she was saying, 'Oh, I am so glad! Papa does so want to see you.'

'See—me?' I stammered, holding the dear hand as if it were already one of the anchors of my life.

'Yes. Come into the drawing-room, and I will tell you about it. I was so terrified at first, but the doctor says his constitution is one that is likely to be disturbed violently by small fanciful causes. It was a kind of stroke, David. You must do your very best to soothe him.'

'A kind of stroke!'

My brow became dewy with horror. Even Gladys seemed concerned about my appearance. The one faint wrinkle of anxiety which I had

already noticed on her sweet face took to itself a partner.

'It is not serious yet,' she said. 'I think I will go and tell him you are here first of all, David. I'm sure he is worrying all the time.'

She moved to the door.

'Stop, Gladys!' I cried, 'just one moment. It isn't all about a—trumpety hat, is it?'

She looked at me gravely, with reproach in her dear eyes.

'How could you know?' she said. 'Yes, it is all because of papa's curious habit of carrying things in his hat.'

'Habit of carrying things in his hat!' What did she mean?

She seemed surprised at my consternation, as before at my reference to the hat.

'Sit down for a minute or two,' she said suddenly, 'and you shall hear about it. Perhaps it would be wisest that I should tell you, and not poor papa. Then you could start right away at consoling him. Do you see, dear?'

I saw nothing except that Gladys was her own beautiful self, and that I might be on the threshold of something dreadful. I sat down to listen, with a sad and foreboding heart. My forebodings soon had justification.

## AVALANCHES OF THE ALPS.

By G. GALE THOMAS.

HERE is, perhaps, no one of the forces at work in the Alps, where Nature displays her grandest handiwork, that appeals more to the imagination than the avalanche, which, while seeming to rush its undisciplined course athwart all law, yet takes its appointed place and does its necessary work in Nature's unwearying cycle.

If the winter snows that clothe the upper pastures were left to melt away gradually, like the white mantle of the plains, much would remain until late in the summer; but under the combined action of the sun and the *fohn* (the warm wind from the south) the early spring re-echoes with the thunder of their descent into the valleys below, leaving the soil to be quickly warmed into life. In the descent many seeds of Alpine plants are swept down to germinate later in the warm valleys.

Smaller falls are often caused in winter by the accumulation of snow on rocky corners, owing to the wind, until at length the mass becomes too great and the *windbrett* falls. When above a highway, disaster may result, as in one instance where thirteen people in post-sledges were swept away on the Bernardino.

The worst snow-avalanches generally occur in winter, but continual small avalanches are an

accompaniment of the early spring in the Alps. 'The heights thunder incessantly,' wrote Von Tschudi, the Swiss naturalist; 'veils wave on all sides over the rocky terraces, and seem to vanish in the air, when their paths are concealed, as is generally the case, by an intervening projection. The native of the Alpine valleys can scarcely ever accustom himself to witness the arrival of spring without these silver streamers, the joyous ensign of her approach in the Fatherland.'

Amidst the tremendous forces of Nature, whose war-song thunders down the valleys day after day, the peasants live on undisturbed in their calm until some catastrophe brings destruction to their very threshold. It is true that some measure of precaution is taken; the best—to avoid the places that lie in the ordinary tracks of the descending foe.

Formerly, the useful method of keeping 'preserved' woods (*bannwälder*) as a protection against the oncoming enemy was maintained, but has been unwisely neglected. On the Austrian side great wooden barricades line the railway at likely spots, to shield it from the snow-avalanches; and on most of the mountain highways galleries have been cut under the edge of the rock, or inclined wooden roofs built over the road in continuation of the mountain slope. These gloomy galleries afford a safe halting-place for the drivers

of the sledges which every winter bring the rosy vintage from the smiling Valtelline up over the heights of the Bernina Pass into the Engadine, as they have for the past hundred years.

In the Valais district a practice prevailed of driving stakes down through the hard snow on the dangerous slopes so as to ensure that there should be no general slide of its whole area. Another plan adopted on the high pastures in some parts is that of leaving portions of the grass unmown here and there, so that when the snow has gathered around it the long stalks are frozen in and prevent the devastating slide of the whole mass in one solid body. In the Grisons, provision has been made in some dangerous places against expected snow-avalanches by placing behind the exposed building two high walls in the shape of a  $\Lambda$ , with the apex pointing up the slope. The descending snow is thus divided into two streams, which pass away harmlessly on both sides.

In most cases, however, little precaution is taken against falls occurring out of their ordinary course; and lamentable loss of life results. In 1885, in the valleys of Piedmont, there were many falls, burying whole hamlets under forty feet of snow; and in the provinces of Turin and Cuneo over two hundred persons perished. Mr Edward Whymper relates that in one *châlet* there were a man and wife, a boy, and a baby. The man was killed outright by the fall of a beam, and the wife was fixed down immovable by another. The boy cried for assistance for thirty-six hours, and then died. The woman prolonged her life by catching a fowl, plucking it, and eating it raw, using the feathers to put under her neck, which was in contact with the snow. Ultimately she and the baby were rescued.

In 1888, over twelve hundred buildings were destroyed and more than fifty persons killed by avalanches in the Tyrol; while, in the same year in the upper Italian valleys, a hundred lives were lost from the same cause.

Many curious escapes have happened in the case of snow-avalanches. One is on record of a woman in the valley of Saas, near Zermatt, who, in the year 1741, was overwhelmed by an avalanche and remained buried in the snow for one hundred hours, hearing quite plainly the voices of the people who were digging down to reach her, but unable to make her own voice heard.

In February last three travellers crossing the Great St Bernard were hurled to the ground by the rush of wind caused by an avalanche near them. The monks of the Hospice of Fontintès telephoned to San Rhemy that the travellers had left the hospice; and, as a snowstorm came on, some men of San Rhemy—whose inhabitants, by an ancient ordinance of the Counts of Savoy, are bound, in lieu of military service, to succour travellers at all seasons—set out to their relief. They found the travellers lying huddled together

under a rock, and carried them back to Fontintès in a state of extreme exhaustion.

Tremendous avalanches have occurred when, from the constant freezing and thawing of the water accumulated in fissures of the mountains great portions of their mass eventually break off and overwhelm the valleys beneath. On the 2nd September 1806, the western side of the Rossberg, a mountain near the Rigi, fell away and buried four villages with over four hundred and fifty inhabitants. The traces of the disaster can still be seen, and upon the site the railway station of Arth-Goldau now stands.

In the year 1618, in the fall of Conto, the town of Pleurs and the village of Scilano were buried, with over two thousand inhabitants, only three escaping. Other notable catastrophes of the same character were the falls of the Diablerets in the Valais in 1714 and in 1749. Von Tschudi relates that, in the earlier of these falls, a cowherd was buried in a most extraordinary manner. A large mass of rock rested on the roof of his hut, thus protecting it from being crushed by the ruins which subsequently fell, covering it to a height of some hundred feet. For months the buried man remained there, living on cheese, but deprived of fresh air and light, and in constant fear of destruction. He groped about day by day in the darkness amongst the enormous mass of ruins which surrounded his prison. At length he followed the track of some running water, and after weeks of labour tunnelled his way through to daylight. Exhausted by hunger, toil, and the constant fear of death, half-naked, and grazed by the rocks, he knocked at the door of his house in the valley, and terrified his wife and children by the apparition which they at first imagined to be his ghost, until the pastor of the parish was called in to put matters right.

Warnings of the possibility of mountain slips have been given by movements in the summit of the Felsberg, and early last year the inhabitants of part of the Val de Travers in the Jura were alarmed by slight movements of a mountain above Noiraigue, from the side of which large quantities of cement had been tunnelled for years.

Ice-avalanches are perhaps less known; but they have frequently wrought terrible havoc. Great balls of ice often form on rocky sides, and, breaking off with a change of temperature, shoot down with detonations like cannon-balls. When they form above a highroad the danger is serious, and in the Grisons they have sometimes been removed by shooting them off with rifle-bullets.

The great flakes of ice which break off from time to time at the lower extremities of glaciers as they advance, or from the pressure caused by the freezing of water that has trickled into the crevices behind, crash down over the rocky precipices like mighty artillery. Sometimes a whole mass of glacier gives way at the same moment, and crushes everything in its downward

path. The village of Randa, in the Nicolai Thal, below Zermatt, has suffered four times by falls from the Weisshorn Glacier that hangs above it like a great dragon on the side of the precipitous Weisshorn. In 1636, the greater part of the glacier fell and destroyed the village, which was subsequently rebuilt, to suffer again from similar falls twice in the following century. Again, on the morning of the 29th December 1819, an enormous mass of glacier fell with a fearful thundering noise, accompanied by a blast of air which destroyed houses that were untouched by the ice.

In Savoy, the previous year had witnessed another catastrophe caused by a glacier. The Gietroz Glacier had moved forward into the valley of the Bagne, filling it with ice, so as to dam up the river Dranse. The lake thus formed afterwards burst its banks and swept down the valley, devastating everything in its way.

A more terrible accident happened in the year 1892, farther east in Savoy, on the road between Geneva and Chamonix. In the night of the 11th July, a sub-glacial lake, beneath the glacier of Tête Rousse, burst away and swept down with a tremendous mass of ice, rock, and débris into the valley of Bionnassay, carrying away in its course half the village of Bionnay. Then it joined the course of the Bon Nant torrent and made its way into the narrow gorge of Crépin. From the lower end of this it issued with terrible violence and descended to the Baths of St Gervais, the hotel of which formed three sides of a square at the mouth of the valley. The terrified visitors were awakened by a fearful cannonade of the mass brought down with irresistible force, and in a few moments the place was battered to ruins and swept away, all but the left wing. The hotel was full of visitors from all parts of the world, and it could never be ascertained how many perished, although the number is believed to have exceeded one hundred and twenty. A new hotel now stands on the fatal site, and the curious traveller may see on the roof of a building near at hand, which lay out of the track of the débris, the marks of the level to which the muddy flood rose.

The most recent catastrophe of the kind was that which occurred on the Gemmi Pass in 1895. On the morning of Wednesday, 11th September, a great portion of the glacier on the summit of the Altels, a mountain nearly twelve thousand feet high, fell away and rushed bodily over a precipice, shooting out in a lateral direction some three-quarters of a mile in mid-air over the forest by the hamlet of Spitalmatte. Some of the blocks of ice were carried to a distance of three miles from the starting-point. But the strangest part of the

occurrence was the effect of the fearful rush of air that accompanied the avalanche. The forest below, although entirely untouched by the mass, was levelled flat in one fell swoop by the awful blast, the great trees lying side by side in parallel lines. The houses of Spitalmatte were destroyed by the same blast of air, and many of the planks carried to a considerable distance. Six persons lost their lives, as well as nearly two hundred cattle, which were feeding on the pastures. The Gemmi road was blocked for a time by the débris, but was subsequently reopened. Mr Whympster, who visited the scene a few days after the fall, and has written an exhaustive account of its features, mentions a similar visitation at the same place, which he found recorded in the archives of Leukerbad in the following words:

'Let it be made known that in the year 1782, the 18th of the month of August, through a dreadful and terrible slip of a glacier, all the cattle which were on the Alp Wintereggen and in the part called Altematten were crushed and destroyed, even to the last cow. . . . The cattle of the Spitalmatte, which come out of the Doschen forest to take their midday meal, would have been likewise destroyed if the accident had happened half-an-hour later. For from the spring of the Spitalmatte to the Grechtalhalden neither man nor cattle could have escaped death; in fact, all this area as far up as the slopes of the mountain looks no longer like a pasture and is nothing but a heap of stones and ice. . . . The fright, the pain, and lamentations of those who suffered by this disaster can be imagined by all. For there was not only the loss of cattle but the death of human beings. Four persons leading two horses with products of the châteaux, going through old Spitalmatte to come back again, were victims of this dreadful slip, lost their lives, and were buried under the stones and ice. These unfortunates were Joseph Leuer . . . They were transported to Leukerbad, and given a Christian burial, amid the tears and sympathy of all who assisted. The bodies of the two horses were also found, but not a trace of the loads which they had carried. What a pitiful fate is that of Maria Catherine Leuer, the widow of the above-mentioned Joseph Leuer, who lost her husband, her two cows, her cheese, and butter. All she owned was on the Alp, and has been destroyed by the stones and the glacier! I have been instructed by the proprietors of the Alp of Wintereggen to tell these facts, to leave an eternal souvenir to posterity: I have tried to do so in the clearest and shortest manner; and to witness to the truth of my tale I sign—JOHANN JOSEPH LORETAN, Former Magistrate and Public Notary.'

## PRINCE ADRIAN OF ZELL.

By W. E. CULE.

## CHAPTER XI.—THE LAST OF MR BARROWS.

T was three days before the end came.

In a sense they were quiet days, but in another way they were days of tempest. It is possible that a man, even a man of no particular force of character, may so accustom himself to the idea of death that at last he feels little dread of it. Much to his surprise, Mr Barrows found himself contemplating it sometimes as a thing natural and inevitable, and even as a relief. His surprise arose from the fact that he had always regarded himself as one unstable of purpose and more than timorous in the face of danger. He found a certain pleasure in the discovery, a pleasure which he could scarcely have explained.

At other times, however, the horror of this calculated sacrifice, this evilly planned murder, seemed to overwhelm him, and to fill him with unutterable bitterness and resentment. He saw himself caught as a rat in a trap, and his action appeared the culminating point of folly. And the best thing he had to lean upon was a chance—a feeble chance which would probably come to nothing—that an old man, seven hundred miles away, would consider his ridiculous standard of honour satisfied. Nothing more absurd had ever been dreamed of.

Once, while in this mood, he walked to the railway station, some mile from the village, drawn, as if by a magnet, to look upon the means which could, if he so wished, take him out of this astounding situation. For a while he lingered about there idly; but when a train was signalled he saw himself in danger, and returned to Saint Claud in a rage of shame and self-accusation. Before he reached the village he met Philip Brode, who was taking a stroll in the same direction; and the sight of that sullen face completed the reaction. But Philip reported the incident to his father, and the Count smiled triumphantly.

Mr Barrows did not go to the station again. He saw that he must guard against such moods as this, and his best help in doing so was the thought that this sacrifice was for one who trusted him, and one whom he had asked to pray for him.

On the Tuesday evening the Brodes put their plan into operation, and told Hadfield that they would take a little pistol practice among the rocks about a quarter of a mile beyond the hotel.

'Shall we go?' asked Hadfield of his companion.

'There is no need for both of us to go,'

answered Mr Barrows. 'Go yourself. That will be quite as well.'

Hadfield went, not at all reluctantly. On his return at dusk he gave his report.

'It was not bad sport,' he said. 'Several people heard the firing, and came to look on. I tried a little myself, but of course I couldn't make any kind of show, even with an air-gun. The Count was first-rate; he made no end of hits, and that without any trouble at all. But as for his son—well, I must say he doesn't seem much of a hand at it. He is not as good a shot as his father by a long way. If he did hit anything in a duel it would be more of an accident than anything else!'

Mr Barrows smiled at his friend's simplicity.

'By the way,' continued Hadfield, 'I never asked you, are you anything of a shot yourself?'

'I'm afraid not. I haven't fired a pistol twice in my life.'

'No? By Jove! Hadn't you better try, then?'

'Why should I?' asked Mr Barrows. 'As you know, the whole thing is only a matter of form. Besides, in case of accident it would certainly be more natural if one of the party were a novice. People would be able to say, "It serves him right for playing with firearms."'

Hadfield laughed as he saw the force of this argument, which he did not succeed in shaking. He was relieved, however, to find that the Count received his explanations of his friend's absence with perfect courtesy and sympathy.

'After all,' said the old man, with irony which Hadfield did not see—'after all, Mr Barrows is perhaps right. It will be quite enough if he only comes here once.'

'Of course it will,' agreed Hadfield. 'Nothing more is required.'

'No,' said the Count dryly, 'nothing more.'

So the days marched slowly, all the harder to bear on account of the event that was coming. But the interval came to its end at last, for on Thursday evening the Count spoke. Friday was to be the day.

Hadfield, of course, agreed. 'We will arrange,' said the Count, 'to be out here to-morrow a little earlier, just before people go to the beach for the evening. When we come we shall have forgotten some trifle, and will send our attendant back to the hotel for it. During the half-hour of his absence, everything can be done. Will you speak to Mr Barrows?'

'Of course,' said Hadfield. 'I am sure, Count, that he will be quite agreeable to anything you suggest.'

The Count bowed smilingly. How confident this young man was! What would he say if he found his principal wanting when the time came?

'Very good, Mr Hadfield,' he said. 'I suggest, further, that we must not all come together, as that would indicate pre-arrangement. Let it be that you and Mr Barrows come first. We will follow almost immediately with the cases.'

'That is excellent,' was Hadfield's reply. 'I am sure there will be no difficulty.'

He spoke to Mr Barrows accordingly, and told him of the arrangement. Mr Barrows fell in with everything as suggested. He found with surprise that the definite fixture of the end gave him a feeling almost of relief. The last days had been painful ones, and it seemed good to be face to face with the conclusion of all.

The matter was thus settled. The two parties met at supper-time that night, just as they had met several times in the interval; and the Count, seated with his face towards Mr Barrows, chatted in his pleasantest humour. Hadfield liked him more and more; but Mr Barrows was quite as reserved as he had been at first.

Mr Barrows did not sleep well that night, and was out early; but he returned to meet Hadfield at breakfast. While he was waiting, sitting lazily in the hotel porch, he heard footsteps in the hall, and Count Brode came upon him suddenly.

The two men were alone. The Count glanced round, stopped, and bent over him as he sat.

'It is this evening, then.'

Mr Barrows looked his enemy in the face, but made no answer. The Count spoke again:

'It is not yet too late. I have no wish to have a life upon my hands.'

Still there was no answer. Count Brode turned back and went into the house.

Mr Barrows was strangely stirred, and felt his heart beating loudly. That brief interview had had a curious effect upon his resolution, but not a weakening effect. He shook his head.

'No,' he said to himself. 'You have given me my opportunity. Heaven help me to take it!'

He spent most of the day upon the sands. What he feared was a moral collapse, a return of that mood which he knew so well. Perhaps it did return, but even if it did he overcame it. At four he came back to the hotel to take an early tea with his second, and when that was over he took him up to his room.

'As you know, Hadfield,' he said, 'no sensible man takes a risk without making certain arrangements. Accidents are always possible, even in a duel. I have thought it wise to put some things in order.'

He produced two sealed envelopes. 'One,' he said, 'is addressed to yourself, as you see. This other, which bears no address at all, contains a telegram, which must be despatched at the earliest

possible moment afterwards. There must be no failure in this.'

Without being aware, he spoke so gravely that Hadfield was alarmed. Mr Barrows saw the look.

'Oh,' he said, smiling, 'don't be impressed. This is all for your guidance in an extreme case.'

'Then, of course,' cried Hadfield, 'when it is all over I shall give them back to you.'

Mr Barrows nodded carelessly. 'Now put them away,' he said a moment later, 'and let us be off.'

They took the winding path in the cliff, which led to the sands. At the foot a turn to the left would have taken them safely, inside the shelter of the cliff, around to the road leading to the railway station. If Mr Barrows felt temptation at that point it was sharp and short; for in three or four minutes they were clear of the cliff and crossing the sands towards the appointed place.

Mr Barrows knew that his enemy was watching that walk from one of the windows of the hotel. He would soon follow, to put the finish to this extraordinary business.

The rocks were scattered and irregular, and the drifting sand had made broad pathways between them. In one place they opened out into a kind of rude amphitheatre, with paths leading away in different directions. This was where the pistol practice had taken place, and where the duel was to be fought.

'It's an ideal spot,' said Hadfield. 'No one can see what goes on until he comes quite close. And, of course, we should keep a sharp lookout.'

Mr Barrows agreed that the spot was ideal for their purpose. It was something like a gigantic rat-trap. After examining the place he sat down upon a flat, smooth-faced piece of rock to wait.

'It will be half-an-hour at least,' said Hadfield. 'We can't expect them before that. What shall we do?'

He was somewhat excited, as was quite natural. For a few moments he stood discussing arrangements, but having all the discussion to himself. Then he became restless, and suggested a change.

'I think I'll go to the opening and keep a lookout. Then I can tell you when they're coming.'

Mr Barrows agreed with some relief. Though such a good fellow, Hadfield was not exactly tactful or sympathetic, and it would be well to be alone for a while. So Hadfield left the ground and mounted one of the scattered rocks outside, where he could enjoy a view of the sands up to the base of the cliff on which the hotel stood.

So far there was no one in sight—no one of the description he looked for. The sands they had crossed were clear, and even beyond, near the village, there were only two or three children playing at the waterside. He began

to whistle idly, but suddenly stopped. That was hardly the thing, after all, before a duel!

As no particular time had been fixed, they might have to wait an hour. He thought he would go back and speak to Barrows; so back he went, treading softly on the sand. But when he reached the place he saw that Mr Barrows was sitting in the same spot, with his face buried in his hands. Then it did occur to Hadfield that the man might really prefer to be alone. 'I won't disturb him,' he thought, 'until they're in sight.' So he returned to his perch and waited.

Still the way across the sands was deserted, and no one issued from under the cliff; but there were a few more children over yonder, and one or two elderly people among them.

Soon afterwards he thought that their plan would be interrupted. There was a pretty farmhouse in a field behind the beach a little farther down, and from this direction came an old gentleman, evidently a visitor. He walked slowly along above the rocks, as if he intended to locate himself somewhere among them; but this was not his purpose, for presently he skirted them and moved away down towards the sea. He was a careful old gentleman, for he wore a plentiful white handkerchief behind his straw hat to keep off the sun; and he carried a newspaper, neatly folded, under his arm. He held on his way down to the water's edge, where with infinite pains he selected a seat, spread one sheet of his newspaper upon it, and began to read the remainder. Hadfield watched all this with interest and with relief. The old gentleman would presently be startled, but he was quite three hundred yards away and quite harmless. His handkerchief and his newspaper made a large white blotch among the brown rocks.

Again he turned his eyes towards the hotel.

Mr Barrows, sitting with his face in his hands, had his last struggle with his weaker self. He tried to shut out the streaming sunshine, the voice of the sea. There was one clear issue which he tried to keep before him. His thoughts might wander, but he always brought them back to this: Restoration!

The end was near at last. To-day—in a few minutes—would come the close of that old life during which he had made an enemy of Count Brode; the end, too, of that quiet life after the Prince's death, the life that had seemed to suit him so well after his wanderings. That quiet existence, perhaps, had only been preparing him to answer this call, and fitting him to face it. He had faced it, so far.

It was not yet too late, for the open country was before him. But he shut out this idea, just as he tried to shut out the sunshine. He endeavoured, instead, to recall the face of the woman whom he had told so carelessly,

yet so earnestly, to pray for him. Had she done so?

It would not be long now. In a moment he would hear footsteps, voices. Then he would stand up.

At that point a deadly sickness seemed to rise up within him overpoweringly. It was the last wrench—the last agony.

Hadfield was growing impatient, for still the enemy delayed. This was inexcusable, for some one might take it into his head to approach the rocks at any moment. That, of course, would cause the postponement of the plan. He stared at the cliff, and the white-walled hotel above it, until his eyes became sore and strained. Then, at last, he gave an exclamation. Some one had appeared, and was coming straight over towards the rocks.

Only one; not two? But in a few moments he saw that this was not one of the Brodes at all. He strained his gaze again, and presently perceived who it was. It was one of the waiters at the 'Seine'—the submissive-looking person who was always in the dining-room.

He tried to guess what was happening. Perhaps they had been prevented from coming, and had sent this man with a note: perhaps they had only been delayed, and were sending their apologies before them.

The waiter came on, in the manner of one who has a message to deliver. Suddenly, however, he changed his course, and instead of making for Hadfield, turned towards the old gentleman sitting at the waterside—the one with the handkerchief. Hadfield, irritated and disappointed, watched with curious eyes.

The man reached the person with the handkerchief and addressed him; then he turned and went back towards the hotel. The old gentleman rose from his seat with a certain celerity, folded up the sheet he had been reading, and left the other on the rock. Then he began to make his way up the beach, so directing his steps that he must pass Hadfield. As he came nearer it was plain that he was neither so old nor so eccentric as he had appeared from a distance. He walked with decision, and his face was that of a man in his prime.

To Hadfield's surprise, he did not pass. Instead, he stopped and said something in French.

'Very sorry,' said Hadfield, 'I don't speak it.'

'Pardon, monsieur,' said the stranger pleasantly. 'I also speak English. Monsieur is waiting for some one?'

Hadfield could only assent in increased surprise. 'Monsieur is waiting, not for one, but for two?' said the man with the handkerchief, smiling. 'Doubtless he will be surprised to learn that they are not coming. Indeed, they are gone. They have left the place.'

This was news with a vengeance. 'The deuce they have!' ejaculated Hadfield.

'Precisely, monsieur. They waited until monsieur and his friend reached the place of appointment, and watched them doing so. Then the one who knew all found his nerve give way before what he could not understand, and he told the other. They left the hotel; but took the other road. They are on their way to Paris.'

The stranger's manner was entirely convincing. It was more—it was serene, omniscient.

Hadfield forgot to ask for explanations, but, leaping from his perch, rushed away towards the amphitheatre. He shouted his tidings:

'I say, Barrows, they're not coming—they won't meet you—they've taken the train for Paris!'

Those were the words that brought Mr Barrows out of his reverie. He raised his face, hearing but not understanding.

'They're gone—cleared out!' cried Hadfield. 'I've just heard. They've given it up.'

At that point he saw his friend's face, and stopped. There came to him at that moment the conviction that he had been playing a small part, not in a mere matter of form, but in a life-and-death struggle.

Before he could recover, some one advanced from behind him. It was the man who had given him the news.

'It is quite true,' he said. 'Perhaps you may guess the reason. Count Brode found himself face to face with a thing which it was not in his nature to comprehend, and because he could not comprehend he began to fear—to fear something behind. He is gone!'

Mr Barrows, half-awake, found the glorious sunshine about him again. 'Quinzell!' he said faintly.

'And I,' said Baron Quinzell gravely, 'was charged with a message from my master, only to be delivered if one should play out his part. This message is'—

There was no more to be said at that time. Mr Barrows, gradually realising the situation, saw the message in the man's face. The sunshine became darkened, and the voice of the sea rose all about him, hoarse and loud. Leaning against the rock, he slid down by it and sank upon the sand. Hadfield sprang to him, but Quinzell was first.

'Go,' said the Chancellor, 'and dip your handkerchief in the water.'

Hadfield did so, and was back immediately. Quinzell took the handkerchief.

'Restoration,' he said, 'is not an easy thing. It has to be paid for.'

'He must have suffered!' said Hadfield, with quick compunction. 'Look at his face. Poor Barrows!'

The Chancellor did not pause in his efforts; but he found time to speak. 'You must not say Barrows henceforth, monsieur. James Barrows died, I have learnt, in America, some twelve years ago. This is not the man.'

'Not the man?' cried the other, bewildered.

It was Quinzell's purpose to close the door behind him whom he had come to call back to another place. 'No,' he repeated briefly. 'This man was once, and is again to-day, Prince Adrian of Zell.'

## CLUBS I HAVE KNOWN.

By T. H. S. ESCOTT.

**POT-HOUSE** club has become a term of reproach; in a double sense the inn has proved the cradle of the foremost among the joint-stock palaces now so numerous in the West-end of London. The taste for French dishes was introduced by George IV.; that sovereign's favourite *chefs* subsequently managed and owned the premises in which both Grillion's and Watier's Club first met. The former of these still flourishes as an institution; it was founded by the grandfather of the late Sir Thomas Acland, during Lord Liverpool's administration in 1812, for promoting the social friendship between hostile political leaders. At first the rival chiefs did not meet at Grillion's. During the Victorian age, Lord Derby, Lord Palmerston, Lord John Russell, Mr Disraeli, and Mr Gladstone seldom failed to find each other at the Monday dinners.

An older society, like Grillion's, without a fixed home of its own, finding its ease in its

inn during the parliamentary session, is The Club. Boswell has told us all about the namesake with which in all details of management The Club remains to-day identical. As in the case of Grillion's, the members are restricted to forty; and by an unwritten rule three or four places are left vacant. Thus at the end of the nineteenth century, the list in both cases respectively amounted to thirty-five and thirty-six; in 1898 the oldest members of The Club were the Duc d'Aumale, Mr Gladstone, and the Duke of Argyll; the youngest still remain Mr Asquith, Professor Jebb, and Mr Pember. Grillion's archives, if any, are slender. Those of The Club belong to English history; they contain printed portraits of every distinguished member from Samuel Johnson downwards; each new-comer adds a picture of himself to the general stock.

The Garrick Club has long since outgrown its nomadic stage. Its first home was Probatt's Hotel, Covent Garden. Here, 13th February 1832,

was held its opening dinner, with the Duke of Sussex as chairman; the other founders were Sir Andrew Barnard, Lord Kinnaird, Mr Samuel James Arnold, Mr Francis Mills. Thackeray came in during the year of its birth; Dickens six years later, January 1837. When my working life in London began, the Garrick had already become the parent of a countless brood of smaller societies. The most considerable of these was the Arts Club, then domiciled in one of the most comfortable and picturesque houses in western London. Beneath that Hanover Square roof the handsomest and the most artistic presence belonged to the portrait-painter Field Talfourd: the face and the velvet coat were those of an Italian artist of the Middle Ages; the figure was developed by athletic exercise; the thoroughly classical features were framed in soft, plentiful silvery hair. Talfourd had the same grand manner which was the glory of Sir Joshua, and which was so amply reproduced by Frederick, Lord Leighton.

To the general public, the interior of the old Arts was well-known from the *Punch* pictures of Keene, Leech, and Tenniel, who, whenever they depicted a club scene, took as the background one of the rooms they knew so well in Hanover Square. The Arts used to be spoken of as a colony of the Garrick originating in the schism between the Dickens and Thackeray factions of the society in Covent Garden. Dickens's eldest son, during many years, was my fellow-member in the Hanover Square house. The only time I ever saw Dickens himself there was as the dinner-guest of his son and of Mr Marcus Stone the artist.

Another member of the Talfourd family, Frank, had associated himself with a literary and artistic haunt widely popular a generation and a half ago. The Arundel Club had, perhaps still has, its home at the bottom of Salisbury Street, Strand. Its chief room on the first floor commanded a long view of the Thames below London Bridge. Through the windows of that apartment the rays of the rising quite as often as those of the noonday or setting sun fell upon the members assembled in tobacco parlour. Dante Gabriel Rossetti, George Chapman, Frederick Sandys, among artists, used to enliven these premises with better talk than elsewhere fell from them. Every theatrical critic, with the genial and scholarlike Joseph Knight at the head of the number, and a rank and file of newspaper writers and actors, formed its regular frequenters. Of play-writers, the brilliant, cynical T. W. Robertson presented a striking contrast to the quiet and meditative William G. Wills. Within the Arundel walls, in 1865, was made the first prediction of Henry Irving's rise to supremacy on the stage. Mr W. S. Gilbert was entertaining as guests George Henry Lewes and the French dramatic critic who then represented the *Debats* in London; the new actor's

performance with Miss Herbert at the St James's in *Hunted Down* was mentioned. 'In another thirty years,' said the Frenchman, 'he will be at the head of the English stage.' 'In my opinion,' observed Lewes, 'he is there already.'

The Savage Club began during the sixties, as an offshoot from the Arundel—composed chiefly of men personally attached to the clever Brough brothers or to the younger Thomas Hood; its rise to eminence as the dinner and after-dinner haunt of celebrities and even of royalties could scarcely then have been foreseen. The latter-day development of the Savage Club as a fashionable haunt for 'guests of the evening' who like to witness the private relaxations of men more or less well known in public has brought the society into a prominence from the idea of which its Bohemian founders would have shrunk. The Savage, as it first met at a tavern in Maiden Lane, and afterwards at one in King Street, Covent Garden, was a protest against the incipient decorum of the Arundel and the established respectability of the Arts. Bohemia then existed as a well-defined area in the social map of London. To-day, that region, as a geographical fact, has disappeared. Bohemia has become a social fashion wherein all classes alike indulge—that unconstrained return to nature which reduces polite society in all its divisions to a common denominator.

'The pleasantest little bit of Bohemia in May-fair' is the definition given by Sir M. E. Grant-Duff of the Cosmopolitan Club, whose meetings are held at 45 Charles Street, Berkeley Square; 'the paradise of the intelligent foreigner' was its description by another member, A. W. Kinglake. The Cosmopolitan chiefly owed its corporate existence to H. A. Layard, our former ambassador at Constantinople, supported as he was by another diplomatist of distinction, Sir R. Morier. Of all institutions of the sort this is the most exclusive and difficult to enter; election is not by a committee, but by the whole body of members. The voting is done by papers sent through the post; and unsuccessful candidates are not blackballed; they are simply not elected. Probably almost every highly-placed member of the Civil Service, the list being headed by Sir Robert Herbert and Lord Welby, belong to this society. Lord Houghton and Anthony Trollope were both, as might have been expected, pillars of the place. Trollope himself never smoked; he liked being among those who did; it soothed his nerves, he said, and sent him to sleep; of the latter fact there could indeed be no doubt. In his most slumberous moments Trollope retained a certain good-natured, grumbling, perverse argumentativeness, thoroughly characteristic of the man. He had just returned from South Africa, and was talking one night to the late Lord Carnarvon, Lord Derby, Froude the historian, Lord Wolseley, and one or two others equally famous, on the

future of that country. In the midst of the discussion Trollope fell asleep; and after a quarter of an hour's doze he awoke, shaking himself together like the faithful, growling Newfoundland dog he so much resembled. Dissentient even in his unconsciousness, he spluttered forth, 'I utterly disagree with every one of you. What is it you said?'

The Cosmopolitan deserves to be described as an international force for good. De Tocqueville was at one time among its most regular habitués; and its English members, when visiting Paris, thanks to De Tocqueville's good offices, found themselves on the banks of the Seine free of a society which was a sort of projection across the Channel of that which they had left on the Thames. In these coteries, British or Continental, a leading spirit was Henry Reeve, registrar of the Privy Council, editor of Charles Greville's *Journal*, and long the editor of the *Edinburgh Review*. In the domain of foreign politics Mr Reeve's wide experience was appreciated by many of our statesmen.

'An offshoot of the Cosmopolitan Club' might describe the Breakfast Club; this society consisted of something less than a score of men of the first rank in home and foreign statesmanship, in diplomacy, in political science, and in thoughts upon current affairs generally. It grew out of a conversation at Sir James Lacaita's lodgings in Jermyn Street. Its first and most active members were Sir M. E. Grant-Duff, G. S. Venables (to be identified, later on, with the Warrington of *Pendennis*), Lord Arthur Russell, Lord Carlisle, Lord Acton, and Sir T. E. May, who subsequently became Lord Farnborough, the learned clerk of the House of Commons. The club dined alternately at each other's houses—a simple, substantial English breakfast of the Oxford kind, never later than ten A.M. No company so limited in numbers ever made contributions more remarkable to the public service. Grant-Duff himself was called from the Breakfast Club to the governorship of Madras; and among his fellow-breakfasters occupying like positions were Lord Dufferin, Indian Viceroy before he became ambassador at Constantinople; and Lord Reay, Governor of Bombay. As a guest the present writer often shared in these hospitalities. During the summer of 1880, York House, Twickenham, the traditional home of Orleanist refugees from France, was tenanted by Sir Mountstuart Grant-Duff. Among the then visitors to the Breakfast Club, Ernest Renan was perhaps most interesting, certainly not the least frequent; he it was who—delighted with the talk of Huxley and Sir John Lubbock (now Lord Avebury) on physical science, of Lord Dufferin and Lord Farnborough on the most enlightened methods of popular government—gratified his guests by a comparison, in his most charming literary style, between the Attic entertainments of the Break-

fast Club at Grant-Duff's and the parties, during the Civil War period, given by Lord Falkland at his house, Great Tew, in Oxfordshire.

To return to clubs, more famous but not more interesting than those just passed in review: the foundation of the Carlton has been related in several memoirs of the period. The best account seems that given by Thomas Raikes the diarist, who, however, does not even mention the name of the most effective labourer in the enterprise; this was one of the most useful instruments in and out of St Stephen's employed by Sir Robert Peel during his most trying times. 'Billy' Holmes, as to personal characteristics, belonged to the same type as that represented by Charles Greville and by Raikes himself. At the present time Conservatism enjoys the credit of being more successful than its opponents with its club arrangements. Such had not been the Conservative tradition under William IV. nor even during the earlier years of the Victorian era. When there first seemed a possibility of Sir Robert Peel forming a Conservative administration, loud was his complaint that he lacked support in society; especially did he lament the want of the club organisation in which his opponents were so strong. During the struggles over parliamentary reform, the one political coterie of any importance in London was Brooks's, the Whig Club in St James's Street. This had come into existence in 1764—not indeed before any Tory Club was known: the Tory White's had been established as early as 1736; Boodles', the favourite haunt of Tory squires, the child of White's, had begun to be popular in 1762. None of these places, however, as to social prestige or completeness of organisation, could compare with the traditional headquarters of social Whiggism. Brooks's did not occupy its present premises—designed, as they were, by Henry Holland the architect—till October 1778; the club itself began to exist at the earlier date already mentioned, in Pall Mall, on the exact spot occupied afterwards by the British Institution. All the Whig magnates assisted at its birth; the chief of these were the Duke of Grafton, the Duke of Portland, the Duke of Richmond, the Duke of Roxburgh, Lord Strathmore, Mr (after Lord) Crewe, known chiefly as the husband of Charles Fox's Mrs Crewe, who proposed a toast, 'True blue, and all of you.' As in the case of most English clubs of the past and of all Continental clubs in the present, the prevailing habit at Brooks's during its first years was that of gambling. The proprietor, who gave the place his name, was himself a wine merchant and a money-lender. Among the first batch of distinguished members, in addition to Fox himself, was his rival Pitt, who like his father, Chatham, never formally adopted the Tory label; other celebrities in the list were George Selwyn, Sheridan, David Hume, Edmund Gibbon, Sir Joshua

Reynolds, David Garrick, Horace Walpole, and Burke. So great was the distinction conferred by membership of Brooks's that, in 1822, John Campbell the lawyer, the future Lord Chancellor, wrote to his father, 'To belong to it is a feather in my cap; since we lost our estates in Angus my election at Brooks's is the greatest honour conferred on our house.' Brooks's through all its vicissitudes has maintained its exclusiveness; among the very few Radicals ever admitted to it was Daniel O'Connell. Lord Palmerston himself did not become free of the place till 1830, some time after he had first made his political mark.

In the matter of clubs, the crowning feat, without which there would, in the fullness of time, have been no Primrose League, was the foundation of the Junior Carlton during the sixties of the last century. The historic details of its establishment are as follows: The Tory Whip, already mentioned by the style of 'Billy' Holmes, had, of course, been a member of the House of Commons; his successor in the business of general organisation, Mr Markham Spofforth, did not belong to St Stephen's. He was simply the chief election-agent; he enjoyed the entire and exceptional confidence of the parliamentary leaders, and he was consulted on all important matters just as if he had been a Cabinet minister. At the period now mentioned he had completed, under Disraeli, the organisation of Toryism throughout the country. All the local agents had been appointed; many of these now wrote to Mr Spofforth desiring to become members of the Conservative or the Carlton Club. These applications amounted to nearly a hundred. The Carlton was full; the Conservative did not admit lawyers, to which profession the Conservative agents in the provinces naturally for the most part belonged. Colonel Taylor, M.P., was then the Conservative head Whip. It was a bright, fine day; Pall Mall seemed to want a new building to show off in the sunshine its proportions to perfection. So thought not only Mr Spofforth but his friend Colonel Taylor. The two at once went to Disraeli, then living at Grosvenor Gate; he applauded the idea, gave his name, and promised to commend the idea to Lord Derby, then the chief leader of the party. Many interviews with that statesman followed at his well-known house in St James's Square; and, after several refusals, he eventually sanctioned the scheme, on the understanding that, in his own words, 'the curtain was not to be drawn up till the house was full.' The local agents, now waiting for admission to some club, were next written to and invited to join a Junior Carlton. At first only three hundred applications for membership came in; after some consideration, the club project was practically continued; a Junior Carlton committee of eighteen prominent politicians was chosen, the new venture was advertised, and

within a month three thousand applications for membership came in. Within six months the Junior Carlton Club had become as great a political force as the Primrose League boasts itself to be to-day.

The general lines on which the Conservative Whip, Mr Holmes, urged the administration of the Carlton Club showed an enlightenment and a morality much in advance of his day. The genius of Brooks's, like that of Whiggism generally, had always been exclusive. It was, for instance, an original rule of the society frequented by Charles Fox that mere candidature for any other club should involve the resignation of membership of Brooks's. Within a generation of its being started the Carlton had become to Conservatism far more than Brooks's had ever been to the other side. The Reform Club itself has perpetuated to the disadvantage of its political principles something of the narrow traditions of the older Whig resort. It has expected, if it has not exacted, from candidates an adherence to certain political formulas of which the Carlton has known nothing. Originally Mr W. H. Smith, who subsequently became member for Westminster and leader of the House of Commons, applied for admission to the Reform Club. He was not welcomed there; but the Carlton managers at once invited him to their premises. The incident determined the course of his future career. The wise toleration of the social headquarters of Conservatism was shown in the fact that, long after his sympathies with Toryism had come to an end, Mr Gladstone's name remained on the books of the club. Between 1876 and 1878 the then Lord Hartington was titular leader of the Liberal party, an extraordinary meeting of which was summoned to the Reform Club. The chief so rarely entered the place that the club porter did not recognise him when upon this occasion he visited it, and wanted to know whether his lordship was a member. On the other hand, the Carlton, in a less degree the Junior Carlton too, has always been the resort equally of the leaders and the rank-and-file of the party. That is a position never occupied by Brooks's in the past or by any successor of Brooks's to-day.

The club came into being as the product of the coffee-house or tavern meetings of a very much earlier day, so far back, indeed, as the introduction of coffee itself in the seventeenth century. The earliest of the joint-stock caravanserais, that to-day line Pall Mall and St James's, is the United Service, formed when the conclusion of the peace in 1815 filled London with retired officers, to whom economy was a consideration. The club, during its coffee-house stage, had sometimes been regarded as a haunt of profligate extravagance. Very early in the nineteenth century it began to discharge the social function it still performs: that of a co-operative home for gentlemen of moderate means.

## ELECTRICITY: FIRE RISKS AND HOW TO AVOID THEM.

By A. T. STEWART, A.I.E.E.

ALTHOUGH, under certain conditions, there are risks of fire in the use of electricity—risks that do not occur in the use of gas and oil—it must not be assumed that electricity is to be condemned as specially hazardous.

An authority on fire risks has stated that the electric light is the safest of illuminants when the work of installation has been properly executed under the supervision of an efficient inspector. For example, in ignorance of the dangers incurred by the adoption of improper materials, the user may sanction the antiquated wood-casing instead of the more expensive but safer tubing; and, after a time, when the casing is thought unsightly, pictures or other decorations are hung on it by nails. These nails, piercing the wires, may fuse them and ignite the wood; and this, going on for some time unobserved, ultimately causes a disastrous, costly fire. Many of the faults complained of are, however, the result of improper installation due to the scope permitted to unscrupulous contractors for reducing the cost by using inferior material and by 'scamping' the workmanship; and thus, in many cases, the variation in the prices quoted by contractors is accounted for.

It is about sixteen years since the insurance companies first took electricity into consideration as a possibly hazardous element in estimating their risks; and to the inspection of the companies and the rules some of them have laid down is to be attributed our comparative immunity from disaster. Of course the inspector for the insurance company has no authority to order the removal or improvement of faulty installations; he can only recommend the suspension of the policy until everything is satisfactory, or he may advise an increase of the premium. It must, however, be admitted that the supervision of the companies has, on the whole, been very beneficial.

Two causes for the occurrence of fire by means of electricity may be stated. It is well known that resistance causes heat, and that the effect of the heat is limited and controlled by the resistance offered. It is generally acknowledged that electricity flows along a conductor. The better to comprehend this, let us take as example water flowing through a pipe; if the water meets with an obstruction (resistance) the pipe is burst and the water escapes. A breakage or fault in an electric conductor is analogous; but it is not so easily detected. Suppose that a joint in an electric conductor is badly made: the joint offers resistance to the flow of the current, consequently heat is generated there. In most cases the heat is very gradual, but inevitable; and when the rubber insu-

lation is melted the wire is exposed, and fire may break out at any moment. Another very frequent cause of danger is the use of conductors too small for the work they have to perform; then they are always more or less heated. Conductors may be laid under the flooring of an attic alongside the bell-wires; the latter rubbing against them and cutting through to the copper wire naturally cause leakage. An endless cause of trouble is the running of insulated conductors without protection through brick walls and under concrete foundations. There is no protective against the danger incurred by permitting bad joints; they must not be tolerated. If a contractor will expend a little more time and cable he can easily prevent the faulty joint. The writer knows of an installation of over four hundred and ninety-five lamps and three hundred and seventy switches with only seven joints.

As a protection, safety-fuses are used—thin strips of tin or other easily fusible lead alloy wires—which melt and volatilise when an excessive current is passed through, and so automatically cause a break in the circuit, disrupting the current. The fuse, however, is no protection in the case of development of heat at a bad joint, and only very seldom is it useful in a case of leakage from one wire to another; it merely prevents an excessive flow, but not a flow along unauthorised paths or over improper obstructions. The fuse, although a device for safety, should be carefully guarded; but the necessity for enclosing it entirely in a non-combustible case is not generally known. The reason is that when a fuse blows it invariably scatters molten lead, which may cause damage. Another risk in connection with the fuse is that when one goes—which may happen frequently or perhaps only once in a lifetime—it may quite possibly occur that the first thing that comes to hand is inserted as a substitute, wire such as is used on aerated-water bottles being frequently discovered in use. It should be a rule that no person should interfere with a fuse unless he is qualified and has authority to do so. Fuses should always be placed in an accessible place. Every section of six lights should have a fuse, and no more than six must be controlled by one fuse, except the main one.

In every electrical path or circuit we have a pressure constantly striving to break through the insulating covering. It is evident, therefore, that only by entrusting the work to a thoroughly reliable contractor can safety and efficiency be secured. The following suggestion, taken from the rules of American underwriters, is commended to the notice of contractors generally:

'In all electrical work, conductors, however well insulated, should always be treated as bare, to the end that under no conditions, existing or likely to exist, can a grounding or short-circuit occur'—that is, electricity getting from one wire to another—'and so that all leakage from conductor to conductor or between conductor and ground may be reduced to a minimum.' Whenever conductors pass through a wall or partition or beams of any description, there must be special precautions for protection of the wires—for example, by using the waterproof and non-combustible tubes specially manufactured for the purpose. The wires should never come in contact with the gas or water-pipes; they should be kept at least two and a half inches apart. The conductors, unless they are protected by watertight

tubing, should never be laid in plaster or cement of any kind; and it is preferable, though not essential, that each conductor should be in a separate tube.

Carelessness in the use of flexible cord has been the cause of many fires in shop-windows, caused by pinning handkerchiefs and other flimsy materials on the cords, so that, when the lights are switched on, short circuits pass through the pins and the goods take fire.

The registration or licensing of electrical workers—just as the plumber is now registered—would probably be a step in the right direction. There appears to be a necessity for similar regulations as to electrical workers and the materials used, and that the work should be under the supervision of a thoroughly competent man.

## A NIGHT OFF LEWIS.

T was autumn, and the day had fallen early in the afternoon. The plunging gray waves of the Atlantic were dimly seen from the windows through deluges of rain. Dinner was just over, and two men drew their chairs near the peat-fire, lit their pipes, and began that endless fishing-chat which is so dear to all anglers. The western coasts of Lewis are not ideally beautiful even in sunshine. Long black reefs, the haunt of cormorants, gulls, and many other sea-birds, run out everywhere into the sea. Bogs and heath extend everywhere; lofty mountains in the distance, half smothered in mist, close the view. A shepherd or an occasional keeper is seen near a herd of black cattle or among countless sheep scattered over the foreground; but there is little or no picturesqueness, no tree, no prospect to charm a southern eye.

'Never was such a rainy climate,' observed one of the fishers. 'I had not a dry rag on me when I reached the farm here. You, who have been fishing all the morning, must have felt the same.' He laughed at a huge pea-jacket in which he was enveloped, and at the legs of his trousers (borrowed like the coat from the goodwife, whose husband was among the sheep), turned up at least half-a-yard, as the speaker was a very little man and the farmer a colossus.

'I also got a jolly ducking,' replied the other man; 'but I am used to the Lewis. It is not a district to be trifled with. I will tell you a story in point.

'When I was last here, more than twenty years ago, I nearly lost my life. I had been out several days fishing with a gillie—out there where you see at present those sheets of foam. One day, however, the gillie had to attend a funeral at Stornoway, so I went out again alone. The farm-people could easily see me from the house here,

and it was a lovely September day. Soon getting dissatisfied with fishing there, I rambled round to the back of the house, where the ground rises a little and hides the sea. There I found a creek with sea-trout passing upwards and rising in a very tempting fashion. I could not throw close to them; but in an evil hour I spied a small boat fastened to a rock, which I gladly undid, jumped in, and began fishing. Soon I rowed out to the opposite rocks—some thirty yards across but a quarter of a mile nearer the sea—landed, dragged the boat up the shingle, but neglected to fasten her with the painter, and went on eagerly fishing towards the sea. Presently, hearing a grating sound, I looked back and saw the boat slipping off the rocks as the tide rose. I instantly understood the situation, and rushed back; but it was too late. The boat was floating down, and the tide was beginning to ruffle and flow out of the creek with greater swiftness every moment. I must rush in, I saw, as the boat passed. This I did, but it was just out of my reach. Quick as thought I realised that I must capture the boat, or I might be swept off the island on which I stood, or otherwise I was liable to be starved to death, as the farm probably possessed but one boat; therefore I dashed in and at once felt the power of the current running out with great velocity. I soon reached the boat and crawled in, when to my horror I found but one oar, the other one being left on the beach. One oar was useless in that fierce current.

'I sat down, squeezed the sea-water out of my things, and reviewed the situation. It was decidedly black. I was at the mercy of the sea. It was extremely unlikely that I should be picked up. I should probably drift out with the tide; and in another six hours I might, or I might not, drift back, but whether to the rocks I had just left or to another equally inhospitable island

who could tell? I remember thinking even then how young salmon go down to the sea from the river in which they have been bred; but who knows whether they return to it?

'It was now verging towards sunset, and dark fringes gathered in the east, lit up one by one by the dying luminary. I hoisted my shirt on the oar, but not a sail specked the sea around me. I might as well have been a castaway in the tropics hundreds of miles from land; yet I was in sight of the long shadowy reefs of my native land, and was even now suffering acutely from hunger and thirst. I had left my rod and tackle on the beach; but there were several trout in the stern of the boat, which, however, I had no means of cooking, and determined not to eat raw until the worst extremity. Solemnly fell night, and I was thankful to resume my shirt for its proper purpose. The waves were not high, and there was no wind; so I made up my mind to wait as patiently as I could till I found the boat moving homewards, when I resolved to aid its course to any land it neared by means of my one oar. Then the stars came out and looked down on me pitilessly.

'Cold as the night air was, I dozed fitfully; but suddenly woke with the sensation that I was being run down. Sure enough, some hundred yards off I saw the revenue cutter, which so frequently comes to guard these waters, crowded with sail and actually bearing down towards me. I was saved! I waved my shirt and shouted and splashed the water with the oar, but to no purpose. The watch was lax, the sails hid me, and the cutter swept on. I watched its retreating form and then flung myself on the bottom of the boat in utter despair. All the night through I had heard the screams of sea-gulls, the lapping of the waves against the boat, even the wash of breakers on the rocks. I did not trouble about any of them now, such was my miserable condition.

'With the risen sun came the love of life, and I once more considered what could be done. I determined to work the boat with its one oar to the rocks, and then in all probability I could let her drift upon the breakers and at least have a swim for dear life. While thus engaged I felt the tide beginning to run very strongly towards land, and I kept her where it set in most strongly, aiding the current with the oar. My delight was extreme when I found at length that I was not two hundred yards from the reefs. On we floated, and now made a narrow passage or 'voe' running up into the land. I began now to see safety, and suffered the tide to run me in farther and farther. At length, to my joy, I saw the chimneys of the old farm; but my troubles were not yet over. Some of the long reefs were mere gray rocks with no vegetation, others were green with heather and bog-plants. I drove the boat on one of these latter, rightly

conjecturing that they were mostly connected with the land. I dashed across it and found it was only an island at high water (which it then was), and the tide was beginning to run out again. I could not venture on another night at sea. At once I plunged in again, swam as strongly as I could; but only just landed at the end of the reef, where a miss of ten yards would have carried me out to sea without a boat, and I should speedily have perished. The rest was easy. Wet, cold, famished with hunger and thirst I made my way here to find the good folk had quite given me up; and, whereas I had left the house in front, they never deemed it necessary to see whether the boat at the back was missing.

'You may imagine that I am careful to play no more tricks when I am here; these hyperborean islands do not permit trifling with them.'

'So it seems,' said his companion. 'I do not envy you that tide-borne trip. It is something to dream of, a veritable nightmare. But it is late,' and he yawned sympathetically with his assertion; 'my pipe is out, and what say you to bed? To-morrow for the wonderful Grimersta river, where a friend once killed thirty-four salmon in a single day and a companion obtained fifty-six.'

'Is that true?'

'Absolutely; and when the fish would not run up because of a drought several men with spades were summoned, who made a mimic "spate," of which the salmon at once took advantage. This shows how much there is to learn yet in the art of fishing, and justifies the enormous annual output of books on angling. Good night!'

#### THE HEATHER-FLOWER.

THE swing of the heather's beneath my feet:  
Oh, the heather-flower so red!  
The westerly wind is warm and sweet,  
And far below me the waters meet  
That rise on the mountain-head.

No gray mists mantle the steep hillside:  
Oh, the heather-flower is red!  
All day I will wander the moorland wide,  
Where the blackcock calls, and at eventide  
The heather shall be my bed.

And the rocky fells are wild and stern,  
But the heather-flower is red;  
The honeysuckle and maiden-fern  
And foxglove grow by the winding burn,  
All drenched with the dew's night-shed.

Oh, bonny the hills where the ash-tree grows,  
Where the heather-flower is red!  
And in summer shine, or in winter snows,  
Or in autumn fall when the drooping rose  
Sinks down to the dank earth dead.

'Tis ever the land I love the best,  
The land of the heather red.  
So I'll wander now on the rolling crest  
Of the lonely moor, till into the west  
The feet of the day have fled.

## SIXTH SERIES.

GEORGE ROMNEY.

By Sir HERBERT MAXWELL, Bart., M.P.

THE Fine Arts being the earliest outcome, as they remain the consummate product, of civilisation, it is no matter for surprise that their literature should be more abundant than that upon any other subject, always excepting controversial theology, which is older than civilisation. For thousands of years men have argued, dogmatised, quarrelled, speculated, theorised, and formulated rules about them; yet here we are, on the morning of the twentieth century, as far as ever from agreement upon first principles. So wisely was it said by men of old, *De gustibus non est disputandum*.

In regard to none of the fine arts is this flux of public judgment so manifest as in painting. The artist who is the rage to-day will be the byword of to-morrow, and the sincerity of this perplexing caprice is demonstrable by the unerring test of the almighty dollar; men of one generation being eager to pay for certain pictures a hundred times the value in hard cash that could be obtained for them in another. It is true that this fickleness is owing mainly to fashion. The works of some painter (always a dead one, mark ye!) rise into sudden vogue, owing partly to the legitimate craft of dealers, partly to the caprice of some rich man who may have a genuine relish for the handiwork of a particular artist. He gratifies his taste at moderate cost, and straightway other rich men, devoid of the faintest understanding in art, are persuaded that their furniture is not complete without examples of the same master. Prices go up by leaps and bounds, and the middleman drives a rattling trade, always keeping a shrewd lookout ahead for the next painter that may be made the fashion.

All that is easy to be understood; what really puzzles one is that the Royal Academy of Arts, wherein are assembled all the most skillful painters of the day, should be content to follow

rather than to lead, to give expression to the fleeting public taste rather than to mould it.

These reflections are suggested by the approaching centenary of the death of George Romney, than whom no British painter has passed through greater vicissitudes of esteem with collectors. Romney died 15th November 1802; it was exactly sixty-nine years afterwards that, for the first time, a picture of his was exhibited on the walls of the Royal Academy. Individually, every Royal Academician is capable of recognising good painting. If Romney's is good work, how came it that the Royal Academy, in its corporate capacity, failed during seventy years to recognise goodness therein? The uninstructed public may be pardoned for paying for pictures, not on their merits, but by the renown of the painter. The late P. G. Hamerton vouches in one of his books for a glaring example of this kind of infatuation; and since he wrote, the system, or want of system, in bidding recklessly for pictures in fashion has been hugely exaggerated. He tells of a small cattle-piece which was knocked down at Christie's, artist unknown, for eight guineas. Two years later the same canvas reappeared in the auction-room. In the interval it had been identified beyond doubt as the work of Cuyp. *Magni nominis umbra!* This time the bidding went up to two thousand guineas. Eight guineas as the (assumed) intrinsic value of the picture; one thousand nine hundred and ninety-two guineas for the artist's name! Yet every educated person professes to be competent to pass an opinion upon the pictures of the year, and does so freely, and, as a rule, unfavourably. Perhaps it would be nearer the truth to say that few people are so well educated as to refrain from passing judgment upon a painter's work.

During his active life Romney had little cause to complain of want of favour. That he was not elected to the Royal Academy was owing, not to any adverse influence within that body, as sometimes has been affirmed, but to his own morbidly

sensitive and suspicious character, and to the mischievous dissuasion of his friend William Hayley, poetaster, philosopher, and pertinacious art-critic. To Hayley also was owing the waste of much of Romney's time in fancy compositions. 'Portrait-painting,' said this injudicious counsellor, 'is both the support and ruin of an artist: filling his coffers, but impeding his progress in that higher field of imagination which promises a richer harvest of delight and honour.' Unstable as we know the public verdict to be, it may be accepted without demur in the relative value it attaches at the present day to Romney's portraits and his Shakespearian and other imaginative subjects; and the same applies to that great master who found in Romney his doughtiest rival. It is in their portraits alone that the finest work of both Reynolds and Romney can be seen, and by their portrait-painting they must be judged.

Howbeit, it is not the quality of Romney's work which I presume to discuss in this place; only to call attention to the haziness of discernment—be it from ignorance, or want of fixed principles, or whatsoever other disability—which people have shown in appreciation thereof. If we are right *now* in the value we attach to his paintings, how blind were our sires and grand-sires to the masterpieces which hung neglected for more than half a century in so many country houses! Fifty years ago any one might have got together a hundred pictures by Romney for less than the price offered (and declined) last year for his portrait of Mrs Lee Acton—to wit, sixteen thousand guineas.

When Romney died, the vogue he had enjoyed passed swiftly away, and there was no man with judgment to forecast its return. In the twenty years from 1775 to 1795 his portraits had been so popular as to justify Lord Chancellor Thurlow's saying: 'All the town is divided into two factions—the Reynolds and the Romney—and I am of the Romney.' Northcote, writing after both artists had passed away, remarked: 'Certain it is that Sir Joshua was not much employed in portraits after Romney grew into fashion, although the difference between the two painters was so immense.' He meant that the difference was all in favour of Reynolds, to whom had been assigned the unchallenged place of the greatest British painter, while Romney had fallen out of all repute.

One must not leave out of account the effect upon Romney's popularity of his lower scale of fees compared with Sir Joshua's. Many sitters were no doubt attracted to that painter who charged only one-third or one-half of the fees of the other. From 1781 to 1789, when Reynolds was charging eighty guineas for painting a head, one hundred and sixty guineas for a three-quarter length, and two hundred or two hundred and fifty guineas for a whole length, Romney asked but twenty-five, fifty, and one hundred guineas.

When Reynolds ceased to paint, in 1789, Romney raised his charges, first by 20 and later 30 per cent.; but the highest price he ever received for a head was thirty-five guineas, and for a whole length one hundred and twenty guineas. Herein, no doubt, was one part of the secret of abundant sitters. But who shall account for the neglect—the contempt—which befell Romney's handiwork immediately his hand was cold in death. 'A curious work,' wrote J. W. Croker, 'might be written on the reputation of painters. Hayley dedicated his lyre (such as it was) to Romney. What is a picture by Romney now worth?' He might well inquire. At the sale of some of Romney's effects at Christie's in 1807, a portrait of Lady Almeria Carpenter was sold for thirty-one shillings and sixpence. I don't know what its merits may have been; but this I know, that a very indifferent portrait of Lady Coote by the same hand brought upwards of ten thousand guineas at the same place during the present summer of 1902. At the same sale in 1807 the lovely features of Mrs Robinson, the actress, tempted a bidder to go as high as nineteen guineas for her head painted by Romney, and three years later the Marquess of Hertford obtained it for twenty-one pounds. One can but speculate to what figure it would mount now, if exposed to bidders, for it is safely housed as national property in the Hertford House Gallery. A good impression of J. R. Smith's engraving after this picture would certainly fetch several hundred pounds.\*

Such was the esteem placed upon Romney's paintings shortly after his death. A temporary revival took place in 1810 when the Hon. E. Greville sold the portrait of his brother's mistress, Amy Lyon *alias* Emma Harte, afterwards Lady Hamilton, in the dubiously appropriate character of Diana, for one hundred and thirty-five guineas; but low-water mark was touched again in 1842, when Lord Waldegrave allowed the portrait of the Margravine of Anspach (Lady Elizabeth Berkeley) to go for thirty-two pounds ten shillings. This picture was bought in at Christie's in 1880 for three hundred and sixty-seven pounds ten shillings.

In 1882 the reintegration of Romney was marked by the price of one thousand three hundred and eighty-six pounds paid at Christie's for the well-known portrait of Miss B. Ramus holding a book. That was considered a prodigious figure at the time, as the following incident may help to show. To the Winter

\* The prices lately paid for fine proofs of mezzotint engravings have often been ten times the amount received by the artist for their originals. Reynolds's 'Girl Feeding the Chickens' is one of his least attractive works; but the engraving thereof has become rare. Thirteen hundred pounds was the price offered by a dealer last summer to a friend of mine for a proof impression, and refused by him.

Exhibition of the Royal Academy in that year I contributed a portrait of a relative, which had always been attributed to Reynolds. The committee, according to their custom, offered to insure it on behalf of the exhibitor; and, Reynolds having long commanded very high prices, they made no difficulty about doing so for five thousand guineas. But no sooner was the picture seen than it was recognised by the committee as the handiwork of Romney, and entered as such in the catalogue. Dealers came to me offering to purchase it. I had no wish to part with it; but at last, being hard pressed by one of the best known of them, I told him I could consider no offer below the sum for which the picture was insured. 'But,' said he, 'the picture was insured as a Reynolds.' 'Can't help that,' quoth I. 'I don't want to sell; but I will consider any offer of five thousand guineas or upwards.' 'Five thousand guineas!' cried the dealer; 'why, sir, there never was a Romney yet worth twelve hundred and fifty.' 'Very well, Mr X.,' I replied, 'you keep your guineas—I keep my picture;' and we parted. Seven years later the same picture was exhibited in the Guelph Exhibition at the New Gallery. They had been seven years of agricultural depression; and this time I was tempted, and fell—to the price of five thousand five hundred guineas. Since that time the tide has mounted merrily. One may note that in 1888 'Lady Hamilton Reading of Nelson's Victories' (twenty-five by twenty-six and a half inches) sold for one thousand three hundred and twelve pounds ten shillings; the same lady as 'Sensibility' in 1890 sold for three thousand and forty-five pounds, as 'Circe' (ninety-three by fifty-eight inches) for four thousand and forty-two pounds ten shillings, and as a 'Welsh Girl' (forty-eight by thirty-nine and a half inches) for two thousand two hundred and five pounds. In the same year a portrait of Lady Augusta Murray (forty-nine and a half by thirty-nine and a half inches) went for three thousand nine hundred and ninety pounds; in 1896 the picture of Lord Thurlow's daughter (sixty by forty-seven inches) was knocked down for two thousand six hundred and seventy-seven pounds, and that of Viscountess Clifden and her sister (seventy-four by fifty-eight inches) for eleven thousand and twenty-five pounds. In 1898 the Marchioness of Townshend's portrait (eighty-seven by sixty-nine inches) fetched five thousand four hundred and sixty pounds, in 1900 that of Charlotte Pierse (sixty-three by forty-seven inches) seven thousand three hundred and fifty pounds, and in 1901 that of Mrs de Crespigny (fifty by sixty inches) five thousand eight hundred and eighty pounds. Finally, to cut this matter short, I have been at the pains to

extract from the books of Messrs Christie the sums paid at public auctions in their rooms for works by Romney in the fourteen years from 1888 to 1901, and they amount to one hundred and thirty-three thousand five hundred pounds. Who so bold as to declare that high-water mark was touched in this latter year by the offer of sixteen thousand guineas for the noble whole-length of Mrs Lee Acton, to which, of all Romney's works that I have seen, I do not hesitate to award the palm?

Now, for the last-mentioned work Romney received the modest fee of one hundred and twenty guineas. Making every allowance for rise in value of any good article whereof the output has been stopped, and without being so rash as to prescribe measure to modern affluence, there is something melancholy in the reflection that, once an artist is dead, people are ready to give for his work one hundred and thirty-three times the price he received for it. One longs for the appearance of a discriminating millionaire Mæcenæ who shall apply his wealth to the encouragement of living artists; buying pictures, not because they happen to be the rage, but because of their intrinsic merit. 'Oh, but there is nobody who paints like that now!' exclaim a hundred voices at once. Is there not? Are you quite sure? I suppose it is not a dead certainty that the sun will rise this day year; at all events it is not more certain than this, that, if civilisation and wealth and leisure (American and other) are as much to the fore a hundred years hence as they are in the present year of grace, dealers will be ransacking private collections in 2002 for works of artists now living, as diligently as they are doing at present for paintings by Gainsborough, Reynolds, Romney, Hoppner, and Raeburn. Remember what befell the peasant-painter Jean François Millet, who died in 1875 in a three-roomed cottage, after having failed to obtain from the dealers two thousand francs (eighty pounds) for his 'Angelus,' painted sixteen years before. Fourteen years after his death, his mother and sisters being still in penury, that picture was bought for the Louvre at the price of one million five hundred thousand francs (sixty thousand pounds).

Romney's was no extreme case like this: his early struggles over, he received ample recognition of his merit, and was able to make an excellent income. That his life was a tragedy was owing chiefly to his own infirm temperament, not to want of popularity. Not the less does it reflect sharply upon our blind method of encouraging art that collectors are now rushing headlong to obtain pictures which the preceding generation regarded with disdainful neglect.

## PRINCE ADRIAN OF ZELL.

## CHAPTER XII.—CONCLUSION.

NE of the chief topics in social and political circles here,' wrote the Graaden correspondent of the *London Hour* one day in the late autumn, 'is the return, and reconciliation to the Emperor, of a political exile of very high rank, who was supposed to have died abroad some years ago. The particulars of the affair are involved in mystery; but as the personage in question is now staying at the palace, there can be no doubt as to the fact. There must have been many obstacles in the way, of which the Emperor's high standard of personal honour was not the least. It is generally considered that the Imperial Chancellor had some share in the matter, as the result cannot fail to have a certain influence upon his work of consolidation. It is freely said, indeed, that the situation in Lusia will be largely affected for good by this unexpected development.'

Many English readers noticed this paragraph with interest and curiosity, but only one or two with complete understanding. Mr MacArthur read it while at breakfast in his villa at Highbury, but did not dream that it had even the remotest connection with his business affairs. He could not guess that the moment had come for the issue of a new edition of a certain small volume, with that paragraph as an advertisement; or that the small book in question was the story of a Failure told, not by the Failure's secretary, but by himself, in a time of extreme bitterness and despair; further, that the writer was no everyday penman, but a prince connected with an Imperial House, and that House one of the oldest in Europe. Mr MacArthur had no idea of all this, and there was no one at hand to tell him; so the moment fled, and one more striking opportunity passed into the limbo of might-have-been.

Hadfield read the paragraph in the office at Welding, and was one of those who understood it perfectly. He took the paper home with him, and on the way purchased a trifling article at his stationer's.

Mrs Hadfield was somewhat disappointed with the remarks in the *Hour*. 'It's all there, of course; but it doesn't seem to be,' she said.

'Well, no,' agreed Hadfield. 'But, you see, it's a very different thing to them. We have lived next-door to the Prince, and have known His Highness for months.'

In speaking of their late neighbour, the Hadfields generally made the best of his titles. They had even used 'Royal Highness' until some well-informed person had hinted that it

contained a word too many. 'The Prince,' however, was good enough, and 'His Highness' was equally satisfactory. These were varied by 'Prince Adrian,' which had an aroma perfectly fascinating.

'Did you bring the notice?' asked Mrs Hadfield.

'Yes,' replied her husband promptly; and he took out the trifling article which he had obtained at the stationer's. It was a small sheet containing the legend, 'This House to Let.' Sitting down at the table, he wrote at the foot of the paper, with pardonable pride, 'Apply to the landlord, next door.'

'We'll go,' he said when this was done, 'and put it up now.'

So he took a key from the sideboard, and they went together to the house which had been the home of Mr Barrows for some nine or ten years. The door gave out a hollow sound when the key was placed in the lock, and when they entered the hall their steps called desolate echoes from the swept and empty chambers. Before attending to the purpose of their visit, they made a survey of the whole house, not for the first nor yet for the twentieth time since by Prince Adrian's gift they had become its owners. All was empty, for the contents, except those few things which the Prince had wished to have and those which Hadfield had selected as mementos, had been sold. The furniture had gone in various directions, and the books and papers had been packed away to Graaden. There was nothing to show what kind of tenant the last had been, or to suggest the curious secret which the walls had sheltered during those long days.

After much consideration, the Hadfields had decided that it would be better to let the house, and to have a nice little sum coming in every month, than to live in it themselves; so now, when they had walked through it once more, they placed in one of the windows the notice they had brought. It was in the window of the front room that they placed it—the room in which Mr Barrows had sat so often during the hours of his last struggle. Perhaps it was the fittest thing in the world that they should have placed it there; for that notice was the *Finis* to the book of one obscure life, and it was in that room that Mr Barrows had won through to write that word, and to begin a new story in another and a higher place.

So those good people set the notice up; and then they returned to have their quiet tea, at which they discussed their great experience once more, and rejoiced in the things it had left

them. Those things were more than a good house and certain articles of furniture; for there was also a romance which their lives would never see the fellow to, and a story which, however long they lived, would never lose flavour in the telling. So they had good reason to be content.

That was in the evening of a day in October. It was on the morning of the same day that Prince Adrian received a visitor.

In the period of early autumn he became convalescent, the serious illness which had fallen upon him as a result of mental strain having given way before tireless care and nursing. He spent the brighter hours in the palace gardens, and to-day the sun shone pleasantly. It happened that this morning a curious fancy had come to him.

'Help me to the summer-house on the south side,' he said. 'I will sit there a little while.'

An attendant supported his steps to the place he named. It was the room in which a Mr Barrows had had an interview with the Emperor. The man drew a chair towards him.

'No,' he said quickly; 'not that one.' For it was the one in which the Emperor had sat. 'Bring the other; and bring it here, to the door.'

This was done, and he sat down. 'You can leave me now for an hour,' he said.

The servant obeyed, and left him alone, looking out upon the gardens. They were not so brilliant as they had been on the day he remembered, but otherwise the scene was the same. Then he had been in the throes of his trial, standing with its sweat upon his brow; now the trial was over, and it was judged that he had conquered.

Yet what had the conquest brought him? It had brought, first, a great weakness and weariness; then had come the peace he had won, the rest of knowing that an old wound had been healed, and an old wrong righted as far as it was in mortal power to right it. These were of unspeakable value; yet in the days of convalescence other and less pleasant thoughts had begun to crowd upon him.

There was a sense of great loneliness. His sacrifice had been a voluntary one; but he had never dreamed of this result. Now he found himself forcibly brought back to the place which he had regarded as lost to him for ever; and he found an interval as of a whole lifetime between the present of this existence and its nearest past. He was beginning life again, and it was naturally a somewhat difficult beginning.

This feeling weighed upon him now, as he sat with his face to sun and garden; and he thought of the little semi-detached villa at Welding, and of that other garden where he had spent so many quiet days. In that house, dead to his old world and its failures and errors, he had commenced a new life under the name of the one man who had been faithful through all.

There, in the first months of his voluntary burial, he had written his own story, placing the old life at the bar and condemning it utterly and bitterly. He thought now that he had possibly been too severe upon himself, and had judged too harshly the first failure of an unformed character set before too great a task. It might be so.

Then in that garden—that long, narrow garden of which he knew each inch by heart—he had learned to forget. By this time it was probably a tangled wilderness; yet would it not have been best to let him go back and spend the balance of his time in the place that knew him? The old quiet and peace would still be there, and he could take up the threads at the place where he had dropped them. Nay, the peace would be so much greater for the knowledge that he had stepped back into the past to make some atonement, and had even been granted success.

So he meditated in his despondency, little guessing, even at this late hour, what was the one thing that could make all ways smooth. But Fortune holds in her care the balm for every human need; and if Our Lady of Destiny loves a good situation, it is quite as certain that she loves to see a player play his part to the uttermost upon the stage where she has placed him. When she has found such a one she sometimes gives with both hands freely.

Presently he heard the sound of a door being opened. He could not see from where he sat, but knew that it was the door which communicated with the Chancellor's grounds. A moment later he heard footsteps on one of the paths.

He listened with curiosity, for unless he was mistaken they were the footsteps of a woman. Directly afterwards the walker came into view, crossing at the end of a path on her way towards the palace. She seemed, however, to be looking for some one, for she paused at the turning to glance in each direction before moving on. She looked the other way first, so that he had a little time in which to mark the graceful form, the movement, the sheen of dark hair in the sunlight, the well-remembered profile. Then she turned suddenly, looked, and saw him.

When she turned, he found that his heart must have recognised her steps even at a distance, for it was beating tumultuously. After a moment of surprise or indecision, she came up the path towards the summer-house.

Again at the threshold she paused. There was a constraint upon both of them.

'Won't you come in,' he asked, 'and sit down with me?'

She obeyed at once, and took a chair. It was the Emperor's chair; but he did not notice now. Then she explained.

'We came to Baron Quinzell to ask after you, and he told us that you would be here. But he

said that you must not see both of us at the same time, so he sent me alone.'

The Prince nodded. 'That was good of Quinzell. I am glad that you found me so soon.' And he wondered why the all-thoughtful Chancellor had chosen to send the daughter. Was it because she belonged to a new generation, one to which the first Prince Adrian was a mere tradition?

He had feared a meeting of this kind, for in spite of recent events he could not forget what these women had suffered through his connection with Count Mathias. Now the meeting had come suddenly, and he would learn what their feeling was. It was best to learn it first from the girl, who had suffered the least. Perhaps Quinzell had thought of that.

'I am glad that you have found me so soon,' he repeated. 'But now that you have found me, what do you think of me?'

He wondered at his own agitation as he asked the question. She appeared to know that there was something behind the jesting tone in which it came. So she answered with deliberation, smiling, but pale.

'It would be impossible,' she said, 'to say what we think of you.'

He noticed the 'we.' 'Is it good,' he asked, 'or ill?'

'It is good. How should it be otherwise?'

With that she looked into his face for the first time. Then he began to understand his own agitation. This came not as a new emotion, but as a perfect comprehension of what he had felt before. It was several moments before he could proceed, and when he did speak his half-jesting tone was gone.

'But have you heard the whole story? And do you know that I am only here at all by a mere chance, that my life is the gift of an enemy?'

A brief silence followed the questions. 'No,' she replied slowly. 'I do not know that. I have heard the whole story; but I do not know that. Nor does any one else think it.'

A flush rose to her brows, and she spoke with an effort, but with resolve. It was as though the words must needs be uttered.

'I think, and know, that it was like this: He—the enemy you speak of—thought he was dealing with a man he had known long ago, a weak man and one he could trample upon. He thought that he could even kill him, for it all seemed easy and plain. But when you resolved to meet him you were not the man he had known, but one quite different, one whom pity had made strong. You were a Prince of Styria, one greater than he, and nobler. At the last he began to feel this—that he was opposed, not to an unknown Englishman, or a coward, but to another man altogether. He could not understand it, and so he gave way, afraid; but

it was not his mercy that saved you, but your own nobleness. That is what I think—and what I know.'

The Prince felt that his every pulse was throbbing violently. It was not what she said, but the glimpse which her words gave him of her thoughts as regarded himself. Conviction came to him suddenly, and as it came his whole views of the world were changed. New life ran in his veins; bright visions of life, of work, of happiness, rose before him. Loneliness—why, there need be no loneliness!

It was only for a little while; then the flood ebbed. He was old, or, at least, past the meridian of life. He had just made an absurd mistake. What he thought he had seen in her was all on his own side, not on hers—it could not be. It had called him back to life, to honour, to sacrifice, as love often calls a man. It had saved him and restored him. He saw it clearly now. But that must be the end.

'So,' he said quietly, 'you think it was pity that made a prince of me? Pity is very powerful.'

She made no answer. In the disillusionment of the minute he became bitter again. Gazing away down the path, he saw, some little distance off, a beautiful rose-bush just bursting into bloom. He drew her attention to it.

'Look at that,' he said. 'It is coming into bloom just as the frosts are approaching to destroy it. It is a foolish thing that flowers so late in the year. Yet it is an emblem of many other things that come too late.'

Naturally she failed to take his meaning upon the instant, quick though her instincts were; and, while they sat in silence for a moment, they heard a sound of footsteps.

'It is my servant,' he said. 'I told him to be back in an hour. It has been a short hour.'

She rose. 'I fear that I have been here too long,' she said. 'Baron Quinzell said only a little while. I think I must go.'

It was just as well that she should go, he decided. Yet even then the longing came back upon him with new force, coupled with a fierce resentment against all that stood between.

'Will you come again?' he asked suddenly.

'To-morrow,' she replied, 'we go down to Cronia.'

Then she gave him her hand, once more looking him in the face. Probably there was more in his face than he knew, and perhaps she saw there that the old mood had fallen upon him, the old diffidence and self-distrust. When she saw that, she also saw the meaning of his reference to the things in life that came too late.

She went down the path towards the door by which she had entered the garden. It happened that as she went she had to pass the rose-bush which had suggested his bitter parable; and she

went slowly, thinking, I believe, of those words and the hopelessness of his tone. So as her eyes fell upon the roses a great thought came to her. For the Prince, watching her going, saw that she paused, full in his sight, beside the bush. She plucked one of the blossoms, and fastened it in her bosom. Then she appeared to notice that he saw her, for she hastened to escape from his view.

At once he understood. His heart thundered, his visions returned, and he saw that from the beginning everything had been drawing to this end. There was nothing in the way, after all ;

he was not old, and his love was youthful. In a flash of memory and revelation he saw that Quinzell—the omniscient Quinzell—the friend of his boyhood, had read him from the first, and had guessed the power which had brought him back from the dead. And it was Quinzell that had sent her here to-day !

He signed to the approaching servant. ‘Go,’ he cried hoarsely ; ‘call her back.’

The man flew. She had just reached the door when he overtook her and delivered his message. And she turned back.

THE END.

## A MOUNTAIN OF GOLD.

In olden times it was said there were ‘seven wonders of the world’—the Pyramids of Egypt, the Hanging Gardens at Babylon, the Colossus at Rhodes, and other creations of the genius and labour of man ; but, compared with these, the wonders of nature known at the present day are as seventy times seven, and are found in every part of this grand old earth. We have read in fabulous story of mountains of gold ; but we supposed that such miracles of nature existed only in the visions of poets and romancists. However, it is known to many that a veritable mountain of golden ore exists in Queensland, the sunny state of the new Australian Commonwealth. This mountain is now being tunnelled and levelled, and its stone crushed and passed through chemical processes. In one year over three hundred and twenty-three thousand ounces of pure gold were extracted ; and the value of the mine once rose in the share market to more than seventeen millions sterling !

Travelling in central Queensland a few months ago, curiosity induced us to visit this mountain of gold, which is situated about twenty-five miles from the populous city of Rockhampton. The train by which we made the journey runs some distance through open forest-country, timbered mainly with bloodwood, box-gums, and iron-bark trees, and up a very steep ridge called the Razor Back to a range of mountains stretching for miles from north to south, where the air is cool and pleasant after the heat and dust of the city. As this famous mine is approached great activity is apparent. A busy and thriving township has arisen, with its hotels, stores, hospital, churches, and School of Arts ; and though some of the buildings are roughly constructed, and in the streets steep natural runnels and blocks of stone are likely to arrest the progress of the unwary pedestrian, there is a buzz of business and evidences of enterprise that augur well for the future prosperity and shapeliness of this mountain-town. We hear the clanging of machinery, and occa-

sionally the sullen boom of a blasting explosion ; and the smoke from the furnaces and various peculiar chemical odours make the atmosphere less bright and invigorating.

On application at the office, the manager readily gives permission to go over the works ; and after a change of dress and payment of half-a-crown to a fund for the benefit of the miners, the visitors are provided with a guide, who shows them the process from start to finish by which the common-looking stone quarried from this remarkable mountain is made to yield gold of the finest quality for the Mint or the jewellers’ workshop.

In the immense tunnels made in the mountain, tier on tier, are men busily at work blasting and hewing the stone and loading it on trucks, which convey it to buckets that are lowered down from one platform to another until the huge crushing machines are reached ; then the ore is carried forward by trucks and buckets to the furnaces, where it is roasted and made porous for the Hall-Richard chlorination process. The ore is now placed in large barrels and treated with chloride solution, under high pressure ; and afterwards it is discharged into leaching-vats, fitted with sand and gravel filters, placed directly underneath. After being repeatedly washed, it is finally made to percolate through perforated board-work covered with cheese-cloth, and next through a bed of charcoal. This precipitates the gold, and leaves it in shining heaps of fine dust on the surface. The whole process is full of intense interest to the visitor. The grandeur and riches of nature are there, and also the science and ingenuity of man. More than one million pounds have been spent on the machinery, the gigantic dams for the storage of water, and the workings ; about eighteen hundred men are constantly employed ; and, as the mine is lit up with electricity, relays of miners continue the work day and night.

Mount Morgan is somewhat oval-shaped at the base, being about a mile and a half at its longest measurement and half-a-mile at its shortest. It

risers almost precipitously from the banks of a small river called the Dee to the height of five hundred feet, and attains at its dome-like summit an altitude of twelve hundred feet above the level of the sea. There was nothing in the outward appearance of the mountain to distinguish it from the other mountains of the range; it had the same rugged slopes and gullies, and the same scrubby vegetation covered its surface as could be seen for miles around. The farming settler and the shepherd wandering over this hilly region little dreamed of the treasure stored beneath. They would sometimes find alluvial gold in the ravines and creeks, and pick up a boulder heavily weighted with the precious metal; but that there was a whole mountain of auriferous ore waiting to be exploited by men of energy and enterprise never entered their minds. The gold was carefully hidden in stone which, in outward appearance, differed slightly from the ordinary metallic structure of the soil around.

The discovery was made almost accidentally. In the early days of settlement in central Queensland, a Scotch family named Gordon took up a selection on the slopes of the Razor Back, and by additional purchases extended their run down across a creek which divided the slopes from this mountain, and partly up one of its sides. They stocked their land with sheep and cattle, and endeavoured to win a living from it; but had little success. Among other misfortunes, a large number of their cattle died through eating a poisonous weed which grew abundantly in the neighbourhood, and so their sons were obliged to leave the homestead for work elsewhere. One of the sons, Alexander Gordon, found employment with the Morgans, mining speculators living at Mount Wheeler, a few miles from Rockhampton. Mrs Alexander Gordon was the daughter of a stockman who had often driven his cattle over the district, and watered them at the streams flowing at the base of the mountain; and she had received from her father a piece of gold-bearing stone picked up in a creek there. Gordon showed this stone to the Morgans, who at once saw its worth, and offered him twenty pounds if he would show them the spot where it was found. This he promised to do; and the two Morgans, after equipping themselves in Rockhampton with horses and tools for a prospecting tour, started under the guidance of Gordon to find this modern Pactolus.

After journeying over the ranges, they reached a creek where the gold was supposed to be; but their first day's investigations were very discouraging, for the stone they crushed yielded little gold. At night a tropical downpour of rain set in, and all the gullies and creeks became flooded and ran in torrents, so they had to seek a place of safety on the mountain. Next morning, as the rain continued, they were in such a saddened and disheartened condition that they decided to

make their way back; but this was difficult because of the floods. Therefore they moved to higher ground, swimming across creeks and climbing up the steep sides of ravines, and at last reached a spur of the mountain, where they found a Chinaman's hut. In this shelter they made a fire, dried their clothes, and ate a hearty meal.

After the rain had cleared off, one of the brothers, accompanied by Gordon, determined to prospect around the neighbourhood to see if any gold could be found there. When they had gone about two miles—Gordon being some distance off—Morgan saw a big black boulder which he thought had some gold in it, so he broke a piece off and put it in his pocket. He also noticed that all along a reef there were similar stones; and, without telling Gordon of his discovery, he broke pieces off, and on his return showed them to his brother, who was still resting in the hut.

Leaving Gordon in the hut, the two Morgans went down to the nearest water-hole, where they crushed and washed the ore, and to their surprise and immense gratification found that these pieces of boulder yielded, as they said, 'more gold than stone.' On exploring the country around, they found that the whole mountainside appeared to be of the same kind of gold-bearing stone. The discovery was kept from Gordon, as his family still owned some of the land; and after having the ore assayed in Rockhampton, the Morgans bought the Gordons' land for the paltry sum of a pound an acre, and afterwards secured the rest of the land on similarly easy terms. Thus the Morgans became the owners of this famous natural tumulus of buried wealth, this wonderful Australian El Dorado.

The mountain, which was formerly named the Ironstone Mountain, was now called Mount Morgan, after its discoverer. Soon a small company was formed and registered; and the brothers Morgan, with one or two others who had secured shares, commenced mining operations. The richness of the stone was unparalleled, and the news of this discovery was soon wired over the world. Speculators in many countries felt the throb of a new sensation, and the share markets became mercurial with excited buyers and sellers; rings were formed, and no small amount of suspected jobbery practised; shares rose to enormous prices, then fell far below their value, and thus many were ruined; there were lawsuits over adjoining claims, and supposed questionable transactions occurred; fortunes were made and lost and regained; but amid all these variations of speculation and fortune the wonderful output of gold continued. Since 1882, when the discovery was made, over two million and a quarter ounces of gold have been obtained; and the latest reports issued by the company state that for some decades, at least, there will be no diminution

of the steady yield of gold which has been so long continued. Even when the mountain is levelled, gold will be found to a considerable depth beneath its base.

For miles around Mount Morgan prospectors have searched in vain for another mountain of gold. Much speculation has been indulged in respecting its origin, and various theories have been advanced as to how, in the dim and distant past, this wonderful mass of golden ore was created. It has been an enigma hard to solve, and geologists have differed in opinion. Mr Jack, the Queensland Government geologist, whose researches in the district have occupied considerable time, has reached the conclusion that 'nothing but a thermal spring in the open air' could have deposited this rich ore. He says: 'The frothy and cavernous condition of the silicious sinter of Mount Morgan may be accounted for by the escape of steam while the silica was yet (after the deposition on the evaporation of the water) in the gelatinous condition so frequently observed in the deposits of hot-springs. The aluminous silicates represent the familiar outbursts and flows of mud. The iron oxides appear to have been deposited in some cases along with the silica and alumina, and in others to have been deposited later—its solvent fluid having been, as it were, injected into the interstices, vesicles, and caverns of the silica and alumina. In some cases it may have been originally pyrites, as it now and then occurs in cubical hollows. Calcareous sinter is very common in silicious springs, and its absence from Mount Morgan must needs imply the local absence of limestones among the rocks from which the spring was fed. The silica would be found abundantly in the quartzites, and alumina in the shales and graywackes, of the country in the neighbourhood, and, possibly, both silica and alumina may have come in part from a deep-seated underlying granite. The gold, and to some extent the iron, may have been dissolved out of the iron pyrites of such reefs as the Mundie reef seen in Mundie Creek, a creek close by: the gold possibly by chlorine produced by the contact of hydrochloric acid derived from the decomposition of chlorides with manganese, which occurs sparingly in the form of pyrolusite along with the ironstone of Mount Morgan.'

This plausible and interesting analysis of the peculiar metallic formation has, however, been disputed. Mr Cameron, another geologist of some repute, argues that it belongs to the

order of 'eruptive rocks;' that its origin was 'volcanic.' He says: 'Although it serves no good purpose to dogmatically assert that gold can only be met with in rocks of a certain age, yet I may mention the fact that hitherto it has been found in greatest abundance in the quartz veins that traverse altered paleozoic slates, and particularly where eruptive rocks junction with strata of Cambrian and Silurian age. It is also a generally accepted fact that the original home of gold is in the granular eruptive rocks of a granitic and hornblendic character, where it is found disseminated in infinitesimal particles throughout their mass; and as I have noticed that eruptive rocks of a granular character, belonging to the secondary igneous system, are to be found not only traversing the Mount itself, but in its immediate neighbourhood, we have not far to seek for the original source of its gold.'

There is also the combustion theory held by some, who suppose that the origin of the auriferous deposits were due to the decomposition or oxidation of an immense pyrites lode; that while in a molten state this came in contact with water containing salt, that chlorine was generated, and the gold originally contained in the pyrites was dissolved into chloride of gold, which was finally precipitated in a finely mixed condition into the substance of the stone.

These and other theories may each have been adopted by geologists; but probably no certain explanation of this extraordinary aggregation of particles of gold in this metallic formation—in some places three thousand ounces to the ton—may ever be given. Nature's operations are often inscrutable. How in the dim abyss of the past she wrought in secret to prepare for the energy of man must ever be shrouded in mystery. Her mighty throes of volcanic fire; her subterranean crucibles where her chemical forces pulverised and mingled all kinds of mineral substances for the service of humanity; her vast torrential floods sweeping down the craggy ranges and conveying and mixing the glittering grains of valuable metals with the commoner soil: all these convulsions we know were taking place in bygone ages, leaving their traces to-day; and out of these mysterious convulsions this marvellous mountain of golden ore was upheaved. Man is levelling it now, and dispersing its treasures over the earth, but it will ever be remembered as one of nature's wonders.

## MR MORRIS'S HAT.

## PART II.

**I**T is about a cheque, David,' said Gladys, 'and I want you to assure papa that you will stop payment and that sort of thing immediately. David, what is the matter?'

Well might she ask and look at me with a face which bore at least one more wrinkle added to the other two!

I am not a fainting man, nor timorous save as regards my ambitions upon Gladys herself; but when I heard these words I knew instantly what was to follow. Doubtless my eyes stood well out of their sockets in the approved melodramatic way. Nevertheless, I attempted to smile.

'Go on, dear,' I said with difficulty. 'Let me hear the whole story.'

'But you looked so horribly frightened!'

'Professional instinct, Gladys,' I murmured.

'Well, what about this cheque?'

'It was for ten thousand pounds, dear,' she continued, softly, as if out of consideration for my nerves. 'Papa wrote it at the office in order to get it cashed at the Bank after luncheon. It was to pay those German Heinsen people, I think he said. Well, he put it in the lining of his hat.'

Idiot that I was! Had I not often chuckled to myself at this eccentricity in Mr Morris? He would enter the Bank, remove his hat, place it on the counter, and take from it the bills or cheques he wished to deposit or cash. Once he had condescended to explain that he considered his hat the safest of pockets in the London streets. Thieves do not think of picking hats.

'He put it in the lining of his hat, you were saying.'

With these words, I encouraged Gladys to continue, for she had stopped at my exclamation of dismay.

'Yes, and he took it with him, of course, like that to the club. There he had a little nap after his luncheon, and it was when he woke up and looked for the cheque that he found it was gone. The man who brought him here in the cab said all he could say was "Get me home at once!" There was a doctor in the dining-room, and he said it was a paralytic seizure; but Dr Richardson doesn't think it was quite that, for he can talk quite plainly now. It was the shock, no doubt, for the cheque was payable to bearer. He has been working much too hard for years, poor papa, and you must go up to him, David, and convince him that there is nothing to worry about, for of course you will stop payment and that kind of thing. Oh, David, if you knew what a relief it was to me just now to hear

your voice! He has talked of you a good deal the last day or two.'

'Has he, dear?' I asked, through the mist of my misery.

'Yes, David. He has such a very high opinion of you as a man of business.'

The bitterness of it! And the simplicity of the dear girl in smiling a bright responsive smile to mine! Well, it was something that I could wear that deceitful cloak to such advantage.

'Now you will go to him, David?' she said.

I nodded. It would depend entirely upon his state of health whether or not I told him the whole calamitous history of the cheque. I followed Gladys like a man in a dream. She was lost to me, that seemed certain; but I was too stunned just then to realise what that melancholy fact would mean.

I was still a man in a dream when I stood before Mr Morris, took his trembling hand, and hoped he was better.

He looked very statuesque in the old-fashioned screened arm-chair in front of the fire. His voice had none of its usual steely ring, and though his profile was severe his eyes were not.

'This is very kind of you,' he said gently. 'I have been inexcusably foolish.'

Gladys intervened to explain that I knew the circumstances.

'He has only come up, dear papa, to tell you that there is not the slightest reason for anxiety, because, of course, no one would think of cashing such a cheque as that except for yourself.—Would they?'

She appealed to me. Her father's eyes were upon me.

'No one but a madman,' I replied. 'You—wrote no letter then, nor sent the cheque by—by hand?'

'No, no,' said Gladys. 'It was missing from his hat in the club.'

'Old fool!' murmured Mr Morris, with a sigh which seemed to have the effect of letting his head sink upon his breast. He gazed at the fire instead of at me.

Abiathar Morris calling himself an old fool! Confused to distraction though I was, this novel situation impressed me. He was changed indeed.

'You are nothing of the kind, dear papa,' said Gladys. She knelt by his side and fondled him, so that he gave up his reverie and began to toy with her pretty hair.

I dare say I ought to be ashamed to confess that the beginnings of tears came into my eyes as I looked at this fair picture. They were utterly selfish tears. What was I not losing in losing such a girl?

But Gladys herself peeped up at me with a pathetic little smile, and misread my eyes.

'Oh papa, dear,' she whispered, 'he does look so tired. Any one would think we had lost the money and he was sorry for us!'

She said this archly, with her head on her father's knees. The old gentleman roused himself at the words.

'Nonsense, child,' he said feebly. 'Mr Hartley knows well enough that there is no real risk of that.—Don't you?'

'There ought to be none, sir,' I replied firmly, in desperation.

'None, of course,' he said, though still as if he craved assurances in the matter. 'But—you will do all that is necessary—in case I am confined to the house? Mr Roots will act for me in my absence.'

Mr Roots was the confidential clerk at Morris Limited.

We are strange creatures. Though I was as wretched as, it seemed to me, I ever could be on earth, something prompted me to continue to play the part of comforter, and I took the cue.

'It will be all right, sir, never fear,' I said.

He nodded several times to the fire, then lowered his head and whispered to Gladys. I heard what he said:

'Don't let him go without a glass of wine!'

I ought to have been staggered by the kindness of such an injunction. No such thing, however. I smiled and took it as a matter of course; also Gladys's eager assent. But I could not touch the wine when it came to decanter and glass.

Ere then Mr Morris had bade me 'Good-night' in a tone that was new as applied to me. He had further hoped I would look in the next evening. And Gladys and I had gone downstairs hand-in-hand, for how could I refuse the dear little hand which offered itself to me outside her father's room?

'He has become fond of you, Davie,' she said brightly, as we descended the stairs. 'So sudden, too!'

This she added mischievously.

I was in such a humour that if Tom Bowers and his son had appeared before me in that moment I would have tried to strangle the pair of them. It was the shock that had changed Mr Morris by reminding him of his mortality and making him think of Gladys's future. He believed I was a good and strong man, able to make his daughter happy; and he felt that he owed me atonement for his earlier doubts. The pair of villains!

Once outside the house I was no longer a man in a dream. The desire for vengeance of the conventional kind in such circumstances sent me speeding back to the West End and to a police-station.

Here my narrative was received and recorded drily.

'It is a pity the Paris trains have left,' I was informed.

'Wire to Dover, Folkestone, Newhaven, and Southampton immediately,' I said.

The inspector showed sympathy for me in my state of simplicity. 'You think the man would not attempt to disguise himself?' he asked.

'Then wire to the French ports and request them to examine all passports.'

But this, too, was just as puerile a suggestion as the other. I had to resign myself, go away, and return to Brondesbury with a feeling that the heavens had fallen and that I was mixed up inextricably in the wreckage.

The night that ensued was about the worst I had ever spent. It really wasn't a great deal to me to realise that my career in the Bank was as good as ended; for what would the directors say about my criminal imprudence in cashing such a cheque even on the strength of an excellently forged letter? It was Gladys that I could not resign myself to lose.

Again and again, as I tossed about, I tracked the calamity from its end to its ridiculous inception. The part which was not as plain to me as my own misfortune could be easily guessed at. Tom Bowers had done secretarial work for Mr Morris before his collapse. He either had, or obtained through his son, the necessary office letter-paper, and he must have acted with the celerity of genius in yielding to temptation and arranging his methods. No doubt he had lured his son from the office and either persuaded or compelled him to be confederate in his felony. Well, well, it makes me weak to think of it all.

It was as a condemned felon myself that I went off to business in the morning. I could and did smile now as I thought of the future; but what bitterness was in that smile!

I entered the Bank as usual, and there, standing at the counter, with downcast face and bleared eyes, the first person I saw was—Tom Bowers!

'You?' I cried, so that the clerks turned their heads in astonishment.

'Yes, Mr Hartley,' said Tom Bowers quietly. 'I—I want to speak to you in private.'

He had something inside his frowzy frock-coat. I could tell that by the bulge. A furious hope took possession of me.

'Come this way,' I said.

No sooner were we alone, with both doors shut, than my glorious intuition was confirmed. The sealed packet was laid upon my desk and the poor half-maudlin man folded his hands and begged for mercy.

'Not for my own sake, sir—I'm past caring what happens to me—but for Willie. As sure as I'm standing here?—'

'Never mind that,' I said. I patted the poor fellow on the shoulder instead of ringing the bell and sending for the police. 'Tell me how you came to do it.'

'Mr Hartley, sir,' he pleaded, 'he's honest down to the marrow, I swear to you. He—he's disowned me—isn't going ever to speak to me again; and if I hadn't come like this he'd have given me in charge himself. He was outside when you came in, sir, watching to see I didn't slip away. I'm proud of such a son: God forgive me, I am.'

While he said this I was counting the notes, though in fact I need not have troubled, for the very seals of the packet were unbroken.

'What in the world made you think of such a thing?' I asked, pausing at the fortieth note.

'I'd be glad to know that myself, sir,' said he. 'That I would. I found it in the hat—this very hat, and first sight I thought something ought to come of it. But I was hardly at Piccadilly Corner when I ran back to give it to the porter to give to Mr Morris. There I saw them helping him into a cab, and when I heard the word given for Brondesbury I held back, sir. They said he'd had a seizure. That did for me, sir. The thought of all that money, and living in comfort out of England, took hold of me like a panorama. I went and borrowed a sheet of paper and an envelope from Willie and made him get ten minutes' leave. You know the rest, sir; and, whether it's Portland or Dartmoor, I'll bear it for the comfort of knowing Willie will always run straight.'

The notes were right.

'It will be neither Portland nor Dartmoor, if I have any influence with Mr Morris, Bowers,' I said.

'Sir!' he said bewildered.

As for me, I laughed in spite of everything, a sort of half-delirious laugh, and held out my hand to poor Tom Bowers.

'Don't be such a fool again,' I said; 'and if you like to call and have a chat later in the afternoon we'll see what can be done for you.'

He left the room with tears of gratitude on his cheeks. I soon followed him; and, after calling on Mr Roots, and wiring to Mr Morris, had the immeasurable satisfaction of myself handing the ten thousand pounds to the former gentleman to pay the account for which the cheque was drawn.

In my telegram I merely told Mr Morris that

the cheque had come to me, and asked for his instructions. These were admirably suited to the situation.

Poor Tom Bowers had in his confession set me a good example. It remained to be seen what would come of mine when I humbled myself to Gladys's father. I did not make it that evening completely. Gladys herself heard it and gave me full absolution, but thought her father might be better able to hear it the following evening. This was merely a sweet, fond artifice in her to spare me. *She* broke the curious history to Mr Morris the next day, and it was due to her loving talent that he took the highest possible view of my reticence in the matter. When I went upstairs to him and began to assume the demeanour of a penitent the old gentleman stopped me with upraised hand.

'I have already received explanatory intelligence on the subject, Mr Hartley,' he said, with overdone formality. 'You may be congratulated on your mediatrix. I, her father, say it. You are a fortunate fellow, David.' The change in his tone and the smile with which he offered me his hand perfected my contentment.

There is little more to say about this odd—and blessed—misadventure of a hat, to which I believe I owe my impending marriage.

Young Bowers was amply forgiven by Gladys's father. Mr Morris appears to be pretty much his old self again physically, though wonderfully softened in other respects. He no longer, however, carries his cheques on the top of his head. I myself have taken Tom Bowers in hand. He has been enabled to invest one hundred pounds in a small business concern of which he is proud to be the managing clerk, and if portents go for anything, drink will never again get the better of him.

As for the fateful hat itself, I persuaded Tom Bowers to sell it to me for one hundred pounds. Gladys very amiably agrees with me that I may, if I please, pay lifelong respect to it as a humble, yet competent agent, under Providence, of my—that is, our—future happiness.

## CHICORY CULTIVATION IN BELGIUM.

By J. E. WHITEBY.

**M**OST people, if asked to define the special products of Brussels, would probably reply in a formula which that interesting personage 'Charlie's Aunt' has made almost classic, 'That's where the lace comes from,' or 'That's where the carpets come from;' or even, perhaps, 'That's where the Brussels sprouts come from.'

Brussels lace, though much of it is to-day made in the environs, is undoubtedly one of the manufactures for which Brussels is as famous as ever; but the carpets associated with the name of Belgium's capital are now made at Tournay, and the little green succulent sprouts have become so widely cultivated as to have no longer any special connection with that city.

However, few people are aware, except those

commercially interested, that certain villages that hang round the immediate neighbourhood of the city like a fringe on some sheltering mantle can make the proud boast that they supply a vegetable seldom or never cultivated in England, France, or Germany, but which is exported to these countries in enormous quantities.

To those unaware of the important part chicory plays in the industrial scheme of Belgium, the name only conjures up a recollection that the root of this plant dried in a kiln to a fourth of its weight, and roasted till it is again reduced by 25 per cent., serves when ground to adulterate coffee, to which it imparts a slightly bitter taste, while the brownish tinge acquired by its infusion rejoices the careful housewife by the look of strength which it imparts to the liquid. The word may also suggest to those who are interested in gardening the dentated leaves resembling those of the dandelion, which in certain rare English households may be met with in the winter salad, and which are obtained by forcing a second top-growth from the roots, and blanching. But it is for yet another form of chicory-cultivation that Brussels is renowned—and for Brussels read the neighbourhood, the vegetable being known as *chicorée de Bruxelles*; and the plant thus produced stops a gap in the round of garden produce for the Continental dinner-table that otherwise might be unpleasantly felt.

Chicory, which botany tells us is known in its wild state as succory, and to whose genus the endive (well esteemed since classic times) also belongs, has a root somewhat resembling a carrot. It is of a dirty-brownish colour without, but white within. For many years the top-growth has been much esteemed as a vegetable in Belgium; and as long ago as 1860 M. van Cutsem, of Evère, had the happy idea of crossing the chicory with the endive—to which, as has been said, it is allied—to secure larger plants. His example was generally followed, and the recognition of the chicory as a staple article of food has caused its cultivation to spread from Scharbeek, where it was first started, to Evère, Haren, Woluwe St Étienne, Crainhem, and recently to Dieghem and Melsbroek. It is the top-growth which, like seakale, serves as a dish for the table, and it is cultivated in much the same manner; though, instead of being raised from established roots, it is grown from fresh plants raised by seed every year. This is sown about April, and in October the chicory is plunged into long beds of a light, rich compost, which completely covers it. Hot stable refuse is superposed, which is protected in the usual way from the elements.

Development is extremely rapid, and in twelve days, if all goes well, the roots are ready for cutting; short, stocky, and beautifully blanched shoots growing thickly together, awaiting the sharp knife. It may be mentioned parenthetically that, as a set-off for the English ignorance of the value

of chicory as a vegetable, may be put that of the Belgian gardeners as to the proper way to grow seakale, which is seldom seen in the markets, and always long, stringy, and to our idea valueless.

Chicory, which has a slightly bitter taste that is not disagreeable, is cooked in a similar fashion to seakale. It bears abundantly, the harvest lasting until April or even May, and the demand is ever increasing. Brussels chicory has indeed of late years assumed so important a position as an article of trade that syndicates have been formed for its exportation, one of which numbers six hundred members. These men occupy themselves with the collection of the ready-packed baskets from the growers, and regulate the despatch, prices, &c. The best quality exported goes to the Paris markets, where the consumption is enormous, from sixty to eighty francs being paid per hundred kilos. Lille and the other northern towns of France take an inferior quality. The expenses of export to Paris by express train, including delivery and the various duties, works out at about twenty-five to thirty centimes per kilo, so there is a good profit. The best chicory is sold in Brussels at about thirty to sixty centimes a kilo; but much that looks good, and is as large in circumference as the wrist, is hawked about in barrows at a much lower rate. There are but few travellers to Brussels in the winter-time who have not been tempted into eating it owing to its likeness to seakale, and most people like it extremely. Every day during the long season wagon-loads of *witloof*—to give the chicory its Flemish name—leave Brussels by road or rail; and some idea of the business done in this root, which is almost ignored by English market-gardeners, may be realised when it is known that, besides the enormous quantity consumed in the city and neighbourhood, from ten thousand to twenty thousand kilos is about the weight despatched daily.

Some of the younger chicory-growers are making the experiment of heating the beds with hot-water pipes instead of by the old system. The new idea claims to have the advantage of economy, while the heat can be regulated; and as the plants are grown in long sheds, they are better protected against violent wind-storms or excessive cold. The installation in use is of the most simple kind, being only four iron pipes connected with a boiler and furnace, and running under the long beds of earth. The heat being evenly distributed, the plan is said to work admirably and to produce splendid plants; and as stable refuse is extremely dear in Brussels in winter, when the chicory-farmers most need it—as much as fifty francs (two pounds) being asked for a small cart-load—the new system is likely to supersede the old, especially as the rainwater occasionally, even under the best management, filters through the stable refuse and discolours and spoils the plants for market.

The patriotic Englishman naturally wonders,

on learning of the large trade done in Belgium by cultivating a vegetable that appears to give excellent results, why the market-gardeners in his own country do not attempt to raise chicory for the table. Many of them, perhaps, have not considered the matter, and some may have heard that for an unexplained reason chicory in this form is said not to be cultivable elsewhere; and the Bruxellois declare that even with their own growers in charge the plant will not give the same generous response as in its native land. Many such experiments have been made in

France; but the bitter taste which is one of the characteristics of the chicory, and which connoisseurs enjoy, was quite lost, and only an insipid vegetable produced.

Even the chicory-plant has not escaped the microbe that haunts us all, waking or sleeping; and if grown too long in the same soil, develops a rotting disease of the roots. Become a lady of fashion (for in French it is '*la chicorée*'), she, like the rest of her sex, requires that frequent change of surroundings which is the result of a very high state of cultivation.

## REMINISCENCES OF AN INDIAN MILITARY POLICE OFFICER.

By 'JUNGUL WALLAH.'

### III.—HUNTING DOWN A DACOIT AND HIS GANG.

**S**tated in the first part of these reminiscences, we found on reaching headquarters that there was more work before us—namely, the hunting down of a noted Dacoit leader and his gang. As a preliminary, I will give a summary of the information brought by our spy, and also some particulars respecting the robber-leader and his followers.

In India, as a rule, reliable information could always be obtained in these days by paying for it liberally. All commanding officers were able to do so, as the Government of India made provision for this, and, having selected the best men to command these military police battalions, allowed them to use their discretion on many occasions, and to act as they considered best, according to circumstances—in short, they were not hampered by red tape.

Our spy's information was that a gang all well armed and well mounted, led by the noted Dacoit named Luckwar, had started from the native state of Dutteeah, which was over a hundred miles from the borders of our district, and were making for a rich money-lender's house some seventy miles from our headquarters. Their object was to attack the village at night, and if the inhabitants resisted, set fire to the money-lender's house and rob him of all the cash they could lay their hands on. The Dacoits were well aware that the money-lender had a large sum hidden; in fact, two men in league with the gang had been in the man's service, and could point out where the treasure was buried.

Our spy had lived with the Dacoits for three days, having pretended to join them; and during their consultations, which were held principally at night, he had learned all their intentions. He was with them on the first day's march, but had managed to give them the slip during the night. In the Dutteeah state they were to keep to-

gether; but on arriving in British territory they intended to scatter into threes and fours, and make for a spot in the midst of a forest which was about a couple of miles square and within three miles of the money-lender's village. Luckwar, the leader, with ten followers, hoped to reach the place in four days; and as it was a very dense forest, he intended to stay in it for a day or two—that is, until all his scattered forces arrived.

The commanding officer decided at once that this little job must be done sharply if we were to make a successful capture; but to succeed he must have infantry to drive the Dacoits out of the forest, if they got into it. The difficulty was how to get the infantry within striking distance of the spot, which was nearly seventy miles off.

However, before describing our operations, I will give a brief biography of Luckwar, the leader.

Before the Mutiny, Luckwar had been a trooper in one of our irregular cavalry regiments. He was a fine man, standing six-feet-four in his stockings, and a splendid rider, but a bad lot in many ways. Having, in a paroxysm of jealousy, struck his non-commissioned officer, he was tried by court-martial and sentenced to be flogged and then dismissed the service.

When this occurred, early in 1857, he and a few other bad characters organised a band of highway robbers. They carried on their depredations very successfully for a month or two, frequenting, as a rule, the main roads to Agra and Meerut, waylaying stage-coaches, the Government mails, and any rich native travelling in a *palkee*. On one occasion the gang, headed by Luckwar, fell upon the Judge of Mynpuree, who was on his way to Agra to attend the Court of Sessions, and shot him dead. It was not intended to attack this officer, but the mistake occurred owing to one of the gang having in-

formed the others that the occupant of the *palkee* was a very rich native. However, as murder had been committed, warrants were issued for the arrest of Luckwar and several of his followers.

Shortly after this event the Mutiny broke out, and from that time up to the period I am writing of, Luckwar had been a daring leader of mounted Dacoits; and during 1857 and part of 1858 the gang had murdered several wealthy and influential natives, and ransacked and burnt down many villages without being molested in the least. The poor agriculturists were not strong enough to offer any resistance; and as our soldiers and police had all mutinied, we were unable to stop the depredations of the gang, so they had a fine time of it for over a year.

I will now narrate the arrangements made for the capture of Luckwar and as many of his gang as possible.

Most of our infantry men were Sikhs of the Ferozpur and Ludhiana districts in the Punjab, who, it is almost needless to state, are born-soldiers. The whole of them were clamouring to be allowed to join in the hunt; but it was decided that only those who could ride a camel would be taken. In a very short time we had a hundred men, with two officers, ready to start, all known to be very good camel-riders.

After selecting our infantry we set to work to pick out a hundred cavalry, taking care that only the best riders and lightest weights and the smartest horses were chosen, as there was a long distance to be got over and only thirty-six hours to do it in.

The difficulty of getting the indispensable infantry over the distance in time was overcome by the help of the Rajah of Chuckmuckpur, who had been loyal all through the Mutiny, and with the sanction of Government he had armed and mounted a hundred of his tenants on fast-trotting camels. With this little body he had managed for several months to keep order in the villages round about Chuckmuckpur. Therefore the commanding officer decided to ask the Rajah to lend him sixty camels, and the request was complied with at once. So within an hour the infantry—every man supplied with two hundred rounds of ammunition—were mounted, two on each camel. Food for the men and provender for the horses and camels we knew we could get on payment from the inhabitants of most of the villages; or, should any of the villagers decline to give us what we needed, we would do as we had had to do before—take what we required, giving the headman of the village an order for payment on the treasury officer at headquarters.

The first day we got over fifty miles with only two camels broken down; but as we had about eight spare animals, this did not cause any delay. The cavalry of the party arrived at the halting-ground two hours after the infantry without a single breakdown.

It may not be generally known that the trot-

ting camel of India is a very different animal from the common baggage-camels we sometimes see in England going around with circus companies; the trotting camel is as well bred as a thoroughbred horse, and can trot his eight miles an hour, and keep it up for forty or fifty miles without a rest. I merely mention this fact to account for the infantry mounted on camels getting into camp so long before the cavalry.

In less than an hour after our arrival the colonel sent off two of our men (both noted as good scouts) to collect any information they could from the inhabitants of some of the villages near the place we were making for. They were directed to rejoin us at a small hamlet about fifteen miles from the forest, which we had made up our minds to reach the next morning between ten and eleven if all went well. We were well supplied with good Ordnance Survey maps, showing villages, hamlets, roads, rivers, &c.; therefore it was never very difficult for us to find our way to any given spot.

We had a very good night's rest out in the open without tents. The inhabitants of the surrounding villages had supplied all we wanted; they had had enough of the rebellion, and were quite delighted to see troops that belonged to the British Government. Of course all were anxious to know where we were bound for; but we knew very well that there were many traitors about, so the men were told to give out that we were going to Agra to bring back a very large amount of treasure for the Chuckmuckpur treasury. Actually, the place where we were making for was in the very opposite direction.

Well, the next morning, after all of us had had a good feed of *chuppatties* (a kind of Indian scone) with milk, and the horses and camels were watered and fed, we made a start at about seven o'clock.

The cavalry took one route, and the infantry on camels took another; but we all arrived within half-an-hour of each other at the hamlet that had been settled on. Our scouts came in shortly afterwards, and brought good news, to the effect that they had heard from a landholder that on the previous morning, at about eight o'clock, he had seen nine or ten men armed and mounted enter the forest, and about noon several parties of threes and fours had also appeared at the same place. Considering this to be very suspicious, he had sent a few of his men into the forest with some cattle to graze, having warned them to keep a good lookout, and to let him know what they saw. In the evening the men returned with the cattle, and reported that they had seen about seventy armed men in the forest, as well as thirty horses, and the same number of trotting camels. They noticed that each camel was laden with a fairish amount of commissariat stores; this the rebels needed, as the inhabitants of the villages they had to pass through would not give them

food or fodder unless forced to do so. The robbers took no notice of the men, as they must have concluded that they were simply watching cattle. At the usual time for cattle to leave off grazing they brought them out of the forest and returned home; but just after they left a dozen more armed and mounted men joined the main body.

As soon as our commanding officer heard this he made up his mind that we must push on at a rapid pace, or we would be too late to surround the Dacoits while in the forest. He therefore gave orders for a certain portion of the mounted infantry to ride in a direct line straight for the money-lender's village. On arrival, if they found that no Dacoits had arrived in the village they were to remain there until they heard firing from the direction of the forest, when they were to mount their camels and to advance, so as to prevent the Dacoits escaping towards the village. If, however, the robbers were found in the village, it was to be surrounded, and no one allowed to pass through the cordon; at the same time two men on the fleetest camels were to be sent back to the main body for reinforcements. Of course, they were also told where they would be pretty sure to find us. The officer put in command of this party was a native in whom the utmost reliance could be placed for bravery, tact, and sound judgment, so we knew that he would act up to the reputation he had made for himself. I was put in charge of the remaining portion of the mounted infantry, and directed to go at a fairish pace until I arrived within five hundred yards of the north side of the forest, when I was to dismount my men and skirmish through it with fixed bayonets. The commanding officer split his cavalry into two portions: one was told to make for the right flank of the forest, only five miles off, at a steady gallop; the other half to go to the left flank. All were to get within a half a mile of the place if possible, there to await the attack of the infantry, and then to act according to circumstances. The colonel was well aware that these Dacoits would fight like fiends; but, as they could not stand the bullets and bayonets of our infantry very long, they would make for the open country that lay in the direction of the position occupied by a portion of the mounted infantry, or towards the flanks. However, it mattered little where they went, for cavalry or mounted infantry they must certainly encounter.

By the time my party had got within two miles of the forest, our advanced scouts reported that they had seen ten or twelve men galloping hard towards it, and that they did not appear to be scouts, but were evidently a small detachment doing their very best to join the main body. On receipt of this information I extended my camels at distances of fifty yards, and advanced. When we got to within five hundred yards, all

dismounted, leaving the camels in charge of a few men, and pushed on. The Dacoits lay low—in fact, they did not fire a shot until we were right in the forest, and then they gave us a volley; but they were so nervous or such bad shots that no one was hit. A good deal of hand-to-hand fighting went on for a short time; but with fixed bayonets we literally drove them out into the open. Some made for each flank, others for the rear; but whichever way they went they were met by our men.

We ourselves had twenty-five killed and wounded. I came out with nothing worse than a bullet through my helmet. Thirty of the robbers were killed, and the rest of the gang (some forty-five) taken prisoners. Over sixty horses fell into our hands, besides no end of loot. Amongst the wounded was the great Luckwar. He had fought bravely, and had done his best to get his men to resist to the last; but they had had enough of it, and very wisely surrendered. Luckwar, with four of his followers, was eventually sentenced to death for the numerous murders he and his gang had committed; the rest were sent across the sea to the Andaman Islands for life.

For our services the Government of India was pleased to bestow the order of C.B. on our colonel; I was promoted to be second in command, and all the men engaged in the expedition received a gratuity of three months' pay. Instantaneous reward for good service was the order of the day, which led to our always being able to get more recruits than we were in need of.

#### MY NATIVE LAND.

ALTHOUGH ten thousand miles away,  
With clearer skies above me,  
There never yet has come the day  
When I have ceased to love thee.

Dear native land! thy hues are gray,  
But, ah! how soft and tender;  
I would not for this brighter ray  
That tranquil light surrender.

So, when I wander from my home,  
Though kindly friends receive me,  
And gay the scenes through which I roam,  
Thy memories never leave me.

'Tis for the old familiar ways  
My wistful heart is sighing;  
I strain my gaze across the haze  
Of space between us lying.

Not Time with his destroying touch  
Can weaken nor can change me;  
Not distance, for thy charm is such  
That nothing can estrange me.

The country which has given me birth  
Is dear as is a mother.  
There may be fairer ones on earth,  
But I can love no other.

### THE LAW LORD AND LESLEY.

#### CHAPTER I.

REMOTE from civilisation as is the village of Tainish in Argyllshire, a certain March Sabbath morning found its rural inhabitants engaged in the most conventional act of church-going. The harsh-sounding bell in the little kirk-tower, with its imperious summons, seemed rather to emphasise than interrupt the brooding peace of the surroundings—the deep, infinite harmony of the hills and solitude.

Nevertheless there were many empty benches that morning in the sacred edifice, for it was a winter congregation, every man, woman, and child among the worshippers being present by right of residency from year's end to year's end in the parish: all save one, a stranger who occupied the Barhulican pew, thereby challenging, had he known it, the curiosity of the whole congregation.

Barhulican, a lodge in Glen Raith, had been recently leased for fishing; but so expeditiously had the arrangement been made that the assembled worshippers on this eventful Sabbath morning were at the obvious disadvantage of knowing little or nothing about the new-comer: that he was 'frae Edinburgh' constituted the extent of their information. It was natural enough, therefore, that they should devote their whole hearts and minds to supplying the deficiency by a minute and careful investigation of his dress, manner, and general deportment. Fortunately for himself, he appeared oblivious of the eager interest of which he was the centre, and joined in the service with an almost mechanical air of boredom, plainly demonstrative of thoughts far away.

Lesley Gordon, the minister's niece, from her place of vantage in the manse pew, found her eyes straying again and again to the stranger's profile. There was something about his whole air which seemed like a fulfilment of one of her vague girlish dreams. Beneath that mask of cold reserve what possibilities lurked—what sovereignty

of will and all-conquering purpose, significantly illustrative to her unsophisticated mind of a vanquished fate dragged captive at his chariot-wheels!

Involuntarily her eyes glanced from the stern silhouette opposite her to the rough-hewn features of her cousin, John Mackenzie, by her side: John the student, the gold medallist, the intellectual Goliath of her narrow universe. No, it could not be intellect which had stamped the difference between the two men. John's under lip drooped; his head was slouched forward over his sunken chest; there was an unfinished look about him, with all his superiorities of education, which struck her with a new, sudden force. No, it was certainly not intellect, she decided as the last note of the paraphrase died away in the throats of the choir, and at a sign from the precentor they subsided reverently back into their places.

Once more the minister's voice rose in solemn summons to God to be present in their midst; and in the rustle which preceded the prayer the stranger turned suddenly and met the full gaze of Lesley's puzzled, half-awakened soul. His eyes lightened, and a transitory gleam of interest shot across them. The next moment he had bent his head forward in his hands; and during the long supplication which followed, Lesley's thoughts wandered very far from the subject of the prayer.

'Did you notice the new tenant of Barhulican?' was the first question her cousin asked her as they stepped forth into the noonday brilliance once more.

A fresh breeze had arisen during the morning, and Lesley welcomed its cool administrations after the oppressive heat of the church.

'Yes,' she replied somewhat vaguely.

'They are all wondering who he is,' continued John; 'they won't have to wonder long. Come for a walk up the glen, Lesley, before dinner,' he added in an eager voice. 'I want to speak to you, and it's my last day.'

They stopped at the little post-office on their way. It was the village store as well; and as they entered through the half-open door they could see that the dark interior was already crowded with the home-going congregation.

'Three for the minister and one for yourself, Mr John, frae Edinburgh,' said the busy post-mistress as they reached the counter; 'and here's a wheen o' letters and parcels for the new tenant o' Barhulican. I'm just wondering whether he'll know to call or whether I should send wee Alick up to the house with them. He was at service this morning, I hear. See, there's his name and address in full on this envelope—it's been redirected—Lord Coalstoun, 2 Moray Place, Edinburgh.'

'Coalstoun,' repeated John meditatively. 'Coalstoun. Oh, of course, he's one of the Law lords,' he added, with a flash of sudden inspiration; 'the greatest Judge in the Parliament House, they say, and the most stony-hearted.'

'Indeed, Mr John?' echoed the post-mistress admiringly.

'I knew he was somebody famous the moment I saw him in church,' chimed in Lesley's clear, enthusiastic voice. She half-turned as she spoke, and her eulogy died on her lips, for there was the object of her admiration standing patiently behind her, waiting his turn. A faint smile hovered at the corners of his mouth; but otherwise he gave no sign of having appropriated the compliment.

'Oh John, how dreadful! He must have heard me,' she cried as, withdrawing hurriedly from the crowd, they found themselves in the sunshine once more.

'And what if he did?' said her cousin stontly. 'I expect he was more pleased by that than by my judgment of him—though I have heard people say that he prides himself on his hard heart.'

A serviceable-looking turn-out was waiting at the post-office door, and the pair had not walked very far on their way up the glen before the steady ring of hoofs on the narrow road behind them warned them to step aside.

Lord Coalstoun was driving. He had enveloped himself in the folds of a rough Highland cloak for his five miles against the caller breeze, and a soft cap was drawn low over his brows.

Lesley, glancing up at him with heightening colour as the dogcart went past, fancied she detected a gleam of amusement still hovering about his lips; but he appeared quite unconscious of the presence of the two pedestrians.

John's tongue was very busy that morning, and he hardly had time to observe how random were the answers which his cousin vouchsafed to all his eager plans and aspirations for the future. The next day he was to return to his classes in Edinburgh, and to the room in Panmure Place which was his only home in the great city, and where he hammered away with such dogged

determination at divinity and theology as they are set forth in the tenets of the Established Church of Scotland. He was by no means a brilliant scholar; but, like many another of his kind, he had overcome the deficiency by perseverance—a perseverance which in his case had been attended by an unwonted measure of success, each ensuing session finding him gold medallist for his year. Only one more term and he would be free of college, and within easy reach of the actual goal of his ambitions—that is, a manse of his own, with Lesley as its mistress.

Ever since, fifteen years ago, she had been brought to his father's house a tiny orphan of three, he had seemed to nourish this dream; and as the years went by and Lesley grew into girlhood, the dream had grown too, and gradually filled the whole proscenium of his life. From the very first he had had the sole charge of her; the minister, a grave, silent bookworm, never interfering with his wishes or even attempting to criticise the lad's well-ordered and systematic methods of upbringing. Thus John had been father and mother and brother to her all at once. When the time should come for him to exchange this triple relationship for a closer, dearer tie, he had no doubt that she would agree as gladly as he to the change; and with a wonderful tact he had prepared her mind for the inevitable step, so that by degrees Lesley had grown to look upon her ultimate marriage with her cousin as a complete matter of course. It is seldom that a man has the privilege of bringing up and educating his future wife; and to say that John gloried in the uniqueness of his good fortune is to put it mildly. There had been a time when he had feared a possible interference with his plans—that was years ago, when he himself was reaching manhood and Lesley was still a child, and his college career threatened a fatal break in their intercourse; but after much deep thought and cogitation he had devised a skilful yet practical scheme for bridging the difficulty. He instituted a system of what he jestingly called 'correspondence classes,' whereby he managed to keep alive all the subjects of interest between them and maintain his influence over her unbroken.

Lesley never realised a tenth part of the pride he took in her answers to his questions, for the meed of praise he saw fit to bestow upon her efforts was wisely tempered, and offered her just sufficient encouragement to do a little better next time.

Now she had reached the age of eighteen, and John was twenty-four, and her increasing comeliness and beauty, and his increasing love, made the struggle to maintain the brotherly relation between them more and more difficult every time they met; but he manfully resisted the temptation to any demonstration of affection, fearful of prematurely breaking the spell of her innocence.

Only one more term and the long apprenticeship would be over, and he would be free to tear off the well-worn disguise and reveal himself in all the bravery of his new-old rôle of lover.

'It will be just going from one manse to another for both of us, Lesley,' he said at last when he had come to an end of the tempting enumeration of his future hopes; 'but I am afraid the poor old dad will be very lonely without you.'

Lesley made no answer to his remark, but sauntered alongside him silent and preoccupied for some little distance.

'Don't you think we've gone far enough?' he ventured presently as she still vouchsafed him no reply. 'We could sit down for a little, if you like, before we start back.'

'No; I want to go to the bend there,' she said obstinately. 'It is exactly half-way to Barhulican, and you can see the lodge from the road.'

John laughed.

'I should think you had seen it often enough before,' he said. 'Do you expect it to have been blown down in a single night or swallowed up by the Raith?'

They reached the coveted corner as he spoke, and Lesley paused and drew in a long breath of the pure austere air. The glen from end to end lay long and narrow before them—the mountains shouldering each other closer and ever closer as it deepened, till they locked at last in a fierce, inseparable embrace, shutting out the rest of the world. Hundreds of torrents seared their rugged sides, and far below the Raith river gurgled an harmonious accompaniment to the everlasting song of solitude. On a jutting spur of the opposite hills was perched the lodge—an unpretentious building standing four-square to the winds, and backed by a thick, dark clump of fir-trees.

'Now are you satisfied?' said John, with a light laugh. 'I think we deserve a rest more than ever.'

This time Lesley agreed, and, taking a few springing steps up the hillside, flung herself down on the heathery sward, John following her example more soberly.

She had tilted her hat over her eyes in boyish fashion, and as his gaze rested on the unconscious grace of her young outstretched figure, the foreshortened beauty of her face, he smothered a sigh and looked resolutely away towards the opposite hills.

'It does seem strange,' she began at last in a dreamy, abstracted voice, 'that I should have to live my whole life in a manse. Do you know, John,' she went on, addressing her cousin, but with her gaze still fixed meditatively on the lonely lodge across the valley, 'I almost wish

that you were going to be something else, and not a minister after all.'

There was a long silence, broken only by the merry splash of a burn far up the hillside and the distant bleat of a baby lamb from the shelter of some hidden corrie.

'What else?' asked John at last, in a voice which he strove to make natural: 'a lawyer perhaps?'

'Oh yes,' with sudden enthusiasm, 'a Judge like Lord Coalstoun; but then'—She broke off as the comparison of the morning came back to her.

Again there was silence, while John struggled to face with fortitude a certain ugly rift which had suddenly appeared in his happiness—the result of her idle words. The bright day seemed to have darkened all at once; the river's voice had grown dreary and monotonous to his ears, and the buoyant air struck chill upon his face.

At last with an effort he spoke.

'It is the first time you have said such a thing, Lesley; is it the first time you have thought it, dear?'

There was a note of tender anxiety in his voice; but Lesley was too much occupied with her own thoughts to observe it.

'Oh, I don't know,' she replied carelessly. 'I suppose it is. I didn't really mean it. I dare say it is just as nice to be a minister as anything else, and there is no difference between a manse and any other house, I suppose; only I was thinking in church this morning what a change it would be to live in a big town and have all the shops and the people to look at.'

'Yes, I quite understand that you should feel that sometimes,' agreed John hurriedly. 'It must seem dull for you always in the one place; but it will be different when we are married. A minister's wife has so much to do, so many things to interest her and fill up her time. Besides, of course, we will go to town for the Assembly every year, and then you will have as much of the shops and people as you want.' His voice had gathered eagerness as he spoke; but she made no response, and a look of disappointment gradually crept over his face.

At last, unable to bear the silence longer, he asked sharply: 'Lesley, what are you thinking of?'

She sat up with a start, rubbing her eyes; then with a vigorous movement settled her hat upon her head.

'I was thinking of dinner,' she said, turning to him with a provocative smile. 'Let us go home.'

John rose heavily to his feet, and she slipped her hand into his arm.

'Poor old stupid!' she said, and the next instant they were racing down the hill together.

## SOME NEW EDUCATIONAL METHODS.

THE subject of education has an interest for every one, more particularly the heads of families, who have to provide for their children's futures and to equip them as well as they possibly can for the great battle of life. The pressure caused by foreign competition and the higher standard required in nearly every employment render this a vital matter for parents. Yet many never trouble themselves about the methods which the schoolmaster employs to impart instruction and to develop the faculties of his pupils. The Code is settled by high authority the schoolmaster carries it out, and the general public accept the situation unthinkingly and without doubt or question. It would be better for interested parents to think over and examine occasionally the usual methods of procedure; doubts will follow as to the wisdom and practical value of some of them, and suggestions of better methods may arise. Plain common-sense is often a fine touchstone for estimating the true worth of new fads and theories.

For some years the present writer has had his mind exercised regarding the considerations he wishes to put forward; it may be they will find an echo in the minds of some readers, and that profit may result.

To begin with the infant school: let us consider first whether parents are wise in sending children to school before the age of six or seven. At this period children are rapidly developing mentally and physically; everything new they see, hear, taste, or smell awakens inquiry in their opening minds, and suggests questions and a desire for information which parents would be wise to answer as patiently and as fully as they can; some will be too deep for the older person. Now, is the school the best place to supply food for this mental hunger? My answer would be in the negative where children have home surroundings of culture and refinement, and where parents do not look upon this perpetual thirst for information as a bore and a trial. In school the minds of all are forced to run in a certain groove; through the circumstances of the case originality is discouraged. Up to the age I have mentioned little real instruction can be imparted there, while great harm may easily be done by stifling this natural thirst for knowledge, and forcing the sensitive child to 'be good, do what the teacher says, and ask no questions.' Of course, in the case of the unfortunate little dwellers in the 'dark places'—the crowded and public-house infested parts of towns and cities—the school atmosphere is immeasurably better for them; there they get some culture and come under refining influences.

'But,' it will be asked, 'where can children be

educated better than in some good kindergarten school? Are not all the great educationists agreed that the kindergarten system is the ideal one for forming the child's ideas? Does it not develop the mind and train the hand and the eye in a manner unapproached before Froebel and Pestalozzi discovered it?' Here I join issue, and say to paterfamilias, 'Examine this matter for yourself. See what your children are doing. Do not be dazzled by such high-sounding and sonorous names; though maybe the word "kindergarten" is well suited for the fallacy called "begging the question."'

Again, it will be said, 'But look at the Germans, the most highly and scientifically educated people in the world: is not the kindergarten the foundation of all their learning and science?' It will probably be news to many that there is absolutely no kindergarten instruction given in any of the German State schools. In that country the State education begins when the child has completed his sixth year; and as he is then so far developed physically as to be capable of work demanding concentrated attention, play (kindergarten) is banished, and the training in habits of continued thought and persevering work is begun and carried systematically all through the school life. Let us point out here that this is *the* most valuable endowment that can be conferred on a child, and is essential for success in after-life; the German nation, noted for steady, patient, successful plodding, is a standing monument to the success of their school system.

A recent writer in one of the Reviews, who states that he spent much time and a considerable amount of trouble in examining and comparing the relative merits of the British and the German school methods, gives it as one of his conclusions that Froebel is a striking instance of a prophet having no honour in his own country; that the Germans despise the kindergarten system. This is scarcely an accurate view to take. The kindergarten in Germany has its place before the child goes to the State school—that is to say, before the end of the sixth year. It is conducted by private persons who devote themselves solely to the work, and here neither books nor writing materials are used. In our schools kindergarten and literary work are combined in such a way as, to put it mildly, does not ensure the good result produced by either of them taken as it should be. In that country kindergarten work is kept absolutely apart from serious school work; as the name indicates, it is simply organised play.

What, then, is the effect of this combined method of ours on the education of the child? In my opinion the carrying on of kindergarten teaching

beyond the infant stage produces a disinclination for bookwork of all kinds, and brings the mind into a groove that unfits it later on for abstract thought and work. I do not speak without practical knowledge and experience of schools. The kindergarten system of drawing in particular, if practised by older children, injures them for freehand, which demands more thought and self-dependence; if it is carried too far they find great difficulty in acquiring skill in ordinary drawing when they have no mechanical aids such as the kindergarten system gives. Drawing is now generally taught in our schools. The old system of 'freehand' was a very fine one, so far as it went, and of course it can never be superseded by any other. For artistic work in the true sense it can have no rival; but for commercial needs—designing of all kinds—it entails an expenditure of time and an amount of labour that the business man cannot afford to devote to it. Accordingly, in many good schools it is supplemented by some mechanical system that vastly facilitates the work of designing. There are several of these in use, all good, the essential features of which are the use of paper divided into squares and triangles by lines or dots, and the employment of ruling and measuring, combined with freehand work. Scale drawing, too, is taught in many schools: a most useful department of drawing for the working business man.

When these new features are introduced there is a great temptation to dispense with more or less pure freehand: a course which would be ruinous to all drawing. It is doubtful whether, in the case of an ordinary schoolboy, the recent 'free-arm' drawing is of further advantage, or the American 'ambidextrous' system—that is, drawing with both right and left arms.

Writing is akin to drawing; both are 'hand and eye' subjects. To the man whose son is looking forward to obtaining a clerkship, either in the Civil Service or elsewhere, it is of great importance that writing be properly taught; it is notorious that in the higher schools, where preparation for a university is the main object, writing is shamefully neglected. The methods now employed in teaching it differ fundamentally from the old ones. In our young days engraved copperplate headlines were looked upon as a *sine qua non* for producing good handwriting—indeed, that was the case until very recently; but now these old friends are vanishing by degrees, and in some schools are quite discarded. The blackboard is freely used for teaching writing; and dictation, transcription, composition, are done in the time that used to be wasted with the old headline work. This is an immense reform, and practically doubles the time that heretofore was given to training children in composition and the fluent expression of their thoughts with the pen.

Some years back a style of writing called 'perpendicular' came into fashion in the schools;

but it has now almost disappeared. It looked nice when slowly and carefully written; but as soon as employed for rapid work it became a vile 'backhand,' and seemed to render those who had been laboriously taught it unfitted for acquiring a smart, quick business hand.

There is a general impression that children who draw well are also good writers, and that if drawing is well taught in a school the writing there will be good too. This theory does not hold in practice; a different kind of training is required for each of these subjects. Very frequently boys who draw well are bad writers, and we all know that professional artists sometimes write execrably.

Modelling in clay is another useful branch taught in some large schools to the junior standards; it trains in accuracy of perception, and develops the power of reproducing the images formed in the mind. A substance called 'plastine' is now usually employed instead of clay, which is messy and dirty.

Paper-folding is an occupation which forms a good occasional lesson for older children. The paper employed is thin tissue, generally coloured; it is supplied in various sizes and shapes. The training consists in folding these pieces into polygons and triangles, also into areas representing various fractions of the piece used: a quarter, one-eighth, three-eighths, five-sixteenths, &c. It helps to produce accuracy and delicacy of touch and manipulation, and may be made of great service, particularly to clumsy children. The polygon folding is also a valuable subsidiary to another branch of drawing intended for designing: as, by lining in the polygons and other pieces formed by the creases, very pretty designs can be rapidly and with little trouble produced, which would require much toil by the freehand method alone.

Another immense advantage that many of these new features of school work possess is that children love them, and would spend all the school time at them if allowed. The mechanical systems of drawing, the paper-folding, &c., have a perfect fascination for children, principally because they enable the little ones to produce a tangible result, and make them feel they are able to do work for themselves.

In America the educational authorities are working on much the same lines as ourselves regarding new school methods; but in one matter they are far in advance of us: the way reading is encouraged in school and home life. It is becoming a custom there to have meetings between teachers and parents, when the former discuss and explain the books they wish parents and children to read together at home. The United States Education Report says: 'No one thing can accomplish more in making the home what it ought to be than such home reading of books which are recognised by all as among the

best. The parents will be benefited as much as the children, for the books we have in mind are just as interesting and valuable for grown persons as for children.'

Another apparently small, but really very important, point—which is dealt with in the United States Report, but is completely overlooked by the English regulations—is the providing of books of reference for the use of the teachers. It is very

necessary for them to have such books; indeed, the questions a good schoolmaster has to answer are 'numerous and extensive;' and it is but fair to provide him with some help for supplying the answers. The official United States List of Reference Books for Teachers is headed, after *Webster's Dictionary*, by *Chambers's Encyclopædia*, a tribute to the worth of that great work of which lovers of *Chambers's* may well be proud.

## BODEN GARRETT: SPY.

By W. H. WILLIAMSON.

### III.—THE ADVANTAGE OF A WASH-TUB.

HE adventure of Boden Garrett which the Federals regarded as the most insolent and his friends as the most audacious was the one that he attempted at Front Royal. 'Stonewall' Jackson was in the middle of his Shenandoah Valley campaign, and information was necessary and urgent.

'Do you think you will be able to be back in twenty-four hours?' General Jackson asked Garrett, after explaining what was required.

'I will try, General.'

'If you want anything, get it. Colonel Bryant will see you are provided with anything you require. It's a risky journey, Garrett; but you're quite willing?'

'Quite, General.'

'Good luck to you, and God preserve you!'

Garrett saluted, and prepared for his errand. That it was risky he knew, for the Federals had been annoyed by so many spies that they were keenly anxious to lay hands on all and sundry who were engaged in the secret service of the Confederates. Besides, his escapade at McDowell had made many of the Northerners particularly desirous of putting a hand on—or a bullet in—him. Banks, who was in command at Front Royal, was not inclined to waste much time in dealing with spies; he had bereft the Southerners of five during the last ten days. It was the comparative nearness of Front Royal to McDowell that gave to this adventure one of its audacious touches.

Garrett prepared wisely and set off warily. He was now a Federal soldier belonging to the 32nd Ohio Regiment under Schenck, who had been defeated at McDowell. He called on his way at a quiet-looking farmhouse, that seemed also somewhat neglected. He advanced rapidly with a cautious step and a roving eye. A heavy negress was in the yard, washing clothes at a huge tub, and she turned on hearing his steps. 'Massa'—she was beginning to call out, when Garrett made a motion for her to be silent.

'Any Feds. here?' he asked in a whisper.

She pointed over her shoulder. 'Jest gone, Massa Garrett. Three.'

'Glorious, Aunt Chris! How are you? Do you like me in this?'

'But you're no Fed'l, Massa Garrett.'

'Sh! Don't mention my name. For the moment I am one of the Feds.; d'you understand? Not a word, not a hint to anybody. Massa John's with General Lee—isn't he?'

'Yes.'

'Do the Feds. trouble you here?'

'Dey come an' go, an' take what dey kin dat isn't 'idden. But Massa John'll come back soon.'

'You're right there.'

Garrett had been a kind of steward for Mr John Austin, who had thrown in his lot with the South; and this negress and her husband were the caretakers on the farm. These negroes were usually left unmolested by the Federals.

Garrett tried to get all the information he could from the negress; but he found it was mostly unreliable or useless. She guessed there were a million soldiers at Front Royal because she had seen a march past! Garrett knew he must go once more right amongst his enemies.

General Banks was busy. The defeat of Schenck and Milroy at McDowell by General Jackson, and the uncertain movements of the latter were matters of deep concern to the Federal General, who tried to keep himself well informed regarding his enemy and well in touch with the forces on his own side. Three or four bearers of despatches were kept waiting in his tent while he discussed matters with members of his staff.

However, he was not long in turning his attention to the despatches. The first was from Saxton, who was at Harper's Ferry, and in as anxious a mood as Banks himself, for he was wondering where Jackson was in the Shenandoah. The second was from Frémont at Cross Keys, and that General was anxious concerning the whereabouts of 'Stonewall' Jackson. The third was from Milroy, who gave what information

he could respecting Jackson's force; but he added: 'A desperately sharp lookout is imperative, as Jackson doubles like a fox and springs as suddenly as a shooting-star.' At the foot of the despatch, however, there was this addition: 'I have learned from two Rebel prisoners just brought in here that Jackson has a splendid spy-organisation, and that one of his most successful agents is the man who impersonated the Austrian attaché before me at McDowell, and then bolted on the train. His name is Garrett, they say, and he told one of these Rebs. he was going to be at Front Royal in a couple of days. It may have been Secesh brag; but if you do get a chance to lay hands on the creature, give him a few inches of rope for us. Our boys are very mad.' Then other matters were dealt with; and at the end of the despatch were these words: 'The bearer of this is a man who saw the Secesh spy at McDowell: perhaps he might help you to identify him.'

The other matters in the despatch were perhaps of more importance at that moment to General Banks; but we are most concerned with what relates to Boden Garrett.

'You know this Rebel spy—Garrett?' asked the General of the despatch-bearer.

'I should know him again, General.'

'Umph! What is he like?'

'I held his horse when he came, an' I was in the run in the train, too. He's a tallish man, General; moustache an' beard—not much of a beard. He's a quick look about the eye. A good many of our chaps 'ud like to shake hands with him,' he added with a kind of humorous grin.

The General nodded understandingly. 'We don't want him here,' he said. 'General Milroy says it is reported he may come here. If he does, we'll let him stay—on a tree. However, suppose you walk about the camp; keep your eyes open, and if you see anybody suspicious, who looks at all like this Rebel, arrest him.'

'An' if he objects?' said the man, more as a suggestion than an interrogation.

'Call for help if necessary, and, if you think fit, shoot. Here.' The General wrote on a sheet of paper: 'The bearer of this has power and authority to arrest any and all persons he may think necessary for the purpose of securing the person of one Garrett, a Rebel spy; and all loyal men are hereby called upon to aid the bearer of this in his task should opportunity be given.—GENERAL BANKS.' 'There,' said the Federal leader, 'that will give you authority.'

The soldier saluted and was going out when the General said, 'You'd better take a man about with you. Major Bentz will find you a companion.—Will you, Major?' he added turning to that officer.

The Major, of course, complied with the request, and the despatch-bearer and a sergeant from

the 2nd Connecticut went off together to lay hands on Boden Garrett.

'I guess it'll be worth somethin' ef I kin catch this durned Secesh,' said the man who held the warrant.

'E's slippery—eh?'

'Some! Did you hear what he did at McDowell?'

'Stole a train an' got away clear—eh?'

'He's too saucy to live long.'

'An' 'e's 'ere—in Front Royal?'

'He'll not be here an' alive long.'

'You're right, sonny. Say! Didn't the Rebs. drive you from McDowell—eh?'

Then they gossiped of the war in many of its phases.

'Say! I'm suspicious,' said the Ohio man who knew Garrett. 'That man sellin' pies has a queer look—eh?' and he pointed to a man with a basket on his arm.

'E's lookin' about 'im some,' remarked the sergeant. 'Is it the spy?'

'Let's march round him.'

They did so cautiously, and were satisfied it was not Garrett. They went on farther, and a man dressed like a Federal soldier attracted the attention of Milroy's messenger.

'That's his build,' he said, nodding in the direction of the man he was suspecting.

'But 'e's a Fed.,' said the sergeant.

'I wouldn't trust this firework of a Reb. He'll play any game. D'you know this man?'

They walked closer, and the sergeant did not know him.

'Is it 'im?' queried the sergeant.

'B'jimy! but it's like him. Let's watch some.'

They hung about the spot listlessly for some time, and watched the man; but he was not Garrett.

The camp of Front Royal occupied, somewhat sparsely, the Blue Ridge Hills, opposite to the Shenandoah Mountains. The region is rugged and wild, and even weird in some places: not a very desirable situation for the camp of a big army with much baggage. The two soldiers, after walking all over the camp, stopped near a clump of houses at the outskirts. They had not succeeded in running the famous Southerner to earth. Other soldiers were straggling about the place; and the despatch-bearer looked fixedly for a moment at one who was talking with two or three men a score of yards away. The eyes of the two men—the Ohio man and the soldier he had just noticed—met, and both stared. The Ohio man came to a decision first; but the other looked on the ground, ransacking his memory as to where he had seen the man he thus partially recognised.

Drawing his companion to the corner of a small building, the despatch-bearer whispered, 'There he is.'

'Which?'

'The man who's looking like as if he'd lost a dollar. We hev him! we hev him! Stand here—don't budge an inch, and don't let yer eyes wander. He's sly; but we'll do him now. I'll slip round here, and when you hear me call, close in. Don't let him fool ye.' Then the Ohio man went round the building.

Meanwhile the suspected Federal was baffled by his memory. When he looked up again he noticed that the man he had tried to identify as an acquaintance was gone. That disappearance seemed to assist him, for a light shone in his eyes as though the sprite of memory had come back with a laugh at the short absence; and he walked slowly towards the sergeant, evidently convinced. When he came to the corner, looking for the other man, and made as though he would run, the sergeant flung himself on him. There was a struggle; and as the sergeant grunted the other man cursed.

'Help!' called the sergeant; but the man he had been talking to had strolled round the building, and didn't hear. 'You think you'll fool me, you durned Reb. sneak! But you're caught this time.—Help!' he called aloud.

They were both calling for help!

'Who in tarnation are you?' asked the man as they stopped struggling for a moment, holding each other's arms. 'Are ye a Secesh or a Fed.?' 'I'm a Fed.; but you're a durned spy,' replied the sergeant. 'I know ye: you're that sneak Garrett.—Help!' he called again.

'You puddin'-'ead! 'E's foolin' us again. That's Garrett that's bolted. Let me go;' and he struggled.

The determined character of the man's struggles only made the sergeant more convinced that Garrett was a very clever man. They had a beautiful struggle for two or three minutes, and did the rest of their talking on the ground.

'I ain't goin' to let ye slip as long as I hev a finger to each 'and. You're a durned spy, an' I hev ye.'

The other man was breathing hard, and appeared much annoyed.

'God help 'im! Look 'ere, boss,' he said; 'I saw this man Garrett at Bull Run w'en 'e came from Beauregard, an' 'e fooled me there. 'E's playin' George Washington to the British army with ye now. 'E recognised me, an' thet's why 'e's expressed. An' now you're 'oldin' me in, durn ye!'

The sergeant began to doubt; but then he had been warned: Garrett was very sly and very clever.

'Ye don't fool me,' he said quietly; but there was not so much conviction in his voice.

The other saw this and hoped. 'We're lumber-skulls. They'll build statues for us, sure. The Reb. spy's managed to get two Feds. to fight while 'e bolts. 'Say, sergeant—general!—I'm 'ere

in the 1st Michigan, an' I've bin 'ere surely as long as you. 'Ow long's the other man bin 'ere?'

The sergeant hesitated. Doubt was beginning to get a good hold of him, and he loosed his hold. 'Hev ye got a revolver?' he queried, as he pointed to his own.

'Take it out of my pocket.'

The sergeant did so.

'Now surely you can believe me. Shall we vamoose? That spy'll be 'alf-way home to old "Stonewall" afore we git away from this claim.'

The sergeant was a stolid man, and still feared treachery.

'You'll swear you're a Fed.,' he said, probably not thinking of the value of such testimony.

'I'll do more. Where did the other man say 'e was goin'?' 'Round the block.'

'E's had time to go round ten blocks. 'E isn't 'ere yet: that's frosty—eh?'

The sergeant gave in.

They both got up and looked as if they had been engaged in an unprofitable business.

The man of the 1st Michigan, who had really had the encounter with Garrett at Bull Run, was quick to act. He had an opportunity now of recovering the advantage he had lost in his first encounter with Garrett.

'E's removed!' he ejaculated as they came round the houses and failed to see Garrett.

'An' 'e's fooled the General too!' said the sergeant, still aghast at the audacity of the whole proceeding.

'Jes' some! An' 'e's seen the camp, an' knows everythin'. Let's catch 'im.'

'B'jimini, yes! But where is the 'possum?'

They walked quickly and looked hard.

The Michigan man caught sight of a running figure nearly a mile away, seemingly going towards a farmhouse.

'There 'e is!' he cried out. 'We'll run 'im down yet;' and he set off at a run, with the sergeant in line with him, for the latter's pride was hurt and his vanity sorely wounded. He had escorted a Secesh through the camp, and practically helped him to get away!

Garrett, however—of course Garrett was the man who was escaping—had got a little start, and he was making the best of it. He knew he would soon be followed; but he ran speedily, and was almost without an ulterior motive of direction when he first started. As he went on his way he cogitated what he must do. He would have preferred to pass the farmhouse; but a regimental wagon was drawn up near it, and he was too prudent a man to run past openly. He was daring enough, however, to attempt the unexpected, and that trait was frequently his salvation. So Garrett made for the farmhouse, crept round to the farm buildings, and used his eyes and ears well. He could hear voices of men

inside the house, and he looked eagerly for Aunt Chris. There was also the danger that at any moment a pack from the camp might be at his heels, for he had caught a glimpse of the two figures racing after him. He crept to a window and listened.

Garrett clapped his hand to his revolver as he heard a door creak; but, to his joy, it was Aunt Chris. He motioned for caution; she realised the game quickly, and came to him.

'De Feds.—t'ree inside,' she whispered.

'They're after me from up yonder,' he whispered in reply. 'Where can I hide? They'll search here.'

'De stables,' she murmured in reply. But before they had moved away a voice called from the house on Aunt Chris.

Garrett and the negress both stopped instinctively.

The call was repeated, and the next instant Garrett prepared to face a very ugly situation, for his two pursuers from Front Royal might at any moment burst into view. However, fighting was his last resource, and he was not in his extremity yet. His quick eye had noted the larger tub that Aunt Chris was using for her washing, and his wit discovered the use for it. He rushed to it and upset the contents; then he jumped inside and snuggled into as little space as possible, pulling a few things over him.

'Cover me up and go on with your washing,' he managed to jerk out to Aunt Chris.

She was lost in wonder and amazement; but Garrett's injunction helped to bring her to her senses, and her own sympathies guided her to do right. She was almost delighted to be able to join in the little conspiracy, and promptly threw her damp washing on the top of Garrett, completely covering him from view; then she went on wringing a sheet as though cleanliness were her one joy in life.

The Federal soldier appeared in the doorway.

'Say! are you deaf? I reckon your late proprietor would have shaved your head if he'd called you twice.'

Aunt Chris ceased to wring the sheet, and looked sweetly guiltless and uncomprehending at the soldier.

'I've shouted twice, an' my throat's objectin'. We're dry, an' so's the jug. Understand, mother?'

'Yes, sah!' said Aunt Chris; but, not being an accomplished conspirator, she was very loath to leave the side of the tub. Still, her hesitation was of no importance, for the soldier's attention was withdrawn from her to two Federals racing down the road towards the farm.

'Say, boys!' he called to the men inside, 'come here; there's some fun on.'

His companions came to the door and looked.

'Is this a retreat?' said one ironically.

'Looks as if these two don't want to stay fer many more drinks at Front Royal,' said another.

'Are they after mischief?' asked the third dubiously.

Aunt Chris was uncomfortable and silent.

The two runners saw the three Federal soldiers at the door, and the 1st Michigan man called out as he came almost breathless to the yard-fence, 'Hev ye seen a man runnin' jest in front o' us?'

The three soldiers looked somewhat surprised at the question; they had been so quiet before.

'Nob'dy's run past here,' replied one.

'E's dressed as a Fed.; but 'e's a durned spy,' said the sergeant.

'Ain't seen him.'

'E turned in 'ere—didn't 'e, mate?' said the 1st Michigan man.

'E did. I saw 'im bolt for this place, an' 'e didn't cross the road again.'

'E's 'ere, sure enough. 'E's as slippery as quicksilver, an' 'e's durned sly; but 'e's 'ere somewere. Say, hev ye bin 'ere long?'

'Half-an-hour.'

'It's curious,' said the 1st Michigan man; 'but 'e's 'ere—'e must be. Hev you 'eard nothin', seen nothin'?''

The Federals shook their heads. One of them turned to Aunt Chris. 'You've seen nothin'—eh?'

'No, sah—no Fed'l soldier come 'ere;' and she felt she had not violated truth.

'It's durned queer,' continued the 1st Michigan man. 'Say, boys! 'elp us to run 'im down. 'E's the man that bolted with the train at McDowell.'

'Him!' said one of the Federals with such emphasis that Garrett, who heard all the conversation, felt flattered.

'Sure ye ain't seen a man runnin' towards 'ere?' asked the 1st Michigan soldier of Aunt Chris.

'Bin wid dese gen'men all de time, an' 'ere in de yard, an' don't see 'ow a man could come widout makin' a noise; an' we ain't 'eard no noise nor seen no man—eh, sahs? Per'ps de man's gone udder way.'

Aunt Chris was as subtle as a K.C.

'I reckon we're foolin' the time,' said the sergeant. 'Suppose we spread out an' look well about 'ere. I'll lay 'e's not far away—mebbe coverin' us now.'

The other men started at that. The 1st Michigan man said, 'Yes, 'e's quick on the trigger. Get your rifles, mates, ef you hev no sharp-shooters.'

Then they began the search. They went into the stables and ransacked the hay and everything within. They went to the outbuildings and searched laboriously.

When the men were out of the yard and in the buildings, Aunt Chris slyly kicked the tub that contained Garrett; and, bending down

to lift an article, she said, 'Massa Garrett, are ye all right?'

'Are they gone?' he asked.

'Dey're lookin' in de buildin's,' she replied.

'How many altogether?'

'Five.' She wrung a sheet very hard, and shook it ostentatiously.

'They're not in sight?'

'Can't see dem.'

'Take some of these clothes off carefully.'

Aunt Chris gathered up a handful of washing.

'Lift it up carefully and let one thing hang loosely,' whispered Garrett.

Aunt Chris, being devoted, became adroit. A coloured print petticoat hung from her dark grasp, and Garrett managed to get his head so neatly encased in it that he was able to see over the top of the tub. He heard voices in one of the outbuildings.

'Only five?' he asked in a whisper, as though he were considering the advisability of tackling that number.

Before Aunt Chris could reply a voice sounded louder, and steps were heard as though one came to the yard. In an instant Aunt Chris had dropped her armful of clothes, and Boden Garrett was merely an article in the washing-tub.

One of the Federals came into the yard muttering; it was the 1st Michigan man.

'It's durned queer,' he said.

Then he looked at Aunt Chris and walked across the yard. He went to a door that was fastened.

'Say, grandmother,' he called out, 'w're's the key to this?'

'De key, sah? Ain't got no key,' replied Aunt Chris, who wanted him to go away.

'Then this'll be the key,' and he lifted up his foot, which didn't look as though it would fit the keyhole. 'Jes' come and show me the ins an' outs o' this place.' Then he lifted his foot against the door, and it proved more than the equal of a key.

Aunt Chris walked after him doubtfully, for she was not sure whether she had better go from the tub or remain near it. She was given little choice, however. Moreover, her absence from the yard stood to her advantage, for Garrett did not wish to make her his accomplice, and for him to be caught in the tub with her near it would mean a short shrift for both. However, he had no intention of being caught in the tub if escape were possible.

The search was pursued desperately for ten minutes. Then the men met in the yard again.

'E's vamoosed,' said one of the three Federals.

'Seems to me,' said another, as ef 'e ain't come 'ere at all. I reckon I've ears, an' 'e didn't rattle 'em much.'

'E's 'ere,' said the sergeant. 'I'll swear 'e came 'ere.'

'E's playin' 'possum somewheres,' said the 1st Michigan man, 'an' mebbe listenin' to us now. Say!' he said, and he walked to the tub and began to haul out the clothes.

Aunt Chris gave a little cry.

'Hurt—eh?' asked one of the Federals unsuspectingly.

Aunt Chris lifted her foot as if in pain—the deception surely was permissible. 'A bunion, sah!'

'I thought perhaps this yer spy was on yer track,' said one of the men, with a laugh.

The 1st Michigan man stood with the clothes in his hand, looking into an empty tub with a rueful face. Aunt Chris was lost in amazement, and the next moment the five soldiers shared her feelings. There was the sound of a horse's hoofs on the road: it was a galloping horse. For a moment mild surprise animated the Federals; but the suspicion of the 1st Michigan man gave him an idea, and he went quickly through the house. He rushed back the next moment.

'Tarnation!' he said; 'e's done gone an' bolted with yer 'orse.'

The five men then hurriedly turned and looked along the road. 'B'jiminy!' was all their tongues could utter.

Pursuit was hopeless, as they had no horses, and Garrett was going with the utmost speed of a splendid horse. He had slipped out of the tub when Aunt Chris had followed the Federal, run quietly through the house, cut the traces of the horse, removed its collar, and—the rest we know.

The sergeant in telling the story that evening to his comrades said, 'I reckon as that durned spy would hev got out of the earthquake that swallowed up Korah, Dathan, and Abiram.'

'Stonewall' Jackson was very delighted with Garrett's adventure and his information, and still further pleased when he led his victorious soldiers into Front Royal.

When asked how he got hold of General Milroy's despatch, Garrett coolly explained that it was his own production, that he had fac-similes of most of the Federal generals' signatures, and that they were useful occasionally. He also offered a pass through the Federal lines to any of his friends. The offer was not accepted.

## THE LESSONS OF THE ZOO.

By F. G. AFLALO.

It would perhaps be trite to enlarge on the wonderful opportunities which such an institution as the London Zoological Gardens affords to those whose ambition it is to stay at home and yet see in the flesh all the most wonderful beasts and birds and reptiles of modern times. Even intelligent folks who pay their shilling to-day and pass the turnstiles in the full knowledge that they will see all those living marvels from every continent rarely pause to recollect that not for the half of his kingdom could any monarch of a century ago have won as a privilege that which we regard as a right.

The amazing extent to which we who live at the centre of civilisation underrate the value of the Gardens, even in their merely spectacular aspect, was brought home to me for the first time a year or two ago when it was my good fortune to show some of their treasures to a highly intelligent Moor, one connected with the Shereefian Court. His unconcealed delight on being introduced to such fellow-Africans as the hippopotamus and giraffe, types that he never expected could exist outside of the realm of the Jinn, reminded me of the fact that, but for the Zoo and its cheap Monday ticket, ninety-nine Londoners out of every hundred would in all probability never see a live otter or badger. This lack of opportunity for making the acquaintance of such shy and interesting Britons has always seemed to me to call for the intervention of the educational authorities; and even our menageries might, one would have thought, have devised some means of housing some of our hardier furred and feathered countrymen under one roof. Such an arrangement would at least enable English visitors to pay their respects to the fauna of their own home before rushing off to gape at the tiger of the jungle or alligator of the tropic swamps. I suggested something of the sort to Lord Llandaff when, a few years ago, he was interested in the proposed new Zoo at Brighton; but on my return from Africa I found that the entire scheme had fallen through, my proposed British House with the rest.

In the absence of such a gathering of British beasts and birds, something may, of course, be done in the way of visiting these in their several abodes; and, indeed, the first useful lesson of the Zoo is to be learnt with the aid of the labels on the enclosures, particularly from that line which sets forth the natural home of the inmate. The evidence of origin is certainly somewhat variable in detail, for in some cases we are told precisely the country or province or state from which the sub-

ject was originally procured, while in others there is no more than a vague allusion to the continent. The latter form of geographical definition is unsatisfactory; yet such discrepancies are inevitable because of the various means by which specimens are acquired: by purchase, by gift, or by exchange. The detail given is, however, ample for certain simple deductions. A little discrimination, for instance, will show that Africa supplies every hippopotamus and every giraffe; but also that even that wonderful continent has its faunal limitations, seeing that it has never sent to the collection a single bear, wolf, tiger, puma, deer, wild-goat, ant-eater, sloth, armadillo, or kangaroo, while in the bird-world an even greater selection of missing interesting forms might easily be made. The tigers are all Asiatic; the pumas and sloths are American; the kangaroos are from the Australian region.

A little further familiarity with the geographical data on the labels warrants more general inferences. Most of the chattering parrots and monkeys are found to have their home south of the equator; on the other hand, the majority of bears, sheep, deer, and wolves come from the northern hemisphere. The antelopes and gazelles are, with few exceptions, Old World forms; the vultures may be found in greatest variety and abundance in those warm countries that most need their services as scavengers. A curious coincidence, too—the sport of chance rather than the outcome of clear design (since no scheme of anatomical classification could warrant such an arrangement)—has made the kangaroos and anthropoid apes near neighbours; and we may fancifully compare the intervening footwalk with ‘Wallace’s Channel,’ that profound waterway that sunders the island homes of the highest and lowest of the mammalian orders.

There are side-issues of the fascinating study of animal geography, to a clearer understanding of which the most cursory tour of the Gardens should prove most helpful. There is, for instance, the principle of ‘vicarious species.’ Stated in its simplest terms, this rather alarming phrase denotes nothing more than Nature’s provision that an absent beast or bird shall be represented by another equally useful in its own way and closely resembling the missing one. Familiar instances of this proxy are the three forms of ostriches found in the southern, central, and northern belts of Africa, and replaced in South America by the rhea and in Australia by the emu and the cassowary. Not only among birds is this ‘vicarious’ arrangement obvious; for the mammalian class furnishes equally striking examples in the boar and the wart-hog, the camel and llama, the badger and ratel, all of which may be seen and

compared at the Zoo, where the several corresponding forms are exhibited almost side by side. We hear from time to time much criticism of the arrangements of the Zoo; but, certainly, if it is as a rule most agreeable to seek the good things, it is also in this case much easier. There are people who criticise the Bible, but I never yet heard any one offer to rewrite it better than the original. The old Zoo will bear a lot of cavilling criticism before it finds itself called upon to haul down its colours.

Another outcome of the further study of animal distribution will be a close attention to the peculiarities of island types; and here again the Zoo shows us giant tortoises from Galapagos, which have obviously attained to their present enormous proportions only because their island home gave them immunity from man and his dogs. These we can compare with the degenerate Shetland pony, the limitations of whose island home, assisted no doubt by breeding and selection when these dwarfed horses found favour in the sight of buyers, have resulted in poverty of stature. Anglers are familiar with an alternative case in the fishes of ponds or lakes, some of which show a stunted development due to lack of varied food, while others, from opposite conditions, reach immense size. After all, a lake is the converse of an island, and there are considerable analogies in their zoological conditions.

Nor is the student of animal distribution done with the help of the Zoo even yet, for he may study to great advantage the contrast between types so widely scattered as the seagull and porcupine, occurring with little variation almost all the world over; and, on the other hand, the secretary-bird, restricted to Africa, and the aoudad, or Barbary sheep, which does not wander beyond the confines of a single mountain-range in that continent.

An establishment like the Zoological Gardens has, however, lessons that are necessarily of wider application and more practical value than these. The acclimatisation of exotic animals and the feeding and housing of suitable 'pets' are subjects that fall peculiarly within the province of the keepers, and on both they are well qualified and ever ready to give advice. The subject of pet animals was exhaustively discussed in *Chambers's Journal* for July 1901; and it is not desirable to revert to it beyond a general recommendation that no opportunity be lost of consulting one or other of the keepers when in difficulties. Clearly, the keepers most in request when such counsel is sought are those in charge of the monkeys and parrots, since those noisiest and most mischievous representatives of the higher vertebrates have for some unexplained reason chiefly commended themselves to many whose ambition it is to accommodate captive animals in their homes; and I have never

yet heard a single complaint of unwillingness or inability—if not consulted too late, as is sometimes regrettably the case—on the part of the keepers to advise on any difficulty that may present itself.

Far more important are the arts of acclimatisation; and in the pursuit of these our own Zoo necessarily takes second place to the Paris Jardin d'Acclimatation, yet occupies in a measure a position intermediate between that and the Jardin des Plantes. Original programmes generally confess ambitions that a more mature mood gently and unobtrusively shelves. Such is the history of almost every public or private institution of the kind, and our Zoological Society was no exception to the rule. Yet, although some of its earlier objects have been found incompatible with its success in other directions, it nevertheless affords much useful information as to what animals best endure the somewhat trying and variable climate that, according to philosophers—most of them either live on the shores of the Mediterranean or else cannot by any means contrive to get away from those of Britain—has made the British nation what it is.

The domestication of beasts and birds is an allied process, and it is instructive to compare the beasts within the Zoo and those without in Regent's Park: the snarling wolf and subdued borzoi, the treacherous panther and amenable house-cat, the mild-eyed Hereford and savage gayal, the fleecy merino and the hairy burhel; and we own that it is sometimes better to tame animals than to kill them. Even those which we do not customarily pursue for their skin or flesh or teeth, or train for their labour, would benefit greatly by being brought within the pale of domestication, for at least it brings them under the aegis of the law. Nature, moreover, is not over kind to the wild creatures, and the jury's favourite verdict of 'death from natural causes' always seems to me to involve something of a contradiction, since what we call 'natural causes' are not quick enough for nature's impatience, and death from freezing or starvation or the murderous attack of some stronger foe, when age and disease have numbed the faculties, is the usual end of the wild sheep or ox. This is the proper answer to those who pity horses and dogs as the slaves of man. Of course, there are masters and masters, many of them not fit to own anything with life and feeling; but, given good treatment, the domesticated horses and dogs are infinitely better off than their wild relatives, and a visit to the Zoo on a winter's day illustrates the difference admirably, except that the inmates of that establishment have not even to work for their board and lodging. The possible recruits to domestication may also be studied there: the African elephant (about whose cause one begins almost to despair), the zebra, and one or two more. They are not many. That the

zebra will ever become a fashionable harness animal I hardly believe, and would as soon look on it as the coming park-hack. Still, the zebra is a beautiful animal, and all the existing species were not long since on view in the spacious new house built for their accommodation. One never knows, in fact, what new animal may not be trained to useful work. Take, for instance, the comparatively few animals educated as man's allies in the chase: the dog, ferret, and falcon in this country; the otter and cormorant and cheetah in the East. This, one thought, was about all that could be done in that direction. Not long ago, however, I learnt with the greatest interest of a tame fox that had been trained by its master, a man in the employ of the Midland Railway Company at Derby, to co-operate with a terrier in hunting the rats that infest the company's sheds. Hunting-men have before now reported Reynard as an admirable mouser, and have often been disbelieved for their pains; but this turning to practical account of the hunting instinct of the most hunted of all British animals is a charming instance of what patience will accomplish, and, if I may say so, reflects the greatest credit on the man who accomplishes it.

In the paddocks and cages at the Zoo, then, we may see the chief wild cousins of our dogs and cats and cattle. Most attractive among the latter, perhaps, are the wild white cattle of Britain, particularly a very handsome Chartley bull and a Vaynol cow, recently seen with her calf. These white cattle, which survive at Vaynol, Chillingham, and one or two other parks, are particularly interesting on account of the doubt thrown by their white colour on their alleged genuine wild origin. So far as historic records go, their pedigree is above reproach; but naturalists, who are a stubborn crew, object that, save in the Arctic regions, Nature does not produce pure white wild animals, however much man may delight in breeding white ducks and fowls and horses and cats, and that, therefore, these 'wild' park-cattle were not originally wild at all. More recently it has been advanced that Neolithic man brought them with him overland into this country; but such a theory argues a somewhat conceited intimacy with that hoary pioneer that will hardly commend itself to modest minds. In the Zoo, too, we can see the African elephant, and the keepers tell us that he is not a whit less intelligent or amenable than his Indian cousin. Well, we have let him lapse from his former state of useful subjection, and we shall bitterly regret having left ill alone when the time comes for us to clear the Central African jungle.

The Zoo shows us the difference between fastidious animals and those that are easily satisfied. In every class of animals there are the easy and the difficult. The chameleon will feed only on living insects, focussing them with one or other

of its independent telescopic eyes, gripping more firmly the supporting branch with its hand-like feet, then shooting out a tongue, harpoon and lasso in one, longer than its head and body together. I once voyaged in company with a good clergyman who had a number of pet chameleons, all of which he allowed to die of starvation rather than give them living flies. They were offered instead alternate meals of minced-meat and bread and milk, and they preferred death. The little egg-eating snake, the chameleon's neighbour in the Reptile House as it is in Africa, will feast only on eggs, those of the sparrow or pigeon being about the right size. The giraffe will eat only the best clover hay, with now and then an onion or a lump of sugar. The pelican will eat only fish; the kea must have its goat chop; the lions, when sick, refuse even horse-meat, and must then have beef. On the other hand, reptiles, beasts, and birds furnish us with many examples of more ready appetites and less discriminating tastes. The alligators once, it is recorded, consumed a cargo of dead and putrescent snakes. The wild-boar delights in a dreadful cold mess of meat, carrot, potato, and ship's biscuit. The hornbill eats either beetles, mice, smaller birds, reptiles, or fruit. In the Zoo the hornbills have to content themselves with the last, and they cleverly catch grapes flung at their enormous bills; but in their natural state they seem to devour just what comes first.

Another very remarkable lesson taught by watching the animals at meal-times is the ease with which they gain confidence in the protecting presence of man. The visitor sees on both sides of the Lion House the antelopes and jackals of Africa quietly munching their hay or gnawing bones without paying the slightest attention to those reverberating roars that, in their natural condition, would send them, with their meal left unfinished, to keep a pressing appointment somewhere over the skyline. With regard to the jackals and foxes, which can see one another through the bars that divide their cages, the nonchalance of the old inhabitants may possibly have its calming effect on the more alarmed newcomers; and a keeper once endeavoured to persuade me that such was also the case with the antelopes. I was able to show him, however, a quite small buck of some kind which had only newly arrived, and which could not possibly, even on its hind-legs, see over the wooden partition of its home; and if it was indeed the indifference of the others that accounted for its own disregard of the lion's voice, then one could only assume some wonderful instinct or silent means of communication where eyesight would be helpless.

Nor are the lessons of the Zoo confined to the animals within the cages, for the London mice and sparrows are a never-failing source of delight as one watches the assurance with which they venture within the dens of the larger cats and

eagles, knowing that the giants will not take notice of such puny game; and, on the other hand, the extreme caution with which they shun the cages of the smaller hawks and weasels and ichneumons, knowing that their lives would not there be worth a moment's purchase.

A very interesting lesson, too, of a walk round the Gardens consists in taking note of the wonderful diversity of size and shape and colour, and endeavouring to guess Nature's reasons for such differences. It is important, by the way, to avoid the flattering anthropocentric view, and to find reasons other than those making only for the benefit of man. As a case in point, it was not long ago discovered, or at any rate announced, that the eggs of a familiar English garden slug emit a phosphorescent light like that of the glow-worm. Some well-meaning person immediately persuaded himself that the explanation was simple: the light of the eggs was intended to guide the gardener to the easier destruction of his enemy *ab ovo*! But that will not do at all. Nature does not take the view which the magistrate expressed so delicately to the thief, that there is no necessity for some creatures to exist. She recognises the right of all to live and to struggle to keep alive with the best means at their disposal; so that if the luminosity in question is to be accounted for, it must be demonstrated as conferring benefit on the eggs themselves—no easy thesis. Other cases, however, on view at the Zoo present less difficulty. No one with the most elementary knowledge of the life of elephants, crashing through dense jungle, often pursued by tigers, at other times having to tear up tussocks of their juicy food as they go, can find much mystery in the great height and bulk, the long and powerful tusks and trunk, the small, well-protected eyes. No yacht-designer, Herreshofer or any other, ever turned out a craft more perfectly fitted to do its work than the hippopotamus. Not graceful lines are its ambition, for a body thirteen feet in length and other thirteen in girth cannot make for beauty; but its specific gravity and build have been studied to a nicety, and nothing could be suggested as improvement for an animal designed to live in the deep African rivers, sometimes sinking to the bottom and walking on the

mud, then rising noiselessly and tearing away great masses of the rank river-grasses for its meals. The great ears of the little fennec, most graceful of desert foxes, are easy to understand when we think how much more useful sharp hearing must be than long sight to an animal which stands only about a foot high, and which inhabits a flat country with no hill from which it can look out for the approach of danger.

Now and then, it must be admitted, Nature's warmest admirers find themselves nonplussed in this quest of her resourcefulness. Why the quills of the secretary-vulture? Surely that archaic and wholly unacceptable suggestion that they are meant to divert the attention of the snake while the bird more firmly grips it in its talons is now out of fashion in a generation that has learnt more of the cunning of reptiles. Why, again, the quills in the porcupine? Not to protect the species from the lion of one continent, the tiger of a second, and the jaguar of a third; for all these animals, albeit with inconvenience, eat it quills and all, and when shot at a later period, have been found with the quills piercing their viscera.

These are a few of the things to be learnt and studied at the Zoological Gardens. Some of us are sent by inclination or necessity on long travels, and it will happen that if we keep our eyes open we may learn direct from Nature some little lesson that not all the resources of the Zoo can teach us. This is undeniable. At the same time, life is short, and even to-day distances are great; and a single ramble round the Zoo will bring us in close touch with the beasts and birds and reptiles of every continent. Side by side we may study the lion and the puma, between which oceans roll if we would pay a visit to their homes; and to see them in their habitat is only to kill them. There are animals that are not fit companions for even the most humane; but at the Zoo all question of danger is eliminated. There we may study the fiercest tiger with but an iron bar between; nor has the deadliest cobra or the bridling rattlesnake any terrors when separated by a single pane of glass that, while keeping their venom at convenient distance, has no secrets for our eyes.

## CITY NOISE.

THE noise of the city and the quiet of the country have been the subject of frequent contrast. It is true that life in the country, and especially in a farmhouse, may be by no means noiseless; but a resting-place can easily be found sufficiently remote from stables and poultry-yards. Except in violent storm, the sound of wind and wave is nerve-

soothing and welcome. Very different is it in the town, and complaints of city noise are as old as the cities themselves. Not to go farther up the stream of time than the beginning of the Christian era, we find Horace in one of his odes begging Mæcenas to cease to set great store by or greatly to covet (if we may so paraphrase '*mirari*') 'the smoke, the wealth, the noise of happy Rome,' thus meaning humorously to con-

trast the advantages and disadvantages of city life. What the Roman noises were he describes elsewhere: the funeral wailing, the hawkers' cries, the hubbub caused by the transport of building material through narrow and crowded streets; and he ironically advises the poet to try to compose verses in such surroundings.

To any one who has to read or think, to the invalid or the light sleeper, city noise is a serious discomfort; and to these latter the trial is greatest in the hours of the night or early morning. Hardened city men may be found to declare themselves so used to the tumult of the town that they do not feel quite comfortable when away from it, and they laugh at the complainer as a dyspeptic; but are they quite sure that the laugh is on their side? We may remind them that the wear and tear of city life claims many victims, and that when the jaded man of business suffers, as he so often does, from nervous prostration, the doctor's first order is that he must go to the country for change of air and food, and for the quiet which it is so difficult to obtain elsewhere. That the last is not the least important part of the prescription is shown by the eagerness of the invalid to secure it; and we may well believe that to live constantly in an environment of noise is as inimical to perfect health as to eat unwholesome food or to breathe in a vitiated atmosphere.

If these things be so, an attempt to classify the various noises which are a nuisance to some at least of the dwellers in our great towns, and probably injurious to all, may not be unwelcome to the readers of this *Journal*.

Let us begin with the necessary noises, for such there must be in all cities. They will be found to be caused almost entirely by the exigencies of passenger and goods traffic by road and rail. The tramp of the pedestrian, the rattle of the spring-cart and the cab, the rumble of the loaded wagon, the clang of the tramway-bell, the snort or the shrieking whistle of the locomotive, the thud of the shunted trucks—all these are only too familiar to us; but they are all necessary, and for this reason we seem to get more readily used to them. The introduction of wood paving and rubber tires has greatly lessened the noise of street traffic in some localities, and our experience is that the railway whistle is not so freely turned on or kept on at night as was the case a quarter of a century ago. Among the necessary noises we may also count the whooping of sirens on board the steamers, and the booming of fog-horns so well known in misty weather to dwellers near the Clyde and other crowded waterways. We refuse, however, to regard as necessary the pandemonium of sound by which in our manufacturing towns the workers are summoned to the mills in the morning and after the midday meal. For a few shillings every worker nowadays can get his or her alarm-clock; and when

a person has to rise daily at a fixed hour the habit soon becomes so engrained that no alarm is necessary. At the most, the moderate toll of a town-bell is enough to warn the laggards, and this was all that was thought necessary till quite a recent period. Evidently when one millowner starts a whistle, the others have to follow suit; it becomes a question of rivalry and advertisement. The smallest mill generally has the loudest whistle, so the slumbers of the community are wantonly disturbed in the supposed interest of some pushing manufacturer. We would class also as quite unnecessary at the present day all forms of cries or noises by street hawkers of goods. The raucous shout of the coalman and the jangle of the milkman's bell are a terrible annoyance in some places. These tradesmen are expected at unvarying hours, and for the householder who wishes to buy their commodities no clamour is required to give warning of their coming.

Passing from the utilitarian to the æsthetic side, our next protest is against quarterly chimes and carillons which are made to ring all through the night. These have, as a rule, been presented by benevolent persons, to be placed in the towers of town-halls and churches for the benefit of the community, and they are a striking instance—we intend no pun—of the great evil which can be done by want of thought although with the very best intentions. To the light sleeper the quarterly chime by night is the greatest of all inflictions. Particularly is this so if he happens to be a traveller, and sleeping in a strange town. Carlyle said that it was not so much the crowing of the cock that kept him awake as the waiting for the next crow. In the case of the chime, the unfortunate victim of insomnia knows that 'the next crow' is coming in a quarter of an hour, and he finds that he cannot compose himself in that short interval. In some towns the complaints of the inhabitants have been so great that the ringing of chimes every quarter of an hour during the night has been prohibited, and we wish that the law were universal. At church bells we do not grumble. They are an ancient and beloved institution, and no one can fairly complain of them unless they are too aggressive or rung too early in the morning. We well remember the strong language certain undergraduates of Balliol College, Oxford, used to employ because they were awakened too early for their taste on the Sunday mornings by the loud bells of a neighbouring city church, known to them as 'The Archipelago' on account of its numerous 'aisles.' The collectors who came round to them on behalf of a campanological or bell-ringing society suspected to be art and part in the ringing of these bells did not reap a rich harvest from the 'undergrads' in the colleges adjacent.

From bells we pass by an easy transition to

street music, which at its best is a luxury for the few, at its worst a torture to many, and anathema to all lovers of quiet; we might almost say it is the last to all lovers of music, although we hasten to admit that an occasional player on harp, flute, or violin, and not a few of the German bands which frequent the squares at the fashionable evening dinner-hour discourse really good music. The grievance is that one is obliged to listen to it whether he wishes or not, and may listen most unwillingly to an excellent performance when he has pressing work on hand which he is obliged to postpone until it is over. It is the development of the piano-organ nuisance, however, which makes life in cities a burden to people with sensitive ears. It was bad enough in the days when Babbage, the famous inventor of the calculating-machine, headed a crusade against it, and Calverley wrote his 'Lines on hearing the Organ,' from which we cull the following:

Grinder—who serenely grindest  
At my door the Hundredth Psalm  
Till thou ultimately findest  
Pence in thy unwashed palm—  
Tell me if, as thou art buckling  
On thy straps with eager claws,  
Thou forecastest, inly chuckling,  
All the rage that thou wilt cause.

Then the 'winsome, grinsome grinder' could carry his own 'stupendous load,' and his sole companion was his monkey, 'Barbary's nimble son.' Now the weight of the infernal machine is so great that it must be trundled on a barrow, and the grinder has always with him a companion, male or female, to help him with his task. There are no monkeys now with this larger type of machine, perhaps because the 'sinewy Jacko' cannot live at close-quarters with the greatly increased volume of sound; but there is, alas! too often, an unfortunate baby at the end of the barrow to excite compassion and draw the pennies. Those who foolishly give money should know that frequently the baby is not the child of the woman who accompanies the grinder, but is hired for the purpose, and that of the money given only a small portion finds its way into the pockets of those who work the organ, the bulk of the profit going to the *impresario* who lends out the machine by the day or the week. Certainly the piano-organ is to the writer the greatest curse of all. He considers it unnecessary to make any excuse for doing as much as he can of his desk-work on a Sunday; for, although his windows look into a quiet square, that is the only day when he can reckon on a few hours of peace from his tormentors. Think of that, ye Sabbatarians, and restrain your households, if you can, from helping to bring about such a dreadful result by giving money to these Italians, who no doubt have only the loosest ideas of Sabbath observance!

The residents in flats or terraces have to enjoy or suffer the music produced by their neighbours

on pianos and other instruments. This may be endured without complaint so long as it does not begin too soon or continue too late. It is the reasonable privilege of the tenant of the house, and stands on a different footing from the outdoor nuisance.

We have dwelt so long on musical offenders that we have no space to dilate on vexation caused by dogs that bark or howl at hours when most people are asleep; or by the 'final *miaow*, that weird unearthly din,' of the nocturnal Tom; or by occasional drunks or roisterers who hear and make us hear 'the chimes at midnight.' The latter may be, and are sometimes, dealt with by the police, although the mischief is usually done before the local guardian of the peace finds it convenient to arrive on the scene.

It remains only to consider very briefly whether anything can be done to improve matters in regard to noise in our large towns. Obviously the first object is to create a more healthy state of public opinion. For this purpose citizens who love quiet might form a society, with a small annual subscription; this being the orthodox British method of starting a reform. They might call it 'The Society for the Suppression of Unnecessary Noise,' or S.S.U.N.; and if they wanted a motto they could take it from the first line of *Juvenal*, '*Semper ego auditor tantum*.' Such a society would, we believe, attract many adherents, and be able to bring much pressure to bear on individuals to prevent them from making unnecessary noise, or encouraging those who do so; and it might be able to influence municipalities to pass new laws or enforce old ones with the same object in view. We make the suggestion for what it is worth.

#### BIEN-AIMÉE.

ADDRESSED TO A SISTER WHOSE NAME WAS AIMÉE.

In the woods I hear a whisper,  
Like a murmur on the sea,  
Or a spirit, breathing gently  
Through the space 'tween you and me.

I am listening, always listening:  
I can almost see it pass;  
I can hear its gentle footfall  
On the leaves and through the grass.

What though my dull eyes are holden,  
Yet my heart is still with thine;  
Yet a bond, for aye unbroken,  
Ever links your hand to mine.

For 'whatever things are lovely'  
Shall be ours for evermore;  
Life begun is never-ending,  
Death is but an open door.

In my heart is ceaseless music  
From the ever-present past;  
Immortality enfolds us,  
Love unchanged shall hold us fast.

## SIXTH SERIES.

### THE NEW YORK POLICE FORCE.\*

By the Hon. THEODORE ROOSEVELT.

[Copyright in the United States by the Perry Mason Company.]

**U**NDER the old system, when the New York police force was the football of politics and a mighty engine of corruption, the force was managed by corrupt politicians in their own interests, and was used as much to blackmail criminals as to hunt down crime. I could hardly have advised any honest man to enter the force; but just as long as the present system of honest administration prevails the force will be a good one, and one in which an honest and able man can rise to very high position.

Most people do not understand the opportunities offered to an able man by a career in the New York police. In the first place, the police force gives a chance which is but rare nowadays—that is, a chance for a man to display the heroic qualities which we all admire, and must admire as long as we ourselves preserve the virile qualities common to the Anglo-Saxon race: courage, daring, readiness to risk life and limb in the performance of duty. These three qualities are continually called into exercise by the career of a New York police officer. He must, as a mere matter of business, continually face the 'toughs' and dangerous criminals. At times he has the chance to save life by rescuing persons from drowning or from burning buildings, or by stopping a runaway team. In other words, he has to show, very much as a fireman has to show, those qualities of hardihood and physical address which we admire in a soldier. The admiration thus called forth is amply justified. We ought, as a people, to admire courage and physical hardihood. The race which does not practise the great soldierly virtues never can succeed. We must be moral; we must be

straight and decent; but we must also be strong if we are to be a great people. No amount of cultivation or refinement, and not even morality, can atone for the lack of the fighting qualities: the qualities which enable man to face his foes, whether these foes be human or elemental. All of our teachers and preachers of virtue should keep this in mind, and should try to educate our young men to the understanding that they must be manly as well as moral.

A hardy and adventurous spirit, therefore, can always find a certain outlet for his energies in the New York Police Department; and it seems to me that this department could be well utilised in disposing of men who, if we had a war, would make good soldiers, but who in time of peace are rather wasted on ordinary trades. Of course, a good policeman, like a good soldier, must be sober, steady, temperate, and obedient; but to be the best kind of policeman he must have a little of the dare-devil in him as well.

The average mechanic or clerk of the class that should furnish the bulk of the applicants for the Police Department earns from one hundred and twenty to two hundred pounds a year. The policeman in New York earns much more. After he has served his noviciate in the force, he receives two hundred and eighty pounds a year; and, even if he never becomes anything more than an ordinary patrolman, at the end of the twenty-five years he is retired on a pension of one hundred and forty pounds. In other words, after working twenty-five years at very nearly double the salary which he would probably make outside, he is retired on a pension equivalent to just about what this outside salary would have been, at the very time he is getting old, and when, if he had not been in the police force, he would have begun to find it a little difficult to get the salary.

Nor is this all. He is well off, even if he never rises beyond the grade of patrolman; but

\* Written by President Roosevelt before his election as Vice-President, and while he was President of the New York Police Commission.

he has many chances of promotion, and there are within his reach some great prizes. The first grade of promotion is to roundsman. This increases his salary by twenty pounds, and gives him command over his fellows. The roundsman is an important man, for on him the discipline of the patrolmen largely depends. He must hold his men to a severe accountability, and in return he is held to a severe accountability by his superior officers. When a man has become roundsman he has already put his head up above the general level. He is a man of some importance, occupying a position of trust and responsibility, who is accustomed both to obey and to command. The next grade above is that of sergeant. Above this comes the police captain. The police captain earns five hundred and forty pounds a year. He is a man whose influence and whose responsibility are both alike great. The preservation of life and order in his district largely depends upon him. He is distinctly one of the men of note in that part of the city where he resides. A man who becomes a police captain can say very emphatically that he has accomplished something in life. His duties are as arduous, his responsibilities as great, as those of the colonel of an average regiment in time of war; and it is not too much to say that the average police captain who is fit for the position has qualities of heart and head which would fit him, under proper training, to command a regiment with credit. Above the captains come the inspectors, and then the head, the Chief of Police, who receives a salary of twelve hundred pounds a year. The whole force of four thousand police is under him: a command larger than that of the average brigadier-general, and one far more important than many brigadier-generals hold during all their lives. On his shoulders rests no small part of the task of protecting the orderly and warring against the disorderly classes in a city of nearly two million inhabitants. He is one of the men of mark in the city. He is a man of great power and of much consequence. In influence and weight he ranks well up among the great bankers and merchants and lawyers and railroad presidents, and they are all glad to be on good terms with him and to assist him, and to get him to assist them in return.

Now, exactly as in the days of Napoleon, when every French soldier was said to carry in his knapsack the baton of a marshal, so, under a clean and honest administration of the New York police force, every patrolman has before him the chance of some day being chief; so that every patrolman has not only his excellent position in the present, but he has always before him the chance that he will rise to be one of the men of mark in the city. In addition to this, he has opportunities for advancement on other lines. Thus, if he has detective capacity, he will prob-

ably be put in the detective bureau. Here is a life of extraordinary interest, and if he does something brilliant he can make a great name for himself.

Such are the rewards and prizes of the life. In return, the city necessarily demands a very high grade of quality among the police. First and foremost, we demand men of good character, as a matter of course. Under the old corrupt administration of the Board the whole force was plunged into an abyss of blackmailing and bribery and extortion; but so long as the principles put in execution by the present Board stay in existence, honesty, like courage, will be considered as an indispensable attribute of every member of the force from highest to lowest. Next to this, the officer must be of sound physique. He must be five feet eight inches in height at the lowest. He must be sound in wind and limb, without any defect of any kind, able to hold his own in a rough and tumble, and to hammer down obstacles. Accordingly the applicant is put through a very severe physical and medical examination. Finally, he must be quick and intelligent, possessing at least such an education as he would have if he attended one of the public schools. The mental examination is framed to test him on such points. If he passes all these examinations as to character and bodily and mental development successfully, under the present rule he is appointed and holds his position without regard to his politics or religion, or to whether he has or has not any influential friends.

By a few examples I may perhaps give a better idea of what a policeman can do and ought to do, and of the dangers to which he is either subjected or subjects himself.

First of all, to take the least pleasant side of the subject, I shall speak of the temptations and dangers which beset a police officer. He deals largely with criminals, and with the men to be found in every great city who lead vicious lives and wish the police to connive at or favour their viciousness. A gambler or a saloon-keeper who wants to violate the law would like to be protected by the police in so violating it. Consequently he is ready to pay blackmail, and it was this blackmail which before the present administration took office spread a festering corruption throughout the whole force. We have, however, almost entirely rooted it out, exactly as we rooted out the old system by which men paid money for promotion or got it through political influence, and have substituted instead a system of appointing and promoting men purely on their merits. Nowadays the average policeman is not corrupt; he is in no danger from corruption in the department. His troubles arise from growing lax in his duties or trying to shirk work, or, in especial, from drinking. Any man, whether a policeman or not, who becomes a

drunkard is useless to society at large, and a curse both to himself and his family; but a policeman has to do work for which drunkenness is a complete disqualification. Accordingly the Board is severe upon men who become intoxicated even to only a slight degree. Sometimes on a cold night, when alone on his beat, it is a very great temptation for a policeman to leave it and get warm inside a saloon. A policeman who yields to this temptation is done. He may escape two or three times, but sooner or later he is found out, and then is either fined heavily or dismissed from the force.

A policeman who shirks work or gets drunk may not be a brutal man; but there are some men who because they are vested with authority like to misuse it. These are the men who in the past have so often clubbed or abused innocent citizens in New York. To this the present Board put a complete stop. Every respectable citizen can now count upon being treated with courtesy by the police. The Board has not the slightest sympathy for 'toughs' and law-breakers. If a rowdy gets into a controversy with the police the Board is delighted to see him suffer, and should a policeman be attacked we are delighted if he uses his club in self-defence and so administers a severe thrashing to the man who has attacked him or has interfered with him in the discharge of his duty; but if he in any way interferes with or mishandles a law-abiding citizen, he is certain to be severely punished if the offence is found out.

Now let me turn to a pleasanter side of the subject, and show by examples taken almost at random how an officer can distinguish himself by serving as a policeman, and can thus win promotion; and I shall purposely take only those that occurred during my own term of office.

Shortly after I became president of the New York police force my attention was attracted by a clipping from a paper describing how one of our roundsmen had saved a woman from drowning. I immediately summoned the man before me. He came—a soldierly-looking, white-headed, erect old fellow, who had been twenty-one years in the force, and was a veteran of the Civil War. I found that he had for a long time been stationed on the river-front, being an excellent swimmer, and that he had saved no less than twenty-five people from death by drowning. He had many medals—gold, silver, and bronze—given him by life-saving societies and by the Police Department, and two granted him by a special act of Congress on behalf of the National Government. The man's career was without a blemish. He had been sober, industrious, and faithful in his duties. We felt that he had earned his promotion, and we made him sergeant.

Another case was that of a patrolman who

performed a deed of signal bravery at a fire. He reached the scene before the fire-engines came. The flames had already cut off a woman and two children. However, he dashed through the fire, ran up the stifling, smoke-shrouded stairs, got the woman and both children, and, bursting open a window, succeeded in climbing along a gutter to the roof of a neighbouring house, making the journey three times and rescuing all three persons. This man had two or three serious blemishes on his past record; but we finally promoted him, after having kept him waiting a sufficient length of time to impress him with the fact that gallantry could not atone for bad discipline, and that he must combine both qualities if he wished to win his spurs or to retain them.

Another man, a member of the mounted squad, had led quite a remarkable career, having stopped no less than thirty-seven runaways. He had also done good duty otherwise, and he got promotion accordingly.

Much of the most important part of a policeman's duty is to control and keep in order the turbulent portion of the population. Sometimes he has to deal merely with individual criminals; sometimes he has to deal with mobs, as in a strike or railway riot. In one instance we promoted a man chiefly because of an act which showed courage, physical prowess, and strong sense of duty combined. One night he surprised three desperate characters, all ex-convicts, in the act of highway robbery. He attacked them at once, and for a moment or two there was a regular pitched fight. His left hand was broken by a blow from a bludgeon, and one of the highwaymen escaped; but he knocked down both of the others, took them to the station, and they were afterwards sent to Sing Sing prison. He himself went to the hospital, and had his broken hand put in a plaster cast. He had a perfect right to stay off duty until his hand recovered, which would not have been within three or four weeks; but instead of doing so he returned at once to his precinct and resumed his work, never taking so much as a day off. There had not been a complaint of any kind against him, and he was promoted forthwith.

As an example of what a policeman can do by a combination of headwork and courage, take another roundsman. There was a strike and much rioting in his district. He was told to take six men and keep a certain line of railroad open. The mob had reached a point where it was sullen and dangerous; and finding this to be the case, the roundsman promptly took decisive measures, charged it, clubbing right and left, and without giving it a moment's chance to rally, drove it in headlong flight, and kept the whole railroad line clear. He had won his promotion to a sergeancy by a deed which was military in its efficiency.

For another variety of work take the following: One day, while one of our officers was returning home in plain clothes, his tour of duty for the day being ended, he noticed two men whose actions struck him as suspicious. Very many officers, when their day off comes, are so anxious to see their families and to enjoy a little leisure that they will not, if they can avoid it, do police duty or arrest anybody. But this patrolman was of another stamp. He followed the two men at a distance, they thinking him merely a citizen, and finally observed them receive from a confederate a bag which he was convinced contained burglars' tools. Watching his chance later, he suddenly seized and arrested them. They proved to be well-known burglars who were wanted because of the crimes they had committed. This started us to look up the officer's record, and we found that he had a real genius for detecting and arresting criminals, possessing not only keen intelligence but much nerve; and the aggregate of the sentences of the criminals he had arrested footed up to one hundred and eighty-seven years in States prison, not to speak of a murderer who had been executed for his crime.

With one final example I shall close, choosing this one to show how a man can raise himself by doing a little more than his duty. One night one of our patrolmen saw a man leap out of the window of a house and run down the street. He, of course, promptly chased him. The man was a burglar, and armed. The officer,

however, went after him, and was overtaking him when they came to Park Avenue, underneath which is the tunnel through which run the trains of the New York Central Railroad. There are a number of big openings in the top of this tunnel, and through one of these the burglar plunged. It was a long leap, and there was danger from the trains underneath, but a man whose liberty is at stake will take a heavy risk. The patrolman was following after. He was inspired by nothing but duty. His liberty was not at stake, and he could not have been punished or reprimanded for failing to risk his neck by jumping into the tunnel. Nevertheless jump he did. The burglar had the wind knocked out of him by the jump. The patrolman, more skilful or lucky in jumping, got off scot-free, seized the prisoner, brought him in, and thereby earned his promotion.

Promotion to the higher ranks must be won not merely by courage, honesty, and alertness, but by the display of executive capacity of no mean order. The present Chief and inspectors have won their places by the exercise of traits which show their fitness to lead and to handle large bodies of men. So long as the present conditions continue, the police force of New York ought to offer an attractive field to any young man who is poor, who wishes to obtain a good salary for life, and at the same time to have before him a career in which, if he possesses the requisite courage and ability, he may raise himself to a very high position.

## THE LAW LORD AND LESLEY.

### CHAPTER II.

NE bright, sunshiny afternoon a few weeks subsequent to the day on which she went with John for a walk in the glen, Lesley was sitting alone in the parlour of the manse singing in her blithe young voice:

'O saw ye bonnie Lesley  
As she gaed o'er the border?  
She's gaen, like Alexander,  
To spread her conquests farther!  
'To see her is to love her,  
And love but her for ever:  
For Nature made her what she is,  
And never made anither!  
'Thou art a queen, fair Lesley,  
Thy subjects, we before thee;  
Thou art divine, fair Lesley'—

when a scuffle in the lobby and the opening of the door by an old domestic interrupted the melody.

'Oh, it's only Miss Lesley,' broke in the disappointed tones of old Elspeth. 'The minister's no' here after all. I'm sorry, sir, for bringin'

ye ben; but ye ken it's near tea-time, an' I thoct, aiblins, to find him in the parlour.'

'Pray don't apologise,' returned a man's voice. 'If Miss Lesley will forgive my intrusion, I will gladly come in and wait for the minister's return.'

As he spoke Elspeth flung the door wider and stood aside, revealing a tall figure clad in the roughest of tweed knickerbockers, and with an amused expression on his stern and somewhat supercilious face.

'It's the gentleman frae Barhulican, Miss Lesley,' she exclaimed by way of introduction. 'He says he'll wait for the minister, so I'll just set the tea, an' you can gi'e him a cup in the hand to keep him frae wearyin'.—The minister'll no' be lang, sir; I can promise you that,' she added, with many emphatic nods in the visitor's direction.

As the door closed behind Elspeth, Lesley found herself joining in her guest's evident amusement.

'I never touch tea,' he said, 'so I am afraid if you do your duty you will have to invent some other antidote to prevent me from wearying.'

Lesley laughed again, more shyly this time, for was she not alone with the great man, the mere sight of whom had so aroused her interest in church that first Sunday morning, and the magic of whose reputation had since thrilled her through and through with a delightful dread?

Yet, notwithstanding her fears, there was a certain necessity stirring within her to rise to the occasion. It was as if by some unconscious power the stranger had given her challenge, putting her on her mettle and impelling her to equality with himself.

'I am sorry the minister is out,' she said as their hands met. 'Did you wish very particularly to see him?'

A slight look of perplexity crossed his face; then he said, with a smile, 'Very particularly indeed. I should have returned his call sooner; but the fact is'—

'Oh, my uncle did not tell me he had called,' interrupted Lesley, reddening with confusion.

'And so you very naturally imagined that I had come to consult him on the welfare of my soul,' he supplemented dryly; 'but if I may finish my apology—my soul is in no particular danger, I can assure you—I have been away off and on a good deal, and the fascinations of my trusty "greenheart" are still very strong.'

'But you have not had good sport,' said his hostess politely.

His lordship smiled. 'No. I see I have thereby earned your contempt; but how, may I ask, have my failures reached your ears?'

'Oh, they hear in the village every evening,' explained Lesley; 'and of course we hear too.'

'This publicity is fearful,' said Lord Coalstoun good-humouredly. 'It is said that "manners maketh a man;" but I fear they also make a hypocrite. Up to this I have prided myself upon the courtliness of my attendant gillies; but I shall trust them never again. They are Norse Highlanders, Miss Gordon: need I make any further excuse for them?'

He spoke easily and quietly, and with an air of friendliness which seemed to reduce the distance between them and put the girl completely at her ease.

'But I interrupted you,' he said suddenly during a pause in the conversation. 'Will you do me a favour, and sing "Bonnie Lesley" again from the commencement?'

If he had expected her to demur he was disappointed. She turned at once to the piano, and sang through the old ballad with spirit.

When she had come to an end he thanked her quietly, but offered no comment on the performance. Indeed, his thoughts seemed far away. 'I suppose your cousin is still in Edinburgh?' he remarked at last.

'John?' echoed Lesley in some surprise. 'Oh yes, he is at college; but'—

Lord Coalstoun uttered a sapient laugh.

'You were with him the first day I saw you,' he explained in answer to her evident astonishment, 'and I have heard a great deal about him since. They appear to be very proud of him in the village.'

'Ah! of course they are,' returned Lesley carelessly. 'He has gained the gold medal every year since he went to college. This is his last term, and then he will be a full-fledged minister like my uncle. I can hardly believe it. It is strange to think,' she added, with a friendly smile, 'that you and John have been so often together in Edinburgh without seeing each other—though of course he had heard of you.'

A flash of amusement lit up his lordship's gray eyes at her words; but the next instant he was grave again.

'Not so very strange after all,' he commented, 'when you remember that we are two busy men. The college, I suppose, swallows up your cousin from morning till night, and—well—my place of business pretty well monopolises me.'

'That is the Parliament House, is it not?' cried Lesley eagerly, seizing upon the opening his allusion had offered to learn something from his own lips of that life which to her appeared in such heroic perspective. 'John has often told me about the Law Courts,' she went on impulsively, 'and the great trials that take place there, and I have tried hard to picture you'—She broke off, overcome with a sudden sense of trepidation.

'Well?' he queried. 'Go on: you have tried to picture me—how? Ah, I can guess,' as she remained silent, covered with confusion. 'But I may as well inform you at once that there is nothing romantic about my calling. Unfortunately, there is no allowance made in it for illusions of any sort, and one gets out of the way of indulging in them; only when I am on my holidays I make-believe sometimes—just by way of practice'—He broke off, his eyes dwelling with trained appreciation on the beautiful, glowing face opposite him. 'But all this reminds me,' he added with an abrupt change of tone, 'that I have to go back to work to-morrow.'

'Then there is no use asking you to take a ticket for the concert?' said Lesley, recovering herself.

'What concert?' he queried.

'It is the only entertainment we ever have,' she explained, colouring a little. 'It is got up for the ministers' widows.'

'There appears to be a certain sameness about your interests,' commented his lordship *sotto voce*. But Lesley was busy prying among a stack of papers upon the mantelshelf, and did not hear his remark.

'There is a programme,' she said at last, triumphantly turning to him.

He scanned it with interest. 'I see you are lending your services,' he said, glancing at her as she stood before him, flushed and eager.

'Yes, I always sing the first song,' she answered, with a little apologetic laugh. 'You see, it gives the others confidence.'

'Which they stand in sore need of, I imagine,' he remarked. 'Well, may I have half-a-dozen tickets for the front row?'

'But you will not be here!' she demurred.

'You are a shocking saleswoman, Miss Gordon,' he replied, smiling as he folded up the programme and placed it carefully in his pocket-book. 'The next time I come to Barhulican I shall probably bring my sister, and perhaps a friend or two. Think of the enormous benefit of having an entertainment ready-made for their amusement in the midst of the unspeakable wilderness. And now for the payment,' he continued, rising to receive the tickets from her, and placing a sovereign on the table as he did so.

'But I have no change,' said Lesley frankly, 'and the tickets are only a shilling each.'

He shook his head. 'An absurdly small price for the privilege of being present. But may I confess something, Miss Gordon? I have become imbued with a sudden and devouring interest in all ministers' widows, and it must have an outlet, so I pray you do not balk my zeal; but if I may ask you one favour, will you make an alteration in the programme, and sing "Bonnie Lesley" instead of that effusion with the ridiculously sentimental name?'

'I am afraid I could not,' she replied, shaking her head dubiously.

'And why not?' he queried.

'Because it would sound conceited, you see'—and frankly—'my name is Lesley.'

'As I have been aware for three weeks,' he remarked with a gleam in his eyes.

His words brought an exquisite colour to her cheeks. 'I am sorry that I have to refuse when you have been so very kind,' she said with great dignity; 'but the people would think I had done it on purpose.'

'And if they did,' he queried, 'what matter? The people you have always with you; but I am a stranger and with but few opportunities of hearing a song sung as I like it sung.'

'You are very kind,' said Lesley again, her mouth taking on an obstinate curve; 'but still I am afraid it is out of the question.'

He smiled tolerantly. 'I see,' he said. 'Then I shall be obliged to make you.'

She felt the virile force of his will dominating her purpose, and instinctively she rebelled.

'Make me?' she echoed, throwing back her head.

Their eyes locked for an instant; then he smiled again.

'Wait and see,' he said. He held out his hand abruptly. 'And now I must be off. Will you tell your uncle how sorry I was to miss him?'

'It's just chappit the hour, Miss Lesley,' said Elspeth, putting her head round the door at this juncture.—'Oh,' with a reproachful glance in Lord Coalstoun's direction as she perceived his preparations for departure, 'surely you're no' gangin', your worship; the minister 'll be back in two minutes, I can assure you, an' the tea's just freshly masked.'

'I have already confessed this afternoon that I never touch tea,' said his lordship, laughing, 'and'—with an amused glance at Lesley—'I am afraid if I stay a moment longer I shall never be allowed to come back again.'

Lesley followed him to the door and walked beside him down the short avenue which led to the gate. On both sides was the straggling, old-fashioned garden, with its plots of flower-beds interspersed with strange specimens of the topiarian art—the especial pride of old Donald the minister's man. Beyond, again, stretched the glebe fields, gray and peaceful in the sudden twilight of winter.

'I suppose you love your garden,' said Coalstoun, glancing from the border of hollyhocks to the tall vivid slip of womanhood by his side.

'Oh yes, of course,' she replied vaguely, 'except sometimes when I am in a discontented mood.'

'Have you ever been in Edinburgh?' he asked suddenly.

She sighed. 'No. I have never lived in a town; and as my cousin hates town life, I don't suppose I ever shall.'

Lord Coalstoun cast a curious glance at her; then a faint smile of comprehension lit up his face. At the white barred gate, with its clumps of elms and sycamores on both sides shutting out the manse from the narrow loaning, he stopped.

'I sympathise with John,' he said, smiling inscrutably down at her. 'After all, the garden is best;' and with an abrupt raising of his tweed cap he was gone.

(To be continued.)

# OLD GARDENS.

By P. H. DITCHFIELD, M.A., F.S.A.

THE glory of summer is gone, the harvest is past, and heavy rains and dark skies and the damp and dismal days have come, which mark the approach of winter. Soon hard frosts and snow will clothe our trees with hoary whiteness. No longer does Nature tempt us abroad, though the gardener knows how precious are the dark November days for the developing of spring-time loveliness, and how much depends upon his winter's work. Now the study and one's 'ain fireside' have a charm that is all their own; and if we follow Lord Rosebery's advice we shall 'in our short Scotch winter days turn to the printed page, and from the literature of gardens conjure up something of our own summer delights.'

'The garden that I love,' quite as fervently as the Poet-Laureate loves his, is an old garden which has been much altered in the course of ages. Sweet sheltered walks with high and thick holly or box hedges, and gardens surrounded by walls and parterres and terraces, used to flourish with every old country house. Everything was beautiful, well ordered, and grateful to the senses. Then came a crowd of ignorant reformers, who cut down the lovely hedges, destroyed the walls, uprooted the flower-beds, and made the place a wilderness. This they called the 'new English fashion' of gardening, a return to nature, and deserved the gallows for their pains. Such gardens, so fashioned, look as if they had been laid out by an undertaker, and the designers of landscape-gardening were mere ignorant and visionary amateurs and a Grub Street poet who had probably no other garden than the pot of mint before his windows. Some foreigners say we borrowed the idea from the Chinese. Gabriel Thouin claims the doubtful honour for the French, and asserts that Dufresnoy, a Parisian architect, fashioned the first landscape-garden in the Faubourg Saint Antoine at the beginning of the eighteenth century.

Malacarne of Padua says that Charles, the first Duke of Savoy, invented this style in a park near Turin, which Tasso immortalised in his poem on *Jerusalem*, which Chaucer copied, and which Warton and Eustace suggest as more likely to have given the first idea of an 'English garden' than Milton's description of Paradise. The poet Mason asserts that Bacon was the prophet, Milton the herald, and Addison, Pope, and Kent the champions of what he is pleased to call 'the true taste.'

It matters not very much to whom this doubtful honour belongs; at any rate the destroyers have scarcely left us a decent hedge or sheltered

walk to protect us from the east winds, and have killed many of the old flowers which delighted our forefathers and made our gardens earthly paradises. Few people admire now the degenerate formal gardens, the clipping of yews into fantastical shapes, which aroused the satire of Addison. He wrote in *The Guardian*:

'How contrary to simplicity is the modern practice of gardening! We seem to make it our study to recede from nature, not only in the various tonsure of greens into the most regular and formal shapes, but even in monstrous attempts beyond the reach of art itself; we run into sculpture, and are yet better pleased to have our trees in the most awkward figures of men and animals than in the most regular of their own. A citizen is no sooner proprietor of a couple of yews but he entertains thoughts of erecting them into giants like those at Guildhall. I know an eminent cook who beautified his country seat with a coronation dinner in greens, where you see the champion flourishing on horseback at one end of the table, and the queen in perpetual youth at the other.

'For the benefit of all my loving countrymen of this curious taste, I shall here publish a catalogue of greens to be disposed of by an eminent town gardener, who has lately applied to me upon this head. My correspondent is arrived at such perfection that he cuts family pieces of men, women, or children. Any ladies that please may have their own effigies in myrtle, or their husbands in hornbeam. I shall proceed to his catalogue, as he sent it for my recommendation.

"Adam and Eve in yew; Adam a little shattered by the fall of the tree of knowledge in the great storm; Eve and the Serpent very flourishing; the Tower of Babel not yet finished; St George in box, his arm scarce long enough, but will be in condition to strike the dragon by next April; a Queen Elizabeth in *phyllyrea*, a little inclining to the green-sickness, but of full growth; an old maid-of-honour in worm-wood; divers eminent poets in bays, somewhat blighted, to be disposed of a pennyworth; a quickset hog shot up into a porcupine by its being forgot a week in rainy weather," &c.

We derived this taste for clipping trees into odd shapes from the Italians, who inherited it from the old Romans; but to them our gardens owe much of their symmetry, beautiful formality, and exact design. The Dutch, perhaps, taught us much in the cultivation of absurdities. They certainly used to disfigure their grounds by absurd and frivolous ornaments and traps and snares for the unwary, which have been copied by some Englishmen, and are the apotheosis of bad taste.

At every resting-place some kind of conceit was formed for surprising the visitor. If he sat down, the seat was probably so contrived as to sink under him. If he entered a grotto or approached a summer-house, water was squirted from concealed fountains. The dial had a lens so placed that during sunshine the priming of a small cannon fell under its focus just as the sun reached the meridian, when of course the cannon was discharged. An artificial cave sometimes was fashioned like a lion's den, with the head of a lion cut in stone peeping from the entrance. Many will remember the mischievous fountain at Chatsworth which squirts water on all who are enticed beneath it; and in the days of my grandfather there was a very humorous garden at Ormskirk, where the host used to startle his guests by touching certain springs which caused hidden caverns to open and a stuffed lion or leopard to spring out upon them.

There was a curious garden near Antwerp which contained scenes of tonsile evergreens, vistas, canals, lakes, secret waterworks, caves, tombs, a lawn with a flock of stone sheep, a shepherd, and dogs, dwarfs, a drunkard, and other paltry contrivances.

These examples of the degeneracy of formal gardens paved the way for the introduction of the new style, which destroyed the wheat as well as the tares. Let us look at an old garden ere it was wrecked and cut about by these wanton innovators. Its design was based on Italian models, and these were framed after the pattern of the ancient Roman gardens. Pliny the Younger tells us of his winter garden at his villa Laurentinum, which looked upon the Bay of Ostia. It was surrounded by hedges of box, and where that failed, by rosemary. There were platforms and terraces, and figs and vines and mulberries. He delights to tell of the beauties of his woods, his rich meadows covered with cattle, the Bay of Ostia, the scattered villas upon its shore, and the blue distance of the mountains, his porticoes and seats for divers views, and his favourite little cabinet in which they were all united.

Pliny's Tusculan villa was his chief delight, basking amid the Apennines, whose lofty summits were crowned with forests of oak and their fertile sides covered with corn-fields, vineyards, copses, and villas. Before the house was the xystus or terrace, and from this descended a lawn covered with acanthus or moss, and adorned with figures of animals cut out in box-trees. The lawn was surrounded by a walk enclosed with tonsile evergreens sheared into a variety of forms. Beyond this was a circular place for exercise, ornamented in the middle with box-trees sheared into numberless different shapes; and the whole was fenced in by a wall covered with box. In another part of the garden was a small space of ground shaded by four plane-trees, with a foun-

tain in the centre. A plantation of trees met the eye in another direction in the form of a hippodrome formed of box and plane trees alternately planted and connected by ivy, the semi-circular ends being formed of cypress, and behind them were placed bay-trees. Rose-trees bordered the walks, which were in a winding direction, ending in a straight path, and then branching off into a variety of others, separated by box-hedges. These were sheared into a variety of shapes and letters, some expressing the name of the master, others that of the designer; while here and there were small obelisks, intermixed with fruit-trees.

There were endless wonders in this marvellous garden: an alcove of white marble shaded by vines and supported by marble pillars, and from the seat flowed several streams of water, as if pressed out by the weight of those who sat thereon; a fountain throwing out water to a considerable height; a beautiful summer-house opening on a green enclosure, and furnished with a fountain and many marble seats, each having a fountain near it; while rills of water flowed here and there, delighting the ear with their murmuring sound and refreshing the trees and flowers of the wondrous place. In addition there was a temple of Ceres, a farm, a park, a kitchen-garden, orchard, apiary, *cochlearium* or snailery, and *glivarium* or place for dormice.

Such was the marvellous garden of a noble Roman, which served as a model for the fashioning of pleasure-grounds in the seventeenth century. The representations of the gardens of Herculaneum show that the same plan was adopted in that ancient city. There were square enclosures formed by trellis-work and trees spread out like a fan, and fountains and vases and statues; and the same arrangement has survived to the present time.

Hawthorne thus describes the Medici gardens: 'They are laid out in the old fashion of straight paths, with borders of box, which form hedges of great height and density, and are shorn and trimmed to the evenness of a wall of stone at the top and sides. There are green alleys with long vistas, overshadowed by ilex-trees; and at each intersection of the paths the visitor finds seats of lichen-covered stone to repose on, and marble statues that look forlornly at him, regretful of their lost noses. In the more open portions of the gardens, before the sculptured front of the villa, you see fountains and flower-beds; and in their season a profusion of roses, from which the genial sun of Italy distils a fragrance to be scattered abroad by the no less genial breeze.'

Early in the seventeenth century the revived classic style of architecture was transplanted into England by Inigo Jones. This celebrated architect had carefully studied in Italy the works of Palladio, then but recently deceased, and effected a complete revolution in the arrangement of an

English gentleman's house. Italian villas became the fashion, and our gardens were modelled after the pattern of those seen in Italy. The terraces adjoined the house, the lawn declining thence; we see again Pliny's flower-garden with a fountain in the centre, the walk bordered with box, the trees sheared into whimsical artificial forms, together with fountains, alcoves, and summer-houses.

Sir William Temple thus describes what he considered to be a perfect garden: 'The perfectest figure of a garden I ever saw, either at home or abroad, was that of Moor Park in Hertfordshire. I will describe it for a model to those that meet with such a situation, and are above the regards of common expense. It lies at the side of a hill, upon which the house stands, but not very steep. The length of the house, where the best rooms and of most use and pleasure are, lies upon the breadth of the garden; the great parlour opens into the midst of a terrace gravel-walk that lies even with it, and which may be about three hundred paces long, and broad in proportion; the border set with standard laurels, and at large distances, which have the beauty of orange-trees out of flower and fruit. From this walk are three descents by many stone steps, in the middle and at each end, with a very large parterre. This is divided into quarters by gravel-walks, and adorned with two fountains and eight statues at the several quarters. At the end of the terrace-walks are two summer-houses, and the sides of the parterre are ranged with two large cloisters open to the garden. Over these two cloisters are two terraces covered with lead and fenced with balusters; and the passage into these airy walks is out of the two summer-houses at the end of the first terrace-walk. The cloister facing the south is covered with vines. From the middle of the parterre is a descent by many steps into the lower garden, which is all fruit-trees, ranged about the several quarters of a wilderness, which is very shady; the walks here are all green, and there is a grotto embellished with figures of shell rock-work, fountains, and waterworks.'

Here was a garden beautiful in every respect, charming in every detail. The Countess of Bedford was its originator, and Dr Donne says that it was 'the sweetest place he had ever seen in his life, before or since, at home or abroad.' It has, of course, long since been destroyed, and its place occupied by lawns and trees.

Horace Walpole tells the sad story of the devastation of these old gardens with many a sigh, which finds an echo in our hearts to-day. He wrote: 'No succeeding generation in an opulent and luxurious country contents itself with the perfection established by its ancestors; more perfect perfection was still sought, and improvements had gone on till Loudon and Wise had stocked all our gardens with giants, animals, monsters, coats-of-arms and mottoes, in yew, box,

and holly. Bridgman, the next fashionable designer of gardens, was far more chaste; he banished verdant sculpture, and did not even revert to the square precision of the foregoing age. He enlarged his plans, disdaining to make every division tally to its opposite; and though he still adhered much to straight walks with high-clipped hedges, they were only his great lines; the rest he diversified with wilderness, and with loose groves of oak, though still within surrounding hedges. As his reformation gained footing, he ventured to introduce cultivated fields and even morsels of forest appearance by the sides of those endless and tiresome walks.

'But the capital stroke, the leading step to all that followed, was the destruction of walls for boundaries and the invention of fosses: an attempt then deemed so astonishing that the common people called them "Ha! ha's!" to express their surprise at finding a sudden and unperceived check to their walk. No sooner was this simple enchantment made than levelling, mowing, and rolling followed. The contiguous ground of the park without the sunk fence was to be harmonised with the lawn within; and the garden in its turn was to be set free from its prim regularity, that it might assort with the wilder country without. At that moment appeared Kent, painter enough to taste the charms of landscape, bold and opinionative enough to dare and to dictate, and born with a genius to strike out a great system from the twilight of imperfect essays.'

Who was this wretch that dared such sacrilege? This Kent was a Yorkshireman, an apprentice of a coach-painter in 1719. He discovered a genius for painting, and was patronised by Lord Burlington, with whom he lived, after a journey to Italy, at Burlington House. He painted historical subjects and ceilings. The hall at Stowe was adorned by his brush. Then he took up architecture, and finally landscape-gardening. Claremont and Esher were his first efforts. Kensington Gardens were also manipulated by him, where he actually introduced dead trees in order to produce the appearance of natural woods. Could anything be more artificial, more antagonistic to good taste? Yet he won the approval of the men of his generation, and amongst them Mason the poet was warm in his praise, alluding to Kent's Elysian scenes in the highest style of panegyric. He tells how Kent prided himself in shading with evergreens his most cherished productions, and attributes to him all that had been done by 'the most deservedly admired designers,' Southcote, Hamilton, Lyttleton, Pit, Shenstone, Morris, and Wright. Had Kent never exterminated the bounds of regularity, never actually traversed the way of freedom of manner, these cultivated artists would never have found it of themselves.

Wright succeeded Kent in the cultivation of these barbarous methods. He is said to have produced 'an admirable effect' on a lawn at

Beckett House, the seat of Lord Barrington; decorated a copsewood with roses at Stoke, near Bristol; designed the terrace-walk at Oatlands; and constructed a river which was not infrequently mistaken for the Thames itself.

Then fashion fixed upon a poor gardener named Brown, and made him prime favourite. A worse choice could not have been made. He was an ignorant Northumbrian, and utterly devoid of taste. He became head-gardener at Stowe; but Lord Cobham very wisely confined his efforts to the kitchen-garden. By the influence of his master he became royal gardener at Hampton Court and Windsor. At Blenheim he constructed the large artificial lake and attained the summit of his popularity. The gardens he wrecked are beyond all reckoning. Improvement was the passion of the day, and there was scarcely a country gentleman who did not consult the royal gardener. Daines Barrington says of him that 'he had undoubtedly great merit in laying out pleasure-grounds; but I conceive that in some of his plans I see more traces of the kitchen-gardener of old Stowe than of Poussin or Claude Lorraine.' He was fond of planting crowded circular clumps of fir, which excited the ridicule of many, and was defended by the artist as being 'playful.' His general plan was to surround the ground to be cultivated by a narrow belt of trees, and fill in the enclosed space with these miserable round or oval clumps, and a reach or two of a tame river on different levels. This is the sort of plan which prevailed from about 1740 to 1790, when the whim ceased. Sir William Chambers declared that if it had continued for any longer period there would not have been found three trees in a line from Land's End to the Tweed. The only benefit which accrued from this curious method of laying out gardens was that which fell to the lot of Martin Brown—'Capability Brown,' as he was nicknamed—who amassed a large fortune.

There was naturally a revolt from this style of laying out gardens which was far more formal than the formal style which it displaced. An ancient garden had avenues, alleys, stars, *pâtes-d'oye*, pelotons (square clumps), circular masses, rows, and strips; but this degenerated Brown-designed garden had only a belt, a clump, and a single tree. The shafts of satire were levelled at these daring destroyers of old gardens and at the folly of fashion which permitted such atrocities. The author of *Village Memoirs* (1775) scoffs at the professor of gardening under the title of 'Lay Out,' and declares that most of the landscape-gardens were evidently planned by some general undertaker. Wyndham laughs at the idea that they should be arranged so as to look well in a picture. Salvator Rosa painted beautiful pictures of caves. Are we therefore to live in caves? Gainsborough's 'Country Girl' is more picturesque than a child neatly dressed. Are our children to go in rags? Places are not to be laid out with a view to their appearance in a picture, but to their use and the enjoyment of them in real life. With this view gravel-walks and neat mown lawns, straight alleys, fountains, terraces, parterres, and cut hedges, are in perfect good taste, and infinitely more conformable to the principles which form the basis of our pleasures in those instances than the docks and thistles and litter and disorder that may make a much better figure in a picture.

Thus thoughtful men were feeling after and finding a more excellent way; but, as in many other departments of life, 'the evils that men do live after them.' Revolutions uproot and destroy, and it is often impossible to restore what wanton hands have sacrificed to momentary whims and passions. Let us cherish the beauties that remain, our diminished inheritance, which time has spared, and resolve that no rude hand or devouring spade shall deprive us of them.

## THE MONTH: SCIENCE AND ARTS.

### RESTORING THOSE APPARENTLY DEAD.

ANY cases are on record in which persons apparently dead have been restored to life by the persevering practice of what is known as artificial respiration, and it is quite certain that in cases of drowning or other forms of asphyxiation hopes of restoration should not be given up until a long time has been devoted to the necessary work. Rhythmical traction of the tongue has been known to revive the respiratory function when other means have failed, and Dr Laborde, of Paris, has contrived for this purpose a small machine which can be worked either by clock-movement or electric motor. In

the course of his experiments to test the value of this remedy he chloroformed a vigorous bulldog, weighing thirty-five pounds, to such an extent that there was no perceptible respiration. After fifteen minutes' tongue-traction the dog recovered sensibility. In another experiment anæsthesia was carried to a much further point, and in this latter case the animal recovered its faculties after two and a half hours' tongue-traction. With regard to the human patient, he is laid on his back, while the little instrument is placed on a stand which projects over his chest. A pair of broad tweezers grasps the tongue, and is attached to the mechanism, which keeps up a continued pulling in-and-out action. Dr Laborde's experiments point to the assumption that although an animal organism may have

apparently ceased to live externally, the germ of life still persists internally, and can be made to assert itself by the means described.

#### NATURE-STUDY.

During the past few decades we have had a plethora of exhibitions, and all trades and manufactures have been represented in this popular form. But the Nature-study Exhibition, which was held at the Botanical Gardens, London, this autumn, differed from all its predecessors in its character and objects. It was to a large extent an experiment, the idea being to ascertain what steps were being taken to teach young people who are surrounded by bricks and mortar the truths of natural history, and to find out how far these efforts to study nature had been successful. The result of the appeal to various schools brought a hearty response, and both rich and poor sent in articles for exhibition, the various Board schools in the great towns and rural districts being well represented. Some of the work shown was most admirably done, notably the wax models of insects, plants, &c.; while the raised maps, modelled in plaster and coloured, showed how well the children in some districts are made to understand the nature of the district in which they live. Photographs illustrative of the geology of a neighbourhood as evidenced by quarries, railway cuttings, &c., were also in evidence. We trust that this exhibition is only the first of a number of similar institutions, for the public must be kept alive to the extreme value and importance of this method of teaching the young.

#### AN ISTHMIAN RAILROAD.

The long-projected canal at Panamá, which seems at last to have entered the domain of things practicable, has a rival in the railway which crosses the isthmus of Tehuantepec. A glance at the map of Central America will show that the barrier which separates the Atlantic and Pacific Oceans is at this point somewhat broader than the strip of land at Panamá, while at the same time it is some hundreds of miles west of that place. Seven years ago the Mexican Government constructed a railroad here which has a length of one hundred and ninety-two miles; but it was very primitive in design, and quite unfit for the heavy traffic which would ensue if this route should ever become one of the world's highways. The Pearson Company, which has already carried out many important works, have undertaken to reconstruct this railway, and to establish a port at each end of the line for the accommodation of the biggest ships afloat, and the work is to be completed early next year. The few brick bridges which now span the line will be replaced by steel girder erections, which better withstand any seismic disturbance which may occur. Very extensive

harbour works and dock facilities both on the Atlantic and Pacific seaboard are in progress, and these works will be fitted with electric cranes and other appliances of the most modern type.

#### REJUVENATED RUBBER.

Most persons know by personal experience that india-rubber goods are perishable, and that neither the popular 'mackintosh' nor the rubber wheel-tire has an unlimited lease of life. Many plans have been suggested for the renewal of rubber, so that old goods may be made to give up the worn-out material, which by certain processes is made fit to enter once more upon a commercial career. This rejuvenated substance is known in New York as 'recovered' rubber, and a factory for its preparation has recently been established there. The principal source of the rubber treated is the discarded galosh, a form of footwear used to a far greater extent in America than it has ever been in Britain; and there are two processes, the one mechanical and the other chemical, by which the rubber is 'recovered.' In the first process the material is ground between rollers, then run over magnets which extract from it any particles of iron; and next a current of air is employed to blow away textile fibres and dust. It is then heated, with or without the addition of oil—a process which to a certain extent devulcanises the rubber—and is finally rolled into sheets. In the chemical process the rubber is robbed of its impurities by treatment with acid; but this method has the inconvenience of leaving a waste acid product which is difficult of disposal. Old rubber can never be made like new; but there is a good demand for rubber goods of low price, and the new manufacture is now a regular article of export from America to this country.

#### CHAMPAGNE.

There is fashion in wines as in everything else. The sherries and ports in which our forefathers delighted have long ago given place to clarets, and now clarets are losing their position in the public estimation in favour of sparkling wines like champagne. However, real champagne is about as rare as real cognac; and as the demand must be met, various imitations find their way into the market. Some find their origin in the juice of the grape, but there is little doubt that a large number are prepared from other vegetable juices. According to the *Society of Arts Journal*, the owners of some vineyards in the Médoc country, recognising that their claret has found a formidable rival in champagne, are now producing sparkling wines made by the same process as that followed by the champagne-growers, and we are told that 'to the ordinary taste there is nothing but the label to distinguish sparkling Médoc from the best brands of champagne.' The colour of the

grape presents no difficulty if the dark skins be removed before fermentation, and as a matter of fact the champagne grapes are as black as those grown in the Médoc country.

#### OLD WATERWORKS.

In the course of some recent excavations in the City of London some curious wooden water-pipes were unearthed. These are formed of the trunks of trees nearly two feet in diameter, with a bore of about eight inches. One end of each length of piping is cut to a point, so that it might easily fit into the hollow of the next length in order. These pipes are supposed to be about one hundred and fifty years old, and were probably laid by the New River Company to convey water from their reservoir to Finsbury, which, although now a strictly commercial district of London, was once a fashionable neighbourhood bordered by fields and hedges. The early methods of supplying the Metropolis with water seem to have been of a very rough-and-ready description. Less than two centuries ago the supply was pumped up from the Thames at London Bridge by the action of water-wheels turned by the tide, which was very swift at this point. These wheels were designed by a Dutchman, and they form a prominent feature in some of the engravings of the time. Of course there was no such thing as filtration in those days, for the discovery of pathogenic germs had yet to await the invention of the microscope.

#### VACCINATION PREVIOUS TO JENNER.

The return of a well-known African explorer in the person of Mr J. Faux, who has had a long sojourn in the land of the Gallas, British East Africa, has given a correspondent of the *Pall Mall Gazette* an opportunity of recording some of this traveller's interesting experiences and discoveries. The Gallas, who are described as a race physically and intellectually superior to their neighbours, the Somalis, have a light copper-coloured skin and handsome features. Possibly the most remarkable thing about them is that for centuries past they have practised vaccination as a preventive of smallpox; and although this disease is not unknown among them, they are not susceptible to it, and are rarely pock-marked. The operation is performed not on the arm, as with Europeans, but on the side of the nose, the serum being rubbed into the skin after a slight puncture has been made. Should any of the Gallas be smitten with an infectious disease, he is immediately isolated from his fellows, while his neighbours cast lots as to undertaking the duties of nursing and feeding the invalid. The Gallas are a strictly anti-liquor people, and intoxicants in any form appear to be abhorrent to them. The land which they occupy extends from some distance east of the Uganda railway to the Juba river, and there have been found on their terri-

tory the ruins of a large city, now almost entirely hidden in the jungle, which speak of a former civilisation of a very high order.

#### WIRELESS TELEGRAPHY.

Shareholders and others who are interested in the submarine cables which now form such a network over the ocean floor are naturally somewhat anxious to know whether the recent experiments of Signor Marconi indicate an impending change in our methods of electrical communication or whether they have simply an academic interest. It has already been proved beyond dispute that the wireless system forms an effective method of communicating between ships at sea and between ships and the shore, and in this employment it stands by itself; but whether it is designed to supersede cable messages is a point upon which the highest authorities do not seem to be able to come to an agreement. Professor Graham Bell, of telephone fame, believes that Marconi's invention will never take the place of telephone or telegraph on land, but that its usefulness will be confined to over-sea employment. 'I believe,' he is reported to have said, 'the invention will supplant the oceanic cables when it is sufficiently developed to be reliable for the transmission of messages.' Lord Kelvin, on the other hand, is said to be 'strongly of opinion that, however valuable wireless telegraphy may be for certain purposes, it cannot affect the transmission of messages over great distances through cables.'

#### NOW AND THEN.

Since the opening of the new century, the *Times* has made a daily practice of printing excerpts from its issue of one hundred years back, and many of these are most interesting, and often amusing, in their contrast to the life of the present day. Last month, for example, appeared a notice of Garnerin's balloon ascent from Lord's Cricket Ground, London, when we learn that the Prince of Wales was present to see the balloon depart. It rose from the ground ten minutes before five, and came to the ground seventeen miles away in fifteen minutes. This was rapid travelling; but the wind was high and the weather in other respects unfavourable. It would seem that we have made but little progress during the past hundred years in the art of navigating the air. Our newest machines are still balloons; and though we have, by the addition of oil-engines and aluminium fittings, learnt how to steer them in a given direction to a very limited extent, they are still of the most unwieldy character. In such a wind as Garnerin had to face, the modern machine could have done no better than the simple gas-bag which he employed. It may be mentioned that about forty years earlier Cavendish noted the extreme lightness of hydrogen as compared with common air,

and that soon afterwards Black of Edinburgh sent up the first model balloon in the form of a small bag which he inflated with that gas.

#### PORTABLE HOUSES.

In the early days of colonisation the brave men and women who ventured into unknown lands had to build their own rough log-huts as best they might. It is different to-day, for a family leaving home can take with them a house which fits together without the aid of tools, and which can be made weather-proof, fireproof, and even insect-proof if required. Such a house, or rather houses—for the designs for the building are of the most diverse kind—will be found in the invention of Mr A. Silbiger, who has now one on exhibition in London. The salient feature of the erection, which in this case comprises four spacious rooms, is the making of wall, door, and window pieces or panels all of one size, and interchangeable, so that the area of the rooms and the position of the windows and doors can be altered at very short notice. Thus there is no need to number the different parts of the house; for, once the framework is up, the panels will fit anywhere, and can be made rigidly fast by hand-screws. The building can be extended almost indefinitely, and in many places abroad hospitals, barracks, and other erections of a temporary or portable kind constructed on the Silbiger plan have been used with success. These houses are also used on private estates for bathing-pavilions, billiard-rooms, and as bungalows for temporary residence at the seaside. The makers are Messrs Farquharson, 85 Gracechurch Street, London, E.C.

#### TELEGRAPHY WITHOUT ELECTRICITY.

The electric telegraph and the telephone are now such common aids to communication between persons distant from one another that we do not often pause to consider what wonderful inventions they are. Even wireless telegraphy has ceased to interest the public, who are so surfeited with the true fairy tales of science that they seem to be losing the power of feeling astonished. There are, however, certain methods of secret signalling, or telegraphy—we hardly know what to call it—known to certain Oriental and semi-barbarous nations, which have long been a puzzle to those Europeans who have had an opportunity of observing their effects. It is said on good authority that the murder of General Gordon at Khartoum was known in the bazaars of Cairo, a thousand miles away, on the day of his death. Similarly, in the first Afghan war, the terrible disaster which befell the British army in the Khyber Pass was known all over the country before it became circulated through the ordinary means of communication. It is certain, too, that in the late war in South Africa the Boers were able, through their Kaffir scouts, to get news of the movements of our troops almost as soon as the order to march had

been given. A recent article in the *Spectator* gives some other instances of this 'natural telegraphy,' the secret of which, in spite of energetic inquiries on the part of many officers and travellers, and the proffer of heavy bribes, has never been divulged to Europeans.

#### FROM PARIS TO NEW YORK OVERLAND.

An expedition under Mr Harry de Windt started in December of last year from Paris, one of the objects being to survey a line of railway to Behring Strait in connection with the Siberian Railway, which is now pronounced quite feasible—however otherwise impracticable—except for the mountains of Verkhoyansk. Yakutsk, in Northern Siberia, was reached in February. Here the post sledges were discarded for light open sleds drawn by reindeer. Their next halt was at Verkhoyansk, the coldest place in Siberia, the average temperature in winter being fifty-three degrees (Fahrenheit) below zero. There are only seventy days in the year free from snow, and in mid-winter four hours of twilight to twenty of darkness. The journey from Irkutsk to Yakutsk occupied a month. The road was over precipitous mountains, and the cold was intense, the thermometer registering seventy-eight degrees below zero. At Kolymsk they found the lot of political prisoners pitiable. There were four suicides, and three had gone mad in two years. On the journey to Behring the party experienced great hardships, having to sleep in tents with the temperature forty degrees below zero. For twenty days they lost their way, were badly frozen, and suffered greatly from hunger. The Chukchis were unfriendly until they were near the Strait. The journey thither from Kolymsk occupied seven weeks, and was made in sleighs drawn by dogs. The party remained in East Cape five weeks, where they had a bad time owing to the drunken orgies indulged in by the Chukchis. They were taken off by the cutter *Thetis*, which landed them on the ice five miles from Cape Prince of Wales. The shore was quite unapproachable in the ship, and they had a perilous journey of four hours over floes and open water. They landed in America on 19th June, and were in Paris by the end of August, having accomplished over eighteen thousand miles in two hundred and forty-eight days. The European members of the expedition, besides the leader, are Vicomte de Clinchampe-Bellegarde and Mr George Harding, a former fellow-traveller.

#### LEAFY THOROUGHFARES.

Nothing improves the appearance of a city street more than the presence of trees, and there is the satisfaction of knowing at the same time that their pleasant greenery is conducive to health. London has of late tardily followed the example of the Continental towns, and its newer thoroughfares are planted with trees, which in

due time will equal in luxuriance those to be seen in the old-fashioned squares. There has recently arisen a cry of vandalism because several trees on the line of route taken by the Coronation procession have been cut down or mutilated, and the loss is one which cannot be repaired for a long time. They seem to understand these things better in France. To find room for the temporary buildings of the last

Paris Exhibition hundreds of trees were removed; but they are now back in their old places looking as green and vigorous as ever. More recently, in the course of street improvements, a double row of trees in one of the Parisian boulevards has been moved to a fresh position without any injury to structure or growth. It is difficult to see why, if such work can be successfully accomplished in Paris, it cannot be done in London.

## HUNTING METHODS OF THE BLACKS OF NORTHERN AUSTRALIA.

THE Australian aborigines, though now extinct in the more civilised parts of the continent, and greatly reduced in number in the partially settled districts, still roam and hunt at will over extensive tracts in that part of Australia known as the Northern Territory. These regions are sometimes several thousands of square miles in extent, and are inhabited by the original owners only, who exist in that primitive condition in which unnumbered generations of their ancestors have lived and died. There the members of each tribe retain their purity of race, and hand down the traditions, superstitions, and customs imparted to them in youth; therefore those interested in the customs and folklore of the aborigines may pursue their studies in the Northern Territory to their hearts' content.

Although practically of one type throughout the whole of the continent, the native race is divided into innumerable tribes, each numbering from twenty or thirty to several hundreds. The tribes are again subdivided into clans or camps, each clan consisting of one or more families, numbering from ten or fifteen to about a hundred individuals. Every tribe inhabits its own particular tract of country, speaks a distinct language or dialect, and possesses its own laws and customs without any regard to contiguous tribes; though many of the laws of the various tribes are practically the same as those of their neighbours, and some customs are common to nearly every tribe. If the supply of game and other food is abundant the camps may be only a few miles apart; but in times of scarcity the clans wander farther afield. The camp, of course, is always located within easy reach of a water-supply. The people of the various camps see but little of their fellow-tribesmen belonging to other camps, as each community secures its own supplies; but occasionally the several communities belonging to the same tribe meet in one large camp, usually for the purpose of initiating the boys who are old enough, after they have undergone certain ceremonies, into the full privileges of manhood, with liberty to marry.

The aborigines subsist on the fish and game they catch, supplemented by various kinds of

yams and other roots. In the pursuit of game they exercise no little ingenuity; and, as is to be expected of a race possessed of only the most primitive of weapons, they have a thorough knowledge of bushcraft, which they use to the best advantage.

In that portion of the country bordering on the seacoast game is usually plentiful, and any creature that can fly, run, swim, or crawl is utilised as food. Among these may be mentioned such feathered game as wild geese, ducks, cranes, turkeys, quail, pelicans, jungle-fowl, emus, and crows; kangaroos, wallabies, opossums, and bandicoots of the marsupials; buffaloes, rats, wild-dogs, native cats, and other quadrupeds; while the amphibia and reptilia contribute large and small lizards, land and water snakes of various kinds, turtles, tortoises, and alligators—only some of the tribes, however, eating the last named.

Geese, ducks, and other aquatic birds are sometimes caught by the oft-described method of swimming towards them quietly, with the head concealed by a bundle of grass or a large water-lily leaf in which small apertures are made for the eyes. The swimmer seizes the bird suddenly, drags it under the water, and breaks its neck; and the act is performed so noiselessly and quickly that the bird has no time to give the alarm. On other occasions he utilises his knowledge of the birds' habits and the regular feeding-grounds—usually in the bed of some dried-up swamp—to which they return at the same time every evening. Just before their feeding-time the native conceals himself in the high grass, a fringe of which usually surrounds the swamps; and as the birds approach, flying low as they near their goal, he jumps out and usually secures several by means of his throwing-sticks. Sometimes rough stages are made among the tops of the highest paper-bark trees, which usually line the swamps, and there two or three natives lie in wait, while others stationed among the trees and on the opposite side of the swamp create a disturbance to frighten the birds and cause them to rise. Then, when the blacks on the stagings imitate the noise of flying geese, the frightened birds fly towards the tree-tops, where they are knocked

over and then secured as they reach the ground.

Another very ingenious method is often practised. A native will proceed to the feeding-grounds and there make a rough shelter of grass, in which he lies concealed. This shelter has a small opening on one side, around and within which pieces of water-lily-root, a favourite food of wild geese, are scattered. When the geese arrive, one sauntering along and feeding as it goes presently discovers the scraps, and follows them up until it finally puts its head inside the opening; then it is promptly seized and despatched by the native waiting for it. Several birds are usually secured in this way before the others become alarmed.

In hunting pelicans the natives take advantage of that bird's inability to fly immediately after feeding and with its pouch filled, as the whole or the greater part of the fish contained in the pouch must be disgorged before rising. When the pelican has finished feeding it will usually catch a further supply and store it in its pouch for future use; then it comes on shore near by and composes itself to sleep. Now is the watchful native's opportunity; he rushes out, and before the bird can shake out the extra fish he is on it, and both pelican and fish go to furnish him with a meal.

Wild hawks are often caught and eaten. They are very numerous in Northern Australia, and always fly towards smoke, the fire driving out lizards and other small reptiles and insects on which they feed. The native, if he wishes to dine off hawk, will make a small rough shelter of green boughs or grass for the purpose of concealment; he then lights a fire to windward, retires to his shelter, and makes a hole in the top, through which he elevates a lizard attached to a stick. When a hawk flies into the smoke and attempts to take the lizard it is either caught by hand or knocked over with a stick.

Occasionally in the dry season the natives indulge in a grand battue. When the grass, often nine or ten feet in height, becomes dry it leans over bent and broken by the winds, thus forming a dense shelter where innumerable lizards, snakes, quail, pigeons, and other small game congregate and breed. When dry enough to burn easily the natives in the vicinity send out to their fellow-tribesmen invitations to come in for a big feed, and then a large gathering takes place. A wide patch of this grass-covered plain is selected, perhaps two or three square miles in extent, and men are posted all round this area, with fire-sticks ready. The patch is first ignited in several places on the lee-side, where the flames, making only slow progress against the wind, drive the game into the heart of the patch, but do not alarm them much on account of the slowness of the progress. When, however, the flames have taken a thorough hold on the lee-

side and form a barrier to escape in that direction, the signal is given, and the natives at the sides and to windward run along the edge of the patch and light the grass as they go, thus forming a complete circle of smoke and flame, and enclosing their quarry in a death-trap. With the wind behind it, the fire swoops down at a tremendous speed, and in a few moments has passed over the whole area, every creature unable to fly being killed. The birds, stupefied by the smoke and driven out by the heat, make a dash for their lives, only to fall back into the flames or drop scorched and singed outside the conflagration, where they are killed by the waiting hunters. The natives follow up the track of the fire as soon as the ground is cool enough, and collect the half-charred remains in bags, usually in tremendous quantity. Then, after indulging in a feast lasting for several days, followed by a *corroboree* (native dance), they disperse to their respective camps.

Fish, which are plentiful in the rivers, swamps, and water-holes, are caught in various ways. In the water-holes and pools of stagnant water in the swamps they are stupefied or killed by means of various roots and barks which the natives grind between stones, adding water till the substance is of the consistency of paste, and this is thrown into the water. After a minute or two the gasping fish rise to the surface, and can be easily caught by the hand. There appear to be at least two kinds of root and three or four kinds of bark used for this purpose; one or two varieties kill the fish, but the effect of others is only temporary, and if undisturbed the fish will recover and swim away in a few minutes. One of the roots is like that of the aconite in shape and colour, but larger; the plant is a trefoil which runs along close to the ground, and is usually found in patches not far from the edge of a swamp. Another root thus used is procured from a kind of wild plum-tree which bears a small, green, acid fruit eaten by the natives. The barks are from various trees having usually very thick and rough bark; one kind is deep red in colour, and all appear to contain a large amount of tannin.

In running water the fish are either speared or caught with nets. The native practice is to lie on a bough overhanging a stream and spear the fish as they swim below; in shallow streams and swamps they wade in and spear as many as they can. If the water is clear they can see them and throw their spears direct; but if, as often happens, the water is muddy, they watch for ripples, and, knowing these are caused by the movements of the fishes' tails, aim their spear just in front of the ripple, very often with success. Rough hinged nets are made from the twisted fibres of the bark of the banyan-tree; and by splashing in shallow waters of small area the fish are gradually driven up to one corner,

where they can be easily enveloped with the nets. The natives discover where fish are to be found in a swamp by observing the favourite feeding-grounds of the pelicans, whose presence is a sure sign.

Turtles and tortoises of various kinds are plentiful, and are esteemed a great delicacy. Turtles are usually caught on sandy beaches when the females come on shore at high-tide to deposit their eggs. They are simply turned over on their backs as they are caught and left till the morning, when they are killed. Sometimes the natives hunt them, both in the daytime and on dark nights by torchlight, in canoes, and spear them when close enough. Tortoises are in the habit of burying themselves in the mud of drying swamps and lying dormant till the next wet season. They leave a small aperture for respiratory purposes, which is discovered by the natives or by their dogs. When the tortoise is dug up it is killed at once, as owing to the shape of its upper shield and the extra length of its limbs as compared with the turtle, it can right itself again if turned on its back.

Kangaroos and wallabies are usually speared on their way to water, to which they often have a regular track, near which the native lies in wait.

In the pursuit of larger game there is, in addition to the excitement of the chase, a spice of danger added, as wounded buffaloes and alligators are apt to attack the hunters, and the pursuer is in turn pursued. In hunting buffaloes, the dogs (which are always numerous in a camp of blacks) are set at one, the hunters hiding behind clumps of grass. As the buffalo rushes past, chased by the dogs or chasing them, the native will step out, seize the buffalo by the tail, and hamstring it with one or two swift strokes of a tomahawk or knife. The beast now sinks to the ground, when the other natives come up, and after blinding it with pointed sticks, they despatch it with spears and tomahawks.

Alligators are plentiful in the tidal rivers, where they subsist on fish, and can frequently be seen at low-tide basking and sleeping on the banks, a stretch of liquid mud lying between them and the stream. The natives use a special spear for this work, with an iron head, very often fashioned from an old shear-blade; and when they find an alligator asleep on the bank, will spear it, if possible, in the side behind the forearm, where the hide is thinnest. The alligator at once slips off the bank, sinks into the mud, and tries to make its way into the water; but the natives on the bank shower spears at it, being able to follow its course by the movements in the mud, and often manage to secure the reptile before it reaches the stream. Sometimes in shallow water the natives will spear an alligator from their canoes, and then it will often take to the land. A scene of wild excitement now ensues, as the natives surround the reptile a short way off, and

discharge spears at it. The alligator, which for a short distance can run almost as fast as a man, will perhaps charge one of his tormentors, who will fly for his life, and the others will follow, still throwing spears. The reptile, on feeling the spears, will turn and give chase to another man, who also takes to his heels; and the native first pursued turns and takes up the chase with the others. This goes on until the alligator is killed or gets back into the water and escapes.

Dugongs, which are to be found in shallow, sandy bays often near the mouths of the larger rivers, are killed with a special spear or harpoon, which consists of an iron head eight to ten inches long, fitted on but not fixed to a shaft of wood or bamboo from fourteen to sixteen feet in length, and a long line made from twisted banyan fibres is attached to the iron three or four inches from its junction with the shaft. When the dugong is found and harpooned, the length of the shaft gives extra impetus to the throw, and the head is completely embedded. The shaft usually becomes detached and floats away; and the line, being attached to the iron not quite half-down, on being drawn taut tends to fix the head crossways in the body of the animal, so that pulling on it does not cause it to be withdrawn. The natives, who hunt in couples in canoes, hang on to the line and thrust more spears into the body of their quarry until it is killed, and then it is towed ashore. However, if not struck in a vital spot, the dugong sometimes escapes, carrying away spears and lines, the natives having to let go everything to save themselves from being carried under water.

#### RONDEAU OF REGRET.

Oh, heart of mine! hast thou forgot  
The sands in moonlight stretching gray  
About the silver bend of bay?  
Laughter and love are forgotten not!

Passion and pain of after-lot:  
These may come; they are come this day,  
Oh, heart of mine!

But when with sadness overfraught,  
Will there not come to the soul, to stay,  
A dream of dunes in the moonlight's way,  
And the dear old love return unsought,  
Oh, heart of mine?

ISABEL KEITH CAMPBELL.

#### \* \* TO CONTRIBUTORS.

1st. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'

2nd. For its return in case of ineligibility, postage-stamps should accompany every manuscript.

3rd. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, should have the writer's Name and Address written upon them IN FULL.

4th. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

H U P E H.

By CARLTON DAWE.

IN TWO PARTS.—PART I.

**B**LOOD is blood and race is race,' said Hupeh; 'you cannot transform a nation in a year, nor in a hundred years. Your people have a wise saying concerning the leopard and his spots; and yet you foolishly hope to turn the yellow man white.'

'Not quite, though I might point to the change half a decade has made in you. Five years ago, acting on my advice, you went to Europe. I will not insult your august intelligence, my admirable Hupeh, by saying you came back civilised; but was there not a difference?'

'A greater difference than even you imagine, Forder,' he said, a grave look adding inconceivable solemnity to the utterance. 'It was wrong to send me to Europe; it would have been better for me, for Europe, had I stayed at home. Many things of which I was ignorant are now made clear, and I doubt if Europe is the gainer. For one thing, I know the limitations of the white man.'

'I doubt it, Hupeh. I doubt if he knows them himself.'

'He may be taught,' said the Chinaman, his strange dark eyes emitting a singularly fervent glow.

'And the yellow man is to teach him? Hupeh, the white man has still far to go, but not quite so far as that.'

'I have learnt much,' repeated Hupeh, with the stolid assurance of his race.

'In my country we say that knowledge is power. It is good to know.'

'Good for me, or for Europe?'

'For you, for Europe, for all concerned. It is this lack of knowledge which has made China the plaything of the Powers.'

'In a way, true; but those who play too long with China will cut themselves with the sharp edges.'

'I grant that a chip here or there matters nothing—I purposely refrained from commenting upon his singularly inappropriate joke—but continual chipping will reduce the most obstinate block of granite.'

'My dear friend, your people chip the edges only; the great heart of the thing is still untouched. You may dot our seas with warships, seize here and there a coast town; but the heart of the country, the stupendous stored-up energy of the millions—how will you chip or damage that?'

'But we do not wish to damage it. Put your house in order: that is all Europe asks.'

'Does Europe know what she is asking? Does she realise what this means: the putting of our house in order? Conceive, if you can, the enormous power of a race, thrifty, sober, industrious, four hundred millions strong. Is not Europe asking us to do a foolish thing?'

'A threat, Hupeh?'

'And why not? The high sport of civilised nations—with an unpleasant lingering on the word 'civilised'—seems to be the threatening of each other. You have your armies and your warships, your diplomatic notes and your open or covert threats. You are civilised—oh, most highly!—yet for a fancied slight you are ready to spring at each other's throat like a pack of wolves. It may be civilisation, Forder; but it is not too convincing. I am not so sure as I once was of the ineffable blessing of the Western method.'

'My dear Hupeh, I regret to see that your visit to Europe has not yielded the return I might reasonably have expected.'

'It has yielded the only return it could. There are many things to admire in your civilisation; but it is not the civilisation of the yellow man.'

'It has done much, Hupeh.'

'Then let it rest content. We are not of the West, and to adopt your manners or your clothes would be equally ridiculous. Moreover, we too have our pride, friend Forder, and are apt to resent your assumption of superiority. There is even such a thing as a national spirit, a dream of nationhood. You do not even smile, Forder. I am glad of that. So many of your ignorant compatriots would have jeered. But you understand us, you are a man of sensibility, and I am proud to call you friend.'

I believed him then, and later on I had cause to deepen that belief.

'You know my sentiments, Hupeh; you know that I am one who would not Westernise the Chinese, were it only as a matter of selfish policy. Naturally you resent the missionary, the diplomatic agent, and the gunboat. If a new Buddha or a new Mohammed were to descend upon England and tell us we were heathens doomed to perdition, and all that sort of thing—well, at first we should all laugh, then we should fling brickbats at him, and eventually we should lodge him in a lunatic asylum.'

'And were we to do likewise?'

'Of course the diplomatic agent would talk—and then the gunboat. Might is right, friend Hupeh.'

His black eyes gleamed ominously. 'That is the white man's gospel?'

'It is a gospel he does not publicly proclaim, but one for which he has a sneaking fondness.'

'And if that argument were used against him?'

'I am not so sure that he would appreciate it.'

'It may come sooner than he expects.'

I started at the tone. Hupeh's eyes flashed; his somewhat protruding lips moved nervously; he made an obvious effort to hide his agitation. Rumours of riots in the south and west had filtered to us from time to time. It was the old game of missionary-baiting, a game beloved of the Celestials; but so far the most exaggerated rumours had spoken of nothing but the uprising of a few local roughs. In China the authorities are always careful to saddle the local rough with official negligence: the one never objects, and the other saves his face.

'Europe would exact great reparation,' I suggested.

'And we should pay—in our own way.'

I felt that he was not frank with me, and the thoughts that lay behind those inscrutable slit eyes of his reflected an uncanny glare. Yet I must confess that my sympathies were more or less with him and his people; for an intelligent man such as Hupeh could not fail to grasp the trend of things, and, grasping, dread the outlook. Every nation believes it has an inalienable right to blunder in its own particular manner, and the Chinese were not yet a subject race; but already there were portents in the air,

and the banner of revolt was known to flap in secret places.

Hupeh knew that I was trying to pierce his thoughts, and he let his little black eyes, with their slow, sullen fire, play all over me, as though to say, 'Look well at me; make what you can of it.' That was just precisely where I failed. One had often heard these half-muttered threats, had encountered looks which were anything but conciliatory. However, neither threats nor looks break bones; and I could sympathise with the antipathy to the 'foreign devil,' and that longing which all true men must feel for the glory and the independence of their country. If Hupeh's country were only more worthy! But that was a thought I could not hope would meet with his entire approbation.

We were not a very large European community in Tsing-Fu, where I for my sins was stationed. There were, of course, the ubiquitous Protestant and Catholic missionaries, the differences between whom must have considerably puzzled the simple Celestials; for, though they all professed to worship the same God, they did not appear to be capable of living amicably together. Two or three merchants with their families completed the foreign community.

Being weak in numbers, we were consequently humble. The natives, having nothing to fear from us, treated us with good-natured contempt, and I do not think we ever ventured upon any undue ruffling of their complacency. It was here I met Hupeh; and as I recognised in him a man above the common, we became good friends. I gave him lessons in English, and he initiated me into the higher elements of his language. Even in those days he had dreams: crude, half-formed ideas beat themselves against the boundaries of his brain. Had I guessed the definite shape those fancies would assume I should not have preached assiduous cultivation of them.

When I thought him ripe to receive impressions I urged him to undertake a visit to Europe. He was a wealthy man, the son of a rich banker, and could consequently enjoy extreme facility in travelling. I was sure the experience would benefit him exceedingly, and in a way—for one can never foresee to what heights a man may rise—might prove of advantage to his country.

Just the opposite happened to what I had fondly anticipated. Hupeh went and saw, but he was not conquered. A closer acquaintance with the white man destroyed the reverence of years; the white woman, whom hitherto he had regarded as almost an angel, became—well, merely the mother of the white man. Ever after he was amazed at the presumption of the foreigner.

Upon his return I was not slow to notice this regrettable change in him, nor did I neglect the friend's prerogative in broaching it; but while he was willing to admit the scientific and

mechanical superiority of the white man, he would concede to him no superior morality. Altogether, I was sorry I had advised him to go to England.

Frankly, he disappointed me; and when he took to talking politics, wanting to know why the Chinese Government allowed itself to be dictated to by people on the other side of the world, I began to fear that Hupeh had been listening to irresponsible patriots. As a rule the ordinary yellow man, never having had a say in the government of his country, is quite content to leave high affairs in the hands of those who are supposed to understand them. Indeed, to question authority is something more serious than a blunder. But in every age and in every clime there have always been men of an infinite curiosity, and they not infrequently prove to officialism more deadly than all the plagues of Egypt. When the mass begins to reason it grows dangerous, and though at the time I little foresaw the real drift of things, I was not so devoid of perception as to be entirely free of anxiety.

Hupeh, I noticed, no longer devoted himself to business with that assiduity which commands success. Politics, and politics alone, seemed to claim all his waking hours; and I observed with no little trepidation that he had become extremely intimate with the people at the Yamen, the chief of which, one Cheng-Chu, was known to be a rabid anti-foreigner and adherent of the masterful Empress. This knowledge, coupled with increasing rumours of disturbances in the far south, filled me with an uneasiness I did not care to admit, for to those who dwell in the far interior the thought of a popular rising has many terrors. Held in check, the populace of the Middle Kingdom is no worse than that of any other

country, but imagination shudders at the thought of a break away.

Once Hupeh and I could talk of such a contingency with an admirable indifference to the gravity of the subject; but of late, and particularly since he had become intimate with Cheng-Chu, he avoided all such topics, or faintly expressed the hope that when the tornado came it would considerably spare Tsing-Fu.

'Do you think the Boxers are strong enough to march so far north?' I asked, referring to the secret society which had lately been making some stir in the south.

'They are here already,' he said; 'they are everywhere. Their society embraces men of all ranks. Never has such a national gathering been known in the Middle Kingdom.'

'And the real object?' I asked.

I could see by his look that he still mistrusted me.

'Who shall say? Much is possible.'

'From a mere revolutionary band?'

He marked the sneer, but it only made his mouth curl slowly into a deep, meaning smile.

'And if it were not a mere revolutionary band? What if it had the Manchu influence behind it?'

'It would be very serious.'

'It is serious.'

Nor could I doubt it. Rumours of the Boxer rising grew and grew; but as yet nothing definite reached us in our out-of-the-way city. I was not slow to notice the changing demeanour of the populace, the furtive, evil looks of the common people, the insolent stare of the better classes. A few months ago they made room for me in the roadway; now they seemed to resent any and every assumption of superiority, withholding the ordinary meed of equality.

## NEW LIMBS FOR OLD ONES.

IT might reasonably have been supposed that artificial limbs, like the bicycle and the telephone, were refinements of modern civilisation. As a matter of fact, however, they illustrate the truth of the wise man's saying, that 'there is nothing new under the sun.' The College of Surgeons owns among its curios the skeleton of a man with a wooden (or rather bronze-cum-wooden) leg. It was found in a tomb at Capua, the contents of which were known to date back to 300 B.C. Coming to a somewhat later date, Pliny tells us that Marcus Sergius, Consul of Rome in 167 B.C., lost his right hand in his second campaign, besides receiving over a score of other wounds. Under such circumstances, most men would have had enough of fighting. Not so the gallant Sergius. After

taking part in four more battles single-handed (in a literal sense), he had an artificial hand made for him, and, thus repaired, fought with undiminished valour and success throughout the Second Punic War.

Passing to more modern times, the 'iron hand' worn by Götz von Berlichingen, one of the robber knights of the sixteenth century, may still be seen by the curious at Jagstfeld. It was so contrived as to grip sword or lance with equal facility, which in those days was no doubt the first consideration, though its weight (over three pounds) must have made it a trifle unwieldy for more peaceful purposes.

These, however, are isolated instances, and from Götz's time artificial limbs seem to have been neglected for about three centuries. Nelson lived for eight years after he lost his arm at Santa

Cruz; but no attempt was made to replace it, and for the rest of his days he wore an empty coat-sleeve. About the beginning of the last century, however, Baillif, a mechanic of Berlin, succeeded in constructing a hand weighing only a pound or thereabouts (in itself a great advance), and capable of picking up any light object.

There matters rested till 1845, which may be regarded as the real starting-point of the limb-making industry. In that year a celebrated French tenor, M. Roger, had the misfortune to lose his right arm. At first it appeared as if his artistic career was at an end; but an ingenious Prussian mechanic, Herr Petersen, constructed for him an arm with which he was able not only to use appropriate gesture in his performances, but to draw and wield a sword, use a pen, and pick up a piece of paper. The French Academy of Sciences appointed a committee to report on the achievement, and since that date the art of artificial limb-making has made rapid strides.

The 'Beaufort' arm, invented by the Comte de Beaufort some few years later, consists of a wooden hand affixed to a leathern socket precisely fitting the stump. The fingers are slightly flexed, the tips of the first and second fingers being brought in opposition to that of the thumb, which is movable, but normally pressed against the fingers by the action of a rubber spring. From the back of the thumb a cord passes up the sleeve of the wearer to the shoulder, and across the back to the opposite shoulder, where it is tied round the upper part of the arm. By a slight movement of the shoulders, or even by a trifling advance of the arm, tension is put upon the cord, and the thumb is drawn apart from the fingers, the wearer being thereby enabled to pick up any small object. On relaxing the pull, the pressure of the spring causes the thumb to return to its first position, and so to hold the object with a fair amount of grip. This, in proportion to its cost, which is very moderate, is one of the most effective appliances of its kind. It was largely distributed by the French Government after the Franco-Prussian war to soldiers who had had the misfortune to lose their arms in the contest. In England the appliance served out to soldiers similarly maimed consists merely of a leather sheath fitting the stump (rigid or jointed, according to the nature of the mutilation) and bearing on its outer end a socket for the reception of a knife, fork, or hook, after the homely fashion immortalised by that staunch old mariner, Captain Cuttle. The advantage of the French soldier is, however, more apparent than real; for, save in the case of exceptionally complicated and costly artificial limbs, these homely appliances, affixed to the stump, are found to be the most effective. Indeed, many artificial hands are worn for appearance only, and are made detachable at the wrist, that they may be temporarily replaced by one or

other of these contrivances, as may suit the immediate needs of the wearer. Among other appliances for this purpose are a ring (to hold a broom-handle or other like implement), a hand-vice, a button-hook, a penholder, a clip for paper or music, and a special contrivance for holding the reins when driving. Indeed, one gentleman, Captain Derenzy, who lost an arm at the battle of Vittoria, gives in a pamphlet called *Enchiridion*, written in 1822, the following list of appliances which he had in everyday use: (1) wash-hand tray, (2) ivory vice with ball and socket, (3) shaving-box, (4) lead cushion, (5) syringe, (6) nail-file, (7) file-holder, (8) boot-hook, (9) silver egg-cup, (10) steel egg-holder, (11) penknife, (12) quill-holder, (13) pen-nibber, (14) ruler, (15) steel vice, (16) hat-stick, (17) knife and fork, (18) nut-crackers, (19) card-holder. Some of these, such as 'wash-hand tray' and 'lead cushion,' are distinctly mysterious. The mention of knife and fork attached to the one wrist is at first slightly puzzling; but probably the combination was what is called the 'Nelson knife,' after its most distinguished user. The handle is like that of an ordinary table-knife; but the end of the blade, instead of being rounded off in the ordinary way, turns up at a right angle in its own plane, and is divided into four fork-prongs. The edge of the knife divides the food, while the points pick it up and convey it to the mouth. This appliance is largely used by disabled soldiers, but usually with the natural hand.

Reverting to the mechanical arm, we must not omit to notice what is as yet the cleverest achievement in this direction. It is the invention of Mr Heather Bigg, a surgical mechanician of exceptional ability. It will be remembered that in the 'Beaufort' arm the necessary 'pull' to separate the finger and thumb was carried to the opposite shoulder. The late Mr Heather Bigg, father of the present holder of the name, improved upon this, where the case permitted, by making the attachment of the catgut to the mutilated arm, above the elbow. Even in this case, however, some amount of displacement of the arm was necessary to extend the thumb, and the pressure of the spring which forced it against the fingers was of course a constant quantity. Mr Heather Bigg set to work to overcome these two drawbacks, and succeeded in doing so. We cannot do better than quote his own description of his amended appliance: 'An india-rubber ball filled with water is suspended in the armpit of the wearer, and from this ball a fine india-rubber wire-bound tube passes along the arm to the artificial hand. When the armpit muscles compress the water-filled ball it is obvious that a hydraulic force is generated, and can be carried along the tube to any mechanism that may be devised to convert this force into definite action. The mechanism, which merely consists of a piston working in a water-chamber, is placed within the

palm of the artificial hand and connected with the thumb by a proper tendinous arrangement. The power thus obtained can be used either to open the thumb against a spring or to close it against a spring, and being worked by the muscles at the armpits, can be varied at will, so as to be either gentle or forcible.' The necessary amount of compression in the armpit can be exerted in nearly all positions of the arm. It should be mentioned, by the way, that where the amputation is above the elbow, a joint somewhat after the Dutch doll fashion is made in the elbow of the artificial arm, enabling the wearer, with the aid of the other hand, to flex it at pleasure. This alteration of position would naturally alter the tension of a direct pull and render it, for the time being, inoperative; but it has no effect whatever on the working of the hydraulic arrangement.

In the case of minor mutilations, such as the loss of one or more fingers, so long as the thumb remains, a hand can be built up to it which is little less serviceable than the natural member. The loss of the thumb is a more serious matter, but in most cases a false thumb can be adapted which will restore to the hand the greater part of its natural functions.

Passing to the lower limbs, the problem of providing substitutes for these is very much simpler than in the case of the arms, for as long as the hip-joint and its controlling muscles are preserved, the action of the remaining leg-muscles in walking on level ground is merely to steady and stiffen the limb. The hip-joint in this case generates all the force required, and the remaining functions of the leg can be very easily and satisfactorily performed by an artificial substitute.

The simplest form of artificial leg is the familiar 'peg,' the appliance with which Mr Silas Wegg stumps through the pages of *Our Mutual Friend*; but of this there are two or three kinds. If the amputation is above the knee, the stump is fitted into a hollow casing of leather or wood, and the leg is known as a 'bucket' leg. If the limb has been cut off below the knee, a 'box' leg is the proper thing. In this case the upper part of the leg is shaped like a tuning-fork, and the patient kneels on the bottom of the recess between the two arms of the fork, the pin representing the handle. The arms are of unequal length, the outer being the longer, and by means of these the leg is secured to the body. The 'socket' leg is a smaller edition of the 'bucket' leg, appropriate to similar mutilations, but receiving the stump vertically, without any bending of the knee. Should any Tommy Atkins be in a like painful position to that of Hood's maimed hero—

At duty's call I left my legs

In Badajoz's breaches—

his choice for replacing the missing members will lie among these three, as they are the regulation

substitutes provided by Government. The two first described are regarded as the most satisfactory. They have the advantage of being extremely durable, their only drawbacks being that the wearer is compelled to make a semicircular flourish with the artificial limb in walking, and that when he sits down it sticks out horizontally before him in a manner which is at all times inelegant, and under special circumstances, say at church or in an omnibus, is decidedly inconvenient. In the better class of peg-leg, however, the peg has a hinge-joint controlled by a spring catch. Thus provided, the wearer can crook his wooden knee at pleasure. A further refinement in the peg-leg is that the lower portion of the peg is made telescopic, and forced normally downwards by the action of a spiral spring, this arrangement tending to diminish the jar with which the leg, if made absolutely rigid, would at each step reach the ground.

These, however, are at best but makeshifts, and scarcely to be dignified by the title of limbs. A well-made artificial leg is a very complete affair. The knee-joint is practically a hinge, with a 'stop' to make it rigid when the right point is reached, and to prevent its doubling over in the wrong direction. At the ankle more play is necessary, that the foot may accommodate itself to uneven ground, and the joint at this point is therefore of the ball-and-socket kind, with due provision against its yielding too freely. The action of a spring lifts the toe slightly as the foot leaves the ground, thus simulating the natural movement in walking. The *tendo Achillis*, the sinew which in nature prevents the body from pivoting forward on the ankle-joints, is replaced by a ligament of catgut, capable of supporting a strain of at least four hundred and fifty pounds.

A form of artificial leg still popular is known as the 'Anglesey,' being, with slight modifications, identical with that made for the Marquis of Anglesey to replace the limb left by him on the field of Waterloo.

Some little practice is required to use an artificial leg properly; indeed, the wearer has in a sense to learn over again to walk. Some learn very quickly, some slowly and imperfectly. When, however, the art is fully mastered, the wearer of a well-made and well-fitting leg walks very nearly as well as his uninjured brother.

An illustration of the extraordinary extent to which art may on occasion supplement nature is afforded by the case of Elizabeth Robertson, a young married woman, who in May 1869 was admitted to the Dundee Infirmary, and was found to be suffering from gangrene of both hands and feet, as a result, apparently, of malnutrition. The mortified parts were removed by successive amputations, the legs a little below the knee, the arms below the elbow. She made a satisfactory recovery, and Mr Heather Bigg was commissioned to provide her with artificial limbs.

This he did with such success that after a little practice the patient was not only able to walk fairly well, but to feed herself, to wipe her lips and brow with a handkerchief, to pick up a pin, to write legibly, and, last but not least, to do crochet-work, by the sale of which she supported herself for the remaining fifteen years of her life. Her late Majesty, who took great interest in the case, was one of her regular patrons. The limbs which did her such good service are still preserved in the College of Surgeons Museum.

Artificial teeth are everyday wear. Artificial eyes, noses, and palates are less common, but can all be supplied to order. Indeed, it would almost seem that so long as some fragment, however small, of the original frame remains, the good fairy Science will find a way to supply its deficiencies.

Our article would scarcely be complete without some note of the cost of the various appliances we have described; but this can only be given in a very indefinite way. A patient might stump about on a 'bucket' or 'box' leg of the plainest and simplest construction at an outlay of about a guinea, or, having lost his arm below the elbow, might flourish a hook, &c., for about the same amount. From this point prices tend steadily upwards, varying according to the nature of the mutilation and the amount of finish put into the artificial limb. Roughly speaking, a serviceable arm or leg will cost from ten to thirty pounds, and even fifty pounds is not an unknown figure. Max Adeler, in *Elbow-Room*, tells a story of an artificial leg which was priced, second-hand, at four hundred dollars, and ultimately offered for two pounds of biscuits and a nip of Jamaica rum. But such outside prices are exceptional.

## THE LAW LORD AND LESLEY.

### CHAPTER III.

ACCORDING to her usual custom, Lesley wrote a long and detailed account of the Law lord's invasion of the manse to her cousin in Edinburgh, not forgetting to make particular mention of their passage of arms over the disputed song, and her temerity in refusing to comply with his request. John's answer to her effusion somewhat perplexed her; it was so much shorter than his usual letters, and contained no allusion whatever to her principal item of news—a fact which in itself, had she possessed sufficient worldly wisdom, should have given her a clue to the mystery; but in her innocence she put it down to something quite different: John was in trouble; he had been working too hard perhaps, or else he was ill—certainly unhappy. Accordingly she sat down and scribbled off a tender, half-bantering appeal to the suffering one, winding up with the awful threat that if he did not at once and by return of post reveal the true cause of his discomfiture, she would never as long as she lived write to him again.

His reply was immediate—full of contrition and apologies, with more than a dozen mendacious excuses in claim for her forgiveness. In a post-script he added: 'I saw Lord Coalstoun driving in Princes Street to-day. He had a very grandly dressed lady in the carriage with him. They say he is to be married soon to Lady Marjorie Bruce.'

This time it was Lesley's turn to be silent, and for a whole week John had to possess his soul in patience before his tormentor saw fit to reopen communications. The letter when it did come was a mere apology; a few exuberant lines

about nothing at all, serving rather to mock at than alleviate the heartache which had been his constant companion since his return to work. It was written on the morning of the concert-day, and just after Elspeth had popped her head round the parlour door—where Lesley was busily engaged putting finishing touches to the simple gray frock in which she was to appear that night—with the startling intelligence that the Law lord had returned to Barhulican the previous evening, bringing with him a 'whene o' grand fowk frae the toon.'

Nevertheless her exultation was tempered by a considerable degree of nervousness as the time approached, and a mist seemed to gather over her eyes when at the appointed hour, led by her uncle and followed by a troupe of sheepish local performers, she took her place on the narrow platform.

The minister's long introductory address gave her an opportunity for overcoming the fears that had beset her; and when at last his hands groping their way back to his coat-tails warned her that he was about to sit down, she had so far recovered her equilibrium as to be able to face, with at all events a show of confidence, the hot and steamy multitude encroaching so nearly on the prescribed limits of the platform.

The precentor, who filled the post of accompanist for the evening, took his seat at the piano. He was a modest-looking young man with a ragged moustache and streaks of hair over his collar; a flamboyant blue tie relieved the monotony of his Sunday blacks for the occasion, while an achievement in scarf-pins added a touch of almost dissolute extravagance to his attire. As his fingers struck the preliminary arpeggio flourish, Lesley

stood up and with a fine return of courage compelled her eyes to the front row. Alas for all her former fears! it was empty. Six vacant cane-bottomed chairs met her downward glance. At the back of the hall people were standing in phalanxes; but out of respect for Lord Coalstoun's donation, the front row had been jealously guarded and reserved by the church officer, who was acting master of the ceremonies.

A passion of disappointment and humiliation took possession of her soul. What a fool she had been to imagine that Lord Coalstoun would keep his word! Probably he had forgotten all about the concert by this time; and even if he had remembered, was it likely that he would undertake a long five-mile drive after dinner for such an entertainment as this?

With an imperious sign to the precentor, she began to sing. The desperation of her feelings lent a certain dash and bravado to her performance which stirred the phlegmatic pulse of the audience. Even the minister was roused out of his ordinary, and glanced in some perplexity at his niece's profile. She seemed suddenly to have appeared in a new light. He had always considered her a bonny lassie like her mother at the same age; but this evening there was a fire and brilliance about her which her mother had never possessed. The sash of Gordon tartan wound about her lissome waist brought a remembrance of her handsome ne'er-do-weel father to his recollection. He had always chosen obstinately to regard Lesley as the sole product of his gentle sister; but to-night the father too had leapt to life within her, and the wild Lochinvar strain was speaking in every word and gesture. How he wished John were here! John would understand this new mood of the girl's. Ah, well! he would write to John to-morrow.

She had entered upon the last verse of the song, her fresh young voice ringing through the hall as she stood in an almost defiant attitude—head thrown back and red lips parted—when there was a stir at the farther end of the room. The knot of people gathered round the entrance-door divided, and a little procession of strangers in evening-dress advanced up the narrow gangway.

Lesley's heart gave a triumphant leap as she recognised the tall form and massive shoulders of the Law lord towering above the crowd as he pushed resolutely towards her. His eyes were on her face, and she responded to his gaze triumphantly conscious once again of that strange magnetic impulse to be at her best which she had formerly experienced in his presence.

As he reached the front at last, he turned to marshal the two ladies who had been following in his wake into their seats.

Lesley was aware of a soft profusion of furs and laces, the gleam of diamonds in dark hair, and a general impression of luxurious refine-

ment which seems to characterise the woman of the world at all times. Of a sudden her feeling of triumph deserted her, and her voice, which up to this had never faltered, fell limply on the last note of the song.

Amidst the loud plaudits of the assemblage, whose enthusiasm had gained fresh impetus from the advent of the gentry, she turned to reseate herself beside her uncle; but before she had time to do so, Lord Coalstoun, after exchanging a laughing aside with the younger of the two ladies, left his place quickly and came forward to the edge of the platform.

'I am afraid our entry interrupted your song, Miss Gordon,' he said in a voice which was distinctly audible in every part of the hall. 'My sister and Lady Marjorie Bruce would esteem it a great favour if you would sing as an encore "Bonnie Leslie."'

It was his turn to be triumphant, and the smile with which he accompanied his request dared her to refuse.

It would have been impossible for her to remain obdurate in the face of the loud and persistent applause with which the audience had greeted his request; so, with the best grace she could muster, she prepared to yield submission. As she sang, the palpitating emotion of her feelings was mirrored forth in her dewy eyes, and the wild-rose colour came and went in her face like the sunshine on an April day. Even Lady Marjorie was moved to unwonted enthusiasm, and, leaning forward, whispered in her companion's ear, 'How beautiful she is!' But his lordship only acknowledged her eulogy with a grave smile—his eyes were all for the singer.

Although Lesley had promised to write her cousin a full and particular account of the concert at the earliest possible moment, the next day came and went, and the next again, and she did not put pen to paper. John, waiting impatiently in his Edinburgh lodging for news, pushed aside his books and took to walking the streets in class-hours, always expectant on his return of finding the well-known girlish handwriting awaiting him.

At last on the fourth day a letter with the Tainish postmark rewarded his patience. But, alas! it was only from the minister, and his eyes roamed restlessly onward over the closely written sheets of commonplace about the parish until they halted at the last paragraph.

'You will have heard about the concert from Lesley,' wrote the old man. 'I've been wondering about the lassie since that night. She seems to have grown into a woman suddenly, and there's more of her father in her than I like to see. I suppose I have been perverse and foolish to make no account of heredity all these years; it is a strong and mysterious ordinance of the Almighty's, and we must respect its

workings like all the other laws of His divine providence.'

John read to the end, and then sat for a long while in silence.

At last he rose up. His hands were clenched at his sides, and his eyes had a fierce, frustrated look in them as he glanced round the meagre room, with its battered sofa, the threadbare strip

of carpet by the table, the broken clock, and the picture of the death of Nelson over the mantelpiece.

'It's my own happiness I have been thinking of all these years,' he exclaimed bitterly, 'not hers. But I can't give it up without a struggle. I'll have a fight for it, even if God Himself should be pulling against me.'

## THE PASSES OF THE PYRENEES.

**T**EN years ago, to have crossed the Alps on a bicycle would have been reckoned by most either a sheer impossibility or a dangerous and foolhardy feat; but even before the introduction of the free-wheel and rim-brake it was demonstrated—and that by a lady, Mrs E. E. Pennell—that the crossing of an Alpine pass awheel could be accomplished by the cyclist of average strength and endurance. At any rate, the glories of the Splügen and St Gothard, even the loftier Furka and Stelvio, are each season becoming more familiarised to the hardy rider of both sexes. A cycling tour in Switzerland is no longer the pastime of a few enthusiasts, but of yearly increasing thousands; not only British and American tourists, but French, German, and Italian devotees of the wheel finding thus a fresh delight in the playground of Europe.

Though many parts of France are keenly appreciated as a touring-ground for cyclists, no such popularity has as yet been accorded the Pyrenees. That stupendous mountain barrier, second only to the Alps in geographical importance, in grandeur of scenery, and in actual elevation among the ranges of Europe, possesses charms which even they cannot boast of: vast forests of oak and beech beneath the hardier pine, pastures fragrant with the commingled scent of box and sweet-brier, and the most wonderful natural amphitheatres in the world. Its countless valleys, so far as the French side is concerned, are traversed by splendid roads, kept up with the diligent care characteristic of the average highway in France. Native tourists, who seem to prefer any method of conveyance to the cycle—railway, diligence, mule, or electric tramway—frequent the leading health-resorts in large numbers. Such places as Pau, Canterets, and Bagnères de Luchon have their full share of British and American visitors; but the more remote valleys of the Pyrenees are seldom explored by the foreign wheelman.

From the cyclist's point of view the most striking thing about these mountains is the marked contrast between the Spanish side and the French. The same road of variable but generally good surface that has carried him across Switzerland brings him down into the fertile

plains of Lombardy; but means of communication between France and Spain, save by unrideable mule-tracks, better known to the smuggler than to the ordinary tourist, are extraordinarily few. The French Pyrenean village is connected with its neighbour and the nearest town by an excellent carriage road; and, as in Switzerland, the wayfarer will find decent accommodation at the remotest hamlet. But on the Spanish side the village disappears, the inhabitants almost invariably dwelling in lonely, dirty towns, a maze of narrow, tortuous, evil-smelling lanes, each a tiny world of bigotry, poverty, and exclusiveness. The *carretera*, or highway, when it does exist, passes at rare intervals a roadside inn, no longer the neat *auberge* of France, with its palatable cuisine and spotless bed-linen, but a tumble-down caravansary, its ground floor a poultry-yard and stable, its upper rooms often scarcely cleaner. Throughout the whole of Spain, in fact, one rarely finds a hotel, properly so called, outside the larger towns, the country inns of nearly every province presenting an indescribable scene of filth and wretchedness.

Nor is the contrast as to their natural features between the French and Spanish sides of the Pyrenees less remarkable. When the first Napoleon stated that 'Africa commenced at the Pyrenees' he gave utterance to no mere figure of speech, but a geographical fact, since at least one-half of the Iberian Peninsula is occupied by desert land. Entering the Spanish provinces of Navarre or Aragon, one soon misses the bright green meadows, the vast forests, the leaping torrents, and the fertile fields of the French side. Instead, the eye encounters illimitable arid wastes, a boundless panorama—so wonderfully clear is the atmosphere at ordinary seasons—of barren peaks and naked rocks; whilst everywhere is the scantiest of verdure and the sparsest cultivation. The many abundant streams give place, for the most part, to insignificant tricklings; and the farther one rides from the frontier the more numerous are deep beds of rivers, which, for all their brave show upon the map, have little or no water in them, save where a group of *lavanderas*, on their knees industriously scrubbing, reveals the existence of a dirty, drab-coloured puddle.

Such is the wheelman's first glimpse of

Spain as he crosses the frontier by the Port d'Urdos, the highest of the very few carriage roads connecting the two countries. In the French language the less expressive word *col* is generally used to denote a mountain pass; but its Spanish equivalent *puerto* (French, *port*) is here adopted. The Port d'Urdos resembles the Splügen in that as soon as the summit is reached, from either direction, the descent immediately and abruptly commences; the highest point, in which it may also be compared to that famous Alpine route, marking the frontier between two countries. In point of elevation (five thousand three hundred and eighty feet) the Port d'Urdos is somewhat lower than the principal Alpine passes; but in grandeur of scenery, though the view from the actual summit is limited, it is surpassed by few. Its great charm, as has been already indicated, lies in the contrast presented by the French and Spanish sides; whilst from a cyclist's standpoint it is by no means so difficult of access as many of the Swiss passes, even when the greater height of the latter is taken into consideration. Starting early from Pau, a fair rider can easily reach the summit of the pass before a summer's sunset, traversing good roads by way of the quaint little cathedral city of Oloron and the romantic Vallée d'Aspe, a beautiful wooded dale but little known to foreign tourists, if local innkeepers are to be credited. But between the little *auberge* at Urdos, the last French village, and the Murray-condemned *posada* at Canfranc, the first Spanish town, a weary nineteen miles, I met with no house of refreshment; a few ruined hovels in both countries near the frontier line alone suggesting more prosperous times for the road when it was better frequented. On the Spanish side the road is surprisingly good, so much so that with a continuous descent of thirteen miles, magnificently engineered, the wheelman reaches Canfranc almost before he knows it.

This route has long been selected for the construction of a railway which would shorten the distance between Paris and Madrid by some sixty miles, crossing the frontier by means of a tunnel at the height of three thousand nine hundred feet, an elevation which rather exceeds that of the great St Gothard and is considerably higher than that of the Simplon tunnel. Within the last decade one section of the line has been completed, that from Huesca to Jaca, two interesting old Aragonese cathedral cities. The distance between these two places, fifty miles by a good road, is nearly seventy by railway, the engineering of which is very striking in places.

Pre-eminent among the passes of the Pyrenees, however, is the magnificent Col du Tourmalet, connecting the Vallée de Campan with the Gave de Pau. This wonderful mountain road vies with the grandest Alpine route in the beauty of its scenery; and in height (six thousand nine hundred

and sixty feet) rather exceeds such passes as the Splügen, the St Gothard, the San Bernardino, and the Simplon, though so far as its engineering is concerned it cannot be compared with the first-mentioned, which is perhaps quite the most remarkable of any carriage road in existence; the long rock tunnels and avalanche galleries characteristic of many of the Swiss passes being avoided in the Pyrenees. The Col du Tourmalet, however, is probably quite as dangerous a pass as any to be found in the Alps, the descent to Barèges abounding in the sharpest of curves and the most abrupt of corners, and the road often traverses a narrow ledge above a precipice unprotected by any parapet. From a cyclist's point of view it is certainly not more fatiguing, perhaps less so, than the great Alpine passes of similar elevation; but it differs from most, if not all, of them in that both sides present about equal difficulties, there being a right and wrong way of crossing the generality of mountain passes. The descent to the Campan valley, however, is the best as regards surface, that to Barèges being loose and bad, and furrowed with a hundred little ravines torn out of the road by streamlets. It is a lonely highway throughout, served by no diligence, and frequented only in summer by a few tourists, who, if not content with 'shank's-mare' or a pony, must pay some fifty francs for a so-called carriage over the pass. I chose a perfect day in mid-September for crossing the Col du Tourmalet; and, despite the fact that it was a steady walk of some four hours from the little hamlet of Ste Marie, in the Campan valley, to the summit, scarcely a hundred yards being rideable for the steepness, I could never have wished for a more enjoyable experience. A thousand little streamlets trickled down the vale; the noise of falling water came murmuring through the beech-woods; the fragrant scent of a box-covered slope came wafted on the breeze; and above all the mighty shoulder of the Pic du Midi, the Pilatus of the Pyrenees, but a loftier mountain, towered towards heaven.

From Barèges, whose healing waters are said to be the most powerful natural springs in existence, the road, exceedingly steep in places, but of good surface, descends to the beautiful Gave de Pau. The cyclist can choose no better excursion than the ascent of this wild, romantic ravine to the frontier village of Gavarnie, whose wonderful Cirque, the grandest of the magnificent natural amphitheatres of the Pyrenees, is a sight unparalleled in all Switzerland. But, arrived at Gavarnie, he must retrace his wheelmarks; for thence there are only mule-tracks into Spain, and even the path from the village to the famous Cirque, a good hour's walk, is impassable for cycles. The Gavarnie road, however, is a splendidly constructed highway, with such skilfully engineered gradients that most of its length, a continuous ascent of some five-and-twenty miles from Argeles, can be accomplished by the average

cyclist with but one or two dismounts ; whilst in the reverse direction a better opportunity could hardly be obtained for appreciating the advantages of a free-wheel.

Among the passes of the Western Pyrenees the best-known is the Puerto de Roncesvalles, three thousand four hundred and seventy feet high, mostly on Spanish soil ; nestling beneath it is the little town of the same name, famed for paladin and poet. By this route the cyclist may ride from Bayonne to Pamplona by variable roads, approaching the latter town, the ancient capital of Navarre, accursed to all time for its holocaust of ten thousand Jews, through a wild and thinly peopled country. Arrived at Pamplona, the wheelman can hardly do better than make a two days' journey, *via* Tolosa, with its imposing Roman aqueduct, to that loveliest of European watering-places, San Sebastian, by roads which, if not perfect, are a good deal better than the average Spanish highway. It is a ride of great interest ; the road, ascending from the bare and thirsty acres of Navarre, descends into fair and fertile Guipuzcoa, one of the three ancient Basque provinces, whose scenery has no equal on Spanish soil. Their mountains, an indefinite extension of the Pyrenees, have for ages sheltered the oldest race in Europe. 'A blending of all beauties : ' their bare moorlands and craggy heights, dense woods of beech and fir, narrow cart-tracks deep in bracken and shaded by venerable oaks, leading to orchard-embowered villages, successively recall the Scottish Highlands, the Black Forest, and the winding lanes of Devonshire.

In the Eastern Pyrenees the scenery is less striking than that of the central or western regions, and the contrast between the French and the Spanish sides is not so marked, Catalonia presenting a more European aspect than the desert wastes of Aragon and Navarre ; but means of communication between the two countries are assuredly no better. The Col de la Perche, which attains practically the same elevation as the Port d'Urdos, is the principal pass in the Eastern Pyrenees. It is perhaps less sternly grand than the latter, though more beautiful ; but the road on leaving Puigcerda, the first Spanish city, degenerates into the almost inevitable mule-track before reaching any other town, a by no means infrequent characteristic of Spanish highways in other parts of the peninsula. The Col de la Perche lies on French soil ; but part of its southern approach runs through a curious little isolated tract of Spanish territory, ignored by most maps, oval in shape, and about four or five square miles in area. From Puigcerda, on foot or muleback to the tiny cathedral city of La Seo de Urgel, the

tourist may reach, circuitously, the miniature republic of Andorra, a little state whose lack of means of communication with the outside world makes it perhaps hardly worth the trouble of getting there ; the Ardorrans, for reasons best known to themselves, neither possessing nor desiring a rideable road into either France or Spain.

Lastly, mention must be made of the little Col du Perthus, a mere baby among passes, only attaining an elevation of nine hundred and fifty feet, but of interest as the route by which Hannibal is said to have crossed the Pyrenees. It lies nearest to the Mediterranean, and commands a prospect as lovely, if less grand, than its loftier brethren.

Though the French side of the Pyrenees is emphatically an admirable touring-ground for cyclists, it will readily be seen that the Spanish side of these mountains, from the scarcity of rideable roads, compels all but the most enthusiastic wheelman to leave his mount behind him on entering Spain, cheap horse-hire being available where the cycle cannot go. The cyclist, however, who makes up his mind to be satisfied with the variable surface of such highways as do exist in the Spanish Pyrenees may not have much to complain of. He should most carefully study his route beforehand, comfortable night-quarters being often inconveniently wide apart ; and it is generally better to take one's midday meal in one's pockets and eat it on the road than trust to the precarious accommodation at the dirty *posada* of the wretched hamlet where one chances to arrive at noon. The tourist need not have the slightest fear of either robber band or solitary thief, nor molestation of any sort save perhaps from the fierce sheep-dogs of the Pyrenees. I was once pursued by a couple of these huge animals, nearly as big as ponies, one on each hand, for the greater part of a mile, till a few judiciously projected missiles from a convenient stone heap made them desist from the chase. As a rule the cyclist will encounter but few wayfarers ; and these will form no exception to the rule in a land where every peasant is a gentleman. Perhaps, on meeting a group of brown-faced *lavanderas*—how much prettier a word than *washerwomen* !—he will be tempted to stop a while and air his Castilian. These damsels, always buxom without being invariably beautiful, will wash a pocket-handkerchief for the wandering stranger, and possibly decline payment with a saucy word ; but this must not be taken too literally. On the whole, the cyclist who ventures on a dash into Spain awheel will gain some decidedly novel experiences ; nor, to one who is not afraid of roughing it just a little, should they be otherwise than enjoyable.

## A CHAT ABOUT PIKE-FISHING.

By 'SANSTERRE.'

IN many respects the pike (*Esox lucius*) thoroughly deserves his title, 'the fresh-water shark.' He is indeed a voracious brute; and, when inclined to feed, hardly anything that moves seems to come amiss to him. I remember once, just as I was preparing to fish a not unpromising roach-swim, and was trying the depth preparatory to adjusting my float, a small pike seized the leaden plummet firmly in his teeth, and allowed me to bring him to the top of the water before losing his hold. I hardly need add that I decided to move on a bit farther before I commenced, as I well knew that such an unwelcome guest in the hole I was intending to fish would most certainly have driven away the roach.

In spite of his voracity, the pike is also one of the most capricious fish in the matter of feeding. I have many times fished in water known to be more than fairly well stocked, the weather has been ideal from a pike-fisher's point of view, my tackle has been fine, my baits in every way good, my skill passable, my perseverance undeniable; but yet not a fish could I move.

On one occasion I was spinning with a dead dace. There was a favourite reach in the river which had an excellent reputation for holding good fish. Indeed, it was such a tempting spot to the pike that no sooner had it been practically depleted by a successful angler than other fish from more remote parts of the water would come to occupy the places of those that had been caught. Carefully did I work my bait over the whole of this reach. I spun across the stream, against the stream, with the stream; I spun near the surface, in midwater, and near the bottom; but not a touch could I get.

Presently a veritable tyro (although an elderly man) came on the scene. He was, I think, pike-fishing for the first time in his life. He joined me, and told me his woes. Some fine dace had been caught for him by one of the villagers the day before. The tin in which he put them had been sunk bodily in the rainwater-butt, and in the night all the dace died. Not to be done out of his fishing, he had brought the dead fish down to the river; and when he showed me his tackle and the arrangement of it I could hardly repress a smile. He had first a big dace—quite dead; this was somehow hung on a toy-shop spinning-flight, but not so that it would spin. On the line was a small leaden plummet as weight, and above the bait at a distance of about three feet was a large and gorgeously painted pike-float. This fearful and wonderful machine was

flopped in and out of the water every half-minute or so. When he came to the reach through which I had been carefully spinning, I was curious to see if he would move a fish where I had failed. Not that I expected that his in-artistic lure would prove more tempting than my spun dace had been.

As I was lazily watching him—my own hopes of catching a fish that day having been dispelled, for I had been at work for several hours—I suddenly noticed a commotion in the middle of the river just opposite to him. At the same time an excited shout reached my ears: 'Bring your gaff!'

Putting down my own rod with scant ceremony on the bank, I unslung my gaff from my shoulder and made tracks for the scene of the sudden disturbance. Just as I reached the spot the game of 'pulley-hauley' was ended by the float and the bait coming away from the attacking fish. More in jest than in sober earnest, I said, 'Try him again.' Flop went the bait, and with a rush the pike came for it again. Once more 'pulley-hauley,' and once more the pike was disappointed of his lunch. Another flop. Hardly had the float righted itself when with a frantic splutter away went the pike again. 'Wait a bit before you strike,' I said to the excited fisherman. With difficulty he restrained himself; but he did as I suggested; and after half-a-minute or so I told him to strike for all he was worth. He was using only a stoutish fly-rod with a short top, and so his strike was not worth much compared with what it would have been if he had been using a pike-rod. Still, he struck, and by my advice held on. Once more a commotion; and soon he worked his prey to the top of the water for a moment. Then I saw that the fish was a good one, and he seemed to have several of the hooks fast in his mouth. He was not a very game specimen, and after three or four half-hearted rushes he turned on his side and allowed me to use my gaff, much to the joy of the angler. On testing his weight I found that he was just under ten pounds.

In the same river, not very far from the identical spot, but in another reach, I had an exciting ten minutes one day. I say ten minutes; but it seemed to me nearer fifty! I was fishing with a live snap, a medium-sized and active dace being my bait. I had a twisted-gut trace and fine gimp on my hook. My snap-tackle—made by myself—consisted of a medium-sized sneck-bend triangle, with a lip-hook bound on the gimp just above the shank of the triangle. This lip-hook was inserted through the skin on the dace's back so that the triangle hung loosely by the

side of the fish as he swam, with the points of the triangle just clear of the bait's belly. My float was in the middle of the stream, and was for the moment floating down with the current. Suddenly it disappeared. After waiting a few moments to give the pike time to get the bait well into his mouth, I struck, and struck hard. Then I knew that I had hold of a good one. Taking care not to allow the line to get slack, I reeled up. Slowly the fish came to the top, and I saw that my surmises as to his being a good one were not mistaken. To my horror, I distinctly saw the triangle hanging loose outside his jaws, while the only hold I had was by the lip-hook at the corner of the pike's mouth. I dared not put any pressure on, for I knew my hold must be very slender. Consequently it was merely a case of reel in and then let go. Five or six times this happened, and I began to fear the pike might take to boring on the bottom, as they often do when only lightly hooked, or run into some weeds, when I felt sure the triangle hanging from the mouth would catch in some obstruction, and, by giving the pike something to pull on, would enable him to break away from the slender hold I had.

At last I was able to use my gaff; but the ferrule into which the gaff was screwed came off with the pressure, the head of the gaff fell to the bottom of the river somewhere, and the pike once more scooted gaily off. What was I to do? I had no second gaff, and I knew the fish was only slightly hooked.

I promptly made up my mind as to the only course to be adopted under the circumstances; but I must say I had faint hopes as to the success of my plan. Reeling in again, I got *Esax* to the top of the water, where I distinctly saw that my hook had hold of only a strip at the side of the beast's mouth, and that this strip of skin was stretching in very ominous fashion. The only thing I could do was to tow him gingerly and gently along the surface of the water until I reached a spot where the bank of the river would allow me to grasp him with my hand. Fifty or sixty yards I had to take him like this, and I did it very gently and tenderly, keeping as far from the water's edge as possible, the pike meanwhile floating like a log.

At last I reached a convenient place. Holding my rod with my left hand only, I stooped down and inserted my right forefinger and thumb each into an eye, and gave a huge lift. I suppose the sudden darkness had an effect on the pike. He did not make a struggle. I noticed that the triangle was hanging against my bare wrist as I lifted the fish; and if he had kicked ever so little it might have been bad for me. Anyhow I determined that when once my finger and thumb had closed in the convenient hollows made by the eye-sockets, I would hang on at all costs. Carrying my spoil a yard or two from the river's

edge, I put him down on the grass. As I did so the strip of skin by which the lip-hook was holding broke, and the connection between line and pike was severed. Knocking him on the head with a little loaded boxwood bludgeon that I always carry in my pocket when pike-fishing, I proceeded to weigh him, and found that he pulled down thirteen pounds.

On picking up my tackle I found that the lip-hook was pulled out half-straight; and therefore, considering the slight hold I had, the loss of the gaff, and the size of the fish, I held myself very fortunate in landing him safely.

Although a pike-fisherman of over thirty years' experience, I have never been able to make any satisfactory rule about the fish feeding or not. I have caught pike in almost all kinds of weather, and certainly with the wind from every possible direction. I have caught them when the rings on the rod froze up so that the line would hardly run through. I have caught them in rain, fog, and drizzle, but not in snow. I have caught them with a north-easterly wind blowing hard. The ideal day for winter pike-fishing is when the wind blows somewhat strongly from any quarter between south and west, with sunny intervals and a warm feeling in the air. I have fished patiently and persistently on such a day as this in a river well stocked with fish and have not had even one run.

Personally, I like the water to be more than fairly clear, not too much stream, and the bait—when using a live snap—not too far from the bottom, say half-way between midwater and the bed of the river. Thus, in a stream six feet deep I should like four and a half feet between the float and the bait, provided the bottom was fairly free from weeds. It is not a bad plan when not meeting with success at one particular depth to vary the distance the bait swims from the bottom. I am speaking now, of course, of fishing with the live snap, which in my opinion is the most killing method in most waters. When spinning it is easier to vary the depth at which the bait is presented to the fish.

When fishing for pike with either live or dead bait, it will be better to try a small part of water thoroughly than to scamper headlong over a large portion, often leaving the best and most likely places half-tried. Some people, I know, cast their bait into the middle of the stream and let it float quietly down with the current, either holding the rod in their hands and walking along the bank opposite the float, or putting it down and moving it little by little as the bait travels down the river. By far the better plan is to take one's stand on the bank—not too close to the edge, and moving gently, for the vibration caused by heavy stamping frightens the fish almost as much as the sight of the angler wielding his rod—and then by a careful manipulation of rod and line to work the bait all over

the water in front, on the right hand, and on the left. Pay particular attention to the slight eddies and backwaters that are constantly being formed in the winter-time in most rivers, for there Master *Esox* may be lurking greedily on the watch for anything edible that may happen to pass by. Make the bait sail naturally past clumps of reeds and rushes, particularly after a frost which, though sufficiently strong to fringe the edge of the river with ice, is yet not severe enough to cover the water. If by chance your dace shows signs of being reluctant to pass any particular spot, and makes frantic efforts to escape either to the shore or to the middle of the stream, pay careful attention to that spot; for most likely a pike is there, and, although he may not take your bait the first time it goes past him, you may perchance, by presenting it to him in a slightly different form, worry him into taking it almost against his will. If the fish are not feeding in deep water, try the shallows. Good pike are often met with in comparatively shallow water, particularly as the season draws to a close.

Many a blank day would be avoided if the angler made up his mind not to cease trying—and trying his hardest, using every resource suggested by his experience—when the fish seem entirely off the feed. However, in spite of all ingenuity and perseverance, there *will* be blank days, even when the elements appear to be perfectly propitious. In winter-time pike do not appear to roam about much in search of their food. The reason for this, I think, is that they can exist for many days without taking a fish at all. The first two or three casts in a day's fishing are very anxious ones. I have noticed many times that when I have had runs from quite small fish early in the day I have not done much afterwards. Pike are horrid cannibals, and it may be that the wee pikelet of a pound or so finds it convenient to 'lie low' when voracious ten or twenty pounders are on the feed. I am speaking of fishing in rivers, be it understood.

A mistake that many pike-fishers make when using the live snap is in not giving the pike time enough to get the hook or hooks into his mouth before striking. The float suddenly disappears; and strike goes the angler immediately, with the result that the pike goes on his way rejoicing, while the angler wearily puts on another bait, and pops it before the nose of an already satiated fish. A pike invariably seizes a fish crosswise. He then, as a rule, moves off to his haunt. Arrived there, he turns the fish round preparatory to swallowing it head-first. When the bait is quite within the pike's mouth it is time to strike. The pike always faces the stream, and therefore it will be wise to strike across, trending down-stream, with the point of the rod. Strike hard, and more than once. It may be said

that the second strike might possibly pull the bait out of the pike's mouth, instead of fixing the hooks more firmly in his jaw; but this could only happen when the hold was very slight, and in that case the pike would in all probability shake himself free when the tussle began in earnest. More than once I have had pike of three or four pounds leap out of the water when being played; and it is no unusual thing to see them poke half their head above the water, pointing straight upwards, and try by shaking their head like a dog to get rid of the detaining hooks. In these cases the hold is generally very slight, and the manœuvre frequently meets with success—from the pike's point of view. Of course, when spinning there is no occasion to wait before striking. If the pike has fairly hold of the fish or bait crosswise, some of the hooks on the flight must of necessity be inside the mouth, and if you wait you may give the pike an opportunity of ejecting the bait (with the hooks) directly his suspicions are aroused by the pricking of the hooks even before the fisherman strikes. Therefore, when spinning, strike directly you feel that your bait has been stopped by something. If it is only a bit of weed you will do no harm; and you will soon be informed of the fact if you are on a good fish.

The question of baits is one that might be discussed at considerable length. Dace are brighter, more tempting, and more showy than roach; but they are tender and delicate. Too much hauling in and throwing out soon finishes them off. Here let me say that considerable skill and practice are required to cast out a live bait properly and to make it fall where desired. If you throw too hard you run the risk of casting away the bait off the hook, which goes through the strip of skin on the back; and if you cast with insufficient strength the bait will fall short and render a second cast necessary almost directly. Roach are much tougher than dace, but have not so much pluck. Pond roach are recommended by some fishermen for use in rivers. I have often tried them; but except that they sometimes prove hardier and longer-lived than river roach, I do not see that there is much difference. I have tried carp; but I do not care for them—neither did the pike. I remember once in the very early days of my experience in pike-fishing having five or six small carp sent to me in a little bait-tin merely wrapped in some wet pond-weeds and carried four miles by the village postman. When the tin reached me the fish were to all appearance dead. In desperation I turned them out into a pail of water, when one by one they slowly revived and soon were as lively as ever.

I took them down to the river next morning, and put one on the live gorge-hook. In a promising-looking hole I had a run; but the pike, after waiting a minute or two, declined to

pouch the unsavoury morsel, and spat it out. This happened three times in almost the same place. Presently I thought, 'How would it do to put the carp on a spinning-flight, and so check-mate Mr Pike if he tried his little games again?' Accordingly I hauled in my game little carp, killed it—as I thought—and put it on a small spinning-flight, and cast it well over the hole in the river in which I had had the runs. The very first throw was successful. A game little pike of about four pounds came at it with a rush, and after a little fuss was duly landed. By this time the carp was bitten about considerably. Consequently I thought a fresh bait would be desirable, and I took my carp off the hooks and threw it into the river. To my astonishment, the little carp swam gaily away as if nothing had ever been the matter with him!

Dace are, of course, from their shape better for spinning than roach; but a roach can be made to spin well with a suitable flight of hooks. I have mentioned dace and roach as baits because they are more readily procured in a general way. Bleak, gudgeon, chub, and even perch with the back-fin cut off can all be used. I have heard goldfish recommended; but I have never tried them, and cannot, therefore, speak from personal experience.

Artificial baits are too numerous to mention, much less to describe. In my opinion they are only useful when natural baits cannot be procured. Therefore I will only say that the best plan seems to me to be as follows: try several different kinds, and select that for general use which takes fish in the particular water to which you have access. As a rule artificial spinning-baits are not of much use after the month of October. At least this is my experience; but at the same time I must confess that I have not used them to any great extent. I have been told that white (or undried) sprats make excellent spinning baits; but I have not tried them. I should think they would be too tender to stand much wear and tear.

In conclusion, I must say just a word about

dress. First with regard to boots. When fishing from the bank the angler will have to walk through many a swampy place, often to stand for hours in wet grass and on soft, spongy meadow-land; therefore let the boots be stout, sound, and good. Tend them carefully after using, and remember that dry feet generally result in warm bodies, and that wet feet are always uncomfortable and often a source of real danger. An overcoat is a nuisance; therefore use a substantial 'sweater' under a tweed walking or shooting coat, which should fit loosely, have plenty of pockets, and not one unnecessary button. It is a good plan to keep a coat specially for fishing. Traces and flights of hooks can be wrapped separately in pieces of stout paper, and have their own particular pockets; while floats and the other small and necessary impedimenta can be stowed away in a similar manner so that they can be found when wanted at a moment's notice. This will render carrying a tin tackle-box unnecessary. The winch can go in the fishing-bag slung over the angler's shoulders. It is a good plan to have about sixty yards of line—well dressed and not too stout—on it, for when the bait-end of the line shows signs of wear the line itself can be run off the reel and turned, thus making, as it were, a new line of it. Then, when both ends are in a similar plight, the line can be divided in the middle, and the other two ends joined neatly together; in this way the sixty yards of line will make four distinct lines before being completely used up. The gaff—telescopic for choice—can be slung over the back, and thus the services of an attendant can be dispensed with.

Cold fingers are very troublesome, and gloves are worse. My plan has been as follows: on arriving at the river-side, turn up sleeves and plunge the hands into the water well over the wrists. Let them get thoroughly wet, and then dry them by waving through the air. Since adopting this dodge—which was told me many years ago by an old boatman—I have never been troubled with cold fingers when pike-fishing.

## REMINISCENCES OF AN INDIAN MILITARY POLICE OFFICER.

### IV.—THE ADJUTANT'S MISTAKE—SIKH CUSTOMS—TWO HUNDRED CAMELS ORDERED—REGIMENTAL SPORTS.

**T**HE lesson we had given Luckwar and his gang, described in the previous article, had a very good effect, as many small gangs of guerillas lurking about the district broke up, threw away their arms, and returned to their villages to settle down as peaceful toilers of the land until a fresh opportunity occurred of going out on the prowl.

This gave us a chance of filling up our gaps in the ranks, replenishing broken-down horses, teaching recruits to ride, shoot, &c.—in fact, going in for the general improvement of the corps. The Government of India was so well satisfied with the good service the trotting camels had performed that we were ordered to purchase two hundred of the best animals that could be procured. This addition brought up our strength

so considerably that additional European officers were needed. The Government therefore decided to give us three, one to fill up the vacancy caused by the loss of our second in command, who was killed in the action with Feroze Shah, and two to do duty with the mounted infantry.

On these officers joining us we found two of them to be very young men, with hardly any experience of actual service; but they were splendid horsemen, and seemed very willing to learn what they had to do and to fall in with our ways. The third, having distinguished himself at the capture of Lucknow in a British Hussar regiment, had the adjutancy bestowed on him for his bravery. We soon found out that he was a very fine soldier and a jolly fellow all round, but a terrible martinet, and according to his ideas we wanted no end of brushing up. He therefore set to work in real earnest to smarten us; and I must confess he did a lot towards the appearance of the corps on parade; but in the midst of his glory he nearly came to awful grief, and in a most ridiculous manner.

I will briefly relate the circumstances.

One morning the commanding officer appeared on horseback in a most excited state in front of my tent, and called out, 'Turn-out Jack' (my nickname), 'there's the devil to pay in the lines. I fear that unless we are pretty smart in rectifying matters there will be a mutiny in the corps.' 'What on earth can be the matter?' I exclaimed. 'Why, I would as soon conclude that the world was coming to an end as that our men would mutiny.' 'Well,' he replied, 'it's all caused by that over-energetic adjutant of ours. He, with his head full of nothing but British soldiers and red tape, issued an order last night that every man-jack of the regiment must appear on the next inspection parade—which, as you know, is the day after to-morrow—with his hair cut short, like a Tommy; the consequence of which is, that nearly half the men have sworn that they will desert, and the rest are taking vows that if a single hair is touched they will mutiny to a man. I had forgotten to state that the adjutant had had it given out that if the men did not obey his orders and cut their hair, he would punish one and all of them. Hazara Sing has just been to see me in a great state of mind, and I have told him to rush back to the lines and explain that the whole thing is a mistake on the part of the adjutant; but he would not leave until I promised him to be down amongst the men, bringing you also, with as little delay as possible. So hurry up, old chap!'

My English readers will, I fear, begin to wonder why men should mutiny because they were told to cut their hair, and conclude that there could not have been much discipline in the corps. I therefore consider that before stating how we settled with the men I had

better explain why the order was so repugnant to their feelings.

As has been stated, our men were mostly Sikhs from the Ludhiana and Ferozpur districts. Well, a Sikh from his childhood never allows a razor to touch his face nor scissors to touch his hair, as his beard and his hair are sacred; and any Sikh who should cut his hair or shave his beard or moustache is an outcast for ever. All Sikhs dedicate their hair to one of their numerous gods; therefore to interfere with it is considered to be sacrilege. As a rule they let the hair of their heads grow as long as possible, taking great pains to brush and comb it whenever they get an opportunity. That it may not appear objectionable, they fix up their hair in much the same way as a woman would do; but instead of placing the knot behind their heads, they tie it on the top, and fasten a large turban over it, which keeps out all dust. Their beards they divide into two, commencing under the chin; then they plait them very artistically, and tie up the ends over their ears. On state occasions or during a religious ceremony they let their beards down, combing and brushing them very carefully. The longer a man's beard is the more respect he commands amongst his comrades and the priests.

Readers will now understand why our adjutant's orders should have caused such a hubbub amongst the men.

Well, to proceed. We went to the lines, keeping the adjutant out of the way, and in less than no time got the men to see that the misunderstanding was caused by the adjutant not knowing their habits and customs. One and all were satisfied, gave us three cheers when we left them, and so the matter ended.

The adjutant, of course, had to be put through his facings for his serious mistake; and he was fearfully down in the mouth about the affair. He had also to undergo a tremendous amount of chaff from his brother officers for a long time. Eventually he became the idol of the men, as he was a grand rider, a daring soldier, and good at games all round, which he always joined in heartily with the men. Poor fellow! we lost him in a very sad manner about nine months afterwards; he was killed at a game of polo, in which the regiment was competing against a squad of young officers of a British regiment which was passing through our station. I shall never forget the sad scene at his funeral. There was not a single man that was not in tears, out of the one thousand five hundred who were present.

The purchase of two hundred trotting camels was no easy task, as the kind of animal we needed was not to be obtained wholesale; but in about a month we succeeded in getting the required number. Then, of course, we had to break them in to stand men firing off their

backs and get them to work in the ranks as horses do. This occupied other two months. The work was hard; but it was done, and well done, too; many a man getting some nice croppers, and several camels had to be rejected as useless all round. It must not be assumed that during these three months we were simply buying and training camels; in fact, during that time three or four expeditions had to leave headquarters to hunt down petty gangs of rebels and highwaymen.

As soon as our commanding officer considered that the camel portion of the regiment was fit for active service, he asked the General of the division to inspect us.

The inspection came off with flying colours, and the General was pleased to remark that he was proud to have such a smart body of officers and men under his command. He added that the regiment—more properly speaking police battalion—had distinguished itself so often that he felt convinced that it would always continue to do so.

After the inspection was over we had a jolly good lunch, and then started off for the race-course, where we had settled on holding a small 'sky-meeting'—a gymkhana—strictly confined to officers and men of the battalion. The camel race, with two men fully accoutred on each, caused great amusement, and many of the cavalrymen performed wonderful feats on horseback. The infantry easily overcame the cavalry in a tug-of-war; but the race that caused the greatest excitement was the one in which our sporting doctor and one of our newly appointed officers had a match for a hundred rupees. The doctor's nag was fast on the flat, but it was blind of one eye. The distance settled on was a mile. Places were drawn for, and the doctor's opponent drew the outside, which happened to be on the good side of the doctor's horse. I noticed at the time that the doctor seemed to be delighted at this, and the reason will soon be apparent. One or two false starts were made—there are usually a few of these with non-professional jockeys—but at last they got off to a good start. For the first half-mile both horses were well together, after which the young officer could be seen riding all he knew to get ahead of the doctor. This went on until they got near the quarter-mile post from home; but the game little one-eyed horse was not to be beaten—in fact was leading by nearly a length. All the lookers-on were ready to bet a kingdom to a china orange on the leader; but all of a sudden we noticed that our young officer had eased his horse a bit, by which arrangement he fell back a little; then he changed over to the blind side of the doctor's horse, sat down in his saddle, and rode as Fred Archer could do. It turned out afterwards that he had ridden many a race before. At the distance-post he was close on his opponent's

girths, his nag straining every muscle to get ahead; and, amidst the greatest excitement on the course and in the stand, he landed his mount a winner by a short head. The coolness and judgment of pace displayed by the youngster was the talk of the mess for many a day; and I am glad to say that he distinguished himself over and over again in many a fight, in all of which his determination and judgment never failed him. In fact, before he left the service he rose to the rank of Major-General, and was one of the very ablest cavalry leaders that India ever had.

I must add that the doctor was game to run his horse again for any amount we liked to name, provided his opponent did not get on the blind side of his plucky little crock; but we knew only too well that we should not be in it under these conditions, so let the challenge pass.

#### A BRETON LEGEND.

According to Breton tradition, Cape Finisterre, a barren and storm-swept headland on the northern coast, was the point from which the souls of the dead took passage for the Isles of the Blest. The voyage was tempestuous, and the entrance to the haven was shrouded by a dense and terrifying veil of mist.

STRAINING eyes towards a darkening west,  
A sea full of pain and deep unrest,  
And never a sign of the Isles of the Blest.

And on the morrow's morn there fell  
A grievous mist on the ocean swell,  
Black as the adamant gates of hell.

Whereat there rose a bitter wail:  
'Back! Oh, guide through the merciless gale!  
We may not pierce this awful veil.

'Not for us are the forest aisles,  
The morning dews, and the sunset's smiles  
On the fragrant slopes of the Blessed Isles.'

But He at the helm drave steadily:  
'Ye shall not faint nor fail,' said He:  
'For Mine are the souls that sail with Me.

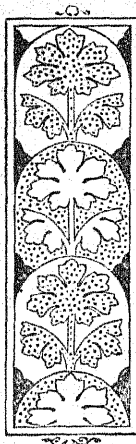

'Only be strong and void of fear,  
Make keen the eye and tense the ear;  
Listen, and gaze, and the mist will clear.'

And e'en as He spake the words fell true,  
For the veil was cloven through and through  
With flashes of opal, gold, and blue;

And the air grew warm and sweet and fine  
With breath of roses and eglantine,  
With balm of fir and spice of pine;

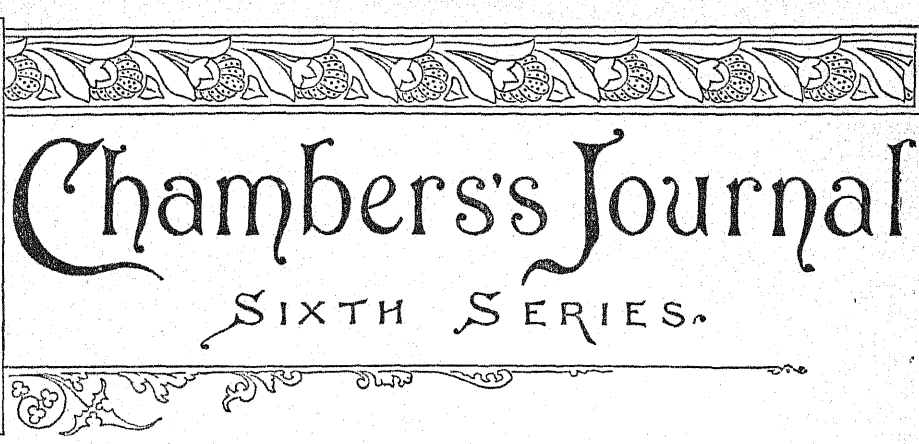

And the veil brake utterly, setting free  
Beyond the pain and the mystery  
That fairest haven where we would be.

## SIXTH SERIES.

### THE RIDDLE OF THE UNIVERSE.

By ALEXR. WM. ROBERTS, D.Sc., F.R.A.S., F.R.S.E., Lovedale, South Africa.

**F**ROM the time when men first turned intelligent questioning eyes up to the firmament of stars above them, thoughtful minds have speculated on the great riddle of the nature and extent of the material universe. What are the stars? How great is the sum of them? How far distant are they from us? are the main questions which go to make up one of the most profound problems in the whole range of scientific inquiry.

It is only in our day that a partial answer can be given to these questions. Previous to the discovery of the telescope men could not even give a partial answer to them. The wise men of the Middle Ages and the philosophers of ancient Greece and Rome had nothing but their imaginations to help them in coming to any conclusion concerning the nature, number, or distance of the stars; there was scarcely a single fact known that could in the least be made use of to correct the wildest excursions of the fancy. The stars were nails or holes in the roof of heaven, diamonds in Jove's crown or sparks from Vulcan's forge, angels' eyes or the glitter of their wings, according to the vision of the dreamer. There was no one who could prove which theory was wrong, and nothing could be adduced to show which belief was right.

It is indeed wonderful what progress in the direction of lifting up even a corner of the veil that hides this innermost of Nature's secrets has been attained during the past hundred years. Herschel, Huggins, Newcomb, Gill, and Kelvin are names that will be intimately associated with the long succession of important discoveries in this direction. The laborious star-gauging achievements of Sir William Herschel, the spectroscopic discoveries of Sir William Huggins during the past forty years (forty fruitful years in spectroscopic work), the arduous investigations of Professor Newcomb on star movements, the recent determinations of stellar distances by Sir David

Gill, and the still more recent and profoundly interesting researches of Lord Kelvin on the dimensions of the material universe have all been strong hands tugging at the curtain.

Although with all this effort only a corner of the veil has been lifted back, yet the ever-widening breach, the ever-decreasing shadow, the ever-clearer view of the end to be reached, and the way to reach it, is reason for believing that one day the riddle will be read and the problem solved; that we shall know where the limiting shores of our universe lie as surely as we know where the outer confines of our solar system are.

The present article, however, is not of the nature of a prophecy, except in so far as present achievements are prophetic. My purpose is to indicate the present position of our knowledge of the nature and extent of the stellar universe; and this can best be done, I think, by considering what answers we can give to the three questions which form the heart of the problem: What are the stars? How many are they? What is their distance from us?

#### WHAT ARE THE STARS?

The discoveries of the past sixty years indicate that the stars are bodies like our own sun; some considerably larger, others smaller, but on the average not much different in size and nature from the sun. They are, at least the visible stars are, great glowing globes of gaseous matter. As a rule these vast furnaces burn steadily. Sometimes, however, the fires seem to die down and then blaze out again as of yore. Three hundred such stars are known to astronomers; they are called *variable stars* because of the waxing and waning of their light. Now and again the seething fires prove too strong for the bonds of attractive force which hold the star together, and with one mighty upheaval the vast globe is shattered into fragments, blown into atoms, veritably 'dissolved into thin air.' Thousands of years after this explosion the record of the catas-

trophe reaches the earth, and a solitary watcher in the old Barony of Bonnington, in the year of grace 1901, sees a new star suddenly blaze out in the midnight sky, to fade away only as its predecessors had done, leaving, perchance, not a trace in the sky to tell the spot where once a world existed.

Among the millions of stars are to be found bodies in all stages of development. Some are glowing with an intensity of heat and light far beyond our utmost conception; others are slowly cooling down—already they are dull red in colour; some are cold and dark and dead. No telescope will ever perceive these latter bodies, and no camera will detect them. We only know that they are there by their influence over the light and motion of bright stars. One of the most interesting sections of the new astronomy deals with these dead, dark stars; and although no eye has seen them, or ever will see them, still we are able to ascertain their size, weight, and position just as if they were in the zenith of their glory.

Not the least wonderful discovery of the past few years has been some stars of the Siamese Twins type. They are in shape like two pears joined stem to stem. After the lapse of long ages these two masses will separate, and we shall then have the birth of a double star. Long before observation revealed these remarkable bodies, Professor Darwin, son of the great naturalist, pointed out that this is the manner in which our moon was thrown off by the earth; indeed, that it is the manner in which every double star is formed. It is surely passing strange to see the genesis of a stellar system before our very eyes.

The mammoth telescopes and the great cameras, some fifty tons in weight, of the present day reveal these facts to us. Thus we find that the myriad lights, the splendid gems of our winter sky, are suns and worlds in all stages of growth, decay, and death; double stars just forming, systems just being evolved, worlds grown old and cold and dead, suns in the noontide of their splendour, and suns whose life-history is abruptly closed by some sudden and awful catastrophe.

#### HOW MANY ARE THE STARS?

In the southern sky the writer has counted five thousand six hundred stars visible distinctly to the naked eye. There are, therefore, about ten thousand stars in the whole heavens which can be seen by the eye alone, without any other aid. An ordinary opera-glass will show close on one hundred thousand stars. As we use larger and still larger telescopes, more and still more stars are revealed. It is estimated that in the great Yerkes telescope, the largest in the world, two hundred million stars are visible.

Then, again, the sensitive photographic plate will show, under long exposure—Sir David Gill

has secured an exposure of twenty-five hours—groups and clusters of stars where the specks of light are like falling snowflakes on a still winter's day or rain-drops against the sun. A long-exposure survey of the whole heavens with one of the most modern photographic telescopes would indicate, I am convinced, no fewer than five hundred million stars.

Now, it may be urged, where does finality come in here? As we go on constructing larger and yet larger telescopes, more and yet more stars will appear. Each remove we are only seeing farther and farther down the great endless galleries of space, and the goal of our desire is as far off as ever. We may only be making visible the frontier realms of an infinite domain, the hinterland of which is a region so vast that no human invention can fathom it, and no human intellect can measure or comprehend it.

This does not at all follow. It is true that the larger the telescope the greater the number of stars made visible by it; but the question is, does the number seen increase in the same proportion as the size of the telescope would lead us to expect? If the universe is infinite in extent and the stars infinite in number, then in a telescope of a certain size we ought to see a definite number of stars. Do we see this number? This is the crux of the whole matter. Now, the answer to this question is, that the number of stars we do see in a very large telescope falls far short of the number we ought to see on the assumption that there is no limit to the number of stars; but, on the other hand, the number seen is quite in keeping with the contention that each increase of telescopic power brings our vision nearer and nearer to the outer fringe of our finite universe.

The same remarkable result is reached if we consider recent photographic research in this direction. As we increase the length of the exposure we do not obtain an equivalent increase in the number of stars registered on the photographic plate. Indeed, we sometimes reach a limit, different of course for different parts of the sky, beyond which we cease to photograph any more stars however long the exposure. We have, in short, photographed all there is to photograph. When any one pushes his way through a great London crowd, he finds the press grow less and less dense as he reaches the outer edge. If no stranger to such throngs, he will be able to gauge more or less roughly the size of the crowd from the appearance it presents to him as he passes through it. If a specialist in the matter of crowds, his estimate will probably be an accurate one. The telescope carries the astronomer through the stellar distances right on to the region where the stars thin out on the margin of the great ocean of space that surrounds the universe like a garment. From what he sees he is able to estimate all he could

possibly see. The part visible is to him a certain measure of the whole. And that whole how vast, how stupendous! The most modest estimates give one thousand million as the total number of stars in the universe—one thousand million!

If this be so—and the result is arrived at by a variety of ways—then a telescope ten feet in diameter will bring us to the foreshores of that vast, inviolate, untroubled sea of empty space that girds our realm of stars. Empty space! It may not be empty. Here and there island universes as large as our own may break the monotony of that shoreless sea: islands and islets that are visible in our largest telescopes as faint wisps and whorls of misty light, specks against the darkness. After all, the number of universes may be as countless and as diverse as the stars. There is nothing unreasonable in such a thought.

#### WHAT IS THE EXTENT OF THIS SYSTEM OF STARS?

The most recent investigations seem to indicate that the outermost rim of stars in our universe, the sentinels on the confines of space, are two thousand times more distant than those nearest our system.

Now, the stars nearest to us are only 'near' in astronomical language. They are on the average 'thirty light-years' distant from us—that is, light takes thirty years to come from our nearest neighbours among the stars. In some cases the distance is much less, in others much more; but the mean distance is about 'thirty light-years.'

If, now, the farthest-away stars are two thousand times more distant than this, a ray of light would take one hundred and twenty thousand years to speed across the whole sidereal universe. Sometimes distances like this are expressed in 'express-train years'—that is, we calculate how

long it would take a train to go across the grand trunk railway of the universe, if such a line could be made. Why distances are so expressed I cannot tell; for what profit is it for any man to know that it would take one million million years to cross from shore to shore of the universe in a train? We can only look at the figures and smile or frown as our manner is—understand it we cannot. It gives us a pleasant sense of vastness to compute how many tons of matter are in the universe. Does it make the matter any more understandable to say that there are a million times more tons of matter in space than there are drops of water in all the five oceans of our round earth? The comprehension of a statement like this far transcends our finite conceptions. We can only be amazed, bewildered. We never can understand it, for it is bordering on infinite relations. Yet, as has already been suggested, this great universe, so vast that the mighty orbs can be reckoned in number as the sand by the seashore, may only after all be a very small part of space; in all probability it is only as a single drop compared with the practically infinite ocean that surrounds it:

A dark

Illimitable ocean, without bound,  
Without dimension; where length, breadth, and height,  
And time and place, are lost.

Even if man explored and measured the universe of stars above him to its farthest reaches, charting, gauging, weighing, the riddle would be still unread, for beyond and barring his way would lie this 'illimitable' ocean. We here reach thoughts that had best be left alone. Let us content ourselves with the wonderful tale of the achievements of astronomers during the past hundred years in making evident so much knowledge concerning the nature, number, and distance of the stars.

## H U P E H.

### PART II.

ONE night Hupeh came to me, and I saw at once that he was labouring under great mental excitement. His usually inscrutable eyes had dropped their mask, and in them I read a great anxiety and a greater danger. Hastily closing the door behind him, he peered round the room, and then interrogated me with a look full of meaning.

'All alone,' I said. 'What has happened?'

'Forder, we have been good friends?'

'I have always hoped so, Hupeh. I know of nothing that should make us enemies.'

'Good. I am a yellow man, Forder; but I do not forget. You must fly instantly from Tsing-

Fu.' He seized me excitedly by the arm and peered earnestly into my face.

'That is impossible, Hupeh. I dare not. Why should I?'

'Because the Boxers are marching on Peking, and Tsing-Fu is in their line of march!'

'Well?'

'You do not understand. This Boxer movement has not for its object the overthrow of the Manchu dynasty; it is a national rising against the foreigner.'

'To what end?'

'Forder, if a foreign army were to invade your England, what would Englishmen strive to do?' His face was pale; his voice quivered with excitement.

There was only one obvious answer; and that, looking into his excited face, I was afraid to make.

'This is the warning of a friend,' he continued — 'the warning of one who fears for his friend. The cry is, "Death to the foreigner!" Do not wait until you hear it ring out in the streets.'

His extraordinary agitation still puzzled me; a suspicion wavered, then grew strong. I seized him sharply by the arm.

'How do you know all this?'

'Because I am a Boxer!'

'You?'

'Ay; why not? Is not a man justified of any means to free his country of the invader?'

'But, Hupeh, we are not invaders.'

'No, you are traders; but the warship and the soldier follow you. The people are afraid; officialism has stirred their prejudices, and one can foresee nothing but horror. Forder, you are in the greatest possible danger. Every foreigner in the country is standing over a volcano. If he had more sensitiveness he would feel the heave and fall of the burning crust.'

'Europe will call for a terrible revenge.'

'Admitted; but Europe stands a long way off, and even it cannot recall the dead. It will be too late once you hear the populace shouting in the streets. We have been good friends, Forder, and this is the last office of a friend. Go while there is time.'

'And the others?' I referred to the merchants, the missionaries, and their families.

He shrugged his shoulders. 'I have already risked too much in warning you. For once in a way be guided by me, Forder. Every hour you remain in Tsing-Fu is fraught with danger.'

'You would advise me to leave at once?'

'This very moment. Make your way to Tientsin. That will soon be the last refuge of your people.'

'It is impossible, Hupeh.'

'I am sorry, Forder. This is like a rising of the Hoang-Ho. No obstacle shall stay its course.'

He went as silently and mysteriously as he had come, and I was left to digest as best I could the alarming intelligence. At first I was disinclined to give entire credence to his story, knowing the Chinese love of exaggeration and the sudden political vanity which had violently agitated some of the most evenly balanced minds. Still, I could not entirely mistrust his friendship, which had stood the test of so many years; though, if what he said were true, the rising had spread with inconceivable rapidity. But yesterday it seemed that one had heard of the Boxers for the first time, and now they were threatening the life of every foreigner in the northern and middle provinces. To be sure the Government at Peking had proclaimed the society; but if Hupeh spoke the truth, Peking was playing a double game. The question was, would they dare to flout the

Powers even in secret? One knew of the Empress, and believed her capable of any daring; but in her counsel were men wiser than she—men who knew something of Europe and its power. Would the woman be foolish enough to defy that power? After all, she was a vain and ignorant woman, and to one who is cognisant of the vanity of the Oriental all things seem possible.

I went out and called on my nearest neighbour, a merchant with whom I had been intimate for some years. I found him surrounded by his wife and family. It was the baby's birthday, and the children, three girls and a boy, were romping and eating sweetmeats in honour of the occasion. It was a merry party, and for something like an hour I made a pretence of enjoyment; but as soon as the mother had retired with the children I broached the object of my visit, nor was I relieved to see that my friend Shelton received the communication with a look of the utmost anxiety.

'In my heart I have feared something like this,' he said, 'and for the last week I have been trying to make up my mind to send my wife and little ones down to the coast. But, Forder, I shall hesitate no longer; they start to-morrow.'

On the morrow they were in the hands of Cheng-Chu, the rabid anti-foreigner.

I left the house a prey to the most evil forebodings. Two or three shadows slunk out from an adjacent doorway and disappeared into the street; at intervals along the dark streets shadows seemed to accompany me. I began to regret that I had come out unarmed, and, foreseeing trouble, hurried onward. But nothing untoward happened, though I did not sleep well.

Early the following morning a runner from the Yamen came with a message from the *taotai*, Cheng-Chu, requesting me to present myself before his Excellency, who had some important news to communicate. I obeyed, and was received with every outward show of courtesy. Cheng had the reputation of being a bad man; but he possessed good manners, and these he could use when the necessity arose. He overwhelmed me with compliment, professed himself my devoted servant, and passed through all the genuflections of insincerity. Then by elaborate degrees he led up to the serious communication. It was rumoured that the Boxers had secretly entered Tsing-Fu, that their object was the destruction of the foreigners, and that he had sent to offer me the shelter of the Yamen.

I could not offend him by refusing his proffered hospitality, and yet I was not absolutely convinced of his honesty. He saw the indecision in my face, and his little black eyes blinked over me with monotonous regularity. They were wonderful, soulless little eyes, clots of black fire that smouldered sullenly.

Fortunately a diversion occurred at that moment. A noise was heard outside, and in rushed a mes-

senger, who, between quick gasps for breath, panted out the information that the Boxers were in possession of the city, and that the foreign houses were already in flames.

Cheng looked at me, and a singular smile curled the thick lips of his ugly mouth. It was no longer necessary to press his hospitality upon me.

'You will be quite safe here,' he said. 'I will keep you in hiding until the storm has blown over.'

'And what of the other Europeans?' I asked.

'All safe here in the Yamen—as safe as you are.'

'My Government will not forget his Excellency Cheng-Chu,' I said.

'I hope not,' he answered.

But though apparently safe from the storm which raged without the Yamen, I was not secure against that which raged within. Indeed, I quickly realised that I was the *taotai's* prisoner, and that my chances had not improved under official protection. When I requested leave to go forth I was met with a curt refusal, and all my protestations resulted in a shrugging of the shoulders or an ominous leer.

In this uncertainty I was kept for two days. Meanwhile strange rumours had reached me through my jailers—rumours which filled me with horror and prepared me for the worst that might happen. Indeed, I feared greatly that the other refugees were even in a worse plight, and one morning the head of my friend Shelton was rolled into my cell. My exclamation of horror drew shrieks of laughter from my captors, and I was told that on the morrow my own head would be treated with as scant courtesy. I did not doubt it. Cheng, having begun his deadly work, could afford to leave no witness to tell the tale.

About midnight I was awakened from an uneasy doze into which I had fallen by hearing the door of my cell softly open. I awoke instantly, feeling my time had come; but no ray of light illumined the darkness, and I peered towards the door, every nerve strung to the utmost tenseness. If it were the end, all I could hope was that they would spare me the torture.

'Are you there?' came a low, strange voice, and yet a voice which vibrated like that of a friend.

'Who is it?'

'Hupeh!'

I gasped, scarcely realising that it could be he.

'Is this the end, Hupeh?'

'I pray not. Come with me. There is still a little hope.'

He took me by the hand and led me from the cell, and presently we entered a room in which a light burned dimly. Pointing to a bundle of clothes which lay upon a bench, he said, 'Dress yourself quickly; you must be outside Tsing-Fu before daylight.'

Without more ado I changed my European dress for that of a native, making in the uncertain light a tolerable Chinaman, and silently we passed the gates of the Yamen. Then I began to breathe more freely.

'Hupeh,' I said, 'if Heaven permits me safely to join my people, I shall not forget this act of yours.'

'May it be so, Forder.'

'There is still danger from Cheng-Chu?'

'Danger, yes; but from Cheng-Chu, no.'

'I do not understand.'

'For my sake Cheng-Chu has permitted this. Surely, Forder, our friendship has been something more than a name? Remember this one act to his credit, and to mine. Now farewell. We shall never meet again. There is the open country. Make for the sea-coast and work your way to Tientsin. You will find money in your coat. Farewell!'

That was not the last time Hupeh and I were to meet. When, later on, the allies entered Tsing-Fu I accompanied them as interpreter, and in the compound of the Yamen I saw the head of the *taotai* Cheng roll in the dust; for the vengeance of the allies was swift and sure, and severe enough to strike terror into the yellow men. But in my heart I was glad that one of the ringleaders still remained at large, though the reward offered for his apprehension was tempting. Hupeh had begotten himself an evil name, and assiduous was the search for him. Every day I feared that they would bring him in; but as the time passed and no information concerning him reached headquarters, I sincerely prayed that he might be beyond the reach of human vengeance.

Then I accompanied a small expedition a week's journey from Tsing-Fu, the object of which being accomplished, we returned to the Yamen early one morning. Troops were drawn up in the compound, the natives clustering with frightened faces behind the men in khaki. Pushing to the front, I saw, kneeling in a row, some half-dozen men, their necks bared, their hands bound behind them. Even as I advanced the executioner's sword swished through the air and a human head went spinning across the paved courtyard.

'The last batch,' said an officer beside me.

'Any one of importance?' I asked.

'Yes,' he said; 'that chap at the end is Hupeh.'

'Hupeh! Hupeh! He saved me once,' I cried excitedly.

'The devil he did.' It seemed quite an unimportant matter to this automaton.

I rushed forward. The headsman, who had already accounted for three of his victims, stopped to look at me.

'Hupeh! I cried. 'Hupeh!'

He looked up at me dreamily, stupidly, like one

under the influence of narcotics; then, recognising me, he smiled.

'Forder! Back again in Tsing-Fu! You are in time to see your friend die.'

'You must not die, Hupeh.' I turned despairingly to the officer in command, who with a swelling face was angrily advancing. 'I implore you to reprieve this man if only for an hour. I have a story to tell. He saved my life; he would have saved us all had we only listened to him.'

'Impossible. Must obey orders. Fellow's a murderer.'

'That's a lie,' said Hupeh in the most excellent English. 'I have never murdered any one. I did as you would do if the enemy were within your gates.'

'Egad!' stammered the officer, 'the fellow speaks English.'

'I will explain. Delay his execution, if only for an hour!'

'Quite impossible.'

He waved to the executioner. Again the sword fell—and again. Hupeh was the last of the line. The executioner hesitated. Hupeh looked at me, and on his face was the sweet old smile of friendship I remembered so well.

'Good-bye, Forder,' he said. 'This man is only doing his duty. I have staked and lost. But it is a strange inversion—is it not?—that the heathen should save his friend, and that the civilised Christian should plead in vain for an hour's respite? I am ready, executioner. Strike!'

## THE ROMANCE OF THE CANADIAN PACIFIC RAILWAY.

By E. A. REYNOLDS-BALL, F.R.G.S.

From East to West the tested chain holds fast,  
The well-forged link rings true.

—RUDYARD KIPLING.

THE Canadian Pacific Railway has recently been much before the public in connection with the Canadian tour of the Prince and Princess of Wales; and every one has read glowing descriptions of the magnificent palace on wheels, the last word in the luxury of railway travel, which was the rolling home of the Royal tourists for nearly a month.

This famous trancontinental railway is closely bound up with the political, social, and commercial life of Canada. The history of this colossal enterprise, so full of vicissitudes, which has wrecked or made so many political reputations, and, indeed, upset Ministries, reads like a romance.

Although a private enterprise, one can scarcely overestimate the enormous political, social, and economical influence of the Canadian Pacific Railway. It is, in short, virtually an *imperium in imperio*. It makes and unmakes towns and cities; in fact, Winnipeg and Vancouver are as much the creation of this company as are Crewe and Swindon of the London and North-Western and Great Western Railways respectively; and it 'holds the great North-West in the hollow of its hand.'

Few people realise that it is now possible to travel by a British overland route to Australia without crossing a yard of non-British soil; and that Yokohama can be reached by this veritable imperial route in three weeks from London, and Hong-Kong and Shanghai in a month. Even with the Siberian Railway, the shortest route, in point of time, to Japan and Australia

will probably be *via* Montreal rather than *via* Moscow.

The history of the Canadian Pacific Railway is remarkably rich in picturesque and even dramatic episodes. All through the seventies the construction of this line, on which the great question of Federation hinged—so far as British Columbia was concerned—was the burning question of the day. The determined opposition that the advocates of the railway had to contend against can only be paralleled by that of Palmerston's Government to the Suez Canal scheme. One of the strongest arguments of the political opponents of the line was the climatic one. It was declared that the severe climate would paralyse the traffic during the winter. The promoters could now, if any serious opponents to the Canadian Pacific Railway still existed, triumphantly point to a continuity of through services almost unequalled under similar conditions in the whole history of railways. Not a single day from the beginning of 1887 to the end of 1892 did the express from Montreal to Vancouver fail to run. Indeed, it is said that the English Great Western Railway has actually lost more time by snow blockade during this period than the Canadian Pacific Railway!

The Dominion Government first took the scheme in hand in 1871, undertaking to complete it in ten years. By 1880 they had only some seven hundred miles of line to show for their nine years' labour and profuse expenditure of capital, while even the surveying was only partially completed. In fact, to use a homely aphorism from the Western States, the Government had 'bitten off a bigger chunk than they could chew.'

In 1881 the enterprise, which was practically on its last legs, was transferred to a private

company, in which Sir William Van Horne (now the chairman) and Lords Strathcona and Mount Stephen were the ruling spirits. The fact that the preliminary surveys cost no less than two million dollars, and that for three hundred miles the track had to be cut through solid rock, while in one section the cost per mile was seven hundred thousand dollars, will bring home even to the unprofessional reader the stupendous nature of this titanic enterprise. In five years and a half the work was finished, the last spike being driven on the 7th of November 1885; while in June 1886 express trains were running daily from Halifax on the Atlantic to Vancouver on the Pacific slope, a distance of nearly three thousand seven hundred miles, in five to six days. We may compare this speed with the vaunted Siberian bi-weekly *train de luxe* service from Moscow to Irkutsk (three thousand four hundred miles) in nine days, and even this schedule time is often exceeded. The extraordinary energy of the contractors and engineers, who were five and a half years ahead of contract time at the finish—in itself a record in the history of great public works—will be better appreciated when it is remembered that the Siberian Railway took nearly ten years to complete, the Suez Canal fourteen years, and the Tower Bridge eight; while the comparatively trifling work, the new Vauxhall Bridge, will have taken over four years, even if completed in contract time.

Perhaps a more striking instance of the remarkable celerity with which all the work in connection with the Canadian Pacific Railway system has been carried out is found in the new St. Lawrence Bridge near Montreal, a worthy rival to the famous Victoria Bridge of the Grand Trunk Railway. This bridge was completed in less than two years, at a cost of one million dollars. The Victoria Bridge, a few miles lower down the river, took six years to build, and cost over six million dollars. This economy is all the more creditable as the *mot d'ordre* of the directorate to the engineers was, 'Spend what you like, but get it through before contract time.' In one section alone over fifteen thousand men were employed at one time. Though a Canadian undertaking, heavily subsidised by the Government, yet the Canadian Pacific Railway might be described as a cosmopolitan enterprise. It was directed by Canadians and financed by American, French, and English capitalists; but the contractors and engineers were mostly Americans, and some thirty to forty thousand of the labourers were Chinese coolies.

The 'stiffening' of this article with a few statistical facts may perhaps be pardoned. The Canadian Pacific Railway, in whose system are over nine thousand miles of line, is, next to the Siberian Railway, the longest railway in the world under one direction; though the American

transcontinental line, New York to San Francisco, controlled by three companies, is some six hundred miles longer. In mere mileage, of course, the Trans-Asian line easily holds the record. The average speed of construction was two and a half miles a day, which compares favourably with that of the Union Pacific (two miles) and the Siberian (one mile). The first-class fare for the through journey of five days is ninety-two dollars, which is, however, proportionately more than the fare from Moscow to Irkutsk (eight pounds first class). The solidity of the track is indicated by the fact that there are one thousand six hundred sleepers to the mile in some sections, which has enabled a speed of over fifty miles an hour to be attained on certain portions. Statistics are, however, usually written to be skipped, so I will refrain from further wearying my readers.

The scenic attractions of the western sections of the line are too obvious to be insisted on, and, indeed, only the pen of a Ruskin or a Stevenson could adequately picture the sublime scenery of the Rocky Mountains and the Selkirks. As Emerson said of the Yosemite Valley, it is perhaps the 'only scenery whose reality comes up to the brag.' It was during the surveys of these wild regions that most of the picturesque incidents in the construction occurred. One of these is indicated by the name of a famous pass, the Eagle Pass. The surveyors were baffled for weeks in the search for a route through the mountain barrier of the Gold Range. At length they decided to follow the flight of an eagle, which led them through this stupendous cañon.

It is mainly the romantic and picturesque aspects of the Canadian Pacific Railway that I am now concerned with, and I have little space left to touch upon the military and political significance of this great highway, for its commercial importance is sufficiently patent. The company could undertake to transport five thousand troops from Halifax to Vancouver in a week, with full equipment, including even the largest siege-guns. The strategic value of the railway was strikingly illustrated in the Riel rebellion of 1885. But for the ease with which troops were brought up to the disaffected districts it would perhaps have taken years rather than months to crush the rebellion. In the Red River expedition of 1870 it took ninety-five days to transport the troops from Toronto to Winnipeg. The Canadian Pacific Railway is of great strategic importance also in that it offers an alternative route to India to the Suez Canal route, should the 'great ditch' be closed to our transports; and certainly, though the transit would be a few days longer, it would be shorter than the Cape route, our only other alternative, while the moral effect on the native mind in India of English troops arriving from the East as well as

from the West would be enormous. Indeed, from an imperial or national standpoint, this great railway, which binds the Dominion to the mother country with its bands of steel, is almost as important a factor in the union of the British Empire as the political federation of the Canadian Provinces in one Dominion. It is curious, by the way, to remember that the title Dominion was not the one originally proposed by the provincial Governments. The 'Kingdom of Canada' was first suggested, and only dropped because it was thought that it might offend the susceptibilities of the United States!

Of late the Siberian Railway has been much boomed, and even compared with the Canadian Pacific Railway, to the latter's disadvantage, as a triumph of railway construction. But what are the facts? (1) No railway was ever made under more trying geographical and climatic conditions than the Canadian Pacific Railway. (2) As to speed of construction, the Russian average was about one mile a day; the Canadian two and a half miles. (3) The former cost eighty-five million, and the latter only twenty-eight million pounds. (4) In the construction of the Russian transcontinental line one hundred and fifty thousand labourers were employed at one time, in that of the Canadian only forty thousand. (5) The Siberian Railway has all the resources of the Russian Empire at its back, while the Dominion Railway is a private enterprise. (6) Then as regards the track, equipment, speed, and punctuality of service there is no comparison. So flimsy is the construction of the Siberian line—no chairs or fish-plates were used, the rails being merely riveted together—that on some sections the engine-drivers are not allowed to exceed a speed of six or seven miles an hour.

Perhaps no great railway in the world—certainly not the American transcontinental railway—had to cope with so many obstacles, political

and economical as well as physical and climatic. Unlike the Union Pacific Railway of the United States, the Canadian line was constructed over seven hundred miles of wild, mountainous country, which was in great measure unexplored; and for five or six months in the year the work of construction had to be carried on under almost Arctic conditions. As to the more obvious and apparently insuperable difficulties of carrying the line over the Rocky Mountains and the Selkirk and Gold Ranges, what is there in the Russian undertaking to compare with these? Indeed, it is not, perhaps, overstating the case to say that the six hundred miles section from Calgary, the gate of the Rockies, to Vancouver on the Pacific slope, is the finest piece of railway engineering in the whole history of railway construction. There may be more sensational short sections of railway in the United States, India—the Darjeeling line, for instance—Ceylon, South Africa, or even in Europe; but there is probably no line of the same length as this wonderful section which can compare with it for grandeur of conception or daring in execution.

In short, the colossal enterprise of the Canadian Pacific Railway Company is worthy to rank with the greatest engineering triumphs of the century, such as the Brooklyn Bridge, the Suez Canal, the Forth Bridge, the Severn Tunnel, the Eiffel Tower, the Assuan Barrage, and the Tower Bridge; while the chief claim of the Siberian Railway to be regarded as a stupendous enterprise rests on mere mileage (six thousand miles), in which respect it is no doubt unique among the railways of the world. Then, historically, the Canadian Pacific Railway might almost be regarded as the nineteenth century realisation of the sixteenth century dream of a trade route to China and India *via* America.

## THE LAW LORD AND LESLEY.

### CHAPTER IV.

**I**T was Sunday again, and the bell in the little kirk tower of Tainish was clanging out its persistent summons as if the welfare of every soul in the parish depended ultimately upon attendance at divine worship that particular morning.

In her bedroom in the manse Lesley was preparing with a heavy heart to yield obedience to the relentless edict.

It was one of those glorious days which so frequently occur in April in Scotland, where the fantasia of spring is a gayer medley than in the south, because of the memory of a longer, drearier winter.

The apple-trees in the garden below Lesley's

window were a frothy mass of dainty white and delicate green, lightened every now and then into almost supernatural brilliance by the fitful glory of the April sunshine; but Lesley was in no mood for apple-blossom that morning. She was ahungered for something—she knew not what—and the beauties of nature seemed but to mock at her want. When the heart is light, and it is springtime, and the apple-blossom is in bloom all at once, then surely life seems too good to be true; but if the heart is heavy, then in vain is all the fragrant freshness of a hundred springs.

At least so thought Lesley this morning. She was conscious of a restless, unsatisfied desire, the exact nature of which she did not know; but of this she was certain, that the future which lay

before her would never have the power of fulfilling it; therefore she turned away from that future with a sense of shrinking dread. Yet how could she escape when her conscience accused her every moment of base ingratitude? No, she was doomed—doomed to live a life which must always fall short of those possibilities which had just awakened into being within her.

Entering the church a few minutes later, she became conscious at once of Lord Coalstoun's presence. To her surprise, he was alone.

She had seen him almost every day since the memorable evening of the concert, but always driving with his beautiful guest by his side in the intimate solitude *à deux* of a dogcart. Lesley had avoided the chances of meeting as far as possible; but it seemed almost as if he had divined her purpose and selected all her hidden byways for his daily drives. Judging by the gay and confidential intimacy of their bearing, he and his fair companion appeared to derive mutual satisfaction from their excursions; and the sight of him in this new rôle had given Lesley a glimpse of that other side of his character by which he was best known to his associates, the brilliant, cultivated man of the world, to whom life at Tainish was but an incident, or at best an amusing novelty to be enjoyed—and forgotten.

According to custom, she did not leave her place until the church had 'sealed;' and when she reached the lichgate Lord Coalstoun was standing out on the dusty road giving some directions to his groom. As she approached, the dogcart drove smartly off, and his lordship turned to greet her.

'I think a walk would be good for both of us,' he said, raising his hat slightly by way of salute. 'I have sent the trap home, and shall lunch at the inn and walk out afterwards.'

'I am sure my uncle would be very glad if you would come and lunch with us,' said Lesley, her mind running rapidly over the contents of the larder.

'Oh no, thanks a thousand times!' he returned. 'I really didn't mean it for a hint, and I feel it a duty to patronise Macnab occasionally and pay London hotel prices without a murmur for his chops and blanc-mange.'

Lesley laughed gaily. Her former dissatisfaction had vanished as if by magic; the heavy purposeless feeling had left her heart, and in its place had come the thrill of true enjoyment.

'So your visitors have gone?' she said as they walked almost mechanically side by side in the direction of the loch.

'Yes,' he answered, striking in an aimless fashion at the little flints on the road with his stick; 'a country house in the wilds of Glen Raith naturally does not possess many attractions to the socially inclined.'

Lesley glanced up at him as he spoke to detect, if possible, any trace of bitterness on his face,

but there was none; its expression was unconcerned, almost cold.

'Besides,' he continued, 'there is a ball in Edinburgh to-morrow night—for which, by the way, I am supposed to return; and Lady Marjorie is the promised belle.'

'She is very beautiful,' exclaimed the girl with frank admiration.

'And charming,' he conceded. 'But shall we find a seat somewhere? The loch is a magic mirror this morning, in which perchance we may see strange marvels.' He pointed as he spoke to a fallen log by the margin of the loch, on which Lesley seated herself, he taking his place by her side on the hillocky grass.

The April sun burst fitfully through the soft clouds over their heads, lighting up the shimmering expanse of water every now and then into a million sparkles, while across the opposite hills gigantic shapes and shadows flitted noiselessly.

'This is a day after my own heart,' said Coalstoun at last. 'Do you see how its face changes every minute? It is easy to have illusions on a day like this,' he added almost below his breath.

'You always talk so much about illusions,' said Lesley impulsively, 'and I don't even know what they mean.'

'That is because there are no threadbare places in your life yet,' he explained. 'It is only when life becomes threadbare that one realises the existence of illusions. I suppose it is the contrast which makes them visible. Still, I don't think this last week has been exactly profitable for you either,' he added with abrupt significance.

The colour leapt into Lesley's face, and she turned away her head. He saw the effect of his words upon her; but a sort of reckless determination had taken hold of him. What matter whether he was only experimenting? The experience was worth enjoying. Lesley's apparent need had provided him with the temptation: for her as well as for him it was a good thing. It was high time that she should be awakened out of her girlish sleep; that uncouth log of a cousin of hers would never have the power, but would leave her to her mazy dreams for the rest of her life.

But her next words somewhat mitigated his assurance.

'And I thought you had been so happy,' she said.

'Happy, perhaps,' he acknowledged carelessly; 'happiness, however, is not always profitable.'

'But how did you know that I had been feeling like that too?' she questioned with sincere directness.

He smiled. She had voluntarily come back to the dangerous ground; on her own head the consequences.

'Oh, I am a bit of a clairvoyant,' he said; 'besides, I may as well confess that it was a venture. I was testing a curious feeling of telepathy

of which I am conscious with certain people—a very few: you are one of them. I chose to imagine your mood as part of mine. Great presumption, you will think; but, if you prefer it, it is easy to put it down to coincidence.

'I have been unhappy,' she acknowledged simply, gazing out over the loch; 'but I don't know why. I think I want something; but I don't know what it is.'

'That is the negative side of your troubles, is it not?' he said. 'But don't you think it would be lessened considerably if you could escape from the positive—I mean the something that you do not want, and yet which duty forces upon you?'

He spoke quietly; but Lesley felt the force of his words.

'How can you know all these things?' she asked in a low, constrained voice.

'Did I not tell you that I was a clairvoyant?' he replied. 'But have I really guessed the truth?'

'Yes, I am afraid so,' she said. 'Oh! I am a very wicked, ungrateful girl.'

'You have become a woman,' he remarked sententiously; 'that is all.'

'Then it hurts to be a woman,' she flamed, with a sudden note of rebellion in her voice.

'Yet some day you will find there are compensations,' he commented dryly. He had tilted his hat over his eyes, but he was observing her closely all the time.

'Tell me,' he began again in an altered tone—'I have not seen you to speak to since the night of the concert—were you angry with me for making you sing my favourite song?'

'Not angry.' She shook her head. 'But, please, I would rather not talk about it. I don't think I enjoyed myself very much that evening.'

'I can't say that I enjoyed myself particularly either,' he rejoined, sitting up and casting a stone with careful aim at a snag which protruded its black nose above the water at some little distance.

All Lesley's sensitive pride took arms at once. 'Of course you did not. I can quite understand what a poor little entertainment it must have seemed to you. I should not have asked you to come.'

'Now you are a child again,' he responded, sinking back into his recumbent position, 'and a foolish one to boot. But I make a point of never explaining my remarks when they are misunderstood, and I have a rooted and constitutional objection to apologies in any form.'

'Apologies!' she echoed in a horrified voice.

He smiled.

'Do you know, I believe you are a little afraid of me still,' he remarked.

Lesley turned and met his gaze unflinchingly. 'I am not afraid of anybody,' she said; 'but of course I never forget the difference between us.'

'The difference is all in your favour, child,' he

said; 'even in the mundane matter of age,' he added a trifle bitterly.

'But you are not old,' she said.

'Unfortunately old enough to be your father.'

'But it is not years that count,' cried the girl, her face flushing with eagerness. 'A man is only old when he has reached a certain time of life and achieved nothing. Look what you have done—already.'

Her eyes were shining with enthusiasm.

'And how, may I ask, have my achievements reached your ears?' he questioned with curious intentness.

'I don't know,' she replied vaguely; 'but when I think of all you must have seen and heard and felt, I'—She broke off.

He laughed.

'You have heard a little and supplemented much, I am afraid,' he remarked. 'I had no idea what a well of romance you contained; but I assure you there is nothing to envy me in my memories. They make an unpleasantly weighty burden sometimes, and one which, like the Old Man of the Sea, I can never get rid of; but what weighs heavier still is all that I have left undone. You think, no doubt, that I have reached the summit of my ambition, when'—with a short laugh—'I have hardly commenced to climb yet; and alas! alas! time is passing so quickly, and I am growing old.'

He sighed as he finished, then turned the sigh into a smile as he met the girl's beautiful, eager eyes. 'Ah, how I wish I could do anything, no matter how small, to help you!' she cried.

For a brief moment a reckless, almost passionate look crossed his face, then faded, leaving a grim, flinty expression behind. 'Rather, pray God you do not hinder me,' he said in a low voice, turning away his head. The next instant he was smiling again.

During the walk home Lesley was very silent.

At the manse-gate he paused.

'But we part friends, do we not?' he said. 'Perhaps some day, child, you will realise what it is to play with fire. Ah, that is right,' as she extended her hand gravely. 'This is good-bye for some time,' he added. 'I have made a sudden resolve to victimise myself to-morrow night. After all, "the ball's the thing"—especially when you are *growing* old,' with a special emphasis on the last words. 'You see your arguments have not been wasted, maid of the manse. Before I venture to call myself old again I shall ask you leave.'

He broke off, waiting for her to say something; but she remained silent. There was a bewildered expression on her face; and, realising her plight, he opened the gate with a little indulgent gesture for her to pass through.

'Good-bye,' he said again, and was gone.

## 'ON THE ROAD.'

ALAS! that breezy, suggestive term is now but an empty name. No longer does the happy 'commercial'—regardless of time-bills, 'connections,' excess luggage, and all the thousand ills of modern travelling methods that we are heir to—drive easily from town to town in jaunty gig or phaeton, as did his brother of former days. True it is that in some remote districts, where thriving villages innocent of railways are worth 'working,' he may revive for a brief hour reminiscences of former times by driving to his field of operations in a dogcart hired from the hotel. True, also, that certain firms are said to have tried the experiment—with success, we hear, in the matter of time-saving, and travellers on certain lines of railway will easily believe it—of sending their representatives from town to town in—oh, shade of Dickens's 'Bagman'!—a motor-car. But the glories of the 'road' are gone; of the road when that Bagman told his story, and of the times when George Moore, bagman, sportsman, and philanthropist, barely saved himself and his laces from the treacherous Solway tide.

The old road is gone, and with it the old bagmen—most of them; but though the old order changeth, giving place to new, there is pleasure on the 'road'—the new road—yet for those who love a roving life and constant change of scene. There are still with us inns which are not owned by limited companies. The 'George' at Grantham is still, I believe, 'one of the best inns in England,' as it was when those two prudent 'outsides' left the Yorkshire coach and 'turned in' there, while Mr Squeers and his wondering usher and shivering pupils pursued their journey on the snow-laden vehicle. The 'Green Man' at Ashbourne is, as Mr Birrell has assured readers of Boswell, 'still an excellent inn;' though we doubt if even the most honoured of its guests now receives the hostess's 'duty' and the quaint and simple appeal for recommendation which 'M. Killingley' proffered to Johnson's good-natured friend on his departure from her hospitable door.

Perhaps of all travellers, whether bound on business or pleasure, the 'commercial' lives at his inn more nearly as travellers lived in days gone by. The ordinary traveller is now but rarely an habitual guest at any country hotel. Suppose, for example, a solicitor travelling frequently from west or north to London. A century ago, more or less, he performed the journey by coach, and probably stayed a night, if not two, on his way up and down. Now he can reach the Metropolis in a few hours, and without a single stoppage. This applies to all classes except the commercial traveller, so that

he has come to be the one visitor who may be counted upon to appear and reappear with any regularity. To the wise host, therefore, he is indeed a *persona grata*, and one whom he delighteth to honour.

And honoured the bagman is. Nowadays, when 'palatial' is a popular descriptive term with hotel proprietors—as if any sensible person would desire to inhabit a palace!—no dweller in such caravanseries is one whit more comfortable than the bagman in a well-ordered country-town hotel. He has toiled, perhaps unsuccessfully, all the winter day, and is cold, probably wet, weary, and—more than likely—cross. But the very sight of the blazing commercial-room fire would melt the heart of an iceberg. 'Boots' has his bag out of his hand before he is across the threshold; the smiling waitress rattles off a dozen tempting delicacies awaiting his selection for tea; a friend makes room for him on the hearthrug that he may thaw himself in John Bull's orthodox manner; another looks up from his meal to greet him; while a third throws 'Hullo! you here,' over his shoulder from the writing-table without lifting his flying pen from the paper.

Kaleidoscopic variety is the great feature of the commercial traveller's life. Towns, the scenery of his journeys, the manners of his customers, the faces round the evening table, form an ever-changing panorama. Of the last-named, his brothers of the bag, some will have been familiar for years, others are always fresh. Some men work their ground with such clock-work regularity that they may be relied on to reach a town, an hotel, a customer's shop even, at a given day, hour, almost minute; such a man will casually ask the 'Boots' if Mr Blank has come in yet, as though he had last seen his friend half-an-hour before, instead of perhaps half a year. But across the track of such fixed stars of the road passes a crowd of more erratic lights that appear, join in the social talk, and disappear—who, whence, or whither bound their convives of an evening know not.

Possibly there is no trade or profession which is permeated by so large-hearted and genial a brotherly feeling and camaraderie as that of which we are speaking; none in which the novice is so certain of meeting with friendly assistance and 'tips.' The bagman is probably without a rival in his freedom—comparative freedom at any rate—from the reserve and stiffness which is generally supposed to be the Englishman's special prerogative. The word 'commercial,' the bag, great or small, that by its shape, make, even the way it is carried, says 'samples' as plainly as leather can speak, are sure passwords to the freemasonry of the road. Intercourse is essentially free and easy; men

who cross each other only at intervals, who very possibly do not even know each other's names, will greet and drop forthwith into what appears to the outsider the intimacy of long-standing friendship. They part and pass from each other's recollection, till the course of time brings them to the meeting-place once more, when the thread of intimacy is picked up as a score of like ones have been picked up and dropped in the interval.

So much for the pleasures of the bagman's life; but there is sport even in his work. The haughty owner of a deer-forest, who stalks the 'antlered monarch of the waste,' would not perhaps willingly brook a comparison between the two occupations; we may more safely take refuge with a follower of the gentle craft of which a linen-draper is the great apostle. Like the angler, then, the bagman has his 'weather.' Towns and districts under a cloud of bad trade, overbuilding, and similar causes of depression will repulse him with empty order-book after many a hard day's whipping of the stream. He, too, has 'flies'—his samples—suitable for different seasons and places. It will not be always possible to forecast with certainty whether his fish will bite or even rise. He may try one 'pool' after another, only to find the occupants leagued in an apparent conspiracy to lie sulking at the bottom. 'Patience, and shuffle the cards,' says the Spanish proverb; if the angler's version of the latter part of the recommendation is 'change your flies,' the commercial's is 'change your samples.'

With the patient reader's permission the simile may be pursued further. As the fish may swallow the bait without being safely hooked, so will the shy and skittish buyer admire a sample in the most delusive manner and yet fail to 'place an order.' Then what 'playing' is needed; what apparent and gently soothing indifference, and seeming wandering from the subject; what a sensitive finger on the pulse to note every change of wavering intention! Oh, it is undoubted sport, the bagman's; and a noble quarry withal, for does he not hunt man?

There is an insignificant-looking little book, for the recovery of which, did its owner mislay it, he would likely offer more pounds than the casual finder would deem it worth pence. It is the list of his customers which he made when first taking up the ground. There are cabalistic signs against the names, whereof the meaning is known only to the possessor: of some the meaning is complimentary, at any rate from a business point of view; of some much the reverse. Probably the whole list and the information it contains are indelibly impressed on his memory by long years of reference to it; but still he values the book, and, moreover, has a wholesome dread lest unscrupulous rivals finding it should, by putting two and two together, suck no small advantage from a perusal of it. Many a name

is there inscribed over which the traveller's keen eye will soften. Memories are awakened of record orders taken, of brilliant successes after much hard fighting; perhaps of no material profit, but of some kindness shown, some useful hint given. Many travellers can tell of men who order little and seldom, but have yet been their best friends in a town, by the giving of a suggestion as to where good business might be done, or a warning of approaching disaster in certain quarters. One cannot 'take the road' day after day, year in, year out, without meeting many a rebuff, not perhaps intentionally given, but yet sufficiently galling; sometimes, indeed, downright purposeful rudeness. Not often this latter, but still—sometimes. And against such a background bright spots are easily seen.

If the traveller works a ground on which his firm has been previously represented, there are names in that little memorandum-book on which he looks with a peculiar affection: those of men with whom *he* was the first to do business for the 'house.' He could give you twenty years later full details of all his dealings with them: of his first 'call,' probably by no means coincident with his first order; how he humoured, how he sounded them, finding out slowly for himself—never a hint from his predecessor—all their likes and dislikes, their idiosyncrasies and peculiarities. With them he feels his position to be unique; *he* is all they know of the firm, of which they had perhaps never heard before seeing him. So he comes to feel a personal affection, be it only for their 'account,' a responsibility for their satisfaction and fair treatment by his 'house' that has something in it besides mere sordid love of gain.

Some of us have seen *Jedbury Junior*, the old butler who, made the recipient of the most acrimonious of messages between master and mistress, softened them in transit into 'honeyed words of sweet intent.' The task of the traveller is more delicate still; for he has not only to render palatable communications of which he is made the medium, but also finds himself called upon at a moment's notice to soften and explain away amenities which have been unwisely transmitted by letter, exchanged, as it were, 'over his head.'

However, if the bagman's occupation has its own peculiar trials, it has also compensations. There is variety even in his worries. Has he a *bête noir* on his list: a customer—and such there are—who is always primed with some complaint, some quarrel with goods or firm, which he vents on the patient buffer? Well, the *mauvais quart d'heure* is soon over, and 'Our Mr Samples' turns his back on that particular trouble for a few weeks or months. Does he meet with reverses? He always hopes to find things better at his next call—in the next town—another county.

Not perhaps the least of his benefits is that

he cannot waste much time over brooding. It is not his lot to sit idle, and consequently depressed, in office or consulting-room, waiting for the client or patient who cometh not; nor yet to stand, a weary tradesman, behind a neglected counter. The less business the more work. Brighter, if wholly superficial, must be his cheerful smile; the more fluently must he 'toll the silver iteration' as he presses home his point to ears dull and unimpressed; more deftly and swiftly must his fingers display the alluring sample. The traveller who allows anxiety and failure to invade his countenance or manner is lost. He may perhaps 'take' an order, intercepting it, as it were, on its way to the letter-box; but 'get' an order, pumping it up by sheer hard labour from the depths of the giver's reluctance, he never will.

Good manners and good feeling will carry a man or woman satisfactorily through most of life's scenes. But every class, every clique, whether born of pleasure or of business, has its shibboleths, ignorance of which will betray an outsider. There are many such small items of unwritten etiquette 'on the road.' The ordinary sojourner at a strange hotel will on his arrival ask to be accommodated with a 'bed' that night; the bagman, if he asks for anything at all, expresses his desire for a 'number.' If he knows his house, however, he goes straight to the commercial-room and makes himself at home. At the one o'clock 'commercial dinner,' too, which holds sway especially in smaller towns where restaurant accommodation is limited, a man must 'know his way about' if he wishes to pass as 'one of us.' The bagman fraternity is conservative, and holds fast to old forms and ceremonies: no small tables or dinners *à la Russe* for its members. The commercial table has a president and a vice-president, even though the smallness of the gathering should leave those officers no company to preside over. And if our supposititious stranger sees three or four gentlemen carefully keeping outside the commercial-room door as the appointed hour approaches, he will do well not to intrude himself too rashly, unless he has a passion for carving and for a conspicuous position; for, failing the presence of some one who has stayed overnight in the house, the first inside the door will be called upon to take the head of the table.

Once seated, and served with his soup or fish, he may fail at first to fathom the meaning of a very possible remark from the president: 'Gentlemen, this is a free table.' Formerly it was the custom for all the convives to share alike, not only in the price of the dinner, but also in the cost of the liquor consumed; but the spread of total abstinence, as well as the not unnatural dislike of the modest ale-drinker to pay for the more cultured taste of his neighbour who prefers wine, has led to the almost universal

fracture of this rule, and the 'freedom' of the table is now usually taken for granted.

With the cheese a couple of money-boxes and a memorandum-book are placed before the head of the table, and each diner is seen to produce a penny which the waitress collects on a salver. 'One and twopence, gentlemen; shall I divide it?' asks Mr President; and forthwith the Benevolent Fund and the Commercial Travellers' Schools at Pinner are each the better by sevenpence. It sounds trifling; but remember that at the other hotels in the same town, at all the towns in Middlesex, and in every county in England a similar collection is daily made; and it will easily be seen what advantages these deserving institutions reap from the bagman's daily penny.

'Mine Host,' as a personality, in these days of company-owned hotels managed by hirelings, is sadly shorn of his ancient glory. Next, perhaps, to the cook, that despot of hungry humanity, the traveller depends most for his comfort and peace of mind and body on the table attendant—usually a waitress except at large houses—and that all-important functionary 'Boots.' More especially is the latter's capability of consequence to the man who carries large and many samples. 'Boots' will select for him that out-porter who will most briskly wheel his colossal pile of cases or 'skeps' from shop to shop. Railway time-tables are at his finger-ends. Nor does his utility stop here. He knows all the gossip of the town, while that of the 'road' flows to him in countless streamlets from the ever-passing guests, and forms an olla-podrida of information from which he can generally make a selection to suit all comers. Where a man has earned a reputation for reliability and promptness, many a traveller would prefer to find a new and unfamiliar house awaiting him at the end of his day's work to the shock of encountering a fresh 'Boots.'

The waitress, too, is no mere machine to fetch and carry; and it would rarely be possible to class her as 'dumb.' She usually knows her charges' tastes well; but it is not often that her care for their creature comforts carries her as far as in the following case—a story which is vouched for as authentic. At a certain hotel in a county town of the west country was an Irish waitress of a passionate but withal kindly temper. To her enter one evening an habitué of the commercial-room who bespoke a 'cod-steak' for his tea. 'Lucy' took the order without demur, and withdrew, but presently reappeared. The gentleman, who was somewhat deaf, was by this time deep in his newspaper. 'Listen,' said the daughter of Erin, shaking him by the arm to attract his attention; 'ye'll not have cod-steak. I've ordered a chop instead.' 'What on earth for, Lucy?' asked the naturally astonished guest. 'Because it'll do ye more

good.' The bagman paused; he felt rebellious, but he also knew that he would 'feel' Lucy's thwarted temper if he joined issue on the question. So Lucy's selection from the larder was consumed as meekly as by any 'Mr Henpeck' of the comic papers.

It doubtless goes without saying that the number of commercial travellers on the road has increased many-fold during the last half-century; but it is equally certain that the relative importance of all but a very small proportion of the number has greatly decreased. The reason of this, at any rate in the case of that large and ever-increasing class of goods which bear a known name or patented brand and are termed proprietary, is told in one word: advertisement. The 'catch-the-eye' poster, whether artistically attractive or painfully so, which faces us on the hoarding, at the railway station, even in the quiet fields; the leaflet which falls out of our new magazine or review: these are more silent yet more effective ambassadors of business than the most fluent and persuasive of commercials. The bagman proper can only reach the tradesman, who is after all

but a middleman. The advertisement steals its insidious way into the heart and home of the consumer. There can be but one result: the general public buys what it hears most talked about and sees most flaunted, whether it is a mowing-machine or a bottle of sauce.

However, the hotelkeeper, to whom the commercial traveller is an undoubted 'object of interest,' and others of us who may perhaps be still more reasonably anxious for his survival, need not fear his immediate disappearance from our midst. We do not all drink 'proprietary' tea and coffee as yet; and our wives will probably decline for many a long day to wear frocks on each length of which the maker's name appears. It is unlikely that engagement-rings and other love-tokens bearing such a brand, say, as 'Goldman's Unbreakable Guinea Binder' will win a swift way to popularity. Not yet will the 'commercial-room' be of the past. The evening tea-table will still hear the universal complaint as to the badness of trade, mixed with the chorus of cheerful joke and repartee which no trade seems bad enough to silence. And we are glad of it.

## HOW EDITORS SAY 'NO.'

It is related of a well-known author that he decorated the walls of his workroom with printed slips of editorial regret in order to 'keep himself humble.' Following his excellent lead, the writer of this little chronicle has formed an interesting collection of miscellaneous 'No, thank you' slips—the result of many unsuccessful attempts to dispose of literary wares.

Rejected contributions are usually sent back accompanied by a printed paper formally stating that 'the Editor regrets that he is unable to make use of the enclosed contribution, for the kind offer of which he is much obliged.'

Much obliged indeed! This Editor, would you believe it, is so much obliged, and his regrets so keen, that the 'enclosed contribution' is used by him as a scribbling-block, by the sub-editor as a blotting-pad, and finally by the office-boy as a convenient register for thumb-marks. This, however, I am bound to say, is on the whole an exception; but it remains a fact, of course, that the thanks and professed regrets are mainly mythical. If the 'kindly offered contribution' is not suitable, then the sooner it is removed from the litter on his desk the better is the Editor pleased.

In this connection a rather curious fact may be noted. In order to secure the prompt return of an unsuitable contribution it is better that the author be inexperienced and that his contribution be exceptionally bad. Then, in the first

place, he will write a weak article; and, secondly, he will send it to the wrong paper. The poor article, naked in its incongruity, will not even pass through the advance pickets without instant detection. It will be promptly returned. If, on the other hand, the contribution is of itself good, but not immediately suitable, it may be many months before the unfortunate author gets it back again. Probably it is pigeon-holed, and as promptly forgotten. When, in the course of time, the manuscript is again discovered, the chances are that it is then out of date. Back it goes 'with the Editor's compliments, thanks, and—regrets.'

Among the very first papers I decided to storm with serried literature were the *Times* and *Punch*. Such is the splendid audacity of youth, inexperience, and mediocrity! The *Times*, I had read somewhere, paid five guineas for a column article; and *Punch*, I knew from a friend, gave half-a-guinea for bad puns—at least his were inexpressible. From the former I received a variation on the usual hypocritical formula; but from the latter, my first indication that the Editor is a personality and not merely a printing-press automaton. The communication, neatly written and initialed by Mr Burnand, the genial Editor, was as follows: 'Whenever you may happen to send anything on approval or otherwise to *Punch*, please observe the above printed and published conditions, otherwise it will be understood that the manuscript is not expected to be returned whether the article be used or not.—F. C. B.'

Inasmuch as the contribution consisted only of a poor joke expressed in two lines, and with which I had naturally not enclosed a stamped envelope for return, the warning and kind return struck me as being particularly courteous. However, this, as I found, was only an exception, as *Punch*, when returning manuscript in the usual way, dispenses with even the scant courtesy of printed acknowledgment.

However, there are other virtues in saying 'No,' and chief among them is to say 'No' quickly. The majority of the daily papers are quick in speeding the rejected, although in some cases they do not return manuscript at all. Allied to the latter class are one or two rather dull old weeklies, their motto being, 'No contributions returned under any circumstances.' Such papers, written by a staff and clique, usually present a monotonous sameness, and certainly owe their existence more to name and reputation than to present-day activity and attractiveness. Monthly magazines are usually long in deciding, and the majority of weekly popular journals uncertain and often inconsiderate. The following occurs to me as an instance: Some two months before last United States Presidential Election I prepared a pithy paper on the subject, and shortly afterwards submitted it to a certain journal, together with a stamped and addressed envelope for return in case of rejection. Six weeks passed, and I was counting my cheques, when, two days before the event, a shabby manuscript crawled shamefacedly into my letter-box. The trick was done. There was no time to get it retyped, and, as in the meantime several similar articles had been published, there was no chance whatever of the ragged return being placed elsewhere. If in the meantime my article has not been used to light fires with, it will be four years before it again becomes available. Such are the minor catastrophes caused by inconsiderate Editors. Of course it was probably a mistake, an oversight of the 'sorry-your-article-got-mislaid' order: it always is.

At the moment of writing, one of my articles is celebrating the first anniversary of its stay at certain editorial offices; and nothing less than a solicitor's letter, I am advised, will get me news of it. On another occasion I had a contribution kept without any acknowledgment for exactly a twelvemonth, then published and paid for. This is the sort of delay that one is more readily inclined to forgive. It is wonderful what a soothing effect a compact little cheque exercises. Inasmuch as I had long since given up the little brain-child for lost, it was indeed a pleasant surprise.

I wonder if Editors and managers ever consider that their treatment of correspondents must affect them proportionately. There is a journal, for instance, to which I would under no consideration submit material—the result, of course, of bad treatment received. As a single instance,

this I must admit is a laughable matter—one poor little journalistic worm on the turn! It is almost pathetic. But consider: one multiplied by an unknown factor may mean all the difference between securing entirely suitable matter and fairly suitable matter, between a rich choice of articles and a poor choice.

There are published in London three weekly journals boasting a combined circulation of nearly two million copies a week. They give the same rates of remuneration, and are severally run on almost exactly similar lines. It has happened to me very frequently that what one of these journals rejects is gratefully accepted by the other. I now come to the point. The Editor of No. 1 journal is careful and prompt with submitted contributions; he accepts and rejects alike quickly and courteously. The Editor of No. 2 journal thinks a month or two in accepting; but he rejects on the whole more quickly. The Editor (speakingly collectively in all three cases, of course) of No. 3 journal is lax and uncertain with all contributions. Is it to be wondered at that No. 1 journal has first choice among all suitable articles written by the person who has experienced the different business methods of the three? No. 3, of course, is only made use of as a last expedient. I regard it as a dumping-ground for rubbish—rubbish, by the way, which is not infrequently thankfully accepted. I know that the citation of this, a single personal instance, must seem incongruous; but I believe and maintain that, on the whole and in the mass, the policy of a paper in this respect must influence it in the manner briefly indicated. At any rate, there is consolation in cherishing the belief that editorial sins are in this way revisited upon them.

'Dear, dear, what a fuss and worry all about nothing!' I hear some reader exclaim. For this reader's benefit, then, let us find a commercial parallel. Supposing you were to send a tradesman a ten-pound note to open a deposit account. Supposing that he never acknowledged its receipt until after six months; or that he returned it after six months, having made no communication whatever to you in the meanwhile; or that—! But the whole thing would be impossible in commercial circles. Not so among the tradesmen in literary wares. At this moment I have at least ten pounds' worth—this is the market value I paid for them—of photographs and drawings out among various press tradesmen; some have been kept for a year, some for less, but none for less than a month. Of each and all these, accompanied by letterpress upon which I hesitate to place any money value, I have received no single word of acknowledgment! Nor am I to expect any, for this is apparently a recognised proceeding. As for writing letters of inquiry—well, one may as well put a note in the wastepaper-basket, and have done with it at once.

Now for a few variations on the eternal editorial theme. The following is a very crafty, tactful specimen: 'I have read your brightly written story with pleasure, but regret I have to return it, as I don't think it quite suitable for *The* —. Hoping my inability to purchase the manuscript will not deter you from giving shelter to an occasional copy of *The* —, and thanking you in anticipation, I am,' &c.

So much for an Editor who has learnt the besetting weakness of writers, and makes good use of it. Let us turn to one who shows a keen sense of humour. Quite recently I sent out to a popular weekly paper an article describing a new and peculiar railway. The report, labouring under the disadvantage of being without pictorial representation, became somewhat involved. It certainly sounded all very wonderful and impossible. The account of the very marvellous engineering exploit was returned to me, and with it the following printed slip: 'The Editor regrets that he is unable to make use of the enclosed. All arrangements for fiction have been made far ahead.' This was unkind. However, I can well afford to smile over the neatly veiled imputation, as I was subsequently able to place different accounts of the *fiction* with no less than four high-class London journals.

One of the illustrated weeklies makes a point of not wounding the tender susceptibilities of its contributors, as in the following manner: 'In returning the enclosed, the Editor begs to point out that such rejection does not imply lack of merit in the contribution, but merely that it is not available for his paper. In order, therefore, that it may be placed elsewhere, he returns it without undue delay.'

Here is rather a neat way of choking off unwelcome contributors; it is of the sort that would accompany totally unsuitable matter. The contributor is politely warned off the premises till further notice: 'In consequence of a vast accumulation of manuscripts of every description, the Editor is regretfully obliged to return the accompanying. He will be unable to accept further contributions for some months to come.'

The 'no space' apology is very often used by those minor journals that cannot so readily afford to be discourteous to correspondents and possible subscribers. The following is a specimen, and it is amusing that it emanates from a large, dull, eight-page local journal mostly filled with cuttings and advertisements: 'I should like your interesting article; but my space is so limited [!] that I could not use it. With best thanks for offer,' &c.

An American humourist suggests that, as a counterblast to Editors' return forms, the following printed circular might be sent on the return of a manuscript:

'The Author regrets the editor's inability to

appreciate a truly good thing. The rejection of a manuscript, however, does not necessarily imply that the editor is lacking in merit, merely that he is lacking in judgment. As many thousand manuscripts are returned to him annually, the Author cannot enter into correspondence with each editor personally concerning the deficiencies of his taste. Nor can the Author give his reasons for considering the editor blind to the best interests of his magazine. THE AUTHOR (per himself).'

This exquisite piece of humour—from the New York *Life*—will be best appreciated by those numbered among the great rejected.

Very frequently contributions just miss being quite acceptable, in which case the bald editorial regret is qualified by a hastily scrawled note, of which these are examples: 'If you could submit something of the kind next spring I might use it. Just now it is all *war*.'

'Enclosed good and facty, but is unfortunately out of date.'

'I cannot accept your "American N——;" but if you care to submit one of "English N——," I might be able to use it.'

To recapitulate the weary round of thanks and of compliments and of regrets formed in the collection would be both impolitic and monotonous. There they all are in my drawer, a jumbled litter—the *Times* regret, and the *Comic Bits* regret, and the *Technical Monthly* regret—a ghostly collection of empty, shuffled words: phantoms of cherished little hopes that were as suddenly and brutally crushed, of bright little pleasures of the moment's gained desire.

Come! we will close this drawer of musty memory; we will press our lips tighter together; we will bend over the virgin white of fresh foolscap, and perhaps—who can tell?—our next paper may sound a paean in praise of editorial benevolence, beneficence, and courtesy; may sing of the times when Editors accept, pay, and are pleasant; may describe, in short, 'How Editors say "Yes."'

#### DECLINED WITH THANKS.

THERE are three words that haunt my way,  
And break my rest by night and day.  
Wouldst know them, reader? These are they:  
'Declined with thanks.'

I wooed a proud and lovely dame—  
I trow you would have done the same—  
Alas! her answer quickly came:  
'Declined with thanks.'

I had a longing once to be  
What may be briefly styled M.P.;  
But, ah! they would have none of me:  
'Declined with thanks.'

I send this in, with deep-drawn sigh,  
To greet the editorial eye,  
Waiting the wearisome reply:  
'Declined with thanks.'

V. I. LONGMAN.

## SIXTH SERIES.

### THE SALVING OF THE 'SENATOR.'

I.

**T**HE ice-coated tramp slouched under her wheezing machinery through the gray seas and the dirty drizzle at an indifferent speed, and at three-minute intervals her siren howled dismally into the mists to give warning of her approach. Her second mate, sumptuously clad in oilskins and leather sea-boots—the trade-mark of the North Atlantic mariner—dodged the sprays that licked the bridge and stared fiercely into the weather. Surely, he thought, this kind of atmosphere was enough to put any Christian out of temper. This, however, was not the first cause of his ill-feeling; and, finding nothing more sociable on the bridge than the ice-streamed ledge of the canvas dodger, to it he addressed his misery:

'A second mate contemplating marriage on seven pounds per month! Well, that's all right so far as it goes; but a second mate designing matrimony on the same seven, who has proposed already to his girl, and then finds all the chances of sack from his job, is all very wrong so far as it goes—and it goes the dickens of a way.'

Walters sniffed the cold air sententiously, and tried to forget the hardness Fate held in store for him by zealously fixing his attention and eyes on the fog, and, by way of easing his feelings, viciously pulling the whistle-string, which sent discords of hideous music madly shrieking over the dark swells; but that first cause would return and be reasoned with. 'So you've got to do it—you've got to give her up,' it said; and at these especial moments the wish of the second mate was that a gray-bearded roller would wash him overboard into the Western Ocean and eternity. Then his uttermost thought was to treat himself to a good, sensible, all-round kicking; for a seaman, he believed, had no claim to sentiment. 'I wonder if that yarn's true the old man told me; if so, pack up your chest and trot, Mister Walters, when you're paid off at Newcastle.'

Thus, in uncomfortable thought-company his

hours of the watch slid by, and then the foreteller of Walters's bad luck cautiously scaled the bridge-ladder and groped along the slippery bridge to the compass.

Captain Larry glared savagely into the eye of the exasperating weather, and, crunching a block of ice underfoot, volleyed to Walters: 'Hang the eternal bad chances that dog us like hungry wolves! Hang the bad weather! Hang all! Put the engines "full ahead" and God bless the Board o' Trade Regulations. We've been steaming slow for three whole days, and the owner'll be everlastingly chewing the rag about his condemned tramp of tramps and her most unfortunate skipper of skippers. It's enough to make a man bald! I'm grayed already, and the sooner I go underground the sooner I'll pass from this vale of misery to a brighter beyond.'

Walters appreciated the sentiments of the master-mariner, and grinned; while with a willing hand he telegraphed the order received to the engineer on watch in the engine-room, and some time later the old tramp vibrated heavily to the new strain, and accomplished her racing speed of a few yards under seven and a half knots.

Larry watched the leaden seas hurl past with a face broadening to contentment. 'Lord! how she can go when she likes!' he commented. 'The engineer despises his bonus this voyage.'

Then the soaking nor'-west drizzle spat spitefully upon Captain Larry, which caused him to crouch under cover of the weather-dodger. Walters, in answer to Larry's bidding, spread sheets of torturing music about the seas with a generous hand. This generosity was necessary—very necessary.

That he was running tremendous risks no one knew better than the captain of the *Masterpiece*, for a steamboat's engines working 'full ahead' are as a rule very refractory to go astern at a moment's notice. The speed of 'full ahead' is a detail out of consideration. The ship was in the 'great circle' track adopted by the Western Ocean

OCT. 18, 1902.

[All Rights Reserved.]

liners that plough it on a line correct as railway running. Moreover, Larry was acting in due contravention of the international law that says: 'In fog . . . all ships shall go at a moderate speed;' which means something below their average 'full.' Still, a tramp skipper cannot serve two masters, and Larry explained this to Walters, while both mariners said bitter things about sea-going and wiped the brine with mittened hands from their faces.

'We've two enemies to fight,' began the skipper. 'If we get into collision by steaming fast, I lose my ticket from the Board o' Trade. If I avert collision by steaming slow (granted the owner is able to meet creditors and keep his ship), I thus come late to port and get bundled out neck and crop, without thanks. So where's the odds? I lose my job in any event. But this is a special case. The owner's in bad straits, beating through 'em with Dutchmen's anchors.' Dutchmen's anchors, by the way, are those left at home.

Larry came confidentially close to Walters; and the second mate prepared himself to listen heroically to a story he now knew by heart.

'They're in debt for two thousand pounds, and can't raise it. They're young in shipping circles, and not well enough known at Lloyd's to obtain a loan; but they've got to raise the breeze somehow; and, so far as I can see, that somehow consists in selling up the ship. As a result, I go, you go, we all go. And I'm sorry for you and the girl. I'd advise you to write her from New York, and offer arbitration—patience. And if she's a good un—and there's 'eaps of 'em on the Tyne: I know a particularly nice one—she'll accept and wait. Otherwise, Mister Walters, overboard you go, and good riddance. If the girl clings to a straw'—Walters grinned—'and the worst happens—which is likely—why, you may perhaps pick up a job as a Methodist parson or a farmer, or go organ-grinding until you get your hand in, and then you know—oh! it's only a dream—start on your own with organs and monkeys and ice-cream carts; so with the girl's help (she'd mix the ice-cream) you might set up a kind of indiscriminate confectionery business, and have a plate over the shop with your name in gilt letters as large as those on the bows of the *Masterpiece*.'

Now Walters, unlike most men who hire the sea for a living, had no ambition outside his work. Besides, his ideas concerning shore-labour were just as sublimely foggy as those expressed by the master-mariner. Apart from that, during most of the time the steamship *Masterpiece* had kicked up her heels sky-high in the North Atlantic, Walters had served her in the capacity of second mate. For three voyages he had shipped as mate; still permanent promotion seemed a long way distant; but he never wavered in faith to her or her owner, though, to use his own expression of endearment, she was a 'hog' of a steamboat. He was proud of her, mightily proud of himself,

and prouder still to think of the day he should be her master on fifteen pounds per month and all he could fudge; but that woeful tale of debt dissipated all his happy thoughts of a rather gilded future, and dear-heart Nellie seemed to fade out of his life. He looked sourly upwards at the streaming blanket that cut short daylight, and listened to the spiteful siren blasts, and the echoes that came as the answering screech of an ocean sister playing in the game of Atlantic 'blind man's buff.'

Captain Larry further expounded the case of the financially struggling tramp. 'I know,' he said, 'the owner has some relation or other who has plenty of cash; but they're at loggerheads, and therefore wouldn't help each other if either were on the edge of the precipice of ruin. You know what relations are, Mister Walters, in these matters. I see nothing for it but a clean wipe-out for all hands, unless a very strange stranger steps in and saves the old wagon, and thus gives the vermin who eke a subsistence out of her beef and biscuits to rivet their bodies and souls.'

## II.

**T**HAT speedy conclusion of Captain Larry to disregard deep-sea rules was as quickly overridden. A big Cunarder was the cause; and a great scare, many maledictions, and the adoption of extreme caution aboard the *Masterpiece* the effect. The liner fled past the tramp's beam scarce a ship's-length distant, and her myriad electric lights flashed through the mist like those of a brilliantly lit town; she gave a tearing shriek on her quadruple siren, and then there came darkness all about, and the tramp was once more left to her own miserable cogitations. Larry reduced speed, and for seven days the steamer dragged wearily forward, and needled a course past the 'Banks.'

It was well for the ship and her crew that Larry took this action, for vessels sailed out of the gloom from all directions, sometimes barely leaving time for the *Masterpiece* to get out of collision-reach.

To Larry, through all those miserable seven days there loomed in the murky mists the apparition of a crying, angry owner, till at last the distracted skipper spoke with the engineer. Then that gentleman, having an affectionate spouse in New York, and understanding his business, manfully drove the big tramp at her best; going, indeed, like half the steamers she shaved past, especially the mail-boats, who should have known better even if they had excusably less conscience. 'Unless this dirty fog stretches from Heaven to Hades we'll run out of it,' was Larry's comment to the engineer.

So the 'white elephant' bumped over the swells under one hundred and fifty pounds pressure of steam and a lying telegraph. True enough they

ran out of the fog; and when the skipper boarded the bridge at three o'clock the next morning he found overhead a cheerful wintry sky powdered with dots of twinkling yellow, the air clear and sharp as crystal, and the wind whistling somewhat freshly out of the west-nor-west. Larry dropped into the chart-room, noted the barometer, and came afterwards to Walters, making no comment for a time, and staring gloomily into the west-nor-west, out of which rolled an ugly swell.

He broke out at last. 'Three weeks of torment,' he said fiercely; 'freight dwindling to the Lord knows where; a picture of my owner with his boots ready to do business with me at the end of the voyage, and yet the Atlantic isn't satisfied. Why doesn't it drown us outright? We no sooner clear the fog than we get the promise of a rousing gale. Are we ever to reach New York?'

'It's not impossible,' replied Walters. 'Old Howie says we've coal for three weeks' steaming.'

Larry did not resent this banter from his subordinate; for the skipper had hurled it at the tramp wholesale since the time of her advent from the yard. It was whispered that even her builders swore mildly under their breath as they watched her day unto day increase into uglier dimensions, and made prophecies and took affidavits for a tremendous coal consumption; and when Larry took her over on the Clyde at her christening he complimented the master-builder severely: 'The man who designed her, sir, is a genius; but the man who can rivet lobster-cans into a more horrible shape is a marvel.' And even the builder forgave the captain for speaking the truth. That is a part of her past history. At present she executed an extremely lively movement by taking a half-turn out of herself, and then ducked her bow and shipped a huge sea over her fore-castle that cataracted six feet deep in the well of the fore-deck, while the sprays lashed up and white-curtained the bridge and its crew, and snaked about the funnel and brined it so that the great iron structure glistened like a huge sheet of diamonds.

Larry and Walters shook the sea from their oilskins, and when the water seethed off the bridge, settled into the weather-corner for a quiet, contented growl; so that there was some consolation in the bad weather and the worse tramp.

'She's a blessing in disguise,' said Larry, grinning.

'Yes?' questioned Walters. 'But undoubtedly under any other raiment she's anything but a blessing.'

'Come to think of it,' philosophised Larry, 'it does my tar-pot soul good to have a bit of experience like this.'

'You are destined, sir, to be a martyr,' said the second mate.

'On the contrary, I'd like to be a seaman's agitator. I'm seriously thinking of starting a society, and spouting mercantile marine politics

on the top of a beef-cask at the back of the Liverpool Sailors' Home.

'Flock to my banner, O Brethren of the Sea!

And list to what a land-shark has to spout to thee!'

'That's prime, sir,' said Walters. 'Did you decompose all that at once?'

'Mere impromptoo,' laughed the skipper.

At this moment both men stared hard ahead; the next they dived amidships and secured binoculars from a teakwood box. And by-and-by, when the *Masterpiece* lifted, on the dark water there reflected a cloud of brilliant blue and yellow, shot with the seething white of the sea-crests; and, lastly, over the great seas the light itself hove up and revealed a distressed steamer.

'Salvation!' muttered Walters. 'Funnel white, top black; three sticks well raked. Can't distinguish the hull. But I'll call her a White Star liner—bless her!'

'Oil,' said Larry; 'struck oil, mister, I think; good iron all right!'

Then everything was lost to view; a sea tumbled over the bridge, and remnants became solidified into icicles in the tramp's rigging; but Walters resented the merciless wet not an atom. The old *Masterpiece* was for the nonce a confectioner's shop, and her bridge the counter, and somewhere about was dear-heart Nellie.

Meantime the steamer dived painfully on her zigzag course towards the signalling ship. Now she topped a mountain-surge, and now she raced madly down the great sea-wall into the trough, only to climb the next roller half-way and grope blindly through, while the enraged seas poured over her bulwarks. Once, as she mounted to the encounter, the bridge-crew observed another flare of light.

'They seem to be in a desperate hurry to leave the ship,' said Larry, with falling heart. 'My firm can't afford to blow off squibs as if it were a Guy Fawkes exhibition; so give a blast on the whistle, mister, as answer to her signal.'

Aggravatingly slow the *Masterpiece* crawled onwards, at times taking exception, when she gathered heart and speed and split the seas with abandon, and rent them into scud; then rose, her great iron body all aquiver, and the smoke of the broken water flinging in song to her lower mast-heads.

Through all this the captain and his second officer played hide-and-seek, and caught occasional glimpses of the lurching redemption ahead. The weather enjoyed the game, and grew fiercer; but the tramp struggled boldly, casting her nose skywards, and then heaving her bows deep, deep down into the Atlantic, while her stern hung high and dry in air, with the propeller wildly beating to the hysterical machinery that at every upheaval threatened to put an end to the steamer and her torture.

To Walters the staggering situation appealed strongly. He was in for 'neck or nothing,' but

was still buoyed with a faint hope of reaching New York with a whole skin in a whole ship. He spoke his thoughts: 'Hadrn't we better ease her down, else we may totally break up?'

The tramp's skipper eyed Walters savagely.

'Are we to give up now,' he cried, 'at the auspicious moment, and sling away wilfully the chance of making a few chips? What about the ice-cream bar? If this old box wants us to attend

her funeral, let it be so, and be hanged to her!' He pointed to a position where the other steamer lay hid deep in a seaway. 'Perhaps you'll be able to accomplish something great, mister. Don't let the chance by.'

So the tramp had to battle forward, and an angry sea sprang up by way of retort, and soaked and bruised against the wheel the man who had set her at defiance.

## THE MAKING OF DIAMONDS.

**I**T has been the custom to describe anything of unusual excellence as being 'worth its weight in gold.' It would give far greater force to such an estimate if for gold we were to say diamonds, for a diamond of even moderate size is worth many thousand times its weight in the precious metal. A gem which was exhibited not long ago in London, one of the finest ever yielded by prolific Kimberley, was valued by experts at two hundred thousand pounds, a sum which in gold would weigh just about two tons. The value of the gem becomes more strikingly apparent when we reflect that it weighed little more than an ounce, and could easily be hidden in a corner of the waistcoat-pocket, while its equivalent in gold would require for its portorage a trolley and a couple of strong horses.

Pliny, in his *Natural History*, speaks of the diamond as being the most valuable thing on earth, and as being of such indomitable hardness that if placed on an anvil and struck with a hammer the gem will remain uninjured, whilst the anvil and hammer will be split to pieces. Pliny also asserts that the diamond is incapable of being burnt. The world would have been richer in diamonds to-day had Pliny and his disciples been a little more particular in verifying their statements; for long after his time it became the custom to test the genuineness of a diamond by the hammer, and many valuable gems were thus reduced to fragments. A diamond is certainly very hard, but it is also brittle; and evidently Pliny and his followers could not distinguish between these two entirely different properties. Nor is the old philosopher more accurate when he speaks of the diamond being incombustible, for, as we shall presently see, it quickly yields to the action of fire. Many fine gems in past times have been destroyed in the attempt to show that they would stand the ordeal of fire, and many of smaller size have been sacrificed in the chemist's laboratory in the endeavour to discover the nature of the beautiful gem-stone.

It is now known to every one that the lustrous diamond is simply carbon in transparent crystalline form; and it is by no means difficult to put the

matter to the test of direct experiment if we are content to sacrifice a small gem in the operation. A glass flask is filled with oxygen, except for an ounce or two of clear lime-water, which is allowed to remain at the bottom of the vessel. The diamond to be tested is held in a tiny cage of platinum-wire, which is attached to two thicker wires that extend through the cork of the flask and are connected outside it with an electric battery. Directly the circuit is completed the diamond bursts into flame and ultimately disappears, while the lime-water becomes milky through the action of the carbonic acid formed by the union of the carbon and the oxygen. Precisely the same effect is produced if for the diamond we substitute a piece of charcoal or other form of carbon. In this way the chemist is able to assert most positively that the valuable diamond is identical in composition with one of the commonest elements known. The glittering stone which has been always identified with all that is princely and magnificent has, after all, only a very humble parentage. Its brother is the piece of coal that tumbles unheeded out of the fire-grate on to the hearth. The possibility of reversing the experiment which has been just described, by taking the charcoal and turning it into the crystalline form, has naturally occurred to many minds; but it is a problem by no means easy to solve. However, as we shall presently see, the task is by no means an impossible one.

The beauty and great value of diamonds have from the earliest times fired the imagination of writers. Sindbad the Sailor found himself in a valley where these gems strewed the earth instead of ordinary pebbles; and it will be remembered that Aladdin was conducted by his pseudo-uncle, the wicked magician, to a subterranean garden where the petals of the flowers were formed of brilliants. The chemist is the magician of to-day, and to his laboratory must we look for the production of diamonds, if they can be produced artificially.

The manufacture of imitation gem-stones was long ago carried to great perfection, and there are shops in most large cities where these are artfully displayed near hidden electric lights so as to make a brave show. Any gems can be well imitated in

what is known as 'strass,' which is a peculiar kind of glass of high reflective power. Imitation gems are also made of the different varieties of quartz; but the best of these fall very far short of the beauty of the diamond, and there are simple tests which at once reveal their true nature. Those who are hoping to reproduce in the laboratory the true diamond have no thought of these acknowledged imitations; they aim at making artificially a veritable diamond which is identical with the natural product in hardness, in specific gravity, and in resisting the action of acids.

We have seen how the chemist is able to analyse a substance. Wonderful is it to reflect that he can take a thing of complex composition and can tell us not only what are its constituents, but can give us the proportion of each one of them. Still more wonderful does it seem that he can in many cases build up those constituents so as to form a natural product artificially. To give only two instances of the chemist's power in this direction, we may name madder and indigo, the production of which in the laboratory has had the effect of revolutionising two important industries. It would seem a comparatively easy matter to induce charcoal to assume the crystalline form, and thus to make diamonds; but Dame Nature does not reveal her secrets too easily. Those who would win her confidence must study her methods and work hard, and even then she is most grudging of her benevolence.

About twenty years ago much excitement was aroused by the report that Mr J. B. Hannay, of Glasgow, had actually succeeded in making diamonds. Acting on the belief which is general among chemists that these gems are formed in Nature's laboratory by the joint action of great heat and immense pressure, he enclosed carbonaceous substances in a strong wrought-iron tube, which was closed at both ends, and submitted it for some hours to the fierce heat of a reverberatory furnace. In many cases the tube burst under the ordeal; but occasionally one was found to withstand the treatment, and it was subsequently cooled and sawn asunder. Within it was found a dark mass of hard carbon, together with some tiny crystals which were said to be diamonds; but they were quite useless from the jeweller's point of view, so microscopic were they in dimension. Even if they had been big enough for use as gems, the cost of their production would have been far beyond their actual value. The report that diamonds had been thus manufactured doubtless caused some uneasiness among the dealers and owners of gems; but when it was found that the artificial gems had no commercial value the scare was forgotten. Nothing has since been heard of Mr Hannay's experiments.

The Glasgow experimentalist was handicapped in his efforts to produce the diamond by being unacquainted with the nature of its matrix or

mother-rock. This is now believed to be the blue ground in which it is found at the South African mines, to which rock the name 'kimberlite' has been given. In the surrounding rocks a black shale (a form of carbon) is found; and it is noteworthy that pieces of this shale which have been altered by heat are found in the blue ground or kimberlite. It would thus seem to be possible, to some extent, to trace the conversion of the carbon of the shale into the crystalline form, the process having probably occurred deep down in the earth under high temperature and great pressure; for the huge pockets or 'pipes' in which the blue diamond-studded ground is found are the vents of extinct volcanoes.

The next one to take up the tale of experiment with carbon with a view to produce diamonds was M. Moissan, the French chemist, who is celebrated among other achievements for his success in isolating the element fluorine. He, too, determined to try the effect of intense heat and high pressure, his method of procedure being as novel as it was ingenious. Carbon, unlike easily crystallisable bodies, is insoluble in all ordinary solvents; but, as is well known, molten metals will combine with it. Bessemer steel, for example, is made by decarbonising iron and then adding to it a measured quantity of carbon. M. Moissan used iron as solvent for charcoal, melting the iron in the electric furnace and allowing it to take up as much of the carbon as it could—in other words, to saturate itself with carbon. The crucible in which the white-hot metal was contained was then plunged into a bath of molten lead, with the result that globules of the iron rose to the surface of the lead and were quickly cooled on their outer surface. Inside the hard crust the iron remained for some time in a molten condition; and, as iron expands on solidifying, the contents of those little globules were subjected to a pressure possibly not attainable by any other means. In due time the lead solidified, and bound up in its mass were several of these bullets of iron, the interior condition of which it became desirable to examine. By the action of powerful acids, first the lead and then the enclosed iron globules were dissolved, leaving a residue of carbonaceous matter which contained tiny crystals. These crystals were determined by careful tests to be true diamonds; but as the largest of them measured less than one-fiftieth of an inch in diameter, they cannot be said to have any commercial value.

It may be mentioned here that true rubies, sapphires, and some of the other gem-stones so highly valued as jewels have also been produced in the chemist's laboratory, and that such stones, although not large enough to be set in finger-rings, are much used for watch movements.

From the scientific standpoint the chemist is

content to have mastered a very difficult undertaking. It is a great triumph for him to have actually reproduced these wondrous flowers of the mineral world. As to the mere size of the crystals, that does not trouble him; he is content to know that they are true to nature. There

are thousands of persons in this world interested in keeping up the market price of diamonds, who are most fervently hoping that the chemist will continue to regard his successful efforts in the making of gem-stones from the same academic point of view.

## THE LAW LORD AND LESLEY.

### CHAPTER V.

BARHULICAN remained shut and deserted for long after that eventful Sunday. The fish had it all their own way in the Glen Raith reaches of the river, for the Law lord, for whose whims so many of their brethren had suffered and died, was engaged in another and more serious quest; though it, too, was concerned with life and death.

On the mountains the bracken was spreading strong and thick and green in vast irregular patches, interspersed with heather, and the whole of nature seemed to be toning up for the great summer festival of colour: the purple and golden pageant of a hundred glorious sunsets rolled into one.

In the manse garden the apple-blossom had all been blown away by a day of April storm, and the first delicate green of the foliage had ripened into a more sombre shade which somehow made the tints of autumn seem not so impossible after all.

'Winter is coming,' said Lesley over and over again to herself with set purpose, forgetting that the summer had yet to have its day; but she had lost faith in summers lately. To outsiders she appeared wrapped in a perpetual brown-study; as a matter of fact she was sternly preparing herself for sacrifice. The one thing in which she evinced any interest, outside her own thoughts, were the daily papers, and these she devoured late and early, carrying them by stealth to her own room, and there reading and re-reading certain passages again and again. She flattered herself that her unusual zeal passed unnoticed by any member of the little household, and as far as the minister was concerned she was right in her conjecture; but she had forgotten to take into account the shrewd, watchful eyes of old Elspeth, who let no slightest action of her adored young mistress go unheeded.

At first the old woman was sorely perplexed to find the motive of her sudden and mysterious interest in the affairs of the outside world; but she was not long in formulating her suspicions, and then came the question in whom to confide them. For some time she was torn with doubts as to whether it was her duty to lay the case before the minister; but her better wisdom bade her refrain, and at last one day,

in desperation, she sat down and unburdened her soul in a short though pointed epistle to Mr John in Edinburgh. She wrote:

'DEAR MR JOHN,—There's a sair change in Miss Lesley this last month, and I misdoot me it's that deil o' a Law lord that's done it. Ye ken the trial o' that muckle murderess Jane Silence, that's on in the Courts juist now, and that Coalstoun's the Judge, and how the papers are fu' o' the evidence and the smart sayin's o' his deil's lordship? Miss Lesley's aye devourin' them, and I ken fine it's no' oot o' peety for the prisoner, puir vile sinner that she is! Noo, ye'll likely laugh at my suspecions; but maybe if ye'd seen the grand buik that cam' for the lassie last mornin', a' dinkit oot wi' green ribbons and sic-like clamjamphrie, frae Edinburgh, ye'd think seriously enouch o' the maitter.

'It's got his name forenent, and a dinna forget sort o' motto below, wi' the date o' the widdy's concert, and a' manner o' Scottish sangs intill't; sic-like daffin', and him busy a' he kens blastin' the soul o' the unfortunate Silence critter! Ye'll kindly mak' no mention o' this, for it was by a chance happenin' it cam' under my notice.—Your respectful and loving

'ELSPETH MACROBIN.'

Unconscious of the betrayal of her secret, Lesley continued to make for herself a graven image in the likeness of heroic justice. All her thoughts were centred at this time in the gloomy court-house in Edinburgh, nearly two hundred miles away, where the grim travesty was then taking place. Her point of view was essentially from behind the Judge's bench, and only when the dreadful inevitable fiat had gone forth did her sternly strung faculties relent, and an inconsistent flood of tears swept away the Spartan glamour from her eyes.

Upon the termination of the trial the Judge had driven through the half-twilight of the sloppy, deserted streets to his beautiful house in Moray Place. Sheets of rain lashed against the windows of his carriage as he drove, and the north wind howled demoniacally at the street corners; but his lordship was not likely to be moved by a pother of the elements when the cries and lamentations of the condemned woman

as she was led from the dock had brought but a contemptuous frown to his face.

The dinner-hour was eight o'clock, and five minutes before that time he joined his sister, Lady Cariston, in the drawing-room. She had learnt all she wanted to know of the trial from the news-boys who, ever since the pronouncement of the fatal verdict, had, with opportunist greed, been sporting their extra special through the streets. The dismal cadence of their voices rising and falling and dying away in the distance had made her shiver in spite of her stout nerves; but when her brother entered the room she greeted him with a smile which betrayed no trace of previous feeling.

Instinctive tact and an accurate knowledge of his character bade her beware of any allusion to the subject which must necessarily be uppermost in his thoughts. Instead, she met him with a ready flow of small-talk, conscious as well as he of the necessity of bridging over the landslip in the emotions which was the inevitable result of the afternoon's work. It is a merciful Providence which inspires some people with the art of bridging over such gaps—the nervous man who sticks at them deserves no less than hanging.

Lord Coalstoun responded gratefully to her endeavours; the reflex action of his mind, after long days of brooding over the problem of life and death, made him especially talkative and brilliant that night, and the dinner *à deux* passed off with a swing of success. The footman, a new-comer from south of the Tweed, who had been looking forward all day to the gamut of private information as to the most thrilling and bloodthirsty details and incidents of the trial, which in his capacity behind the scenes would fall to his share, was ruefully disappointed, and passed a verdict of his own on his master, which condemned him as the most cold-blooded and heartless of his kind.

'A-drinking of his champagne—Heidsieck Dry Monopole '93—with that much gusto as if he had given the poor unfortunate creature a new lease of life instead of cutting her short in the midst of her sins,' said James indignantly. As a matter of fact, Lord Coalstoun's thoughts were very far indeed from the cell of the condemned woman. His powers of concentration on the subject in hand enabled him when the necessary result was achieved to fling off all thoughts of his past endeavours; and in this case he did so with a fine disgust and repugnance which left no room for pity. While the trial had lasted he had devoted himself body, soul, and spirit to eliciting the justice of the case; but now that he had succeeded conscientiously in that attempt, he felt he deserved relaxation. Accordingly, with the removal of his mental curb, he had allowed his thoughts to slip back into certain pleasant byways of the past, where all sorts of fragrant illusion had flourished, covering

as with a flowery pall the cold carcass of his ambition.

'Mark,' began Lady Cariston abruptly as he entered the drawing-room after an interval of solitude in the indulgence of his fancies, 'I want to know what I am to do about Marjorie.'

'Do about her?' he repeated, taking up his position against the mantelshelf and looking down with an amused smile at the handsome, perplexed face of his sister.

'You know that she expects an invitation—after—well, all this stress of work you have been having lately is over,' continued Lady Cariston, 'Shall I ask her to come here for a fortnight?'

Lord Coalstoun shifted his weight from one shoulder to the other, a slight frown contracting his brows.

'I don't quite see why she should have expected an invitation,' he said. 'The fact is, I had thought of running down to Barhulican for a rest, and if Lady Marjorie comes I am tied.'

'Not if I am here to look after her,' said Lady Cariston conventionally. 'Besides, you know, it is the last fortnight I can spare this summer,' she added in a more natural tone; 'and you could surely delay going to Barhulican for a little. You cannot shut your eyes to what everybody is saying, or be blind to the influence the Earl would have as your father-in-law upon your career. Personally, there is no one I should prefer more for a sister-in-law—if that is likely to have any influence on your decision.'

The frown deepened on Lord Coalstoun's face as she spoke. He left his place by the fire, and commenced to pace up and down the room with hands behind his back—a sure sign of mental disquietude with him, as his sister knew; but she was determined to stand to her guns, and force him if possible into some direct confession of his intentions.

'Perhaps it is because I have so much to do with deciding other people's affairs that I am tempted to shilly-shally where my own are concerned,' he said at last, with a short laugh.

'There speaks the man,' cried Lady Cariston. 'Do you forget, O egotist! that there is another concerned as well?' she added significantly. But before he had time to reply a knock at the door interrupted the discussion.

'There's a young man waiting to see you, my lord,' said James discreetly. 'I told him you were engaged; but he said he must see you, so I showed him into the library. Judging by his looks, my lord, I should guess he was a jurymen.'

Lord Coalstoun laughed outright at this evidence of the footman's perception. 'That will be all right, James,' he said.—'I will be back in a few minutes, Geraldine,' he added to his sister as he left the room, 'and we can fight it out to a finish then.'

The shaded light suspended from the ceiling in

the library seemed rather to emphasise than illuminate the darkness of the surrounding walls, with their solid fencing of calf-bound treasures; but as Lord Coalstoun entered, a man's figure rose from a dusky corner and stepped into the central arc of light.

It was John Mackenzie.

Lord Coalstoun recognised him in a flash, though illness and trouble of mind had wrought sad havoc with his appearance; but he gave no sign of having done so.

'Good-evening,' he said, as his visitor remained silent. 'Won't you sit down?' indicating a chair as he spoke, and himself sinking into his own particular seat by the table.

'My name is Mackenzie,' said John abruptly, taking no notice of the proffered chair; 'my father is minister at Tainish.'

'Ah!' said his lordship, 'I thought I had seen you before.' He rose as he spoke and held out his hand; but John's clenched themselves obstinately.

'I have not come to-night to seek for your friendship, Lord Coalstoun,' he said, 'but to tell you something which it is right you should know.'

His lordship's eyebrows rose. 'Still, that is no reason why you should not sit down,' he said imperturbably, and again he set the example, crossing one leg over the other in an easy attitude.

This time John yielded, and seated himself in an uncompromising manner on the chair indicated.

There was a short interval of silence, during which Lord Coalstoun's eyes were fixed with a calmly interrogatory stare upon his visitor's. His stern, heavily modelled face seemed like a mask, so impassive was it, and somehow John felt his courage evaporating. Here in this luxurious room with its soft, rich carpet and the sombre glory of its oaken furnishings, his cause of quarrel with the owner seemed to take on the nature almost of a presumption. The dominant presence of the great man, too, fresh as he was from dealing with the enormous issues of life and death, gave John a sense of his own littleness which served but to exasperate him into a loss of self-control.

'I don't know how you'll take what I've got to say,' he burst out at last; 'but perhaps you'll be honest with me at once, and spare the rest. My cousin, Miss Gordon, is engaged to marry me.'

His waning courage lent an air of rudeness to his delivery, which emphasised still more forcibly the difference between them.

Lord Coalstoun hid a smile with difficulty.

'That is no news,' he said. 'Miss Gordon informed me indirectly of the fact the first time I had the pleasure of meeting her. But before I proffer my congratulations, may I inquire the

date of this engagement? Miss Gordon is so young—I understand that she is just eighteen—that I imagine it must have been quite a recent affair.'

A dull red flush mounted slowly into John's haggard cheeks.

'We have been engaged always,' he said in a low, dogged voice; 'we are not like other people—there was no need for me to ask her; she has always belonged to me. Besides, I haven't come here to-night to seek your congratulations,' he added with sudden vehemence, his nostrils quivering.

'Ah, I see—my advice, then,' put in his lordship agreeably. 'Well, you are not the first one; and for the sake of my friendship with your father and—cousin, I shall be only too glad to help you—if I can. No,' holding up an authoritative hand, as John was about to burst into indignant denial; 'allow me to finish what I have to say.' There was a relentless gleam in his eyes though he was outwardly calm and unmoved. 'From what you have told me I gather that this engagement is founded upon a mutual understanding,' he began; 'or, to put it more plainly, though perhaps less politely, you have allowed the young lady no choice in the matter, but on the strength of that sole responsibility of which you boast, have blinded her to the existence of any other possibilities. I can quite sympathise with your desire to possess her; but I confess the means you have adopted seem to me hardly fair. Some day an alternative choice is certain to present itself—it is not as if she were in any particular an ordinary woman—and just as certainly after her marriage with you as before it. In either case your happiness must be jeopardised. The whole issue depends, of course, on the quality of her affection for you, and about that I am naturally quite incompetent to pass opinion; but yourself must have gained some idea upon the matter. Does she love you only as a cousin, or does she love you with that love which as her future husband you have a right to expect from her? Upon your answer to that rest the whole ethics of the situation. If you feel convinced of the latter you will be justified in marrying her blindly and risking the inevitable awakening; if you have any doubt about it, it is your bounden duty to allow her opportunities of making her choice between you and any other candidate who may present himself.'

He paused. While he had been speaking a vision of Lesley's face had risen up before him—young and sad, as he had seen it in church that morning, and he had been moved to further zeal by the thought that it was her unconscious cause he was pleading.

'You, to speak of possible candidates and future awakenings!' cried John with bitter indignation as he finished. 'You!'

Lord Coalstoun faced his vehement anger calmly.

'I presume, sir, coupling your intrusion to-night with what you have just insinuated, that your accusation is levelled at me?' he said.

'I did not mean to insinuate anything,' said John. 'I tell you to your face that you have taken her from me.'

His lordship uttered a short sardonic laugh.

'You have small respect for your cousin's name apparently,' he said, 'when you would have me believe that she has given her heart unsolicited to any man.'

'Unsolicited!' echoed John, leaping to his feet, the veins starting out like whipcord on his temples.

'Unsolicited,' repeated Lord Coalstoun.

'Then you are a worse villain than I thought,' cried John; 'for, though you have doubtless been careful not to implicate yourself by words, you have done the mischief just as surely. Read that.' So saying, he fumbled in his breast-pocket and drew forth a crumpled letter, which he thrust into the other's hand. It was old Elspeth's communication, and Lord Coalstoun took it with a faint sneer.

'Well, the old woman is more plain than polite,' he commented after he had read through a few lines. When he had finished he tossed it back to John.

'Young girls are proverbially known to have a thirst for sensation,' he remarked carelessly. 'It would have been wiser for Miss Gordon to have been debarred the delectable enjoyment in this case; but I really fail to see the corollary between the fact of her interest in a murder trial and her supposed secret devotion to the "deil o' a judge." In any case, I prefer to retain my respect for the young lady, and leave myself unflattered by the illusion.'

His coolness provoked John well-nigh to madness. 'But the book! the book!' he cried, snatching the letter with his open fingers.

'Ah, the book!' repeated his lordship in a reflective tone, a shadowy smile flickering round his lips as he spoke. 'After all, it was a small enough token of gratitude for a very pleasant memory,' he continued abstractedly, 'and from a man who was old enough to be her father. But,' he broke off with a sudden white heat of passion, 'what am I dreaming of to be thus stammering excuses to a raw college boy? Pah!'—with a short laugh—'let us bring this unprofitable interview to a close.' He rose as he spoke. 'I am sure you will excuse me; and as for yourself, I should recommend bed as the best place. You've been working too hard, I imagine,' scanning with careless interest his visitor's dejected visage.

But John was not to be so easily disposed of. 'You cannot put me off like that,' he said in a low, tense voice. 'You may blind others,

but you cannot blind me. You chose to amuse yourself with a simple country girl, when all the time your heart was set on a grand marriage. It was the first time a man like you had ever paid her attention. Is it any wonder that she compared us in her heart? You've little enough to boast of in your conquest after all,' he broke off with bitter humility, 'with me as your only rival.'

Lord Coalstoun's expression changed as he spoke, and an almost compassionate look stole over his face.

'You make a mistake,' he said; 'I am no rival of yours. I had not even thought of entering the lists against you; and if I ever do, rest assured that it will only be after you have had your trial and failed. Any interest which I may have aroused in Miss Gordon's heart must be of a transitory nature, for no word or suggestion of love has ever passed between us. I assure you it is my trappings and not myself which have been responsible for the mischief. Should you fail in your endeavours, it will surely matter little to you whether it be I or another who succeeds. On my life,' he finished, with a grim smile, 'there is only one objection which you could fairly raise to me, and that is my age. But if she agreed to condone it?' he shrugged his shoulders expressively. 'There, I have said my say. Go in and win. You need fear no rivalry from me—as I am a gentleman.'

If the contrast between them had been marked before, it was doubly accentuated now.

Bereft of passion and disarmed by the magnanimity of his rival, John's whole attitude was expressive of self-conscious inequality. He hung his head and appeared to be seeking for something to say in response which should emulate his host's generosity. But they were no longer speaking as man to man; in a flash they seemed to have regained their normal standpoints—Lord Coalstoun that of the brilliant man of the world, descendant of a long line of cultured ancestors; John, the divinity student, grandson of a crofter, with his peasant blood betraying itself in every gesture. At last he burst out with an effort:

'My exams begin to-morrow. If I am successful in them I shall ask her; and if I am unsuccessful in that I shall let you know.'

'Pray do not trouble,' said Lord Coalstoun coldly. 'Be assured that you have my best wishes for both endeavours,' he added in extenuation as he held the door open for his visitor to pass out.

'I have changed my mind, Geraldine,' he said, entering the drawing-room a few minutes later, where Lady Cariston was still seated before the fire. 'I shall not be going to Barhulican just now. You may do what you think best about your—visitors.'

## BELL ROCK, 1808-1902.

## SOLILOQUIES ON THE EVE OF ALTERATIONS.

THE tenure of your life, as witnessed for the last ninety years, is drawing to a close. In a few short days your upper walls, lantern, and dome, which have defiantly withstood the storms for that time, will, for the most part, be cast into the turmoil of waters raging beneath, seemingly eager to encircle and roll into unknown depths, or carry for ever out of sight, their share of the débris or spoils of destruction. Who can tell the boon your beaming eye of light has been to the mariner in that time? As he careered along before a raging gale in the vicinity of your treacherous reef, a sight of your beams has gladdened his heart and guided him to a safe haven. I see no reason why you should not have become a centenarian before any dissolution of your members should have taken place; but it has been otherwise decreed. True, you are getting too slow, scarcely moving with the times, and not up to date; and your upper story is getting rust-eaten, cracked, and feeble through occasional bleaching with salt spray. The idea of being outshone by comparatively youthful innovations in your vicinity is of itself enough to make you sign a new lease of life. The Inchcape Rock, of which poets have sung and historians rehearsed, you must still come to the front as conspicuous as any, though your bells are again—and for ever, it is to be feared—to go ‘down with a gurgling sound,’ fated never more to send their warning tones over the waters. Some are inclined to question the wisdom of putting a new head on old shoulders, and presage that your weight of ambition and lofty attainments will be your downfall. Your foundations are secure as ever; neither microbes, aches, nor pains have attacked your frame. You will, I doubt not, continue to rear your imposing head for the guidance of our children’s children when structures now building will be shapeless cairns.

Ninety years! How many long, dreary watches have the keepers spent within the octagonal stone-built wall which forms the lightroom, gazing on the square-paned lantern, revolving frame of red and white lights, and brass machine-case, all of which are now to be demolished! How often have they climbed the ladder—if not to fame and fortune, towards light and leading—to replenish the oil in the fountains, to trim or regulate the burning of their lamps! Sitting at his lonely seat at the table, or pacing the half-circle of the lightroom, six steps and a round-about turn, wherever his thoughts or imagination may have wandered, the keeper’s eye, intuitively, was directed upwards towards his lamps. How often has his foot rested conveniently on the

nose of one of the dolphins (four of which formed corner-pieces of the base of the machine-case), or his curiosity been roused regarding the alligators, serpents, flambeaus, and other mythological and allegorical emblems with which the panels and corners were otherwise ornamented! On this base rested the beautiful machine-case of polished brass, with fluted corners, top and bottom mouldings, and glazed doors, a veritable work of art, worthy a place as a show-case in any museum; but methinks its beauty would soon fade were its regular polishing neglected.

How oft have the keepers, nightly pacing to and fro within your walls, thought of their dear ones at home, and doubtless offered up silent supplications for the special welfare of some sick member of whom they were anxiously desiring to hear, but could not! How they have felt when assailed by the storms which have wrought destruction on our coasts during the ninety years of your existence; when the fierce westerly gales would sway you from your perpendicular; when the shrieking of the wind was such that the tell-tale bell of the machine could scarcely be heard, and when at the change of the watch it was a case of shouting to each other when in conversation! And when the mighty north-easter comes rolling in—the grandest sight of all—as the keepers stand viewing the turmoil from the balcony, advancing waves seem as if they would carry all before them, at times throwing the spray for a hundred feet to the lantern-glass, the impetus making the building tremble from its foundation, and causing doors to creak and utensils to rattle on the walls as during an earthquake shock! Naturally the keepers felt timid at first; but now, with perfect faith in your ability to withstand the strongest of storms, they only regard the visitations of the storm-king with awe and wonder.

There are, however, a few familiar and valuable articles which will be carefully preserved and restored to adorn the new lightroom for another century; but, instead of resting against the cold wall of Craighleith stone, they will hang on the warmer background of good pitch-pine. Chief among these is the magnificent timepiece, made, as also was the machine and case already mentioned, by James Clark, Edinburgh, in 1811. The works, all of which can be seen, are enclosed in a brass-framed case, glazed all round, with a mirror in back. Meantime it occupies an honourable position in the library of the lighthouse, on the bracket along with the marble bust of Mr Stevenson, engineer and builder. In addition to the usual hourly tell-tale, dials on the sides indicate the days of the month and week. Few

look on its face during the day; but I question if there are many so often scanned in the silent watches of the night, when keepers—cold, weary, or drowsy—are anxious for their watch to come to a close. And how often—and who can blame him?—has the keeper wished that its side-dials would quicker indicate the dates of his turn for being relieved! Fortnights are the great epochs of time in the lives of Rock light-keepers, for each fortnight reliefs are made, and it is the turn of one or other to go ashore.

The barometer, another old friend whose indications are at times carefully studied, shall in due course return to its usual position. Often is it scanned when favourable weather is anxiously desired at relief-time; and when the storm-king is careering along in his strength, and the mercury low and pulsating in the tube from the atmospheric depression, its face is often tapped to find its lowest reading, or to ascertain if it shows any signs of abatement of the elemental war.

Another familiar object removed from the sunny side of the stone parapet wall is the sundial, which will, in the most convenient place, be fixed to the new cast-metal structure, to regulate the time for a few more generations.

However, in future the Bell Rock will be a bell-less rock, for the two large bells on the north and south sides of the balcony are to be discontinued, having been superseded years ago by a more efficient explosive fog-signal. These bells, which each weigh five hundredweight, bear the inscription and date: 'Thomas Mears & Sons, London; *fecit* 1811.' They may have been useful fifty or sixty years ago, when hundreds of small sailing-craft were drifting about our shores; but as an aid to the navigation of the present-day class of vessels they are of little use. One of these bells, in response to a request by the secretary of the Arbroath Museum, has been presented to that institution by the Commissioners of Northern Lighthouses. I see no shape of a bell about the formation of the rocks to give the place its well-known appellation, and consider that it must have got its name after the publication of Southey's well-known ballad, or from the fact of bells being on the rock.

The original album is not now in use—the one

in which Sir Walter Scott in 1814 inscribed his name and the following well-known lines:

Far in the bosom of the deep,  
O'er these wild shelves my watch I keep:  
A ruddy gleam of changeful light  
Bound on the dusky brow of Night.  
The seaman bids my lustre hail,  
And scorns to strike his timorous sail.

The present album dates back over forty years, and is full of interest and well worth an hour's study. The writer has during the last twenty-five years made the acquaintance of many old Bell Rock residents, and to him many pages bear well-known signatures, recalling old-time recollections and awakening thoughts of dear friends, many of whom have passed away. Apart from that, a look through the book is curiously interesting. Several have, like Sir Walter, left a souvenir of their visit in verse. The late Rev. D. W. Morris, Edinburgh, in 1861 wrote:

Oft have I watched thee from the shore, thou sentinel  
 of light!  
 As o'er these rocks, where billows roll, thou vigil keep'st  
 by night.  
 For many years thou hast held sway o'er this thy rocky keep,  
 When tempests raged or mists obscured the face of the  
 briny deep.  
 In the changing light of thy bright eye, or the deep  
 tones of thy voice,  
 The seaman learns when danger's nigh, and steers a  
 wary course.  
 Emblem thou art of Him who set the way of life to show:  
 Not only points where dangers lie, but shows the course  
 to go.

Last year, erected in Glasgow Exhibition, you looked down on thousands of all nationalities passing beneath; but now you come to solitude and desolation, but for a better, nobler purpose. The waves of the ocean will continue to thunder on your granite base; you will in due course receive your baptism of salt spray; the gale will whistle and shriek in your gun-metal astragals, funnel, and lightning-rod; the sea-birds will scream discordant around you, and migrants attracted by your rays dash themselves against your panes and die; but long may you withstand the tear and wear of the elements, and with your brighter light conduct and guide all who manage the transport of our increasing maritime commerce, and all others who have their business in your vicinity.

## SOME RABBIT-PROOF PLANTS AND FLOWERS.

By WALTER SMYTH, Author of *Hardy Border Flowers the Year Round*.

RABBITS give so much life to a landscape, with their little brown bodies and skipping ways, that it is a pity they are such depredators, in a general sense, to all green things. There are, however, some plants which they are not disposed to nibble at; and our object is to give the names and descrip-

tions of these, and also specify some suitable positions for planting.

The common furze or whin, with its prickly spines, does not appear attractive to rabbits save as a shelter; in fact, furze seems to grow very luxuriantly and to flower well in the neighbourhood of rabbit-warrens. It may be easily grown from seed, which should be sown in drills in

quantity, or it may be raised from cuttings. There are several varieties of *Ulex* or furze, all of which are useful for planting. Of these a dwarf variety named *U. nanus* makes a pretty shrub, flowering after the native whin at mid-summer. There is also a double variety which is well worth planting. Indeed, it is a wonder that more use is not made of the furze, as it is so hardy and useful.

For extensive planting in thickets and under-woods, dogwood, elder, and snowberry are very useful, as being proof against rabbits; and for more secluded and important shrubberies *Aucuba japonica*, with its green leaves variegated with yellow, may be depended on; but, not being quite hardy, it should receive the benefit of a sheltered position. Of the *Berberis* family, many are to be recommended; they are all handsome berry-bearing plants of much ornament in winter. The common box-tree, too, with its dark evergreen leaves, is very hardy and useful for this purpose. The *Cotoneasters* are also suitable. Ordinary soil suits all of them, they are thoroughly hardy and free in growth, and bear beautiful clusters of brightly coloured berries in autumn. They have been introduced from the Himalayas and China.

The noble pampas-grass appears to remain untouched by rabbits, and the handsome yellow-flowered St John's wort will never be entirely killed by them. Then it is only necessary to mention the hollies, the laurels, and the daisy-trees, which were introduced from New Zealand, and, being rather tender, require a sheltered spot. Two very beautiful shrubs, the mock orange and the purple plum, are also recommended; the former bears beautiful scented white flowers, and the latter is desirable for its handsome purple foliage. Of the rhododendrons, *R. ponticum* makes a fine cover-plant, and should be planted in quantity. *R. Auguste van Geert*, *R. concessum*, and many others are suitable. Some of the shrubby spiræas, too, may be planted;

also the sea-buckthorn, a beautiful native shrub which bears a profusion of orange berries.

Of forest trees it is merely necessary to mention the Austrian pine, Scotch fir, spruce fir, and the silver fir; and of coniferae, *Thuja* (*Arbor vitæ*). The hardy azaleas called Ghent azaleas, introduced from North America, are beautiful shrubs suitable for planting in shady woodlands, where rabbits frisk in and out; and butcher's-broom, a plant which produces beautiful red berries, and is suitable for planting in partial shade and under the drip of trees, enjoys immunity. Box-thorn also, so rapid in its growth, is suitable for covering walls or even making a hedge.

The Forsythia, or golden bells, is one of our most beautiful shrubs. It is of loose, rambling habit, and in a sunny spot gives a fine display of flowers in spring; and both it and the well-known hydrangea are considered to be rabbit-proof plants. The Hibiscus, or rose mallow, and the evergreen shrubby juniper have been noted as suitable for planting in sunny, sheltered spots in the south of England and Ireland. Peonies and privet are not sought eagerly after by the rabbit; and the spindle-tree, or *Euonymus*, (which suits any class of soil and thrives near the sea), as well as the yuccas, escapes.

Of hardy flowers untouched by rabbits we have noted the following: Arabises and anemones, aubrietias and aquilegias, Canterbury-bells, *Cineraria maritima*, and daffodils, dog-tooth violets, delphiniums, foxgloves, and grape hyacinths, irises, kniphofias (flame-plants), lilies of the valley, periwinkles and primroses, scillas, Solomon's seal, and montbretias in many varieties.

Mr Charles Warwick, land-steward to the Marquis of Dufferin and Ava, in sending a list, wrote me some time ago: 'In times of frost and snow the rabbit, like David of old, is not too particular where he gets his dinner; and if the plants want to be thoroughly protected they should be surrounded by wire-netting.'

## REMINISCENCES OF EDINBURGH SIXTY TO EIGHTY YEARS AGO.

BY A PIONEER RESIDENT OF VICTORIA FOR SIXTY YEARS.

**I** WAS born in 1818, the son of a well-known physician practising in Edinburgh during the first half of the last century. I must in infancy have been singularly precocious, for I can easily recall the nursery I occupied with an elder brother and sister, my parents' domicile at that period being in a flat at the corner of St Andrew Square, on the same side as St Andrew's Church. The nursery was heated by a small stove, on top of which my sister used to toast little cakes of moulded new

bread, and the process interested the children, and thus the surroundings became impressed on my memory. I was little over two years old when we removed to a larger house at the corner of Hill Street and Frederick Street, west side, where my now only surviving sister was born, and I recollect a scene there when she could not have been more than a few months old. By our area gate, on the pavement, was a form, on which sat, when disengaged, three licensed porters, having a sedan-chair, then much in request by ladies and children going to or returning from

evening parties or visiting, just as street cabs are now. These chairs were borne by two stalwart porters, one in front and the other behind, each holding two long handles. The porters were clothed in the costume of the eighteenth century—long coats and vests, shoes with buckles, and cocked hats—and each had a large metal badge of license on his vest or hanging from his neck. In 1822 I recollect being held up by our nursery-maid to witness in the evening the procession bringing the reigning king, George the Fourth, then on his visit to Edinburgh, to the quarters prepared for him in the Castle, Holyrood Palace being out of repair until restored some years later. I remember the band playing and the torchlights.

Later, while I was still but a little boy, my father's practice having greatly increased, we removed to a large house, No. 31 Queen Street, and from there I went to a small boys' school kept by a Mr Gilston. In front of Queen Street there was then within high stone walls a grass field extending to Heriot Row, in which was kept a bull that we could see resented any intrusion on his domain, and occasionally induced feats of agility on the part of the owner or keeper if he showed himself outside the shed at the entrance to the field when the bull happened to be near it and in a capitious mood. Gardens were being laid out between this field and Howe Street on the east and Wemyss Place, then in course of erection, on the west. At the foot of Wemyss Place there was the ancient domain of Moray Park, which was entered through an iron-railed gate, between dark-gray stone pillars, each surmounted by a stone lion couchant. These disappeared when the ground was feued in mansion sites. First excavations were made for the servants' apartments, kitchens, laundries, and cellars, and the foundations and cellarge under the pavement built in; and then Moray Place and adjacent streets towards Randolph Crescent, with its tall trees in front and noisy rookery, were quickly built. However, up to the date of my leaving Edinburgh at the age of twenty-two, in March 1841, there were no buildings north of Dean Bridge or of Ann Street towards Queensferry Road, except a row at Comely Bank; there was nothing but cultivated fields outside and between these, and between Lynedoch Place and Corstorphine Hill, which was reached by Lovers' Lane, a narrow road running alongside corn-fields, and leading to a stone seat inscribed 'Rest and be Thankful.' At the entrance to this lane a dear old lady we visited, Mrs Keith (mother of Dr Keith, then at Wemyss Place), had her country residence, her quaint, old-fashioned town-house being in the Canongate of Edinburgh, on the south side, below John Knox's house, towards Holyrood. The residences of Lady Keith of Ravelston and Lord Jeffrey, between Ravelston and Craighleith Quarry, were also near; and whether with my father as their family physician, in my holidays,

or occasionally when with genteel schoolfellows, the dear ladies there and at Ramsay of Barnton's and Hopetoun House were lavishly kind to me.

When St Stephen's Church was being built, the Circus Place School was inaugurated by a syndicate of gentlemen, of whom my father was one, and I attended it till I went to the old High School in Surgeons' Square. Going thither I occasionally met on the Earthen Mound, then only the site for wild-beast shows and such-like, the famed poet and novelist Sir Walter Scott, and noted the peculiar hop-and-skip gait his lameness occasionally induced. I also saw the execution of several criminals, about the time of the Burke and Hare tragedies, on the open scaffold in High Street. Surgeons' Square, with its anatomical lecturers' dissecting-rooms, and their horrifying odour felt by all passers-by, then became a terror; and the new High School at the Calton Hill, beyond the new jail and the castellated house of the jail-governor (Captain Rose), was projected, and when it was completed a grand procession of the boys in classes, with their teachers, took place, wherein I, then in Mr Pyper's class, walked in the procession.

Going to the new High School necessitated a new route along Queen Street, thence by St Andrew Square and Register Street to Waterloo Place. Near there, opposite a coach-office, on peering at an object on the ground I discovered it to be a bundle of bank-notes, probably dropped by some cattle-dealer going to or returning from Falkirk Tryst. I had stooped to lift it, when a man more like a thief than owner of such an amount of money thrust me aside, snatched it up, and disappeared quickly. It was too common a practice up to the time I left Scotland, in 1841, for drovers and graziers attending cattle and sheep markets to carry similar bundles of bank-notes for the settlement of their transactions; cheques seemed unknown, but amongst the then interested market attenders dishonesty was rare.

The teacher of writing at the old High School, Mr M'Kean, senior—his son succeeded him—was a martinet with the nickname of 'Hoppy M'Kean' on account of his peculiarity when chastising an evildoer of holding him by the collar with the left hand, and gyrating around on one leg, with the taws operating actively on some portion of the offender's person. He did not teach at the new High School, but at his house in Duke Street, on the west side. In his classroom entrance-passageway was a once well-stocked stone rabbit-house. I, with many of my schoolfellows, kept tame rabbits, but none of us could then imagine the universal scourge the liberation of a few score pairs in Victoria would afterwards prove to the whole of Australia, nor the enormous cost of merely thinning their ever-increasing and outspreading legions from the agricultural and pastoral areas.

When I emigrated to Victoria in March 1841 from Greenock, in a 700-ton sailing-ship of the round-bowed form of ocean tubs then in vogue, my voyage lasted one hundred and twenty days. On the 26th of July the ship anchored in Hobson's Bay, Port Phillip; and we were landed from it by a boat from the shore of Sandridge, now the populous town of Port Melbourne, but then having only one house in it, and no others within a mile. There was no jetty or landing-place. Each passenger was hoisted on a boatman's back and landed high and dry. A walk of about two miles brought him, following the edge of a reedy swamp in which the frogs made a noise almost deafening, to the punt over the Yarra River, without passing a single house or hut. Thence we entered on the partially built-up Swanston Street and Collins Street, the main business streets then in Melbourne; blank spaces or yards for bullock-teams separated the few one-story shops, one of which—now a palatial music warehouse—was a butcher's with a wooden block on the earthen floor, and with only a wide, shuttered opening for a window. In front, the unmade road had on both sides a gulf-like excavation, caused by rainfall, that would have engulfed a wagon. An Arab stallion was smothered in one. The Government House was a cottage on a hill now levelled and covered with a network of railway-lines. The blacks were dangerously hostile within a few miles of Melbourne.

Another 'Old Edinburgh Citizen' sends us the following reminiscences:

Though not by any means a Jacobite, I have a few links—slender ones, it must be admitted—with Prince Charlie.

A valued friend of mine in former days lived at Merchiston Castle. The old family coachman, my friend told me, had conversed with a woman who, standing at her cottage door, exactly opposite where Craiglockhart safety-pond now is, saw Prince Charles Edward and his Highland host march past on their way to Edinburgh. Bivouacking at Slateford the night before, they had ruined a bean-field. When the farmer complained, the Prince gave him a promissory-note on a future bank. That bank was set up in Inverness; but what its notes were worth after Culloden every one knows.

Another intimate friend of mine who carried on a lengthened ministry in Teviotdale numbered among his congregation an old man who had often heard his mistress, the farmer's wife, recount the following experience: When a little girl she was sent one day in 1745 on a message from the village of Ancrum to Jedburgh, some four miles distant. Emerging from a wood, she was appalled by seeing the road black with hundreds of fierce, strangely dressed armed men. As she stood petrified at the sight, 'a bonnie gentleman on horse-

back'—so she described him—seeing her alarm, called her to him, and told her to stand beside his stirrup. When the soldiers had passed he put spurs to his horse and rode on. Need it be said that this was the Prince? And one cannot wonder that when the girl grew old enough to understand about public events she was fond of referring to her short interview with him.

A Scottish laird informed a circle in which I sat that from the lips of a Highlander a hundred years old he had heard the following story: In 1746 this Highlander, then a herd-boy in Skye, was looking after his master's sheep when he saw two ladies approaching him. One he knew, because she was Miss Flora Macdonald, his chief's adopted daughter; but the other was quite a stranger to him. First of all they eagerly asked him if he had seen any of King George's red-coats on the island. That question having been answered in the negative, they next inquired if he had seen any Government ships cruising about. To that also he replied 'No.' Then, at their request, he led them to a spring, where the stranger lady, unhooking a small gold cup from her girdle, filled it, and offered it to Miss Macdonald. When she declined to drink first, the visitor emptied the cup, and then refilled it for her. The boy's heart having been made to dance by the gift of a shilling, they left. It will be unnecessary to say that the stranger was Prince Charles in female attire.

During the first half of the nineteenth century, while moving about in the south-west of England, I took up my abode for a short time in the village of Berkeley, Gloucestershire. This village, readers of English history will remember, is the place where Edward II. ended his troubled life, foully murdered, there is every reason to believe, by some of his barons. There was pointed out to me a window in Berkeley Castle from which cries were heard to issue one night in 1327.

As I conversed with the chatty landlord of the inn where I was a guest, he interrupted our talk by drawing my attention to an old man in a smock-frock who was passing in front of the window. As there was nothing striking about him, I naturally looked for an explanation, which was at once given. Towards the end of the eighteenth century Dr Jenner, of Berkeley, was, like other medical men of his day, often grieved by the havoc which smallpox wrought among the villagers. At last he observed that the milkmaids of the place either enjoyed immunity from the fell disease or were very slightly affected by it. Following out this striking fact, he came to the conclusion that something in their daily calling must render them invulnerable, or nearly so. What could it be? He traced it to the cowpox near the udder, the nature of which he did not know; but it is now familiar to the world as lymph. Could this be the substance

that protected from smallpox? That was the question, and it could only be answered by experiment. Dr Jenner then made known his convictions to the villagers, and asked for a boy-baby, a healthy child, as a subject for experiment with the supposed cure. The conditions were that if the child died—though Dr Jenner apprehended no such result—the parents would receive one hundred pounds; and if, on the contrary, he lived to the age of sixty, he was then to enter into the possession of a cottage, with a bit of ground attached to it, and to receive eight shillings a week till the day of his death. The old peasant whom I saw had been that boy-baby, and was now enjoying the provision made for his old age by Dr Jenner. Thus I had seen what may be called the fountain-head of vaccination.

Returning to Scotland not long after the incident just related, I came across a family partially French living in one of the closes of the Canongate of Edinburgh. The grandmother and her daughter were pure though humble Frenchwomen; but the husband of the daughter was Scotch, and their children, though of mixed descent, were undistinguishable from other young people of the neighbourhood. The old lady had accompanied her husband, a military prisoner in the great Napoleonic war, to Scotland, and after his death she remained in Edinburgh. She knew no language but French, and could not read. Conversing with her one day, I expressed surprise that, coming as she did from such a cultured country as France, she had not learned to read. 'Ah, monsieur!' was her reply, 'quand j'étais petite fille, Robespierre n'avait pas laissé des écoles en France.' The effect on me was positively electrical. I well knew the date of the Revolution; but its horrors were such as to make it seem far, far away back in the past. Yet here was I face to face with one who, safe in her obscurity, had lived at that time.

It may be mentioned in passing that one of my mother's earliest recollections was the death of Louis the Sixteenth. One day early in 1793 she, a little girl, was standing beside her father at the breakfast-table when the morning paper (the *Mercury*, I believe) was brought in. Glancing at it, he exclaimed, addressing my grandmother, 'Good heavens, my dear! the French have cut off their king's head.' Later in my mother's history, when she was a young married lady, and lived in what was then the extreme south of Edinburgh, there were hundreds of French prisoners of war at Glencorse. Some of these soldiers had been followed by their wives, who lived in cottages near the Government prison. Out of the mutton-bones which remained after their dinners the neat-handed Frenchmen made toothpicks, bookmarks, and other little articles; these their wives sold in Edinburgh, buying with the proceeds tea, tobacco, and a few simple

luxuries for their husbands. My mother got into the way of showing these women kindness. They used sometimes to embrace my elder sisters, then little children, as they thought of their own darlings far away. When an exchange of prisoners took place they came with joyful hearts to say 'Adieu' before returning to their own loved homes.

I must now ask the reader to accompany me to India, where I spent a few years. There, among other incidents, besides being introduced to Lord Canning and Lord Dalhousie, Governors-General of India, I had a conversation with Mr Elliott, son of General Elliott, afterwards Lord Heathfield, who commanded at Gibraltar during its celebrated siege in 1782. In that year the Duke of Crillon, who had shortly before taken Minorca from the British, arrived on the scene. All the French Princes-Royal, with thirty thousand French and Spanish soldiers, were in the besieging camp. Ten floating batteries, mounting three hundred and ninety-seven guns, were specially constructed for the work. All their efforts, however, were frustrated by General Elliott and the British forces under him. As the fierce attack went on, when some of the floating batteries were set on fire by red-hot balls fired from the Rock, Captain Curtis, commanding a party of the besieged, saved the lives of thirteen officers and three hundred and forty-four soldiers. Vain were the efforts of the beleaguering army, which had to retire unsuccessful.

The Mr Elliott I have mentioned inherited no small amount of his father's courage and energy. On one occasion, armed with nothing but a horse-pistol, he faced an infuriated Madras crowd. He also, with great cleverness, detected the perpetrators of a daring robbery. All the plate of a leading hotel had been carried away, and as the loss was serious, the police were eager to apprehend the thieves. For some time they were quite baffled; but at last suspicion was concentrated on an eating-house near the shore, chiefly frequented by sailors. Having made his arrangements, Mr Elliott entered this house one day in the costume of a naval officer, and ordered a dish of curry and rice. The food was soon placed before him, but accompanied by nothing better than a pewter spoon. This was precisely what had been expected. Handling the spoon with a contemptuous air, he asked if they expected one of Her Majesty's officers to eat with such an article as that. Searching looks were then directed to him; but he succeeded in maintaining an appearance of ingenuousness and simplicity. Then, after a short delay, a silver spoon was brought bearing the mark of the plundered hotel. A few quick steps took the magistrate—for such he was—to the door, and a low whistle brought the waiting subordinates; then the landlord, landlady, and servants were seized, and the whole of the plate recovered.

## ELECTRICITY IN THE KITCHEN.

THE very latest application of electricity is to cooking. M. Moissan, of Paris, has been making experiments in raising heat by electricity. He has succeeded in inventing an electric crucible in which very great heat is generated, and the most intractable substances, that hitherto had defied analysis, are driven off into vapour; but more moderate heat can also be obtained for ordinary purposes. In fact, it is a mere matter of arrangement whether we get light or motion or heat from the electric current. If we choose heat we can have it, and we can use it as we desire, to smelt metals or to cook our dinner. An electric oven has been invented, in which electricity both turns the spit and roasts the joint. The fireplace has been turned into a small electric furnace, from which the heat radiates just the same as if it were a coal-fire. Vessels have also been made for cooking purposes, with an outer and an inner skin, the interval between the two skins being filled with a white metal which is heated by a current of electricity. In this way water can be boiled and food cooked. There are three degrees of heat according to the will of the attendant.

The vessels are provided with binding screws that connect them with the current in a moment. It is impossible to exaggerate the importance of this invention. In a few years we shall be turning on our room-fires for heating just as we now turn on the gas for lighting. Our cooking will be done without dust or smoke; and by being able exactly to regulate the intensity of the heat, we shall also be able to cook a steak to our entire satisfaction. At the breakfast-table the coffee may be made before our eyes; while soups and other preparations can be allowed to simmer any needed time, with the certainty that the fire will neither become too hot nor go out altogether. There is hope for scientific cookery under the conditions of the coming time! The housewife's labours will be lightened, and her husband's temper will remain serene. Already the applications of electricity as a heat-producer are numerous, and they are increasing every day. Among the first so to use it were tailors, who now employ it to heat their irons; and as these were formerly heated by gas, the workshops must now be healthier places to work in. The electric current, it seems likely, will be used extensively for many similar purposes.

## THE SONG OF THE EXILE.

Oh, the world has many wanderers!—the Pilgrims of Unrest—

Who press for ever on,  
Who come and then are gone,

As if searching for some wondrous distant Islands of the Blest;

But to me the old home-country has always seemed the best,

Though now I sojourn far,  
Where great pine-forests are,

In this vast and foreign country of the young and growing West.

And my heart goes back again—  
Ever back and back again—

To the little, low thatched cottage by the island sea,  
To the north winds blowing free,

To the shadows fast asleep on mountains far away,  
To the land of sullen gray,

To the rocky barren shore,

To the witching foam-white mists—the mists of Corrie-more.

I have crossed wide sultry prairies stretching out beneath the sky,

Have seen the night-winds pass  
Over the sun-dried grass,

Till I heard it stir and shiver as though spirits had gone by.

Yet, for me, I know the country where I'd choose to live and die,

Though in a narrow bound  
The mountains shut us round,

And we cannot see a wider world unless we look on high.

I have passed through great pine-forests, with their solemn, silent ways,

Have seen the sun-shafts fall  
Adown the pine-stems tall,

While the shadows lying blackly stretched themselves into a maze;

But to me there comes a breathing from some far-off childish days,

Of small birch-woods in spring  
With mossy carpeting,

And the smoke of burning heather in the air from hills ablaze.

I have seen wide western rivers flowing seaward silently,  
Carrying craft of every size,

And foreign merchandise,

With the calmness of a mighty land, whose best is still to be.

Yet I know a little country where small burns sing cheerily;

Here in the gracious West,  
These still I love the best,

Though they carry only music through the heather to the sea.

Oh, the world has many wanderers, and I have wandered far,  
And everywhere I find

The hearts of men are kind;

For well I know the road to these no race or speech can bar;

Yet from this kindly Western land my home is very far.  
I am with strangers here,

Not so my fathers were

In the little island oversea, where still their kinsfolk are.  
And my heart goes back again, &c.

### OLD NEWGATE.

By the Author of *Life in a Convict Prison*.

**T**HE phrase 'Old Newgate' seems a little paradoxical; but it is thus that 'the man in the street' designates the ancient pile which the Government has taken over from the City authorities, in virtue of the Prisons Act, 1877, and which the 'house-breakers' have been busily employed in pulling to pieces. The total disappearance of this ancient City landmark calls for some comment, and information bearing on its history will be of interest.

As is well known, London was a walled town in early times. The City gates—closed every night when the curfew-bell was tolled—were Aldgate (which, as the name implies, was very ancient), Bishopsgate (built in 680), Moorgate (in 1415), Cripplegate (in 1010), Billingsgate, Ludgate, Highgate, and Newgate. The latter was originally known as Chamberlain's Gate, because of its connection with the City and its Chamberlain, and is the only gate now associated with a prison. Strype, in 1700, gave a very interesting account of it in his *Chronicles*. He mentions that it was first called Justices' Hall. 'It is,' says he, 'a fair and stately building; very commodious for that affair. It cost six thousand pounds to build; and in this place the Lord Mayor, Recorder, Aldermen, and Justices of the Peace for the County of Middlesex do sit and keep His Majesty's Session of "oyer and terminer."'

The building thus described was destroyed by fire during the Gordon Riots of 1780; and the well-known architect Dance erected the new prison, which, of course, has been much altered and enlarged since. It is of this fire that Dr Johnson, writing to Mrs Thrale, says: 'As I went by Newgate, the Protestants were plundering the session-house at the Old Bailey. There were not, I believe, a hundred; but they did their work at leisure, without sentinels, without trepidation, as men lawfully employed, in full day, such is the cowardice of a commercial place.'

That the destruction of the old prison was not

an unmixt evil may be gathered from statements then made as to its insanitary condition. For instance, one writer tells us that it was 'seldom free from disease.' Another 'faithful chronicler' informs us that 'it was not only among the prisoners then overcrowding the jail that disease showed itself; but two judges, the Lord Mayor, several of the jury, and others, to the number of sixty persons, died in the spring of 1750 of the jail distemper, which was communicated to the session-house from the adjoining prison.'

After the Gordon Riots great progress was made with the new prison, and on the 9th of December 1783 the first execution took place there; the last one at Tyburn having been about a month before.

The most notorious part of the whole structure—and which yet remains—was the press-yard. Here it was that *peine forte et dure* was inflicted upon prisoners charged with felony who, with the view of saving their property from confiscation, refused to plead at the bar. This dreadful punishment of being pressed to death was, however, abolished in 1772. A Major Strangways, who was indicted for murder, having refused to plead, was condemned to this savage *peine forte et dure*. He died in eight minutes; and many of those who witnessed the dreadful sight threw stones at him to hasten his end.

In Old Newgate poor Ann Askew, Penn (the founder of Pennsylvania), Elwood (Milton's friend and amanuensis), Lord William Russell, and a score of other celebrities, were imprisoned. Here it was that Defoe commenced his *Review*; and here, in the very prison he had emptied and set on fire, Lord George Gordon died of the jail distemper in 1793.

That executions were constantly occurring at Newgate, and on a scale which—thank God!—is now unknown, is evident from both public and private records. Thus, Horace Walpole, writing to his friend Mann, says: 'It is shocking to think what a shambles this country has become. Seven-

teen were executed this morning after having murdered the turnkey and almost forced open Newgate.' Indeed, public executions had long been a great scandal; but since 1868 all executions have taken place within the prison walls in an iron cage-like erection, which, by the way, was recently carted off by the contractors.

It was at the Old Bailey that all the regicides were tried; and, besides those already mentioned, a *Newgate Album* would not be complete without the names of the Earl of Shaftesbury, Hardy, Dr Dodd, Savage, Elizabeth Cumming, Bellingham, Thelwall, Jonathan Wild, Jack Sheppard, Governor Wall, Horne Tooke, Fauntleroy, Thistlewood, and many more.

Among the elaborate contrivances which went to make up the penal machinery of those days, the pillory occupied a prominent place. The last to stand in this unenviable position was a man named Bossy. He had been tried for perjury, convicted, and sentenced to transportation for seven years. Before transportation he was to be confined in Newgate for six months and to stand in the pillory for one hour. This sentence was carried out to the letter, and on the 22nd of June 1830 Peter J. Bossy stood up on high like 'unabashed Defoe.'

One of the most gruesome sights was the old graveyard of Newgate. This was situated between the prison and the court-house, so that every prisoner who passed from the one to the other literally walked upon the graves of the criminals executed there during more than two centuries. I have known of at least one man who walked over those rough flagstones on the first day of one month, and was put underneath them by the first day of the next, or thereby. This hideous passage was roofed over with iron netting—from which it received the sobriquet of Bird-Cage Walk—and was flanked on each side by high stone walls. For a long time my mind was exercised in deciphering the great number of letters cut in the side-wall. These, I afterwards learned, were the initials of the names of those buried there. In more than one instance I have traced out a whole name—for example, 'Flowery Queen,' &c.

To the uninitiated it may appear impossible that such a large number of interments could take place in this very limited space. The explanation is that quicklime was always thrown in with the remains, which soon disappear under chemical action. The depth of the graves was

about six feet, and the place might well be called the 'valley of bones.' After the inquest was held the body was encased in a 'shell' of plain deal, painted black; and into this the bags containing the lime were put.

'What is to be done whilst the new Old Bailey is being built?' may be asked. Well, the choice was between Wandsworth and Brixton, formerly a military prison. The authorities have already selected the latter, and a few months ago Brixton Prison was opened. It may here be stated that seldom have so many prisoners been confined in Newgate as within the past year, nearly one hundred prisoners having been located there lately. This was probably owing to Holloway Jail, the usual 'house of detention,' being crowded.

My earliest recollections of Newgate are associated with the public execution of five pirates for murder on the high seas; and I can recall the horrible sensation experienced when, as a mere boy, I witnessed the dead bodies dangling in the air. It was indeed a gruesome spectacle; and as I lived near the spot at the time, I suffered indescribable agonies on account of the hideous noises which, during the whole of the previous night, converted an ordinarily quiet neighbourhood into a veritable pandemonium.

The *Times* commented on the subject of 'Old Newgate' thus: 'In view of the approaching pulling down of Newgate Prison, a number of articles of historic interest have been transferred from the celebrated jail to the museum at the Guildhall. The collection contains the following: Six volumes of the *Police Gazette*, 1828 to 1833; the Lord Mayor's minute-book, 1791; the visiting magistrates' book, 1814; two volumes of visiting justices' minute-books, 1843 to 1873; the committees' orders from 1871 to 1878; one set of leg-irons and four waist-belts; a bust of Sir John Sylvester; a whipping-block; a leaden cast of the City arms, dated 1781; and four ancient chairs from the chapel. The casts of the heads of some of the celebrated criminals who have been executed within the prison, and which are familiar to those who have visited Newgate, were offered to the Guildhall Museum authorities, but were declined as being too gruesome in character. These relics have been sent to Scotland Yard, where they have been added to the collection of famous criminal *curios* at the police headquarters.'

With the demolition of Newgate will pass away an institution around which scenes of historical and dramatic interest cluster thickly.

## THE SALVING OF THE 'SENATOR.'

## III.

T was when the high dawn slanted athwart the boiling ocean that the distressed vessel revealed herself in true colours, and Walters banged his glasses into the box with unmistakable disgust.

'A pot-bellied old coal-wagon bound to the west'ard.'

'Yes, she's a funny old sardine-tin,' compromised Larry. 'But she may be a valuable boat,' he added hopefully.

'She's too painfully built for that,' subtracted Walters.

Then a hoarse shout floated down to the *Masterpiece* on the streaming wind: 'Will you take us off? We're sinking!'

'Oh dear!' groaned the second mate. 'There's nothing to be earned there but a tin medal, and emphatically I didn't come to sea for honour.'

To the hail of the steamer to windward the skipper of the *Masterpiece* shrieked reply across the mad seas with the siren, forged half a mile farther, and then eased his engines so that his vessel lost headway. He looked at the second mate, and then overside at the great seas which screwed upwards the jerry-tramp; and when a great roller had swept the rusty side and left a momentary peace in its wake, the captain spoke:

'If you can get a crew to volunteer, go ahead; but it's a risky job, Mister Walters.'

'Beggars are not choosers, and might as well die fighting,' answered Walters, and grinned gloomily. He left the bridge, roused all hands, and arraigned them on the steering-bridge, where whisky was provided by the skipper to give the sailors encouragement. When the captain had assisted himself generously, he proceeded from pleasure to business.

'There's more whisky where this came from; but that's got to be earned. Astern of us there's a steamboat's crowd yelling for us to take 'em off. As I understand, there's no salvage, because the boat's sinking. But there'll be a smoking concert at the Liverpool Home if you fellows do the right thing; and any one bold enough to get only half-drowned will no doubt be awarded a good, solid, unbreakable medal. Don't you think it's worth earning?'

However, the hands appeared unanimous in adverse opinion; they were not quite so ready to volunteer manning a boat as they were to drink free whisky; and when Walters had waited impatiently two minutes for answer, he pitched upon the best man of the crowd.

'Griffen,' he said savagely, 'come out of that gum-sucking congregation. You're worth three pounds per month, and one-half your voyage is pay

to the slop-chest. If you get drowned now instead of a little later on, you'll die to wind'ard of your debts; in the other case you'll work for nothing.'

Griffen gave consent to the usurious proposal by striding across the bridge. 'Whisky,' he observed, 'will nerve a chap to do anything,' and he cast fond eyes upon the bottle; while Larry overcame his acquisitive scruples and kindly 'took the 'int,' as Griffen expressed it.

The crowd had been waiting for a leader, so that there was a full complement chosen to man the lifeboat. Then all hands set to work to sling overboard the craft of rescue, while to leeward the vessel in distress bleated on her whistle for help. Soon the lifeboat took the water, and, with a half-coil of new three-inch line in her stem, dropped astern.

The big seas caught her, and flung her into a chasm that yawned black and grim, and the boatmen held to the thwarts and wondered how many seconds would elapse before they should say 'Amen!' But marvellously the lifeboat swung up and over the seas, and rode them as a graceful albatross rides Cape Horners. All the time the skipper watched anxiously from the poop and slacked the line from the bits, and sighed relief when the staggering craft bobbed to his ken every other half-minute.

'It's not exactly a yachting expedition,' he defined; and the boat shot down, down, until Larry shook with a terrible fear—and then bravely out of the smoking trough the lifeboat climbed.

When the line came to a finish Walters put out his sea-anchor to lessen the drift and keep her head on, and for the next ten seconds no one knew precisely what happened. A great, green wall of water, white-fringed and ominous, rose over the stem, and as some person shouted 'Hold on!' an ice-biting sea snapped over the boat and its crew. At the limit of those ten seconds, Griffen, bathing neck-deep, came out of the salty smother and grasped the boat's gunwale; and the crew hauled him aboard and laid him, a shivering heap, upon the bottom boards.

After many editions of this, the lifeboat, with three men bailing her out for dear life, came alongside the steamship *Senator*, from which a line was thrown and many eager faces peered. Down ropes the *Senator's* crew came swiftly, with death above and death below—or at least a promise of it. A big man was the last to descend, and he came as coolly as if he were entering a ball-room. He squeezed himself on the stern thwart and smiled, which irritated Walters.

'I don't know what you see to monkey at,' he spluttered. 'Hi! shove her off there, some of you, unless you want us to be swamped.'

'I've been looking for adventure,' explained the big man, 'and I've found it—heaps of it. And I am not going to look for it any more.'

The second mate regarded the speaker with appreciation. 'Yes,' he said, 'you've about gone the whole hog, Mister Quixote, and I admire your effort to be drowned rather than buried and so save funeral expenses. It's a good idea, that adventure business; and my devout wish for you is that you get an epitaph in the Atlantic. It's a nice poetical place, isn't it? It's you passenger Jonahs that cause mishaps at sea, Mister Quixote, and that's my belief.'

Then Walters addressed himself to a black-whiskered man whom the rescued crew treated with some deference.

'I believe you are the *Senator's* skipper?'

'I am, my lad.'

'What's the matter with the bucket?'

'She's suffering from a chronic desire to sink.'

'Been in collision?'

'Yes. I think we must have struck something below water; perhaps a sunken wreck. Anyhow, whatever it was, it punched a big hole in her under the engine-room.'

'Much water in her?'

'Half-way up the cylinders and bunkers; the engine-room's fairly drowned.'

'But her Plimsoll's well above water.'

'That may be.'

'Any cargo in the holds?'

'Nothing. Ballast for New York.'

'How long do you suppose she'll swim?'

'A few hours.'

Then the lifeboat came to the side of the *Masterpiece*, which vessel had hung handy to leeward to pick up her crew.

#### IV.

LARRY'S face was decidedly long as he glanced out of the chart-room at the white hail and wind-squalls driving madly from the flaked hills in the westward.

'It's something more than desperate,' he said. 'We're barely provisioned for ten days longer, and now there's twenty-two more mouths to feed.'

Naturally enough, with a minus quantity of dividends, the owner could ill supply the *Masterpiece* generously.

'It's hard lines on you,' said the salved passenger, and then dived to the shelter of the weather-dodger, where Walters kept a lookout and made poetry upon this life of torment.

Two miles astern the *Senator* rolled in the long seas like a huge bucket, and buried her well-decks at intervals. Eight hours had elapsed since her desertion, and still she did not appear to settle deeper in the water.

'It's quite time she sank,' said Walters, 'according to her skipper.'

The second mate lost eyes for reality. Salvage gave him visions of dear-heart Nellie and a master's berth; but salvage looked very uncomfortable, not to say impossible.

All day the *Masterpiece* crawled west at a quarter-knot-an-hour speed, and the Atlantic piled up agony and wrought wholesale destruction about the steamer's decks; it tore out the chart-room, carried away stokehole ventilators and all but put out the fires, lifted the main winch from its deck-bolts, cracked and tore at the bulwark, and swept the whole business pell-mell into the sea. In the engine-room the big Geordie mechanics throttled the racing machinery, and swore at the fate that made them work knee-deep on the foot-plates in brine.

At 5 p.m. Walters took over charge of the bridge from the mate, and glancing across the purple swells to where still hung the ungainly *Senator*—no deeper surely, he thought, than at noon—experienced a most pleasant heart-throbbing which sent his half-frozen blood oozing to his face, and for a time he became dreamily thoughtful. Larry unpleasantly awoke the second mate.

'Things are worse than I thought,' he said. 'We've barely provisions for five days for one crew. I've inspected the lazaret, and there's no doubt at all upon the matter. Still, the weather's clearing, and we'll soon make good speed.'

Walters came quickly to Larry, and said, 'I've been thinking it over, and I've got an idea.'

'Let's hear it, man.'

'That deserted ship has all we require.'

'Well, what of that?'

'Hang on to her, and when the sea smoothes down I'll go aboard and get you all you want.'

'Surely you're not so mad. The *Senator's* sinking. Her skipper says so, and he ought to know.'

'He ought to,' replied Walters quietly.

Larry turned on the second mate quickly. 'Well?' he said.

'That ship is not sinking, and I've an idea what's saving her.'

'Go on.'

'That's all.'

'Are you sure of all you say?'

'Positive.'

The skipper stamped upon the bridge and strode athwart. At last he gave Walters a decision.

'The chance is yours. Ring the engines down "slow."'

They held tight to the *Senator*, and the weather slowly fined.

The late skipper showed some uneasiness, and asked, 'Do you mean to tow her, Captain Larry?'

'I've done worse things in my time,' was the response; and the captain of the *Masterpiece* went to the upper bridge and waited for the moon to clear the darkness. At midnight the yellow globe swung over the eastern swells and sent a pale,

golden light shafting over the heaving bosom of the Atlantic, revealing the *Senator* riding the seas quite comfortably. By the time the moon meridianed, the weather had decidedly improved and the sea gone down.

Larry ported his helm and brought the *Masterpiece* almost alongside the *Senator*, so that the drippings from her scuppers and plate-edges could be plainly heard aboard the sister-tramp. The *Senator's* skipper, leaning over the rail, interrogated Larry: 'What do you mean to do with my ship?'

'Board her and get provisions for your crew and yourself.'

'You're utterly foolish. The old box won't live five minutes.'

'Long enough for my second mate to take her in hand.'

'You'd pirate my steamboat?'

'Not for worlds.'

'I'll go aboard too.'

'With my permission. Oh no, sir; you'll stay where you are.'

A boat was put out; the lifeboat was drifting east in sections; and half-an-hour afterwards Walters returned with his boat loaded with tinned provisions.

'She's a safe salvage,' he exclaimed. 'Not a drop of water in the holds; her bulkheads have saved her. What water she has cannot be increased.'

Finally the ex-captain of the *Senator* was invited into the chart-room.

'Your ship's waiting to be salvaged,' said Larry.

'Rot!' replied the *Senator's* master angrily; 'and a man's a fool who says otherwise than that she's perfectly unsafe.'

'Very well,' replied Walters, 'I'm off aboard. I'll see you in New York.'

'Stop! stop!' cried the skipper. 'You don't mean she's all right?'

'I mean I want your apology, or your ship's mine.'

'I don't want to waste any more time,' observed Larry after an interval of silence. 'Come down your dignity or take the other consequences.'

Some time later the *Senator*, secure on a double hawser, was towing over the gilded deep, her former captain on her bridge, grateful but feeling small.

The pent-up feelings of the second mate found a sympathetic ear into which to pour their load; for surely disappointment had cut him with a cruelly keen edge.

'After all the trouble and worry and risk. By —, man! I thought I'd get something out of the business besides a tin medal and the sack. We've given that fellow our rightful salvage, and it broke me up to do it on account of the promise I made to my girl. Well—he was a shell-back, same as myself. Perhaps he's already got a wife and youngsters. The salvage on that old drag-

astern will be a mere nothing. If I could only get to that rich relation of our owner I'd boot him—no, boot him isn't strong enough—I'd kick him until he was black-and-blue in the face, and then heave him overboard. Well, never mind any more now; there's the steward banging the hash-hammer.'

'You like the *Masterpiece*?' inquired the salvaged passenger.

'She'll do, though she's a hog in a seaway. But she gives me six pounds a month and promises—substantial promises.'

At New York, where the authorities took over the *Senator* for repairs, the passenger left the *Masterpiece* and wished Walters luck.

Some days later the tramp steamed from Sandy Hook, set her course in the home-trail, and after battling for seventeen days, berthed at one of the Newcastle quays.

She had but tied up to the wharf-posts when a boy handed a note over the bulwarks. Larry read it with a lengthening face and approached the second mate, who was busy scouring the decks of lines and cork fenders.

'We're wanted at the office,' he said grimly, and stalked to his room without further explanation; and each man, attired in Sunday rig-out, was despondent and miserable as he stepped on to the quay.

'I'm glad Nellie's not here,' thought Walters.

'I'm thankful Bessie kept out of the road,' added Larry.

At the first public-house the two men obtained courage for coming disaster, and later entered the steamboat-owner's office, and were ushered into the presence of that gentleman, who smiled genially and presented a handshake of welcome to the mariners. He said:

'Mister Walters, I wish to appoint you as mate of the *Masterpiece* for a few voyages, when I shall be pleased to promote you to master. Captain Larry, when the transaction of my taking over the *Senator* is complete, I shall desire you to take charge of her, at, of course, an increased salary. The *Masterpiece* will be here only a fortnight; so I'd advise you both to skip and have a holiday while the opportunity offers.'

'He's the stuff,' Walters heard a voice he recognised say, and, looking into an out-of-the-way corner, discovered the big passenger regarding him. The man came across the private office.

'I am Mr Slade,' he said, 'the cousin of your owner, and upon whom'—the man smiled and put a greeting hand out to Walters—'you swore vengeance.'

For a moment things real faded from the eyes of Walters. He forgot about steamboats and hard fate, and all the rest of it; and in place there rose a vision of dear-heart Nellie hugging him on the quay at Newcastle and giving him, his fifteen pounds per month and all he had fudged, a glorious and longed-for welcome.

## WASTE.

**T**HE consideration of waste is very interesting, whether we think of waste as meaning manufacturing residuum or as the result of wear and tear.

Taking the first definition, it is wonderful how modern science has enabled us to utilise what in the past was useless and only fit for the rubbish-heap. The Romans during their occupation of this country worked and smelted the iron ore in the Forest of Dean; but so imperfect was their process that it has since been found worth while to resmelt the heaps of waste left by them for the sake of the unreduced iron remaining in the slag.

Amongst manufacturing processes, too, many instances may be mentioned of the utilisation of residual products formerly worse than useless. An example of this is seen in the manufacture of ordinary coal-gas. In the early days of gas manufacture the tar and ammoniacal liquor were subsidiary products of little if any value, and sometimes even entailed a loss by reason of the cost of their removal. Now, however, that aniline dyes are made from coal-tar, the tar is very valuable commercially; and the ammoniacal liquor can also be dealt with to a profit. It is even a question whether in the future the gas will not be comparatively valueless, and coal distilled for the sake of what are now called residuals. So far is this already the case that, whereas in the production of coke from small coal it was, and in old-fashioned establishments still is, the custom to allow the gas and residuals from the ovens to burn away freely in the air, it has been found economical to construct elaborate apparatus and carefully collect the residuals. Again, in the manufacture of silk it was at one time the practice, after winding off as much silk as possible from the cocoon, to throw out the cocoons for use as manure, though some remnants of silk still adhered. In 1857, however, Mr Lister of Bradford (afterwards created Lord Masham) invented a successful method by which these remnants of silk might be detached and spun up with the rest.

The towns of Dewsbury and Batley, with the districts round them, owe a large part of their prosperity to the utilisation of waste. In former days rags were of no use whatever except for the making of paper, and for that purpose only certain sorts were available; but now, in the district named, thousands of tons of woollen rags are every year converted into wool, and, with the addition of more or less new wool, again spun and woven into serviceable cloth. In washing wool and woollen cloth in the process of its manufacture a large amount of soap is used. Chemical processes now enable the manufacturers to recover from the soap-suds a considerable pro-

portion of the grease of the soap, which had run to waste and greatly polluted the streams.

A wonderful saving has been effected by the aid of modern science in perfecting old processes and finding out new ones with the object of doing the required work more thoroughly, and that with less waste of the material manufactured and less expenditure of fuel. The very refuse of our great cities is burnt, instead of being collected in heaps dangerous to health, and the heat produced is utilised. Cheap fuel is, however, an important factor in the utilisation of waste. Most of the regenerative processes are carried on largely by the aid of heat; hence the life or extinction of a useful process depends frequently on the facility for procuring cheap fuel. Small establishments for the treatment of manufacturing refuse spring up when coal is cheap, but are nipped off by a rise in the price of fuel, when, as often happens, there is no considerable increase in the value of the commodity recovered or produced.

The gradual wearing away of a thing by use or decay is our second definition. Chemists tell us that it is impossible to destroy anything. We may cause new combinations amongst the elementary substances of which a thing is composed, or add some further element to them; but though the apparent form of the object may be changed, or even made invisible, the elements still exist.

Over and above chemical waste of this kind, however, a wonderful amount of solid matter disappears, for all practical purposes, by mere wear without any chemical change. Take, for example, one of the great main roads which run through England, and have followed more or less their present lines for the greater part of a thousand years. Year by year the road is coated and repaired by the application of thousands of tons of material of various kinds. To coat a broad main road something like a ton of stone per lineal yard is required. This coating, taking from one thousand five hundred to two thousand tons of material per mile, may be done every three or four years where there is heavy traffic, and yet what becomes of it all? The road does not get higher and higher, till, from being on a level with the country round about it, it forms a ridge across the landscape; but if not, what becomes of so much solid rock and earth? The rock is, doubtless, ground into mud; but this is usually scraped off and kept in heaps at the side of the road, to be used at the next coating to bind the broken stone. One explanation of the gradual disappearance of road metal is that it blows away in dust; but this seems rather a weak explanation to give for the disappearance of a thousand tons per mile of road in, say, five years.

The wear and tear of a railway is another instance. In the early days of railways, when

iron rails were used they constantly needed renewing, being worn out by the light rolling-stock of those days. Even now, when steel rails and steel wheel-tires are used, the wear and tear is very great. Doubtless the chemical action of the air, in rusting the bright surface of the rail in damp weather, does something; but the real wear is much more than this; and it must be remembered that the wear is mutual between the rail and the tire, and that the friction between the two is tremendous when a train running at a good speed is brought up by a powerful continuous brake, greatly retarding the revolution of almost every wheel in the train. Where, then, does the steel of the rails and tires go to? Are we to suppose that geologists in the distant future, when railways have been abandoned in favour of flying-machines and forgotten, will be puzzled by a network of thin bands of iron ore spread over the country?

The Chancellor of the Exchequer has almost

every year to ask Parliament for a grant to repair the waste of the gold coinage. In 1890 this loss amounted to about two thousand pounds. The mere transit of a box of gold coin from the Bank of England to Edinburgh or Dublin entails an appreciable loss of weight by the coins rubbing one against another. If this is so when the coin is carefully packed, how much greater must the wear be in the rush and bustle of business, when money is roughly thrown from till to counter and back again, and subject to constant friction in purses and pockets! Where does all the gold and silver go to? One might expect a Lombard Street dust-cart to have more gold in it than many a gold-mine floated with a most entrancing prospectus.

To our sorrow, we know how fast our clothes, and especially our boots, wear away. The amount of waste in individual cases is small, but in the aggregate enormous.

The mud of our great cities must be of wonderful composition!

## THE LAW LORD AND LESLEY.

### CHAPTER VI.

**P**ERHAPS the lists did not come out after all to-day,' said the minister, looking nervously up from the book he was reading. 'I think he would have telegraphed if they had come out,' he added. It was the third time since supper that he had volunteered the remark, and each time it had brought Lesley's thoughts back with a rude shock of self-reproach to her uncle's need of consolation.

The oil-lamp on the table flung its light on to the pages of the book she was reading; but, though her eyes skimmed the words, no sense of their meaning invaded her mind.

'No, they cannot be out yet, or he would certainly have wired,' she agreed for the third time.

'He has never failed to do so before,' said the minister; 'but then it was always honours, and he has warned me repeatedly in his letters of late not to expect too much this time. It is strange what difficulty the lad seems to have had with this last examination, when most men find it child's-play after the others.'

A still sharper pang of self-reproach went through Lesley's heart at his words.

She had only lately begun to realise the nature of her influence over her cousin, the events of the past spring having rendered her clairvoyant about such matters. But the knowledge did not persuade her to mercy; on the contrary, it seemed to have a hardening effect upon her thoughts of him, which was betrayed but too plainly in the

few and scanty letters now representing their once copious correspondence. Oh, what a traitor she had felt when again and again she had been called upon to join in the old man's glad anticipations of his boy's final triumph, knowing that in her heart was nothing but a sick dread at the prospect of his victorious home-coming! How could she deny him what he had been working for so zealously all these years? No. At all costs to herself she must fulfil her obligation and go through with her share of the tacit bargain which had existed between them from the commencement. The longing to escape had been growing and deepening within her every week which brought the dreaded event closer. Visions of herself as a hospital nurse, a governess, a lady's companion, floated enticingly before her eyes—the most menial servitude appearing glorious freedom in comparison with the inevitable future; but her conscience, like a strong wall, barricaded her about, shutting her off for ever from the joys of independence.

Silence had fallen once more upon the little room—the tense, nervous silence of expectation, when suddenly, as if in answer to the mute desire of the occupants for something to happen, the door quietly opened, and there was John upon the threshold.

At first sight of him Lesley recoiled in horror, for as he stood swaying to and fro, clutching at the lintel for support, he had all the appearance of a drunken man; but the moment he spoke she knew she had wronged him.

'Father! Lesley!' he ejaculated, and then

stopped; something seemed to be gripping his throat and choking back the words he would say.

'I have failed,' he added hoarsely at last. His eyes were burning out of the clay whiteness of his face, and his clothes hung in loose folds on his once stalwart figure.

Lesley remained riveted to the spot, her gaze fixed in uncomprehending fashion on the spectacle of misery at the door. The whole scene seemed to her like a petrified nightmare. Surely—surely it could not be true—this dreadful ironical response of Heaven to all her past rebellious longings.

'Failed?' echoed the minister, who had risen too at the opening of the door, and now stood erect and rigid by the table, his lips mechanically repeating the fatal announcement in vain endeavour to bring home to his mind the meaning of the word. 'Failed?'

'Ay, failed—the gold medallist a stickit minister,' cried John in a voice of misery. 'Oh Lesley, girl, for pity's sake say something!' he added, turning almost fiercely on his cousin. 'Don't stand there glowering at me with those frightened eyes. I'm not asking you for anything, God knows. Why, girl, you should be rejoicing. This night you're free—free; and I'— His head went down on his breast, and his voice died away in an inarticulate murmur.

Then for the first time Lesley realised the full significance of the tragedy. His words, piercing straight to her heart, brought about a total revolution in her feelings: all the dread and repulsion of the past few weeks were swallowed up in an absorbing love and sympathy.

Great tears of remorse welled into her eyes. She was hardly conscious herself that she was crying; but John, raising his head again, became suddenly aware of it.

'Oh lassie, don't greet!' he exclaimed with passionate contrition, his own grief melting at sight of her distress. 'There, there—foolish cry-baby that you are,' he went on, patting her tenderly on the shoulder as he spoke, and gently drying her eyes with his handkerchief; but the memory of the many other times when with like tender administrations he had comforted her childish griefs made Lesley's tears flow all the faster.

'Ah, poor lassie! poor wee thing!' he continued, looking sorrowfully down at her. 'I ken fine how the skies rain sometimes for relief when the day is at its bravest,' he went on, relapsing into his boyish vernacular, as if the past had truly for the time being supplanted the unhappy present.

'Let her weep, man,' put in the minister's voice sternly; 'it is natural that she should. Tears bring comfort to women; but men have no such outlet for their griefs,' he added bitterly.

'No, poor dad; it's hardest of all for you,' said John, taking a few steps over to where the old man still stood immovable by the table. He

staggered a little as he walked, and clutched aimlessly at a chair in passing; but neither Lesley nor her uncle noticed the fact. Both were too absorbed with their own grief.

'I was never clever like you, dad,' he pleaded, laying his hand with a little wistful gesture over his father's.

'Merciful Providence! the lad's fevered,' cried the minister, coming to himself with a start. 'Laddie, are you ill? You're burning like a furnace.'

John smiled vaguely, raising his other hand to his head in a bewildered fashion. 'I've been burning in hell so long, it's little wonder,' he said. 'Oh father!—Lesley!—I think—I must say good-bye—now,' and he fell in a prone heap on the little horsehair sofa.

For many days after that awful home-coming John lay unconscious to the summer world about him, in a mysterious region far removed from the utmost reach of tender human voices, alone with the imaginary demons conjured up by his diseased brain. There day by day he wrestled in mortal conflict with his unseen foes, and only by his muttered ravings were the anxious watchers by his bedside able to gauge the full extent of the torments he was enduring.

The one word failure was never off his lips. 'Failed! failed!' he would repeat again and again with monotonous insistence, and then would burst forth into unintelligible wanderings through the mazes of which his listeners could catch but distant glimpses of the truth. 'It was only at the end, I tell you,' he would cry; 'she was mine till then. But God pulled the hardest. I knew He would—He had so much on His side—that beautiful room, with all the books and the carpet—like velvet—and they had taken away mine when I got home that night—the strip by the table: my chair had made a hole in it, and Mrs Fasson was angry. But they all said God had a hard heart. He hanged Jane Silence, you know.'

'Lesley! Lesley!' he cried on another occasion when the girl was seated alone by his bedside, 'that day I took the thorn out of your finger you kissed me, little sister; but I said sweetheart under my breath; that was before the awakening. Oh! I have had such awful dreams, Lesley. I dreamt I had failed,' and his voice trailed away in a dry, hopeless sob.

At first Lesley had hardly been able to control herself as she listened to the wild outpourings of his tortured brain, every word of which seemed to pierce straight to her heart; but by degrees the stoical despair of the penitent took hold of her, and she would sit by the hour calm and apparently unmoved in the endurance of her punishment.

At last, one day when the doctor had gone, leaving a well-nigh hopeless verdict behind him,

John, who had been lying still and silent for longer than usual, opened his eyes, and Lesley saw in them for the first time since his illness the light of reason. In an instant she was down on her knees by the bed, pouring out the confession of her pent-up love and misery. If only she could disabuse his mind of this reproach of failure all might yet be well, and surely this God-given opportunity had not been sent in vain. But the awful days and nights of mental torture had made too deep an impression on his mind to be wiped away in a few moments; and, despite all her vows and protestations, the anguished expression still lingered on his face like a reflection from the gates of hell through which he had just passed.

At last a glimmering dawn of hope in his eyes rewarded her appeals, spurring her on to further efforts. A few moments later she burst impulsively into the study where the minister was seated in a dejected attitude by the table, his head buried in his hands.

'But have you counted the costs?' he asked sternly when he had listened in silence to her wishes. 'I would do anything to preserve his life; but we cannot tell—it may be God's will to take him from us.'

But Lesley was in no mood to count the costs; her whole idea was to make expiation for the terrible consequences of her ingratitude. 'Come—come! Oh, come quickly!' she cried with frantic impatience. 'Why, he is better already, and—who knows?—if he feels what it is to be happy again he may recover. Oh, come! come at once! He will never believe it till he hears you say the words.'

So the minister followed her to the sick-room, and there in a few moments more Lesley Gordon and her cousin were made man and wife. As the brief ceremony came to an end a contented smile crept over the sick man's face, and with Lesley's hand in his he was soon sleeping peacefully.

Two days later a notice of the strangely solemnised marriage appeared in the *Scotsman*. Lord Coalstoun read it at breakfast, and laid the paper down quietly.

'Lady Marjorie,' he said, addressing himself to his guest, 'do you remember a concert, when we were at Barhulic long ago, in aid of ministers' widows, and a minister's niece who sang a Scotch song at your request?'

'At yours, rather,' she corrected; 'and it wasn't so long ago at all. Of course I remember.'

She spoke pettishly. It was the last day of her visit, and she had become impatient of her host's dilly-dallying methods.

'To me it seems ages and ages,' he returned abstractedly.

'And why do you ask?' put in Lady Cariston from behind the coffee-urn.

Lord Coalstoun gave a start, and then uttered a short, half-apologetic laugh.

'Oh, only that I see in this morning's paper she has taken the first step towards qualifying for a future share in that night's profits,' he returned enigmatically.

'What do you mean?' interposed his guest.

Lord Coalstoun bent towards her with a smile.

'She has married a minister, of course,' he explained gravely.

'How dreadfully prosaic!' cried Lady Marjorie, rising. 'I thought you were going to tell us she had gone on the stage or bolted with the village schoolmaster—that dreadful man with the blue tie.—Now, dear,' turning to her hostess, 'if you will excuse me, I will run away and dress. I don't want to miss my train. Yes, do come with me.' So saying, she swept from the room, followed more slowly by Lady Cariston.

'And so ends romance the true and the false,' said his lordship in a low, ruminant voice.

That night he started on a long-projected journey to Russia.

A premature November frost held the old gray city in its relentless grip when he returned. The pavements rang crisp and metallic beneath the feet of the hurrying foot-passengers, exhilarated into greater speed by the familiar nip in the air. All day over the Castle there hung a yellow haze, which deepened and fell like a gloom upon the town in the later afternoon.

Lord Coalstoun had broken his journey on his way north at Dudhope to pay his respects to Lady Marjorie—now Lady Marjorie Maxwell—and the young laird, her husband. The flying visit left him absolutely unmoved. Not so his hostess. 'Poor Coalstoun'—he was always poor Coalstoun to her after that—'no doubt he had felt her marriage dreadfully. He had aged years in a few months. After all, when a man has remained single until his time of life, it is safer not to think of matrimony at all,' she confided to her very youthful spouse, who agreed with her laconically, as he always did with everything she said: it saved trouble—a fact he had discovered even in his few short weeks of matrimony; and if he did happen to have opinions of his own on the subject—why, he could keep them just the same. Old or not, Coalstoun was a deuced fine fellow, and the woman who got him might say grace with a thankful heart.

Certainly Lord Coalstoun had aged, though Lady Marjorie was mistaken as to the reason. His hair was grayer by far, and the lines round his mouth had deepened; but the virile force of his personality which had always constituted his chief attraction to both men and women remained undiminished: it was if anything rather increased and intensified by the rubs of fortune.

Whatever the condition of his feelings, his first evening at home found him in harness once more,

and settled down in the shaded sanctity of the library before the immense arrears of correspondence which had accumulated during his absence. The house was very quiet—after the din and rattle of months of incessant travel it seemed to him almost oppressively so—and he welcomed with some degree of pleasure the roll of the carriages over the cobbly stones as they rounded the crescent, bearing the guests to a dinner-party which was taking place a few doors off. He was conscious of that very human weakness which inconsistently desires to do nothing the moment a long-coveted opportunity to do much offers itself.

Still, he was not the man to allow his vagrant fancies to overrule his conduct, and he wrote steadily on until a knock at the door provided a legitimate interruption. With a sigh of relief he laid down his pen and turned half-round in his chair.

'A young lady, my lord,' said James, whose training was gradually adding discretion to his many other virtues. 'No, my lord, she won't give no name,' as his master interrupted him with an abrupt query; 'she said as 'ow I was to tell you it was a minister's widow, my lord.'

'Show her in,' was his lordship's curt command. But he did not turn round at once; instead, he remained with his back to the door, bending over his table, and pushing the papers upon which he had been engaged hither and thither in an aimless fashion until a soft swish of feminine draperies warned him that he was no longer alone.

Then he straightened himself and faced round abruptly.

For a moment there was silence.

'Is this a jest?' he asked at last, indicating the girlish simplicity of his visitor's attire.

Lesley smiled sadly. 'It would be a poor jest,' she said. 'It was one of my husband's wishes that I should not—not wear black.'

Lord Coalstoun winced.

'When did he die?' he asked in a conventional tone, his tired eyes scanning with relief every line and curve of her graceful figure, and dwelling thankfully on the vivid beauty of her face.

'A long, long time ago,' she returned.

He started. 'But you were only married on the 15th of July—four months ago to-day.'

'And he died on the 18th,' said Lesley.

'My God! then it was a deathbed ceremony.' There was a note of triumph betrayed in his voice in spite of himself.

'I did not know he was dying,' she explained in a low, monotonous voice. 'We were engaged always. Neither of our lives would have been complete if we had not married.'

She repeated the short sentences mechanically, like a lesson learnt by rote—though even as she spoke a pang of the old remorse which she would carry to her grave shot through her.

Lord Coalstoun observed her closely the while; but, whatever his thoughts, he suffered no sign of them to appear upon his face, and she continued hurriedly:

'You know that he had failed; but the day after his death came a letter from the University Court saying that as it was only in one of the smaller subjects, and as he had done so well in the others, they had agreed to pass him. So he was a minister after all, though he never knew it.'

There was a pause.

'Ah, well! you have had your romance, and it is over,' remarked Lord Coalstoun at last. 'And I have had mine, and it is over,' he added in a lower tone. 'We must both of us start afresh. It will be easy for you—you are young; but for me who am growing old—with a little reminiscent smile—it will be less easy. It is a difficult matter to make old love grow round a new name; but when it is only the name that is new'—he continued abstractedly, then broke off.

'Do you remember my sudden interest in ministers' widows that first day I called at the manse,' he began again abruptly, 'when you told me about the concert? I know you thought I was joking; but I assure you, though I had never given them a thought before, I seemed suddenly to feel a presentiment of future interest in—well—one at least.'

He finished with an interrogatory glance at Lesley.

She coloured faintly. 'Yes, I remember,' she said. 'My uncle has been very ill ever since,' she continued in a somewhat constrained voice, ignoring his former allusions. 'I have been nursing him; but he is better now, and I have come to Edinburgh to pack up the things John left behind him and take them home. The day he died he wrote a few lines to you, and made me promise to give you the letter with my own hand. I would have sent it by post otherwise, as I have not had time to get away before: that is my only apology for my intrusion to-night.' She handed him the letter as she spoke.

He took it from her and laid it down on the table.

'I only arrived from Russia this afternoon,' he remarked, with apparent irrelevance; 'and to-morrow I go to Barhulican,' he added, a gleam in his eyes.

Lesley coloured again. 'You have bought the place, have you not?' she asked, striving to speak conventionally.

'Yes,' he rejoined. 'I bought it because it is the brick and mortar personification of a certain airy castle of mine. My Castle of Indulgence I call it—the home of my illusions. I am glad I did so now. The deed has brought good fortune with it.'

'And I am glad too, for your sake,' she conceded; 'but I will not interrupt you any longer.'

She turned to go as she spoke, but he hastily interposed.

'Allow me just to read this first, and then I will see you home.' He took up the dead man's letter as he spoke.

'Oh no—no!' cried Lesley in a pained voice. 'I would rather not wait. There is no need for you to see me home. I am accustomed to looking after myself—and—I am tired.'

'Let me see you in my chair first,' he said, the old peremptory ring in his voice. 'Come,' he added, taking her hand in both his. 'This is my house, and you must do my bidding.' His

will seemed to be dominating her—rendering her powerless to struggle against it. 'There, that is right. Sit down. Oh, what a long time I have waited for this! And I will tell you a wonderful story about the future'—he leant over the back of the chair as he spoke, and taking her face between his two hands, he turned it up to his own—'of how Lesley married the Law lord,' he went on in an ever deeper, more tender tone, 'and how they both lived happily, shall we say—what a poor thing a vocabulary is, child!—in a heavenly place which is called Barhulican, ever after.'

THE END.

## THE MONTH: SCIENCE AND ARTS.

### THE BRITISH ASSOCIATION.

**T**HE British Association opened its seventy-first session at Belfast, under the presidency of Professor James Dewar, whose name is so well known, more especially in connection with the low-temperature researches which have occupied the attention of science during recent years. His presidential address will be highly valued as an exhaustive history of the gradual approach by the march of knowledge to the absolute zero. The last time the Association met at Belfast was in 1874, when Professor Dewar's predecessor at the Royal Institution, Professor Tyndall, was president. There has been a good attendance at Belfast this year, and many questions of interest have been dealt with. Professor Armstrong's paper on educational reform will naturally attract much attention at a time when the same matter has so recently formed the subject of parliamentary debate. He condemns the modern system of teaching, and contends that, as progress depends upon research, the spirit of research should be the dominant force in our educational methods. The tendency of the modern system of education was, he considered, to kill the very power upon which the progress of the world depends. He blamed the Education Department for having allowed the present method of teaching, as pursued in our Board schools, to grow up, and he advocated a root-and-branch reorganisation of the entire system.

### OLD SHIPS.

Like all other mundane things, a ship has its limit of serviceable life, however strongly it may be built, and sooner or later it finds its way to the shipbreaker's yard. Nelson's old flag-ship, the *Victory*, is of course an exception; and while it is undoubtedly the oldest warship afloat, great pains are taken that it shall not fall into a state of decay, large sums being spent upon its maintenance. The life of a first-class wooden ship may

be reckoned at one hundred and twenty years. Iron ships should last longer; but improvements in their construction have come so rapidly that these ships get obsolete long before they perish from old age. The oldest steamer still in active service appears to be the *Swift* of Cardiff, whose years number seventy-one. We have no means of ascertaining the age of the oldest wooden ship afloat; but within recent years we have seen at Ramsgate a picturesque old ship which brought timber from Norway, and which was so ancient in appearance as to at once challenge remark. It may be assumed that such an old-world relic could not be entrusted with any other sort of cargo. A wooden ship carrying wood can be trusted to float under any conditions.

### HUGH MILLER.

The celebration of the centenary of the birth of Hugh Miller, which took place at Cromarty recently, was a significant testimony to the loving regard in which that great geologist is held by his compatriots. Although times, and ideas too, have changed with regard to many matters on which he wrote more than half-a-century ago, his books will always repay perusal, so fresh are they with the breezy air of hill, dale, and seashore. Well might Sir Archibald Geikie say of him: 'He clothed the dry bones of science with living flesh and blood. He made the aspects of past ages to stand out once more before us as his vivid imagination conceived that they must once have been. He awakened an enthusiasm for geological questions such as had never before existed.' It is noteworthy that, besides the British geologists who met to do honour to Hugh Miller's memory, there were present at Cromarty representatives from both America and Canada and from other countries.

### A NEW FIRE-RESISTING SUBSTANCE.

It is generally acknowledged by those who have given attention to the subject that an absolutely fireproof house is a thing impossible

of achievement, for although we may employ un inflammable materials in its construction, its contents will always present an opportunity for the play of flames. At the same time it must be admitted that our ordinary modes of building construction are open to grave condemnation on account of the unprotected woodwork which forms the foundation of walls, flooring, and stairways. Recent legislation has formulated certain rules which have to be adhered to by builders; but we have not as yet gone very far towards the realisation of a fireproof structure. A demonstration was recently given at the factory at Higham, Kent, of a fireproof material called uralite, which is made by the British Uralite Company. Its principal ingredient is asbestos, which is combined with chalk, water-glass, and other materials. The composition is rolled into sheets and boards, and can be used in place of wood in house construction, for roofings, ceilings, floors, and partitions. It can be planed, sawn, and worked with carpenters' tools generally, like ordinary wood, while at the same time it will stand the action of continued heat with impunity. We are without any information as to the cost of uralite as compared with timber, and cost is unfortunately an item of great importance in the adoption of any new material.

#### AN AUTOMATIC LIGHT-SHIP.

The ordinary light-ship which guards our coasts usually has a crew of twelve men, seven of whom are always on board while the others are resting ashore. It is a lonely and dangerous life, this, of guarding hidden sands and sunken rocks; for, strange as it may appear, it is not uncommon for these vessels to be run down by the ships for whose protection they exist. Possibly in the future the automatic light-ship will take the place of the old type of vessel, the new beacon riding at its moorings untenanted. Such a ship has recently been established at the Otter Rock, Islay, on the west coast of Scotland, and it remains to be seen whether its performance is equal to promise. The idea of such a ship seems to have been suggested by the gas-lighted buoy which now finds employment in so many places. The new ship carries a light on its mast which is visible for about twelve miles, and this lamp is fed with compressed gas carried in tanks in the hold of the vessel. The lamp will burn for many months without attention, and the gas-supply is so arranged that on its way from the tank to the lamp it will actuate a lever which rings a powerful bell. Thus through the medium of two senses the mariner is warned from the vicinity of danger by automatic means.

#### ROBINSON CRUSOE'S ISLAND.

If any one would care to follow the example of that idol of boyhood, Robinson Crusoe, he has now the chance of doing so, for Juan Fernandez, the island upon which Crusoe and his man Friday

were supposed to go through such thrilling experiences, is now, so to speak, ready for occupation. The island, which lies six hundred miles to the west of Valparaiso, belongs to Chili; and the Government are now arranging to make it one of their provinces, and to establish there a local civil government. The island is about fifteen miles long by eight miles broad; and it has at one side a good harbour. Its commercial advantages have not been overlooked, for a large canning factory has been established for the utilisation of the lobsters and crabs which are found on the island in inexhaustible quantities. There are also plenty of fur-seals to be found there, which the law allows to be killed from March to November, the skins finding a ready market at Valparaiso, whence they are shipped to Europe. Land can be acquired by intending settlers on the island free of cost; there is plenty of fresh water; fruit and vegetables grow wild, and are easily cultivated; and plenty of food-fishes can be obtained on the coast. The expenses of living are therefore very low. We are indebted for these particulars to the *Journal of the Society of Arts*.

#### PAPER-MAKING MATERIALS.

Only paper of the very best quality is now made from rags, the bulk of that employed for newspaper and book work being manufactured from wood-pulp. Other materials are also coming into use to meet the enormous demand for paper, and plants which were at one time supposed to be of no economic importance are contributing their fibre to the manufacture. Among the new materials may be named bagasse, the refuse of the sugar-mills, formerly a waste product save that it was employed for fuel. Rice-straw, long only used as bedding for cattle, is also enlisted in the service of the paper-maker. Spruce is the wood now generally used in making paper-pulp, and of this there is a vast amount not yet drawn upon in the Dominion of Canada, which is only waiting for railway facilities of transport. In the meantime protests are being raised against the quality of the paper made from these substitutes for rags. It answers the purpose of ephemeral literature; but there is good reason to believe that it rapidly deteriorates, and that books made of it will have but a short life. It is somewhat humiliating for us to have to acknowledge that our modern documents cannot compare in permanence with those written on Egyptian papyrus before our own historical period commenced.

#### A USEFUL FINGER-SHIELD.

Those who frequent public libraries are often inclined to feel some repugnance at handling popular books of reference on account of the very dirty condition of the leaves; and their disgust is not lessened by reflecting that much of the soiling is due to the common practice of moisten-

ing the finger as the pages are turned over. It is a matter of common knowledge, too, that infection can be conveyed by books, and it can be easily imagined that this very obnoxious finger-moistening practice is conducive to that end. The busy person of clean habits and clean ideas will therefore be thankful to hear of a rubber finger-stall, with corrugated surface, which has been introduced for their relief. From personal use we can testify to its efficiency in clinging to the paper with greater tenacity than the naked finger, and to the sense of comfort and cleanliness which it confers upon its user. The cost of this valuable little device is one penny, and we feel sure that it will meet with large demand. We think, too, that it will be found useful in certain industries, such as photography, where glass has to be constantly handled. It is manufactured by the Scottish Waterproof Company, of Cockburn Street, Edinburgh.

#### A NEW TURBINE STEAMER.

Some time ago, when the efficiency of the Parson's turbine system for steamships was first demonstrated, we ventured to prophesy that before long the Channel service between England and France would see the introduction of vessels propelled by that method. We now learn that that anticipation is about to be realised, and that the ensuing season will see launched a turbine steamer which is being built for the railway company under whose control the traffic is worked. There is no doubt that the change is due to the great success which the system has met with on the Clyde in the hands of Messrs Denny of Dumbarton. The length of the new vessel will be three hundred feet, with a beam of forty feet, and she will be built with every possible convenience which may add to the comfort of the passengers. Thus her spacious deck will be covered by an overhead shelter, so that in rough weather the horrors of the cabin may be avoided by good sailors. The turbine machinery occupies so little room in comparison with the ordinary engine that there will be increased space for passengers. The present quickest time for crossing the Strait of Dover is sixty-five minutes, and it is expected that the new boat will reduce this by more than one-third. To those who suffer the pangs of sea-sickness the saving of that twenty minutes will be a great boon.

#### THE PRICE OF SPEED.

The largest steamship in the world is the White Star liner *Cedric*, and a competitor with her for the Transatlantic passenger service will be the recently launched *Kaiser Wilhelm II.*, belonging to Germany. The *Shipping World* has given some interesting comparative figures with regard to these two vessels, by which it will be seen that the highest speed can only be attained by a steamship at great cost. There are many pas-

sengers who cross the Atlantic who are willing to pay a big price if only they can travel quickly; and so long as this is the case ships will be devised for their special benefit. The German ship referred to is to have a speed of twenty-four knots, and its engines will develop forty thousand indicated horse-power. The British ship, with fourteen thousand horse-power, will have a speed of seventeen knots. To obtain her extra speed the German vessel will require to burn each day about seven hundred and fifty tons more coal than her rival, and will require two hundred and fifty-six more hands to do her work, the chief of these being mechanics, not sailors. At the same time, to make room for her coal, she must forgo the carrying of twelve hundred passengers and about twenty thousand tons of cargo every voyage. It will thus be seen that speed must be paid for.

#### TABLE SALT.

Although we too often hear of cases of food adulteration even in these days of inspectors and sanitary authorities, we are probably better off with regard to purity of food generally than were our forefathers, who had to be content with rough-and-ready methods of preparation. The manufacture of the commonest necessities for table use is now controlled by scientific knowledge, and we have the comfort of knowing that if a food-substance bears a reputable name its purity may be depended upon. We can many of us remember the time when table salt, for example, would always cake into a solid in dry weather, and become moist and semi-liquid when the barometer was falling: changes which were due to the presence of various chemical bodies generally associated with salt in its native state, which the mode of manufacture at that time failed to eliminate. We were thus dosed with various medicinal salts unknowingly, and no doubt suffered in consequence. We have recently received a sample of Messrs Tidman's digestive and dietetic table salt, which is quite free from the faults to which we have just adverted, and is as appetising to the sight as it is in actual use. Messrs Tidman's name is well known in connection with the rougher kind of sea-salt supplied for bath purposes.

#### DUST.

At the recent Sanitary Congress held in Manchester, Sir James Crichton-Browne dealt in an exhaustive manner with the subject of dust. 'We are,' he said, 'from the cradle to the grave encompassed by a cloud of dust;' and then he proceeded to show the various sources from which the different kinds of dust had their origin. Part of it comes to us from space, in the form of meteoric dust. Every shooting-star which we see slanting across the sky breaks up and finds its way as dust to our earth. The volcanoes, as we have all been recently reminded, send forth dust by thousands of tons. In the healthiest

places we find dust—two hundred particles have been counted in a cubic centimetre; and in London the number totals up to one hundred and fifty thousand particles. The greater the number the more disease; and this quite apart from any question of pathogenic germs. The dust of cities is made up of all kinds of incompatible items, such as sand, soot, salt, cotton fibres, vegetable debris, pollen of flowers and grasses, bits of straw, scales of skin, and other organic and inorganic fragments. Then in certain localities there are deadly ingredients added to the ordinary dust: tiny particles of lead which bring death to the workers in many trades, arsenical dust which affects others, phosphorus dust which attacks the match-makers, and the terrible anthrax dust which brings 'wool-sorters' disease.' Then there is the gritty dust which wears down the lungs by its irritating presence, and which is constantly present in other manufactures. With all these minute enemies warring against us in the air we breathe, it is a matter for wonder that the general death-rate is as low as it is.

#### THE CONTROL OF RAIN.

It is a matter of common knowledge that in hilly situations the rainfall is much above the average, and that a town may be so situated with regard to neighbouring elevations that it will receive two or three times the amount of rain in a year that falls on a place only a few miles distant. A case is quoted in one of Professor Tyndall's lectures, where the rainfall of one Irish town amounts to fifty-nine inches, and of another to only twenty-one inches, the difference being due to the action of the Kerry Mountains in forcing the moist winds up suddenly to a higher level, where they meet with the cold necessary to precipitate their moisture as rain. The Hon. Rollo Russell has suggested that we might control the rainfall artificially by the erection of immense walls, extending for some six or seven miles in length, and from three hundred to four hundred feet high. Such walls would act as natural hills in diverting the path of the moisture-laden air, and the clouds would be forced to yield their treasures. The idea seems to be theoretically sound, but the practical difficulties of building a wall of such dimensions would be insuperable.

#### THE NEW WATER-SUPPLY FOR EDINBURGH.

The story of Edinburgh water-supply, like that of all large cities, is one of gradual evolution. The sanitary condition of the wynds, closes, and streets surrounding the sky-aspiring tenements of the town three hundred years ago was often anything but satisfactory. When the draw-wells within the city walls became insufficient, water from the South Loch in the Meadows was brought in three hundred years ago. After 1681 water was brought from Comiston, then three miles outside the town, in three-inch pipes. The

Swanston springs were next annexed; then Bonaly Reservoir was made, and the waters of Glencorse valley, or 'Crawley,' were introduced. A supply of five million gallons daily was secured from the springs in the north Pentlands, and the reservoirs of Clubbiedean, Torduff, Harelaw, Thriepmuir, Harperrig, and Crosswood were formed in succession to supply Edinburgh, and also the millowners on the Water of Leith and the Almond with compensation water. One of the first endeavours of the new Edinburgh Water Trust in 1869 was to introduce water from St Mary's Loch; but the scheme was defeated in Parliament. In 1895 a Bill was passed to secure the water of Talla, in the parish of Tweedsmuir in Peeblesshire, and a drainage area extending to six thousand one hundred and eighty acres was bought from Sir Graham Montgomery and the Earl of Wemyss at the cost of thirty-six thousand pounds. A light railway of eight and a half miles was formed from Broughton, on the Peebles branch of the Caledonian system, to the Talla valley, where a reservoir extending for three miles up the valley, with a capacity of two thousand seven hundred and fifty million gallons, is being formed. The embankment for the reservoir, in order to withstand the enormous pressure of such a body of water, is being made very strong. At the base it is six hundred feet broad, with a core or puddle-trench of blue Carlisle clay. The embankment, ninety feet in height, will stand nine hundred and eighty feet above sea-level. This reservoir, it is expected, will be capable of supplying thirty-five or forty million gallons daily, although only from eight to ten million may be required at first, to give forty gallons per head to each person in a population of over four hundred thousand. The water-track extends from Tweedsmuir to Fairmilehead and Alnwick Hill (where it will be filtered), a distance of over thirty-two miles. It will be brought by pipes, tunnels, and aqueducts. When carrying the first instalment of eight million gallons per day, the water tunnel, which is of concrete, seven feet six inches high, and six feet wide, will only be flooded to a depth of two feet. The estimated cost was six hundred and seventy-six thousand pounds; but the expenditure has already risen above that sum owing to expensive whinstone tunnelling in the vale of Tweed and running sand and water in other sections, and it will ultimately cost about one and a half millions sterling. The works have been in progress for seven years; and three years may yet elapse before their completion, when Edinburgh will have a water-supply second to none in the kingdom.

#### ELECTRICITY ON THE FARM.

An interesting series of experiments has just been carried out very successfully near Rostock, under the auspices of the Prussian Minister of Agriculture, in the application of electricity to

farm-work, a plough and a thrashing-machine being used. These were of the ordinary type, the only difference being that they were driven by electric motors instead of steam-engines. The motive-power had been stored up in accumulators, and these were taken on lorries to the spot where they were needed. A lorry could convey accumulators with sufficient electricity to drive the windlass for the plough during four or five hours—that is, for one yoking; and during the dinner-hour the exhausted accumulators were replaced by a supply sufficient to last until the evening. The thrashing-machine was worked in the same way.

The water-power was supplied by a waterfall on a small burn on the farm, which had formerly been used to drive a turbine. The turbine now generated electricity, and was kept running constantly day and night.

For the farm-steading, accumulators were not needed. The electricity was simply led by wires, and put to various uses: in the dairy to work the churn, in the sheds to cut the turnips, and in the time of sheep-shearing to work the scissors. The ordinary servants on the farm seemed quite able to use the motors, and no accident happened; therefore, the experiments were considered so satisfactory that the farmers generally are likely to adopt motor-power. In the upper reaches of the Rhine, however, the method is different. The farmers of a district form themselves into a company, set up a turbine on the river, and distribute the electrical power by wires among the farms within a radius of fifteen miles, and it is used when needed.

In Germany two million five hundred thousand horses and fifty thousand oxen are employed in the cultivation of the soil; and it is calculated that if their labours could be dispensed with through the use of electrical power it would be a saving of eleven million pounds per annum. However, this is practicable only in places where water-power can be had to drive the dynamo.

There are many places in Scotland and England where these experiments would be as successful as they were at Rostock. With our abundant rainfall and numerous streams and rivulets, and with the system of accumulators, there is no reason why we should be behind other nations in the use of electric energy. Water-power is

cheap. It can be utilised by night as well as by day, and the turbine could be run continuously at certain seasons. The only difficulty would be to supply a sufficient number of accumulators; but even with merely sufficient to provide for one day's thrashing or one day's ploughing at a time, a great deal more work could be overtaken in seed-time and harvest.

No mention is made of the cost of such an installation; but it seems likely that it would cost less than steam-power, and it will no doubt become cheaper when it is more generally used. For the smaller class of machines like cream-separators and turnip-cutters the electric motor is sure to be most useful and economical. For heavy work, where expensive accumulators are necessary, it will be different; but most farmers would be content to set up a turbine or to use the power where it can be led. We shall watch with interest this new step in the progress of scientific farming.

Consul Bergh reports from Gothenburg that an effort is being made to use electricity in agriculture after another fashion. A seed-field is covered by a network of wire, and a strong electric current is turned on during nights and chilly days, but cut off during sunny and warm weather. The system, which is yet on trial, is invented by Professor Lenström of Helsingfors, Finland.

#### AN ORCHARD PEST.

Some of the finest orchards in California are infected by what is known as 'scale,' the larvæ of a fly which multiplies with great rapidity. Many efforts have been made without success to rid the trees of this invader; but at last Mr I. M. Clark has devised a means which is effectual. This is evidenced by a photograph of two rows of trees, the one treated in the manner to be presently described and heavy with foliage, the other bare as in winter owing to the ravages of the scale insect. This photograph was recently published in the pages of the *Scientific American*. By means of a pump the trees are first of all sprayed with mineral oil, a process which kills insects and larvæ in a few minutes. This is followed by a spray of caustic alkali, which prevents the oil from having any deleterious after-effect upon the trees. The two agents combine to form a soapy paste which acts as a valuable fertiliser.

## THE OLDEST LOCOMOTIVE IN THE WORLD.

AN ENGINE BUILT BY GEORGE STEPHENSON IN 1822, AND STILL AT WORK IN 1902.

T was in 1813, whilst following his employment at the Killingworth Colliery in Northumberland, that George Stephenson constructed his first locomotive, which he named 'My Lord,' evidently as an expression of his appreciation of the encouragement and financial support given to him by Lord Ravens-

worth, one of the principal partners in the Killingworth Colliery. The engine was placed on the Killingworth Railway on 25th July 1814, and, having succeeded in drawing eight carriages weighing thirty tons up a gradient of 1 in 459, was acknowledged to be the most successful working locomotive which had up to that time been constructed.

Despite the complete success attending the working of the Killingworth railroad, it was not until some five years later, in 1819, that we first see Stephenson in the rôle of a railway engineer, as up to this period he had been employed solely as an ordinary colliery mechanic. In 1819, however, the owners of the Hetton Colliery, Durham, decided to transform their wagon-way into a locomotive railroad; and recognising the abilities of the Killingworth engine-wright, they invited Stephenson to act as engineer of the undertaking, which, with the approval of the Killingworth Colliery Company, he agreed to do. The Hetton Railway was then the longest in that part of the north of England; it was eight miles in length, extending from Hetton Colliery, a few miles west of the city of Durham, to the shipping-staiths on the river Wear at Sunderland, and crossing in its course Warden Law, one of the highest hills in the district. The character of the country forbade the construction of a line with easy gradients, except by an expenditure much greater than the amount placed at Stephenson's disposal; and as heavy works could not be executed, it was necessary to make the line with but little deviation from the natural conformation of the ground, and also to adapt the mechanical methods employed for the working of the railway to the character of the gradients, which in some instances were unusually heavy. Stephenson carefully drew the line between the cases in which the locomotive could be usefully employed and those in which stationary engines were calculated to be the more economical. Consequently, on the Hetton line we find there were employed five self-acting inclines, the full wagons drawing the empty ones up, and two inclines worked by reciprocating engines of sixty horse-power each.

The Hetton line was opened on 18th November 1822, or nearly three years before the first public railway, the Stockton and Darlington, and on this date five of Stephenson's locomotives were at work. The speed of these locomotives was about four miles an hour, each engine drawing a train of seventeen wagons weighing about sixty-four tons.

It is of interest to observe that one of the stationary engines at Hetton, built by Stephenson in 1822 for hauling the wagons up one of the inclines, continued working until 1876, when it was withdrawn after nearly fifty-four years' service; also that one of the locomotives built by George Stephenson for the opening of the Hetton Railway in 1822 is, after nearly eighty years' continuous service, still at work at Hetton in hauling the coal-trucks. This is the oldest working locomotive in the world. It cannot be expected that much of Stephenson's original work remains in the engine; but its general design, excepting the cab, &c., remains as originally constructed. This is explained by the fact that at various times different parts have been renewed, the new pieces being made to correspond with those taken out,

whilst some parts, notably the steam dome, are actually portions of the engine as constructed in 1822. The principal dimensions of this old-timer are: diameter of the cylinders, ten and three-quarter inches; piston stroke, twenty-four inches; diameter of the wheels, three feet. The weight of the engine is fifteen tons; and it has a haulage capacity of about one hundred and twenty tons, at an approximate speed of ten miles an hour on a fairly level track.

Now, after its long and faithful service, it is not surprising to learn that the engine is unequal to the ever-increasing demands made upon it, and the directors of the Hetton Colliery propose to withdraw it from work at Hetton. With peculiar and commendable appropriateness, the old relic will find a permanent resting-place in the Durham College of Science, Newcastle-on-Tyne, where it will be preserved for this and future generations as a worthy specimen of the earliest period of locomotive engineering. No. 1 Locomotive, now placed on a pedestal at Darlington Station, was built by George Stephenson for the opening of the Stockton and Darlington Railway in September 1825, and continued working on the first public railway until 1850. It then passed into the hands of Messrs Pease and Partners, by whom it was used for colliery purposes until 1857, when it was placed on exhibition at Darlington. Therefore, in point of date of construction, and also in the number of years of active service, the engine used at the opening of the Stockton and Darlington Railway must give place to the old engine at Hetton constructed by George Stephenson fourscore years ago.

#### OCTOBER.

How fickle now the changeful autumn seems,  
That brings to-day the blue, unclouded skies,  
With late return of summer's languid dreams,  
While in her heart arise

Old loves and longings that shall move her soon  
To drive cold storms amid her tender vales,  
And, faithless, blast her trustful flowers at noon  
With sudden wintry gales.

When your eyes shone into my soul they made  
Fair Love to grow and blossom like a flower,  
Which now yearns outward from the deathly shade,  
But withers hour by hour.

J. L. SINCLAIR.

SAN ANTONIO, TEXAS.

#### \*\* TO CONTRIBUTORS.

- 1st. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'
- 2nd. For its return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3rd. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, should have the *writer's Name and Address written upon them IN FULL*.
- 4th. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

### MY AUSTRALIAN DUCHESS.

By GUY BOOTHBY,

Author of *Doctor Nikola*; *The Fascination of the King*; *The Red Rat's Daughter*; *Billy Binks—Hero*, &c.

#### CHAPTER I.

**M**Y wife declares that there are two good and sufficient reasons why I should not tell this story. The first is—so I understand—because it all happened a long time ago; the second is because she affirms the only people it could possibly interest are ourselves and our children. Now, it is not often that I disagree with my wife, perhaps because—after a fashion women have—she generally manages to get the better of the argument. In this case, however, I distinctly give it as my opinion that she is mistaken. A good story—though, mind you, I do not in the least defend my way of telling it—must always interest intelligent folk. I will go even further than that, and say that when you record a woman's heroism it becomes almost a matter of criminal neglect if you refuse to give that record to the world.

Now, therefore, you can understand why I am sitting here in my study on this beautiful September morning, determined to spend a couple of hours or so in giving you the story of my one and only love affair, instead of driving ten weary miles to attend a political meeting in which I do not take the least possible interest. What matter if the sunshine, as it streams in through the open window, falls upon some very gray hairs, or that that long youth, on leave from his regiment, now smoking under the cedar on the lawn, should give me cause to reflect that I am too old for the spinning of love-tales? Not a jot care I! My heart is as young at sixty as it was when I wooed and won the beautiful girl whose portrait by Millais hangs over the chimneypiece, and whom I can now hear chatting with her daughter and the vicar on the terrace outside. It is the law of nature that dukes should grow old as quickly as other people; on the other hand, I have more to be thankful for than most men.

So, all things considered, I must not complain. Now, with this long-winded preamble, let me get to my story.

It seems to me that nowadays every one travels. Royalty sails round the world with the eyes of the Empire upon it, peers and millionaires think nothing of visiting Alaska or Fiji, ladies of fashion plunge into unknown continents without a male relative to guard them; while little Smithson-Brown, late of Tottenham Court Road, tailor and outfitter, and Wilkins-Jones of Regent Street, both feel that it would be impossible for them to rest quietly in their gorgeous vaults in Kensal Green until they shall have estimated, by personal inspection, the value of the Big Bell at Kyōto, or have explored the wonders of the Yellowstone.

In my young days, when I quarrelled with my father in a moment of boyish passion, and went off to Australia in a huff, it was not so. The grand tour was a stately parade across Europe; Her Majesty's representatives in our Colonies were for the most part military men, and the soldier and the sailor were the only real travellers. Now look at the difference: my boy last year, when in India, went on a shooting excursion into Cashmere—a country which I am not sure I had heard of at his age—with as little concern as if he were walking to the home farm.

Beyond the fact that it took me out of England, my reason for quarrelling with my poor father does not in any way concern this story. One thing, however, I *do* know, and that is I have regretted that quarrel ever since. As most people are aware, I was the second son; Birkhardon being the eldest of the family and my father's favourite. Poor Birk! he was drowned whilst bathing, and that, of course, is how I come to figure as the head of the house to-day.

Having always had a desire for an adventurous life, and feeling that after what had happened

to remain in England was practically out of the question, I went up to London, secured a berth in a sailing-ship on the point of leaving for Australia, and three months almost to a day after bidding Gravesend good-bye, found myself in Sydney, wondering what I was going to do next. Had I stated the fact that I was Lord William Durrington, son of the Duke of St Columb, and brother of the Marquis of Birkhardon, I have no doubt I should have had no difficulty in obtaining lucrative employment—unfortunately a large proportion of the population of this world of ours are snobs; but I wanted to win my way on my own merits and without any adventitious aid. Perhaps I might have made a fairly good clerk in a merchant's office, or have become an employé in a bank, with the chance of rising to manager later on; but I argued that it was not worth travelling so many thousand miles to shut one's self up day after day in an office with its dreary routine. Then there were the goldfields—plenty of excitement there, and as rough and adventurous a life as the heart of a young man could desire; but they did not appeal to me. The fact of the matter was, I wanted to be among cattle and horses, and to know the existence of the stockman on the Great Plains. That was the life I determined to adopt.

I had still upwards of a thousand pounds left: not a very large sum, it is true; but many a man has started on less and found himself at my age a multi-millionaire. Having settled what I was going to do, the next thing was to endeavour to find a property. I called upon the various stock and station agents, but could obtain no satisfaction from them; I advertised, but the result was even less satisfactory. Had I possessed five times the amount of my capital I might have been able to secure something like the description of estate I was in search of. As it was, I found myself to all intents and purposes wasting my time in Sydney, with every week making further inroads into my capital.

At last, driven nearly desperate by my inability to find what I wanted, I determined on a bold stroke. I accordingly purchased horses and camp equipment, placed the remainder of my money on deposit in the Occidental Bank, and left the city to seek my fortune. Fortunately, during my stay in town I had kept my ears open in order to gather as much useful information as possible. This stood me in excellent stead now, for the Back Blocks of New South Wales in the early sixties were far from being what they are to-day. Bushranging and cattle and horse stealing were crimes as common as I understand they are rare at this moment of writing. Also, as you travelled farther inland there were the blacks to be reckoned with; and, as you may suppose, they constituted a formidable item in the list of chances it was necessary for a traveller to take. All things considered, the settler who was willing

to brave all dangers, and to venture out in the attempt to build up for himself a home in that new and dreary land, deserved whatever good fortune he received in return.

At length, after many wanderings, many queer experiences, and a few somewhat remarkable escapes, I found a resting-place. Yarradin, the station in question, was by no means a large one—that is, as such properties are reckoned nowadays. It was, however, well stocked, well watered, and fairly well manned. The owner looked after it himself, and from him I gained an insight into bush-life which was destined to be of inestimable value to me later on. By the time I had been on the place a year I had won a sufficient measure of his confidence to be appointed an overseer, and within three months of that important event my opportunity arrived. How well I can remember that time! It was late in autumn, and every day we expected the rains to break. Well, as our water had held out through the season, we were beginning to feel a little anxious concerning it. On another property some sixty miles farther down the river, we were informed that they were travelling their cattle in search of the precious fluid, and naturally we had no desire to be forced into following their example. Taking one thing with another, it seemed almost as if my luck were bound up with that of the owner, for on the very day that the first down-pour came the man who was destined to prove my greatest friend in the world—a man's wife, it should be distinctly understood, is more than a friend—Frank Farquhar, put in an appearance at the station and decided my fate. As I learned later, he was travelling south, and from the moment I saw him I liked him. People may say what they please about taking a fancy to strangers at the moment one sees them. It has only happened to me twice, and on each occasion I can with truth aver that I looked into the eyes of a person I have loved and honoured ever since. It will not be difficult for you to guess to whom I allude.

My meeting with Farquhar was a somewhat peculiar one. Not knowing when the rain would come, I had ridden out to inspect a water-hole some fourteen or fifteen miles from the head station, and I was still upwards of five miles from home when the storm, which had been threatening all day, burst. To give you anything like an adequate description of it is beyond me. In all my experience of Australian rains I cannot remember such another storm. Almost before one had time to become aware that it was falling, the dry and dusty track was a quagmire, with the deep ruts cut by the bullock-drays running like sluices wherever there was the least declivity. In less time than it takes to tell I was wet to the skin; but you may be sure I did not mind that, for had I not the delightful certainty to console me that the drought had broken?

By the time I was within a mile of the homestead the track had become so muddy and slippery that I was obliged to dismount and lead my horse for the remainder of the distance, lifting pounds of dark-brown soil on each foot at every step. Presently I became aware of a figure approaching me from the north. From what I could see of him he was in a worse predicament than myself, for the reason that, in addition to his riding animal, he was leading a packhorse which had plainly had about as much as it wanted of the road. As he came closer I noticed that the man was young, probably not more than six or seven and twenty, tall, with an honest and kindly face, and the curliest chestnut hair I've ever seen on an Englishman. Later on I found him to be a first-rate boxer, a fair rider, and second to none with stock generally.

When we had greeted each other after the fashion of the bush, I inquired if he was making for our homestead. On his replying that that was his intention, we trudged along together; and this was the beginning of our acquaintance.

As it turned out, the weather did not moderate for more than a week, and even then it was impossible for our guest to proceed on his way until the tracks had had time to settle a little and the creeks to fall. Work on the run during that period being practically impossible, I was enabled to see a good deal of him, and the more I *did* see the better I liked him. It was not long before he told me, in a burst of confidence, the reason that was taking him south. He had been out to the Far West to visit a tract of country he had chanced to hear of, and he was now on his way to Melbourne to endeavour to negotiate the lease from Government. Inspection had proved to him beyond doubt that the property was all that it had been represented to be—

more than equal, he declared, to anything he had hitherto seen, and capable of carrying a large amount of stock, even in a poor season. Over and over again we discussed the matter, and with each discussion I found myself wishing more and more that it were possible for me to go into it with him. My capital was still lying idle in the Sydney bank; I had saved my wages, and managed to bring off some effective deals in horse-flesh; therefore I could now lay hands on a sum totalling a little over fifteen hundred pounds.

Three days before his departure we walked down together to the new wool-shed, which we had used for the first time that year. As we went we as usual discussed his venture; and at last, unable to keep silence any longer, I blurted out my wish that I could go in for something of the sort myself. He clapped his hand on my shoulder.

'My dear fellow,' he cried, 'I would not wish to be associated with a better man. Let's see how it can be done. Have you any capital?'

I told him the extent of my resources.

'That settles it,' he answered. 'If you're satisfied with what I've told you, put it in, and from this moment we'll consider ourselves partners. The lawyers can do the rest.'

Then we shook hands, and he went on to say some nice but rather absurd things about always having liked me, and about feeling sure that we should pull together. After that, in our enthusiasm, we shook hands again and vowed that before a year should pass over our heads Yarley Plains—for that was the name of the property—should be the finest station, not only in the old colony, but in any of the other colonies as well. We were as enthusiastic and as sanguine of success as children; and, as this dear old place can bear witness, our hopes did not prove to be unfounded.

## ARCHIBALD CONSTABLE AND HIS LITERARY FRIENDS.

### IN TWO PARTS.—PART I.

**T**HE lapse of three-quarters of a century is sufficient to give interest to many trifling circumstances that at the moment of occurrence would be of little importance. The following extracts are from a notebook in which the writer jotted down the events of the day just as they happened, and as the names of several well-known persons are mentioned, a perusal of the extracts will no doubt prove interesting.

It was in November 1825 that a young gentleman, aged twenty-two, journeyed to the city of Edinburgh for the purpose of studying at the university. He had letters of introduction to several well-known citizens, in particular to Mr Constable the publisher, with whom, indeed, he

made the journey northward. It is not necessary here to refer at length to the personality of the writer of the diary; but it may be mentioned that from all accounts he was a fine, handsome young fellow, full of spirit and intelligence. He had been a student in Trinity College, Dublin, and subsequently became a clergyman of the Church of England, holding an important living in one of the southern counties. The notes, written in a simple and natural manner, show that he was fond of society and appreciated pleasant company; and that he was very popular is indicated by the warmth of the invitations which were given to him.

So much for introduction of the writer; now for the circumstances of his times. He came to Edinburgh when a memorable crisis was about to

occur there; for it was in the early part of 1826 that the great publishing house of Constable failed, drawing into its ruin Sir Walter Scott, whose connection with the firm through the Ballantynes had not been generally known. The commercial speculation on the part of Sir Walter had been induced, it is said, by ambition to increase his fortune for the purpose of leaving his family a position and estate of importance. The large sums he had expended on Abbotsford and the comparative ease in which he lived were, his friends believed, provided for by the success his works had already obtained. The fall of the house of Constable was a severe shock to Scott; but no part of his life bears better telling than that which records the way in which he met the reverse, and how, from 1826 until his death in 1832, he laboured until from the product of his brain and pen he realised sufficient for the payment of all his debts, though in doing so he did not spare himself, and in the opinion of many shortened his days.

The little word-pictures we get in the pages of the diary are full of interesting gossip of the Constable family and other persons remarkable and famous in their day. The opening entry concerns Letitia Elizabeth Landon, who is so well known by her initials, L. E. L. This lady was regarded as one of the most eminent poetesses of her time, and was a writer of considerable repute. The sad story of the last days of the life of L. E. L. has ever invested her memory with a pathetic interest; and, seeing here the young girl full of the playfulness and vivacity of disposition for which she was remarkable, one turns with pain from the thought that years after, far away in Cape Coast Castle, she was found on the morning of 16th October 1838 lying dead on the floor of her room. Evidence at hand seemed to show she sought relief from the loneliness and uncongeniality of the position in which she found herself on her arrival there with her husband, to whom she had been married but a few months.

We open the diary at 4th November 1825:

'Before leaving home I had a great wish to meet L. E. L. in London, and made many inquiries as to the possibility; yet chances seemed against me. But the same Being who generally accomplishes my lawful wishes brought about this also; for I am now travelling with the said L. E. L. in a private carriage on her way to York, in charge of A. Constable, and eagerly caught every blossom of wit as it budded from her flowery imagination. She thinks that "Love is predestined," that it is the "scarlet-fever of the Heart," yet positively declares that she never felt the bitter arrows. L. E. L. believes there are such non-describables as "ghosts;" indeed, Constable told an anecdote which occurred to himself (evidently proving himself a true believer). This was that previous to his second marriage a figure appeared by the bedside, a fine

handsome female very like his present wife. Good figure; but he is a Scotsman. L. E. L. expresses a regard for Dr Maginn, who, she says, has addressed some lines to her eyebrows.'

This was the Dr Maginn so well remembered in connection with *Fraser's Magazine*.

Miss Landon married Mr George Maclean, Governor of Cape Coast Castle, and on her death a votive tablet to her memory was erected there by Dr R. R. Madden, at the request of Lady Blessington.

'5th November.—Set out this morning at six. Talked very freely with L. E. L., finding fault with her mode of life, guarding her against her literary friends' free opinions of Religion. She said she could not believe that I was so sincere as I professed to be; abuses the idea of platonic love, yet she professes the greatest friendship for Mr Jerdan (friendship is platonic love when between the sexes); her friendship is built upon gratitude. Mr J. it is who has always been her best friend. "Gratitude is the memory of the Heart." Thus we find it rise from a pure source, and so continue its course until it arrives at what is called Platonic love. Would not L. E. L. be much annoyed if I told her that her friendship was perhaps mixed with the passion? Will not marry a medical man; will wait for me five years (she may wait fifty); will not have a man who sings or plays. Dreads death, yet wishes to be dissected; had an uncle who was buried alive—fears the same. Is an orphan; never went to school; is supported by her grandmother; her connections very good; is going on a visit to her uncle, Rev. Mr Landon, Rector, Abbeyfield, near York. We exchanged cards; promised to send her Wolfe's *Remains*; repeated the first verse of my parody on his beautiful lines, at which she laughed heartily; her conversation very like her writings, airy and trifling, "Writings upon the lines of a Rainbow," &c. We left her at her uncle's this evening; had to walk through a churchyard; she felt quite agitated. She is not handsome—no sweetness of expression; has read very little; some French.'

Mr Jerdan here mentioned was William Jerdan, a native of Kelso, who founded the *Literary Gazette*, and printed L. E. L.'s first contribution in 1820. She afterwards became one of Jerdan's chief writers and his intimate friend. Jerdan published an interesting 'Autobiography' in four volumes in 1852.

'7th November.—We arrived safe at Polton House, Mr Constable's county seat, at seven o'clock this evening (this day's scenery was particularly fine, and so much history connected with it). Four little bairns gave their fond embraces to their Papa. Mrs C. an agreeable, affable, lady-like woman—no foolish pride; the daughters in town.

'8th November.—We go to breakfast at nine. In a short time in walked the two Misses C.; genteel-looking girls, not beauties; one (Maggy) particularly sweet expression, reddish hair. We went to town; saw Tommy Moore, a gay young

chap. Hills about Edinburgh quite white and very bold. Returned to dinner. Mr C.'s carriage, a large comfortable one.

'9th November.—Went to town again. On our way Mr C. said he would write to L. E. L., and wished I would give him a few lines.

IMPROMPTU.

I do much like thee, L. E. L.,  
The reason why I must not tell;  
But this indeed I know full well,  
That I do like thee, L. E. L.

He repeated it to Tommy Moore, who was delighted with it, he says. We dined with Mr D. Constable, the son, a barrister, who has a very fine library. He is a delightful young man, of such general information. We had a *tête-à-tête* after dinner. He made a most admirable Whigish speech, delivered with much warmth, supported by good arguments; but still I remain a Tory. Miss C. is in town, living with him; an affectionate, interesting girl; Mrs J. Hurst's character of her was faithful. We returned early. On our way called on H. Broster; was sitting with his companion *Mr Gout*. He is better, and was very glad to see me; said he would give a dinner on my account.

It is hardly necessary to mention that the Tommy Moore alluded to was the son of the author of the *Irish Melodies*. His mother's sister, Miss Dyke, had been married to Mr William Murray, of Edinburgh, of whom we find mention later on.

'10th November.—A most happy day. Did not go to town; read, talked, and had delightful music in the drawing-room: "Isabella," "Bid me discourse," &c. &c. Captain Basil Hall dined with us; he is the author of the —. His good opinion of himself will not allow him to be so agreeable as he would otherwise be—indeed, as I understand he *was*; but the Scotch have spoiled him, and he thinks that he is a man of decided genius. Talking of correcting manuscript, &c., he thinks you cannot pore over it too much; but genius would not require this—more, would not *bear* it; the spirit is lost. The manuscripts of Sir W. Scott's *Waverley*, *Monastery*, and *Guy Mannering* were produced. Wonderful manuscripts; will bring at any time an enormous price. They are in good condition. Few corrections, which Capt. H. regretted; but I think it proves the genius. A fine property for Mr C. to leave his family, all the manuscripts. [These were sold in 1831. See this *Journal*, 1898, p. 19.] Capt. H., speaking of the Religions throughout the world (he has been nearly over it all), says that the "Religion of the Church of England is *vastly superior*." I had a pleasant walk with the Misses C. to Lasswade, a neighbouring village.

'11th November.—Mr C. is attacked with gout in the foot. The Misses C. go to town.

Captain Basil Hall, spoken of above, was the second son of Sir James Hall, President of the Royal Society of Edinburgh. He was in the

Royal Navy, and had travelled over the island of Java with Admiral Sir Samuel Hood, and accompanied Lord Amherst on his China mission in command of the *Lyra*, of which he wrote an account. He was several times on a visit at Abbotsford, and showed in later days great sympathy and kindness towards his honoured host. He also suggested to the Government that a ship should be placed at the disposal of Sir Walter Scott during his last illness, a request that was granted, and gave great satisfaction to the recipient. Captain Hall was a man of decided ability, and wrote many scientific papers besides several books of travel.

Several entries follow recording the doings of each day, one of which states, 'Read in the Green-House for three hours, so comfortably;' and another mentions, 'Mr Cadell dines with us.'

It will be remembered that Mr Robert Cadell was a partner of Mr A. Constable's, and had married his daughter in 1817. She, however, only lived for a year after, and he married for the second time in 1821. In the diary of Sir Walter Scott, under date 25th January 1825, there is written: 'Constable without Cadell is like getting the clock without the pendulum; the one having the ingenuity, the other the caution of the business.' When circumstances arose that caused the partnership to be dissolved, Scott held to Cadell, and it is a matter of history that Mr Cadell bought the manuscripts of Sir Walter's works for eight thousand five hundred pounds, and reproduced the whole series with the most favourable results. He became very intimate with Scott, and according to Lockhart gave him 'delicate and watchful attention.' He died in 1849, and has been described as 'one of the most acute men of business in creation.'

'19th November.—Went to town on the Coach. Paid a visit to Mrs Siddons; promise to dine with her on Monday.'

This Mrs Siddons was the widow of Henry Siddons, eldest son of the great Mrs Sarah Siddons. He owned the Edinburgh theatre; but when he died in 1815 it was in anything but a prosperous condition. His wife, Mrs Harriet Siddons, who had acted with success in Drury Lane and elsewhere, then took over the management, and with the constant and able assistance of her brother, Mr William Murray, turned it into a success, and was able after her lease had expired to retire with comfortable means. She was highly esteemed, it is stated, in both public and private life, and 'surrounded herself with friends in the highest circles of society in the Scottish capital.' Her father, Charles Murray, was an actor of some note in his day, and her brother William made his last appearance at the Adelphi, Edinburgh, on the 22nd of October 1851. Sir W. Scott several times alludes to him; and his first wife, as mentioned before, was sister-in-law to Thomas Moore the poet.

'20th November.—Went to Lasswade Church alone; poor sermon. Professor Wallace paid a visit. Mr Hugh Murray, the author of — (who came out yesterday to stop till Monday), and a Mr —, together with myself, had some arguments on predestination. They three were opposed to me; but of course it was a fruitless one. Professor Wallace I like most; better than Leslie. Hugh Murray is a most unassuming man, just as Nature sent him.

'21st November.—Hugh Murray, the Misses C., and myself go to town. Dined with Mrs Siddons; saw her two sons, the younger a fine handsome lad of about thirteen, the other fifteen. Went to the theatre in the evening. *Paul Pry* first night. Mr Murray very good; a general favourite. The *Beggar's Opera*. Miss Noel a good actress indeed; the company very fair. Slept at Broster's.

'22nd November.—Breakfasted with Broster, and very pleasant. Dined with Mr D. Constable, where I met a Mr Mackenzie, a clergyman of the Scotch Church. Very Calvinistic after dinner. We had much argument.'

At this point the entries end for a time, and a lapse occurs, for the next bears date more than a month later.

'SCOTLAND, January 1st, 1826.—POLTON HOUSE.—This morning before one o'clock, while reading in my room, I was not a little surprised to see the Butler and housemaid walk in, the former with a jug of "*Hot Pint*," the latter with a tray having on it a glass and some biscuits. Rising from my chair, and according to instructions, I kissed the maid, shook hands with the Butler, drank my "*Pint*," and ate my biscuits. In other words, I did as Rome did.

'I went with Mr D. Constable to Roslin, a small village about 7 miles S. from Edinburgh. The Castle is nearly in ruins; stands on a peninsulated rock, and is only accessible by a bridge. There is an old R. C. Chapel, which was built for the family (St Clair), in very good preservation; numerous little figures ornament the roof, and it is Gothic architecture. It was a most delight-

ful walk, and philosophic of course. Received letters from home; a New Year's gift. So much for New Year's Day.

'2nd January.—Left Polton to reside in Edinburgh, after spending eight weeks with Mr Constable. The time passed over quickly; every one there so kind to me. There was one in particular who won my affections. Found it very difficult to get a lodging, &c., to please me; at last fixed upon one, No 8 Buccleuch Place, with two ladies; 55 gs. per annum. Dined with Mr D. Constable, where I met the Rev. Mr Mackenzie, an honest, steady fellow, and Mr Lyne. We had some theology. Mr M. and Ego had a hard card, too, to play against these sceptical but clever men. Mr L. went cunningly to work by sowing seeds of discord between Mr M. and me—Kirk of Scotland and Church of England; but all this we evaded, and finally had the best of the battle.

'3rd January.—Entered into my lodgings; had a plain but comfortable dinner. Miss Pantton told me she had lost her mother a few weeks since, her father being dead these twenty years. Miss Mt. Constable ill with a very bad cold; the Doctor called in.

'4th January.—We had a party this evening. Rev. Mr Henderson, Miss P.'s cousin, was here. He seems a very clever man, and is generally esteemed. We got together, and had a little controversy. In the course of the evening he read a chapter and gave us an extempore prayer: very good; he introduced the afflictions of the family. Cake, wine, &c. Home.

'5th January.—Commenced the classes regularly; Leslie's, Hope's, and Jamieson's. Heard Dr Gordon preach; liked him very much: *vid.* sermon-book.

'6th January.—Commenced the Hebrew this evening with Mr Noble. Saw Mrs Constable in town to-day; she seemed delighted to see me.

'7th January.—Paid Mr D. Constable a visit; promise to dine with him to-morrow; talks of going to London with his father in a few weeks.'

## A VISIT TO THE ZIMBABWE RUINS.

By A. HOFMEYER, B.A., Author of *The Story of My Captivity during the Transvaal War*.

HIS is not an attempt to describe these marvellous ruins: abler pens than mine have done so. I am only going to tell the simple story of a visit which to me is an ever-memorable experience.

I was at Fort Charter at the time. The ruins being only some twelve or fourteen miles distant, a party of us planned an expedition thither. It was at sunrise on a beautiful morning that we started. Our party consisted of ten men armed with rifles, and two Mashona 'boys' driving our

pack-oxen; we were equipped for a two days' outing. Off we went over hill and dale, enjoying the beautiful scenery around us. Every little hollow had its rivulet of clear water; there were flowers on tree and bush, for it was autumn. The air was so exhilarating, and it was such a real pleasure to tramp along the winding Kaffir-foot-path, that by eight o'clock it was no wonder every one had a fine appetite for breakfast. This was enjoyed under some grand *mapani* trees, the velvety grass affording comfortable seats and lounges. After a short rest the march

was resumed, and by one o'clock the famous Zimbabwe was reached. We had heard a great deal about this wonderful and mysterious spot weeks before, and great was the excitement as we neared it. Often I had interrogated old and intelligent-looking Kaffirs I came across regarding these ruins; but I never obtained any satisfactory answer. It was always, '*I kona*' ('I don't know'). Numerous stories and explications, learned and otherwise, were floating about; yet nothing definite was known. Therefore, the Chartered Company had secured the services of Mr Bent, a well-known archaeologist, to visit the ruins and try to wrest from them their secret; and he was there with his party at the time of our visit, and had already begun investigations and excavations. We were all eager to hear his opinion.

I must confess that the nearer I came to the spot the more a sense of awe and mystery stole over me. Who knows, thought I, what peoples, in olden times, have walked here, and how long ago? Who knows what wars were waged, what tragedies enacted, on this very spot where we are standing? Who knows? Will any one ever know? Thus musing and dreaming, I walked on till we reached the longed-for goal.

As we approached, a fairly high and abruptly rising granite kopje or hillock lay on our left. We skirted the foot of this almost half-way round, and then found another kopje, not so high nor so rugged, about a mile and a half off. These hills were connected by rising ground gently sloping down on each side between the hills, and level on top. On this little tableland we saw, as we ascended, the Zimbabwe ruins, and on the hill to our left we could see the remains of old walls and what looked like battlements of a castle. At last we had reached the mysterious spot. We encamped under some trees, close to the only entrance to the main ruin.

What I felt then I cannot describe. As I stood there, before I had seen anything or explored any part, I was awe-struck. A cursory glance revealed traces of a past greatness, of civilisation, and power. To-day all was barbarism in the country. The Mashona was a poor, miserable specimen of the Kaffir race. The Monomotapas before him were a mighty people, and had attained to a comparatively high state of civilisation. But the ruins showed traces of a superior civilisation, and of a time of which no record existed now, nor any legend, not even in the time of the Monomotapas. Who, then, were the wonderful builders? What was the place built for? Will the secret ever be known?

We took a hurried lunch, and then the exploration commenced. First we had a guide, one of Mr Bent's men, to take us all over the place and explain what had been discovered; and then we wandered about singly or in pairs. I was alone till evening. Some of us then dined with Mr Bent, and listened eagerly to what he had to tell.

He and his wife were both very enthusiastic, and eager to discover the secret; but up till then little had been discovered: only some arrow-heads, pieces of old china, &c. Months afterwards I saw all the wonderful things that were unearthed, articles of phallic worship mostly. The reader will find full descriptions of all this in Mr Bent's interesting book.

Let me continue my tale. The ruin on the platform is of oval shape—a tremendous oval, but I cannot remember the exact dimensions now. The outer wall is almost quite intact—some thirty feet high, and from ten to twelve feet thick, built of granite, the small stones cut to the size of a common brick. Neither mortar nor bricks have been used; but though the stones are only roughly hammer-dressed, the walls are so beautifully and symmetrically built up that they have successfully withstood the storms of centuries. The whole ruin reminded me somewhat of the Colosseum at Rome—its size, its solitude, and the scenes enacted within. There was originally only one entrance to the building. Within are remains of altars apparently, of a labyrinth, of a large tower, &c., all built in the same way as the outer wall. Round about are the remains of terraces, very likely cultivated as gardens. Then a roadway, now overgrown, led up to the kopje mentioned. This kopje had been a marvellously strong place naturally, and was so further strengthened by the construction of massive walls and ramparts that access could only be gained by one narrow pathway where a couple of men could keep hundreds at bay. Some of the walls are fifteen feet thick, with long and massive upright stones built into them at certain intervals, which looked at a distance like grim sentinels. Many of the stones were broken, but from the appearance of those still intact it seemed very likely that they were all shaped at the top in the figure of a bird. There was a spiral staircase entirely built of this stone, which led down into some secret hiding-place within the ramparts. The remains of large granaries or stores for provisions could also be seen. To crown all, there is a beautiful fountain of crystal water on the kopje. Our idea was that the hill had been a strong fort to protect the now ruined structure below, formerly a mighty temple. Who knows?

It was really wonderful, mysterious! I have seen the Colosseum, I have been through Pompeii, I have examined every corner of the Kentucky Mammoth Caves and the Oudshoorn Congo Caves in Cape Colony; but nowhere was I more impressed, more awe-struck, than when surveying these marvellous Zimbabwe ruins. I felt as if I stood among the Phœnicians or Egyptians of old; as if suddenly I had been transplanted to scenes and peoples of thousands of years ago. Many a time, as I stood there during that day and the next, though really I could neither hear a sound nor see a human being, the place seemed in imagi-

nation to be filled with the peoples of the past: I could see them and hear them, and I watched them with breathless interest; yet I could not find out who they were or what they were doing.

Let me tell you what happened as our little party was approaching the ruins during the forenoon. We were still some miles off when a terrible tragedy was on the point of being enacted. The kopje at that time was inhabited by a small tribe of Mashonas, under a rather important chief, who somewhat resented the visit of the white explorers. He had not exactly placed any hindrance in their way, but was keeping sullenly aloof. He especially disapproved of any investigation being carried on at the hill-fort, his residence. Early in the morning Mr Bent and his men began digging and examining the hill and its ramparts. The chief and a number of his men were around looking on, and showing their disapproval by their gestures. Whilst Mr Bent was at breakfast, the men accidentally, in digging for relics, struck an underground corn-store of this chief, and all at once there was a tremendous hubbub. The Kaffirs imagined they were going to be robbed, and surrounded the unarmed men with their assagais and axes. No explanation availed, and a fight seemed imminent. One of the men therefore ran off to call Mr Bent, who came up immediately, but also unarmed, as all felt sure they could pacify the Kaffirs. The chief, however, would hear of no explanation; he announced that he was going to take them all prisoners, and if they resisted he would kill them. The blood of both parties was now up, and the men, though they were but a handful, proposed fighting the hundreds of natives with their spades and pick-axes. They stood close together, expecting every moment to be attacked and killed, but every one determined to sell his life dearly. The Kaffirs had already raised their assagais ready for the onslaught, when a Kaffir, evidently a sentry on the hill, came running in, speaking and gesticulating fiercely. The chief and some of his men thereupon ran off and mounted some of the higher rocks. In a few moments they returned in great excitement, and after some palavering all disappeared as if the ground had swallowed them. There was reason for this, and very soon the little band of men who had been in such imminent danger discovered it. The sentry had seen an army advancing towards the *stad*, over the open plain beyond; he had seen the glint of the rifle-barrels in the sunlight, and there was a host of them! The chief ran up to see for himself, and also observed the dreadful sight. That is why they cleared in such a hurry.

The reader has already guessed, I am sure, that the mighty advancing army was our little company of ten men, two natives, and two bullocks! Of course our approach was hailed with delight—we were veritable saviours, as blood would otherwise certainly have been shed. The

chief, who immediately humbled himself on our arrival, afterwards explained that when he saw our little band advancing he made sure it was the advance-guard of an army coming from Fort Victoria, and that it was advancing in consequence of a message sent through the air—a telegram to Fort Victoria—to tell them of the threatened attack. 'The white chief is a great witch-doctor. I am afraid of him now. I will not trouble him again.' Needless to say, Mr Bent did not disabuse the chief's mind, and never had any trouble with him again. When it was all over we could, of course, afford to laugh heartily at the whole episode. I have played many parts in my lifetime; but never before have I been the commander of a relief-force. It is a pleasant rôle to play.

Long we sat talking round the camp-fire that night, and most interesting was the conversation. It was one of the nights I love to revert to. Towards midnight we retired to our camp—some five hundred yards from Mr Bent's. It was a beautiful moonlight night, and very soon every one had sought rest. Heavy breathing and snoring proved that the others had very quickly found it too; but I could not rest, for not only the excitement of the day but the weird surroundings kept me awake. I could not resist the temptation to walk back to the big ruin behind me. Alone I entered through the gateway whereby the mysterious and unknown people had also entered perhaps a thousand years ago. The moon was shining brightly, sending her beams through the branches, casting fantastic shadows on the ground. The whole scene was weirdly mystic. Here there was a bright spot of light, there a dark shadow. As the winds sougled through the trees, the shadows of branch and leaf moved to and fro. It required but little imagination to fancy the place alive with moving beings. I walked about slowly, looking, pondering, marvelling. Gradually I drew near the tower I mentioned, and leaned against its rugged walls in the shadow. Again I fancied that I was in the dim past, and saw the thousands of figures moving about engaged in one of their wild and mysterious religious orgies. I fancied I heard without on the hill the trumpet of war, followed by the crash of armies meeting. I heard the victors' cries and the victims' moans. Then came the rush of many feet towards the temple, to the tower where I was standing. I heard them sing their pæans of victory, and saw them offer their sacrifices. I was the only stranger amongst them, and therefore cried out, 'Tell me who you are, and from whence you come. What does all this mean? Tell me!' I must have uttered these words aloud, as they woke me out of my reverie. There I stood again, alone in the mighty colosseum, in the moonlight and the shadow—in the night!

It was four o'clock when I retired to camp again and lay down to rest. It is now many

years since ; but the impressions I experienced are still as fresh in my mind as they were then. When I close my eyes I can imagine I am again standing up beside that tower in the darkness, and still see the flitting figures, and cry out to them to tell me whence they came ; and I seem to hear their answer, floating towards me from out the moonlight dim : 'No, stranger ; never shalt thou know !'

Before leaving the ruins I, as usual, had a talk with the chief men of the Mashonas living on the hill. They told me many a tale of the fights they had had with the dreaded Matabele. Lobengula, the bloodthirsty chief of the Matabele, as every one knows, used periodically to swoop down upon the poor Mashonas, killing the old men, stealing their cattle, and carrying their sons and daughters into captivity. No wonder that the advent of the Chartered Company was hailed with delight by the poor oppressed Mashonas. Many a gruesome tale of cruelty and horror could these people tell the traveller, such as the one told to me that morning before we left.

'Moruti,' said one of the chief men, 'I can tell you of an awful thing that happened here many years ago, when the Matabele attacked our stronghold on the hill. Our chief, a young man himself, had a very beautiful young wife, a daughter of a neighbouring induna. She had come to our kraal a few years before, and, with her husband, was well beloved by us all. She was a tall and stately woman, with a voice as tender as her eyes were sweet. When she passed through our little village, carrying her first-born in her arms, every one looked on in adoration. Reports came in that the Matabele were devastating all the country round about us, and we began to fear that our doom too was sealed. We fortified the place as strongly as we could, and stored provisions for a long siege ; then we sent out our scouts to watch the movements of the enemy. All too soon these appeared upon the scene. Before daybreak one morning our outposts rushed in to tell us that the dreaded Matabele were on us. When the sun rose we could hear the ominous thud of marching feet, and soon our fortress was surrounded by a bloodthirsty, yelling horde.

'The attack began very soon, and fierce was the fighting. As you see, however, Moruti, the place is very strong, and can be reached only by that one path yonder coming up from the temple ruins. We were consequently able to beat off the attack, and I am sure they would never have succeeded in taking our fort ; but, alas ! black treachery was at work. I told you before how we all loved our beautiful queen, and how faithfully every one followed our brave chief. But every one did not ! There was one man, our chief's half-brother, who had a black heart. Ever since the chief had brought home his beautiful bride this man had desired her for himself. Carried away by his passion, he had one day told the queen of his love, making insulting overtures

to her, when she had spurned him with words of scorn. Knowing that it would cost him his life if the chief heard of his conduct, he professed repentance and begged the queen not to report his dastardly behaviour to her husband. She promised this, because she had a kind, noble heart.

'The cowardly cur, however, was determined to be revenged on brother and wife and child. His time came during this attack on our fortress by the Matabele. No one had suspected him of any sinister design, so well had he succeeded in disguising his feelings. Thus it came that during the early hours of the next morning he relieved his brother, the chief, who had been guarding this pathway since the evening before. When our chief left him I well remember his words : "My brother, guard this pathway with your very blood. Remember your people's honour, your chief's victory, his wife's life, depend on you." The brother promised faithfully to execute the charge entrusted to him. Oh, the black-hearted villain ! Shall I tell you how he kept that trust ? Towards morning, on some pretext or other, he sent the two warriors who were with him back to us on the hill with some message. Then he crept down to the Matabele outposts, told them that he could lead them on to the fortress, and that the place would be theirs—on condition that they should spare his life and give him his brother's wife. The promise was given, and before the messengers sent by him to the fortress could return, the Matabele were swarming up the secret inaccessible pathway, and had reached the very place you and I now stand on, ready when daylight came to overwhelm our garrison with superior numbers.

'Woe is me that I have to tell the tale ! When day broke a frightful yell rent the air, dusky forms rushed out from behind every rock, and we saw, to our utter dismay, that defence was useless. Our chief rushed in and out amongst us exhorting us not to surrender, which would mean cruel death at the hands of the Matabele, but rather to fight on to the bitter end and die the death of warriors. We did so, and even more desperately did we fight when we heard the Matabele shouting to us, "Why do you fight ? Your own chief's brother has betrayed you. Surrender, and we will spare your lives !" On we fought till but a handful of us remained alive, though even these were all wounded already. Our chief was dead, and there was talk of surrender amongst the survivors, when our beloved young queen, with her baby-boy in her arms, rushed in amongst us crying out, "Fight on, brave men ! I know why your chief's brother has betrayed you. The coward, because I spurned him, has to-day acted the traitor. He has killed your chief, my husband. He has dishonoured our people, our forefathers. Fight on, brave hearts ; let no man surrender. Die like heroes !" No need to tell you, Moruti, that we

fought on with renewed vigour and strength, like very lions. On yonder parapet, between those two stone sentinels you see standing there, our noble queen took up her position, exhorting us with inspiring words to continue the fight. But, alas! it was of no avail. One by one the warriors beside me dropped. I too was desperately wounded, and sank down bleeding on the ground when the Matabele rushed in upon us to finish their deadly work. Before I swooned away for very faintness I saw the traitor leap forward in amongst the dead and dying, jump on to the parapet, and rush towards the queen. "You are mine at last," he shouted; "mine at last, cruel beauty. Come to me; your life will be spared if you come. I only can save you; come to me, long-loved one!" He ran towards her; and, Moruti, I will never forget the expression on her noble face—scorn, hatred, contempt. There she stood erect in her queenly beauty, and every one could hear the burning words that hissed through her lips: "Come to you, monster, murderer, traitor, coward! Come to such as you! No, never, as long as there is breath in my body!" And then, as the wretch still attempted to approach her, followed by cruel Matabele warriors, she lifted her right arm, and, with all the power she could exert, she thrust an assagai into the heart of the miserable villain, and he sank to the ground like a log. With a yell the Matabele rushed upon the unfortunate woman; but before they could reach her, clutching her babe to her heart, she cried out, "My husband,

your death is avenged: your queen is yours; your child and I are coming!" The words were still ringing in our ears when we saw the brave woman leap forward over the parapet wall down into the valley yonder. Yes, Moruti, she and her babe had gone to the Great Spirit-land, where there is no insult and no treachery. Come here, Moruti; look down. You see yonder, far down? Well, on that rock there the mangled bodies were found; but they were left by the cruel Matabele for tigers and wolves to devour.

"When I woke again it was dark night, and the Matabele had gone, taking with them whatever was valuable. A few women and children, some wounded men, and myself were all that were left behind. I was young then. I am old now; but in the silent watches of the night I can still see our beautiful queen stand there. I can still hear her farewell shout of victory as she leaped down the precipice and went home."

Thus spoke the old man, and I could see that his spirit was deeply moved. Yes, reader, even in the land of barbarism you find hearts that beat true and strong, but also hearts foul and treacherous.

The Government of South Rhodesia has appointed Mr R. W. Hall, joint author with Mr Neal of *The Ancient Ruins of Rhodesia*, as temporary curator at Zimbabwe. Various architectural discoveries have been made in clearing away the rubbish; a gold bangle of wire-work has been found, and a beaten gold cup or ferrule, with pottery and iron tools. The place is three hours' journey in a Cape cart from Victoria, in the south of South Rhodesia.

## SIR HENRY IRVING'S TUTOR.

By J. F. HOGAN.

WHEN I was in the twenties I held the office of day sub-editor on a Melbourne morning paper. I came on duty at ten o'clock in the morning and left at six in the evening, when the night sub-editor arrived. I had to open all letters addressed to the editor and prepare a synopsis of their contents for his information, make provision for the reporting of any unforeseen important event during the day, read 'exchanges,' revise copy, and receive visitors. I was thus brought into contact with not a few remarkable characters. I had a chat with Lefroy, whom I thought a rather prepossessing, well-informed young fellow, never dreaming for a moment that I was destined to see his waxy duplicate at the other end of the earth in Madame Tussaud's Chamber of Horrors. Lefroy did not look in the least like a possible murderer. His case was one of the sight of means to do an ill deed making that ill deed done. The responsibility largely rests with the stupidly conservative English system under which any one of us is liable to be boxed up in a

narrow compartment with a homicidal lunatic or somebody in desperate need of money. Had Mr Gold and Lefroy been travelling between Brighton and London in an American corridor carriage there would have been no murder. Lefroy had just arrived in Australia when I met him, and was on the lookout for a journalistic situation. He showed me a book of English newspaper cuttings—specimens of his work—and at the other end were press criticisms of certain pantomimes and plays he had written. He did secure a brief engagement on a Melbourne evening journal, and he contributed to its columns some capital descriptive articles on the Chinese quarter of Melbourne: its opium-dens, its lottery-shops, its vices, its squalors, and its quaint Orientalism in the heart of the modern city. Another of my visitors was Kate Kelly, the sister of the redoubtable Ned, 'The Ironclad Bushranger of Australia,' to give him the title by which he is best known to the numerous London readers of the *Deadwood Dick* school of literature. At that time she was the most daring of horsewomen and the most expert of 'bush telegraphs,' as the conveyers of informa-

tion to outlaws concerning the movements of the police are called. A third notable visiting personage was Mr James Anthony Froude. He called to see my editor; but as that walking cyclopædia of colonial information was not accessible at the time, I had to deputise and answer questions from the famous historian for half-an-hour or so. I had some little difficulty afterwards in recognising my information in the pages of *Oceana*. Froude's method during his colonial tour was to examine all the prominent people whom he met at Government House dinners, in the clubs, and in the editorial rooms. He took no notes at the time, but towards midnight he would jot down all that he could remember of what he had heard during the day. In the case of a man endowed with a retentive memory this plan might work fairly well; but, judging by results, Froude's memory was the reverse of retentive. In the copy of *Oceana* I saw in an Australian parliamentary library, almost every page has marginal notes of correction. Froude's account of his tour of Greater Britain is eminently readable and sometimes eminently inaccurate, fact and fiction deftly interwoven.

One afternoon there was ushered into the sub-editorial room a tall, pale-faced, clean-shaven, clerical-looking old gentleman, dressed entirely in black, with a certain air of distinction and refinement, and a strong suggestion of the scholar and the student. Had his long black coat been supplemented with gaiters he would have looked the Church of England dignitary to the life. As a matter of fact he belonged to a profession that is still supposed to be held in abhorrence by the strictest sects of English Christianity. He was Mr William Hoskins, who in the far-away forties and fifties was a leading member of the famous Shakespearian company that Samuel Phelps gathered around him at Sadler's Wells, and who was the first influential actor to help, advise, and encourage a certain aspiring London youth whom we all now know and admire as Sir Henry Irving. At the time I refer to he had practically retired from the stage, and was conducting a dramatic academy in Melbourne. Several of his pupils are now well-known actresses in England and the colonies. One of them was about to make her first appearance in Melbourne, and he naturally desired a little preliminary paragraph. That was the object of his visit, and it was duly attained.

The foster-father of the leading actor of our time was the son of Abraham Hoskins of Newton Park, Derbyshire, and was educated at the University of Cambridge. He was not yet nineteen when in 1834 he joined a provincial touring company. On 25th July 1846 he made his first appearance at Sadler's Wells, as Poins in the First Part of *King Henry the Fourth*. On the following 4th of November he impersonated Lucio in *Measure for Measure*, the character—to quote the

biographers of Phelps—'that made his reputation, in which and other eccentric parts he was without a rival in this theatre.' Other characters played by Hoskins under the Phelps régime, in which he won praise from the London critics, were Modus in the *Hunchback*, Gratiano in *The Merchant of Venice*, Guiderius in *Cymbeline*, Slender in *The Merry Wives of Windsor*, and Roderigo in *Othello*.

It was on the eve of his departure for Australia at the beginning of 1856 that he performed the kindly action for which he deserves to be held in grateful remembrance by all lovers of the drama. He had known young Irving as a member of an elocution class connected in an informal way with Sadler's Wells; he had seen him in small parts at rehearsals for amateur performances; he had been favourably impressed with his assiduity, his intelligence, and his manifest determination to succeed; he had given the neophyte a number of hints and suggestions that were promptly acted upon; and, finally, Hoskins, before sailing for Sydney, handed young Irving a letter of introduction to his friend, Mr Davis, the manager of the Lyceum Theatre, Sunderland. The letter was duly presented, and it led to an early engagement and to Irving's first appearance on the regular stage as the Duke of Orleans in *Richelieu*. The rest is history.

Curiously enough, the play in which his protégé started what was destined to be a brilliant career at Sunderland was also the piece in which Hoskins himself, enacting the title-rôle, made his first appearance in Australia at the Victoria Theatre, Sydney, on 14th July 1856. He was announced to the Antipodean playgoing public as the 'great London comedian.' He achieved an unqualified success at the start, so he decided to settle in Australia, and for nearly thirty years he was one of the most conspicuous figures on the colonial stage. He was particularly popular with the diggers, and as the actor-manager of the principal theatre on the Ballarat goldfield he cleared fifty thousand pounds, most of which he subsequently lost when he left the golden city to become lessee and manager of the Melbourne Theatre Royal. In New Zealand he had a second period of combined artistic success and financial prosperity. There he sojourned for some years, building two fine theatres and raising the standard of the drama to a very high level. He was so highly respected and esteemed in that colony that, on the occasion of his marriage to a popular actress, Miss Florence Colville, the ceremony was honoured by the presence of the Governor, Ministers of the Crown, Members of Parliament, and leading citizens. He thus had the unique distinction of being the only actor of the Victorian era who was married in the presence of the representative of the Queen and the Throne.

I was only a boy when Hoskins was at the height of his colonial popularity. My recollec-

tions of him are associated with spasmodic revivals of Shakespeare and the legitimate drama in Melbourne. I have a distinct remembrance of his Sir Peter Teazle and his Polonius, both thoroughly effective, well-studied, and highly finished performances. He excelled as a Shakespearean actor, and it was his proud boast that he could recite the Bard of Avon from beginning to end. His declamation of Shakespeare's lines was a model of stately elocution. He set an exceedingly high standard in this respect, and woe betide the erring or indifferent actor who failed to rise to it. Mr Brewer, in his *History of the Australian Stage*, narrates an amusing anecdote in this connection. Hoskins was playing Macbeth to a crowded house in Sydney. A super, to whom had been entrusted the small part of Lennox, corroborating the stormy character of the night on which Duncan was murdered, thus rendered the lines of Shakespeare :

'The night's bin unrooly; where we laid,  
Our chimbleys was blowed down.'

Hoskins was paralysed by this wholly unexpected Cockney reading, but he managed to struggle through the rest of the act. When the curtain came down sounds of commotion were heard from behind, and people in front fancied that somebody else would be murdered as well as

Duncan. As a matter of fact, the infuriated Macbeth did commit a violent assault upon the provokingly careless or stupid Lennox.

Hoskins in his old age was naturally disposed to exaggerate the importance of the services he had rendered to young Irving, and to revel in an unreasonable amount of reflected glory when his former friend and pupil reached the pinnacle of his profession. At the Melbourne Garrick Club he was wont to pose as the creator or the discoverer of Irving, and to emphasise the prominent part he had played in the evolution of the greatest of contemporary actors. But these harmless little septuagenarian vanities did not detract in the least from the solid and abiding fact that Hoskins was the man who placed Irving's foot on the first rung of the ladder of success. That is his one claim upon our recognition and regard.

He passed away in Melbourne on 28th September 1886. Shortly afterwards the profession he had adorned and elevated met in the Princess' Theatre, Melbourne, to perpetuate his memory. The first communication read to the meeting was a most sympathetic message, accompanied by a subscription of one hundred guineas, from Sir Henry Irving, the 'youth of striking personality and eager, handsome face,' whom he had befriended in London thirty years before.

## THE BETHEL STONE.

By JAMES PATEY, Author of *The Gurnard Rock*, &c.

### CHAPTER I.

ONE Sunday morning Mr Julian Danvers stood in the bay-window of the parlour of the 'Plume of Feathers,' and looked down the steep, winding main street of Langissack. He was lodging at the inn—its solitary guest; for the place, though picturesquely situated, has few visitors. Sometimes a belated commercial traveller will spend a night there; and occasionally an artist, reluctant to leave, will stay a month.

On week-days the little town wakes early and noisily enough, with a clatter of feet on its rough cobble-paved ways, the rattle of jolting carts, the greeting of men in from the night's fishing, and the salutations hurled from open doors across the street by shrill-voiced women; but a befitting calm sits upon the place on Sunday, when Langissack hangs up its sea-boots and anoints its head with oil.

If the street were reasonably straight the inn would command a view of beach and bay; but Langissack is locally admitted to be as crooked as a corkscrew; nevertheless Danvers as he smoked his pipe was contented with the limited prospect, and resolved to make a sketch of it before he

departed; for the houses are oddly picturesque, and the hill dips so suddenly that thresholds are on a level with neighbouring roofs.

A stickler for hygiene gazing on Langissack might cry aloud with the Psalmist, 'Down with it! down with it, even to the ground!' But artists love the place, and condone the redolence of its gutters for the sake of its quaint gables and weather-scarred walls and eaves of lichen-thatch; even the terrible cobble-stones, that bruise the toes of the uninitiated pedestrian and provoke the anathema of the stranger, have found their apologist in an enthusiastic sojourner who insisted that they picturesquely broke the foreground and would be distinctly valuable in an etching.

Danvers strolled up the quiet street, odorous in places with the frying of fish and rhythmic with the potato-chopper. Everywhere there was filmy sunshine and the promise of a cloudless day. There was nobody astir but a few gaily-dressed children, prematurely despatched to the Sunday-school by emulative mothers.

Presently there clattered up the acclivity a troop of boys carrying chairs, and Danvers watched them pass with considerable curiosity. Soon a wagon came along, heaped with forms and benches. Then

came another contingent with chairs—wooden-seated chairs, cane-bottomed chairs, chairs of all sorts and conditions, some of the kitchen variety so delightfully antique that he was tempted there and then to make a bid for them. The queer procession reached its climax in a donkey-cart laden with a harmonium and a pile of books.

His interest keenly aroused, Danvers walked back to the inn and called to the landlord:

‘Mr Bolitho, what’s up this morning?’

Bolitho came to the door, a voluble old man, jovial and rotund, with a face like a russet apple.

‘Why, ’tis quarry-praichin’ to-day, sir; they’m whitewashin’ the chapel, and the praichin’ to be in the quarry. ’Twas a reg’lar instootion, backalong, quarry-praichin’; but, like other old things, ’tis grawin’ out o’ fashion. ’Tis said that Jan Wesley praiched wance in Langissack quarry, and they can shaw ’e the very granite stone he stood ’pon; an’ when ’tis a quarry-meetin’ the praicher always stands ’pon Jan Wesley’s stone.’

Danvers seated himself in the porch and refilled his pipe, while Bolitho rattled on.

‘Iss, I’ve heard some famous quarry-praichers in my young days. There was Jerry Trebartha, a remarkable chap, sure ’nough; you could hear the voice of ’en in two parishes to wance. An’ there was old Will Peniddick—“Whosoever Will” they called ’en, an’ a delighted in the name—a quieter man, but mighty convincin’. When Peniddick praiched there wed’n be no sort of iniquity stirrin’ in the place for more’n a week. Nowadays, sir, seemin’ to me, they’m a tamer lot; there ed’n a man among ’em that can blaw the trumpet in Zion like the men that be passed away. They mane well, I b’lieve; but there ed’n the old heloquence.’

Half-an-hour later, finding Mr Danvers still smoking in the porch, Bolitho asked, ‘Was ’e thinkin’ o’ walkin’ up to the old church this mornin’, sir? Because I warn ’e there weant be a sawl there, unless ’tis a few old women for the ninepenny doles. The folks be quarry-mazed. The Independents an’ the Particulars might so well keep the doors locked for all the worshippers they’ll get; an’ as for the Brethren an’ the Seekers After, they’m all gwain to the quarry in a company.’

‘You seem to have a good many sects for so small a town,’ said Danvers, with a smile.

‘Iss, sir,’ replied Bolitho sadly. ‘I b’lieve there’s so many soorts o’ religion in Langissack parish as there is soorts o’ fish in Langissack Bay. Some folks like a choice; but for my awn part, sir, I’m no runner after new things. I like to putt my feet where other men have putt their feet before me.’

Bolitho, in his local pride, was anxious that his guest should not miss the meeting, which is accounted a great event. The young fellow had come to Langissack avowedly for a week’s sketching; but what were the rocks and cliffs and caverns

compared with the supreme interest of the quarry-preaching?

A gray, eager-faced man passed along the street.

‘There goes Doctor Trewarne,’ cried the landlord. ‘He’s organist o’ Truro. I reckon he’s come to hear the singin’.’

‘Singing?’

‘Iss, fay! there’s brave singin’ to a quarry-meetin’; an’ there’s a hecho there—a double hecho—’tis reckoned the finest in Cornwall; an’ when they hundreds o’ folks do rise all to wance an’ sing number nine-nine-wan, trumpet-metre, an’ the hecho answereth, the power an’ the glawry o’ it wed stir the sawl o’ a Devonshire horse-dailer. If you’m minded to go, sir, an’ you’m partial to singin’, ’twill do ’e good; for ’ted’n ordinary singin’ that tickleth the ears, but ’tis singin’ that shaketh the innards o’ a man so’s ’tis no mortal odds to ’en how much a droppeth in the collection.’

These persuasions prevailed, and an hour later Danvers found himself in the wake of the Langissack folk, walking quarrywards. The way lay through Brimble Lane, a tunnel of foliage scooped deep by centuries of traffic, with high hedges that harboured an infinite variety of vegetation, from dank mosses to clambering dog-roses.

‘Fine praichin’ weather, sir,’ said old Roskriggin the thatcher, hobbling slowly because of his rheumatism.

‘It is indeed,’ answered Danvers pleasantly.

‘What I do call a ’eavenly mornin’,’ added the old fellow; and Danvers felt the appropriateness of the adjective. It was a delightful pilgrimage; the route was lined with battalions of foxgloves, and everywhere there was the scent of scattered hay. Gradually the road became steeper, till from the deep shade of the lane he emerged into the open sunshine, and felt in his face the fresher breath of the moorland; then, following the grass-grown wagon-track, he came to the quarry.

The old granite-quarry of Langissack has not been worked for many years. The grasses and mosses have crept over its abandoned terraces, and in the clefts grow bramble and whortle and heather.

When Danvers reached the place the service had already begun. The bed and slopes of the quarry were strewn with a great company, and detachments of the congregation lined the terraces. The stretch of moorland was dotted with the carts and tethered horses of those who had driven from distant villages and farms. Most of the people were seated, for a seat at a quarry-meeting is a *sine quâ non* of Langissack respectability. The eminences were occupied by such adventurous hobbledehoys as considered a precarious perch an aid to devotion, and rows of pendent legs made a restless fringe on the ledges of rock.

Danvers seated himself on a boulder at the skirts of the meeting, and watched the strange scene. Standing on the traditional stone of John Wesley, a tall black-bearded Boanerges was reading and

expounding; but the words of the man were lost in the reverberations. A hymn was given out, the inadequate harmonium droned the air, and with a great stir and flutter the multitude rose to its feet. Hitherto Danvers had looked on with somewhat languid interest, but his pulse quickened at the first burst of singing; by some wonder of acoustics the hundreds of voices sounded like tens of thousands. The tune was 'Ascalon,' a favourite at quarry-meetings, selected probably on account of the opportunity it gives to the famous echo. It was sung vehemently, as becomes the militant air, each verse culminating in a staccato climax that was almost a shout; then amid breathless listening the great hewn concave flung back the tumult, and a vaguer repetition came from the amphitheatre of hills beyond. There were old people there who could count such gatherings by the score; but even these listened for the echo with the eagerness of children, and smiled with the wonder of children at the unfailing miracle. It may be that to some it bore something of supernatural response.

As for Julian Danvers, he was strangely moved; there was a vigour in the voices of these Cornish folk that thrilled him; and as the great hymn thundered along its course the multitude swayed to the rhythm, and the singing became more and more charged with the fervour of the Celt.

An open hymn-book, passed by many hands, reached him where he stood; for the presence of the bookless stranger had been courteously noticed. But he had no eyes for words or notes; the scene and the music held him spell-bound.

Then a flash of inspiration fell upon Julian Danvers. Here was the great subject he had been waiting for, the theme of the great picture that was to make him famous: The Quarry-Predaching!

When he had done for the *Graphic* his full-page drawing of the fishing riot at Penzance, John Hillier of Newlyn had said, 'That fellow Danvers will be doing something great some day; he knows how to handle masses, and can tackle a crowd with the best man living. Mark me, Danvers will be doing big things in a big way.' Since that day he had dreamed of fulfilling the prophecy of Hillier; but his ambition had taken no definite shape, and he had continued the production of those charming little pictures of fishing life which he painted and sold with an equal facility.

Yes, here at last was his opportunity. His eyes drank eagerly in the details of the scene: the many-coloured multitude, the women gay with rural finery, the blue-smocked fishermen, the impressive background of gray granite, and beyond the varied greens and purples of the hillside. The picture was full of colour and life, the motive was novel and interesting, and it gave him ample scope for his rare gift of composition. Instinctively his fingers sought a pencil to roughly

sketch the groupings of the people, and to make such brief notes as would afterwards aid his memory. Alas! he had not a scrap of paper about him, not even an envelope.

Then in his emergency he did a wicked thing: he filled the blank leaves at the end of the borrowed hymn-book with rapid pencillings, incoherent notes in pictorial shorthand.

Meanwhile there was a long exhortation, mainly inaudible, and more sonorous hymns, notably the famous 'trumpet-metre' of Bolitho's predilection, in which Dan Jago, first cornet of the Langissack town band, blew a series of astonishing blasts. Then, while the ubiquitous stewards gathered in the tribute of silver and copper, a tall, white-robed girl, standing on a ledge of rock by the harmonium, sang alone, and sang divinely, 'Oh for a thousand tongues to sing!'

Danvers thought he had never heard anything so glorious. The woman's clear voice went up in the great space like the voice of a lark; it seemed a thing of the sunshine. He listened entranced; the thunders of the hymns had not stirred him like this girl's singing.

When all was over, with a rush of remorse he realised the depth of his iniquity in sketching in a stranger's hymn-book: it was impertinent; it was indefensible. All he could do was to seek the owner and express his contrition.

'Can you tell me to whom this book belongs?' he asked one of the crowd as the congregation was surging out of the quarry.

'I b'lieve 'tis Miss Trethewey's book,' said the man; 'she's sittin' 'mong the choir.' Then, looking in the front of the book, Danvers read the inscription: 'Zillah Trethewey. 1893. — "Unto Thee will I sing with my whole heart."'

He made his way to the centre of the throng, which was now rapidly dissolving, and inquiring for Miss Trethewey, was directed to a tall girl in a dress of white muslin—none other than the singer who had so enchanted him.

'I am very sorry,' began Danvers, standing hat in hand before the girl; 'I'm afraid I have taken an unpardonable liberty. I am something of an artist, and was so impressed with the strange scene of the gathering that I was seized with a desire to make a sketch of it; and in the impulse of the moment I used the blank-leaves at the end of the book you so kindly passed me. It was an abuse of your goodness, and I can only plead the temptation of an artist to carry away some impression of your beautiful service.'

The girl took the book and looked at the offending scribbles, expecting to find, perhaps, some intelligible sketch; but the rough pencillings conveyed nothing to her; so, with a smile, she said, 'You're welcome to the leaves, sir, if they're of any use to you;' and with her gloved hand she tore away the pages, and passed them to the artist.

She was beautiful. Danvers thought her the

handsomest girl he had ever seen. Tall she was, and finely built; there was steady frankness in her brown eyes, and splendid health in her face; and the wind had freed little waves of her brown hair from the bondage of coils, which gave her an air of exuberant loveliness.

'Thank you,' said he, pocketing the leaves; 'these little notes are of no value to anybody but the perpetrator; but I shall find them of great service.'

She smiled again—a smile of complete forgiveness; and there was, perhaps, a gleam of amusement in her brown eyes.

It was a morning of emotions for Julian Danvers; and when he returned through Brimble Lane there was a smile of 'Eureka!' upon his face, for he had struck the subject of the picture that would bring him fame; moreover, he had heard some marvellous singing, and looked upon the loveliest face in the world.

## THE TABLE AND THE EMPIRE.

THE late Professor Seeley, in his work on *The Expansion of England*, has much to say in criticism of other historians who fail to take a philosophical view of their subject. Seeley showed in his delightful way how great events in widely separated spheres acted and interacted. The fortunes of Virginia, for instance, are probably only to be properly understood by reference to something that transpired at Versailles or Simancas. That was his philosophy of the Empire in its wider aspects. That there is a philosophy of the Empire in its more intimate and domestic sense is not generally recognised, though every potato one eats, every sprinkling of pepper over one's Australian mutton, and every cup of tea or coffee one takes is there to encourage reflection or jog one's memory. A belief exists that sooner or later vital Imperial issues will turn on the new corn-duty, and that the registration fee of threepence per hundredweight may be the first step towards preferential tariffs with the Colonies. Such a development is not impossible, whatever views as to its expediency may be held by alleged economic orthodoxy. A fiscal revolution, in other words, would result from an impost amounting to a fraction of a farthing per loaf consumed. In such a fiscal revolution four hundred millions of British subjects would be concerned. Yet the average man regards the impost as a question affecting the British breakfast-table mainly. Not for the first time have momentous Imperial issues depended on a matter apparently so entirely domestic. Raleigh, wandering in South America, discovered not El Dorado, but the potato, and introduced it into Ireland, where it became the staple of Paddy's food. Two hundred years later Adam Smith was busy attempting to educate an Imperial race in its duty to over-the-sea possessions on the one hand, and in the economic advantages of Free Trade on the other. Adam Smith's Imperial views did not prevail; but half a century of agitation, maintained by men like Villiers and Cobden and Bright, secured the partial adoption of Free Trade. Strenuous opponents of the demand that food

should be imported free surrendered in a night. The volte-face was not due to a sudden realisation of Free Trade truths, but to the urgent need of saving Ireland from starvation. Raleigh's potato had failed at a critical moment in our economic history, and the legislation carried in consequence has influenced the whole subsequent course of our Imperial history. Sir Robert Peel's action was so palpably justified in the circumstances that the nation speedily swung round to the belief that free imports were indispensable for all time; and that belief, as Lord Beaconsfield recognised in his great Crystal Palace speech in 1872, was largely responsible for the unbusinesslike views taken of Colonial affairs throughout the middle years of the nineteenth century.

As the potato was the determining factor in an economic crisis, so to pepper we owe in no indirect degree our Indian Empire. The sixteenth century was the century of the adventurer *par excellence*, and foremost in any dare-devil scheme afloat was the Englishman. Drake and Hawkins, Raleigh, Gilbert, and Grenville, were merely a few of the best-known leaders of thousands of gallant spirits eager to seize a Spanish galleon or discover for themselves a land of gold or of hardly less precious spices. The rounding of the Cape of Good Hope by the Portuguese and the discovery of the West Indies by the Spaniards at the end of the fifteenth century induced Pope Alexander VI. to divide the known world between the two. The twin monopoly was challenged at the peril of his life by any daring interloper from other lands. Spain and Portugal secured the first right-of-way to the Eastern spice-lands, whose produce found a ready market in Europe. Venice hitherto had been the European *dépôt* of Eastern goods. The opening up of the sea route delivered her trade into Iberian hands.

Not for long were Spain and Portugal to enjoy the advantage unopposed. The Dutch, emancipated from Spanish control, embarked on enterprises in the Far East, and defied Papal ordinances and Portuguese pretensions, with profit to themselves and service to others, including England. Only a fairly vivid imagination can conjure up an idea of the courage and resource

demand of the Dutch, who undertook to dispute this right to exclusive trade with native lands ten thousand miles away. If they had been content with reasonable profits they might have developed their trade indefinitely; but they no sooner grasped the fact that they were capable of successfully challenging the monopoly rights of others than they sought to be monopolists themselves. English adventurers in Eastern waters, the exhibition of bull-dog devotion notwithstanding, secured little credit, and the majority of the ships which left English ports for the East either went to the bottom or failed in their quest. England therefore welcomed the spices and other Eastern commodities which they obtained through the Dutch. When, however, the traders of the Netherlands, deeming no doubt that they were masters of the position, decided to raise the price of pepper in London from three shillings to eight shillings per pound, they roused those feelings of resentment and irritation which English Chancellors of the Exchequer have always had to reckon with when new taxes have been necessary. The Lord Mayor of London instantly called a meeting of merchants to discuss the exactions of the Hollanders. 'On the 21st of September 1599,' says Mr R. W. Frazer, 'Sir Stephen Soames, the Lord Mayor, sundry aldermen, and others of less dignity, such as grocers, drapers, vintners, leather-sellers, skimmers, and haberdashers, met together at Founder's Hall, Lothbury,' and there agreed with their 'owne handes' to embark on a 'voyage to the East Indies, the which it may please the Lord to prosper.' Rather more than a year later the charter of the first East India Company was signed by Queen Elizabeth, and in three months more the Company's first fleet of four vessels set out on the voyage which was to pave the way to Empire. The Dutch, by their attempt to make pepper a luxury in the London market, called into existence the most remarkable trading corporation in history, which was to last in one form or another for two hundred and fifty years, until the Indian Mutiny rendered it necessary for Queen Victoria to round off the work which Queen Elizabeth had begun.

If pepper brought us an Empire in the East, tea was made the instrument of our undoing in the West; but by way of compensation it saved another part of the Empire from bankruptcy. The cup that cheers has left an indelible mark on the history of the Anglo-Saxon race. When, a century and a third ago, British statesmen, in their wisdom, drove the American colonies to rebellion, the issue turned on tea. It was in the hope of maintaining the principle that the mother-country was within her right in imposing taxation on the Colonies that one article was retained out of the list at first drawn up. The result was that the contents of the tea-chests found their way not into the Colonial teapot

but into the waters of Boston Harbour, or were left by the colonists to rot in damp cellars. When we remember how much tea meant to every home in either the old country or the Colonies, we seem to see in the decision of Lord North to adhere to an obnoxious principle a determination to bring an Imperial question to the very doors of the individual. That instance of blundering statesmanship is happily not the only Imperial event which is associated with tea. In other directions it has proved an Imperial blessing. It has been the means of rescuing parts of India from a state of nature that was neither attractive nor profitable; it has saved Ceylon, one of the most interesting and valuable of British possessions, from a worse fate even than that which foreign bounties have inflicted on the West Indies; it has provided the Imperial Exchequer with enough funds, if need be, to pay for the construction yearly of three or four ironclads; it has contributed materially to our manufacturing industry, thus bringing wages and profits to the pocket of the Briton at home; above all, it has afforded the Briton who turns his attention and his capital to the outlying portions of the Empire an excellent opportunity of showing the grit that is in him. The story of the rise and progress of the tea industry in Ceylon supplies one of the best instances on record of British refusal to be beaten. When coffee, the chief article of Cingalese produce, was attacked by a virulent disease, and when the blight was followed by a decline in the public taste for coffee, the future of Ceylon seemed dark indeed. The pluck of the planter, who raised new capital, tried tea, and won in the very teeth of disaster, is a proud memory to those who know what Ceylon was a quarter of a century ago. Ceylon tea has gone far to drive the Chinese article from the British market, and there is not a tea-drinker at home who cannot claim to have assisted this great Imperial triumph. That it is an Imperial triumph will not be disputed by any one who understands the importance of Ceylon to the British Empire.

#### THE HAMMER OF GOD.

BEFORE my soul unrolled a pageant vast:  
The mutable mysterious scroll of life;  
Whose glorious images, with colours rife,  
Emerged from out dim caverns of the past,  
Then faded like a cloud, till there appeared  
An anvil filling space, a mountain flame,  
And One that stood beside, Whom none can name,  
To wield the Hammer that all men have feared.

I saw the molten soul and body in fire  
Prepared for that dire Hammer's fashioning,  
Heard the eternal spaces echoing  
Harmonious sound, and saw the sparks aspire.  
My soul awoke and cried, 'Take all of mine,  
And shape me to Thy purposes divine.'

### THE TRUTH ABOUT THE 'COTTAGE-COUNTESS.'

By ARTHUR O. COOKE.

**T**HE immortalisation of a story by a poet-laureate does not necessarily ensure perennial interest in the germ of fact round which the filigree web of fiction is spun; still less does it imply accurate statement by the singer, or minute and careful verification of each detail by his readers. The admired superstructure not unnaturally hides the substantial but insignificant-looking foundation upon which the building rises. When Tennyson wrote *The Lord of Burleigh* most people admired the verse, accepted the story as a pleasing tale more or less true to history, and pursued the matter no further. The poet did not descend to particulars as to the locality of the 'landscape-painter's' wooing; and, as a matter of fact, the scene is not on one of those great highways of note along which the average tourist makes his pilgrimage to the historical or the picturesque.

Of late years occasional magazine articles have been presented to notice purporting to give the truth, the whole truth, and nothing but the truth of the matter; and a further statement of the case might not, under ordinary circumstances, seem loudly called for. But the recent marriage of a scion of the House of Cecil may have recalled to some that this is not the first time that Romance has presided at the family nuptials; and to the student of heredity it may also serve as an instance of the 'outcropping' at long and irregular intervals of curious 'faults'—I use the word, of course, in a purely Pickwickian (that is to say, geological) sense—in the strata of families of rank. As George Eliot's characters—so many of them—would say, such things 'run' in great families.

Not the first, nor yet the second, of such faults is the recent example. To find the first recorded romantic marriage in the Cecil family we go back three centuries and a half, and lay our finger on no less a person than Elizabeth's Burleigh himself: a man, surely, whose subse-

quent career hardly points him out as likely to have committed matrimony in an unexpected or irregular direction. Nevertheless such was the case. Entered at St John's College, Cambridge, in 1535, he became the close friend of that famous Fellow and Grecian, John Cheke. Cheke was a son of the people. His father had, during his lifetime, been the university beadle, and the widow now supported herself and her family by keeping a wine-shop in the town. There was a daughter, Mary, with whom young Cecil proceeded to fall in love; and although his indignant father packed him off to London, he returned within a couple of months of his entry at Gray's Inn, and married her when he was barely twenty.

Two hundred and fifty years later we come to Henry Cecil, afterwards Earl and finally Marquis of Exeter, and his 'Cottage-Countess'; Countess only, for she died four years before her husband's elevation to the marquissate. Readers will doubtless have noted and wondered at the inverted commas of my title-line. In sober fact, the so-called 'Cottage-Countess' was no cottager, as we now, or she then, understood the term. That title, so alluring in its alliteration, has been too much for the accuracy of more than one chronicler. Doubtless a more captivating and attention-arresting headline could not be desired; and if the story were not deliberately written 'round it,' the writer at least kept a sidelong look upon it as he wrote. Facts, or legends, which fitted in nicely were not called upon to undergo any very searching medical examination before being 'passed,' while others that seemed to threaten contumacy or contradiction were not pursued.

However, let me follow that wholesome precept of the immortal Jorrocks: 'Cut the cackle and come to the 'osses.' Henry Cecil, afterwards tenth Earl and still later first Marquis of Exeter, met, wooed, and married Sarah Hoggins at Bolas Magna, Shropshire. This out-of-the-way village is best reached from the little town of Newport, six miles away; though for the infor-

mation of any future pilgrims it may be added that there is a nearer roadside station at Crudgington, on a branch of the Great Western Railway. But let not the visitor count unduly on the beauty of the romance's setting. All the wide county of Shropshire is fair—to the present writer perhaps the fairest and dearest of English counties; but Bolas Magna is not a strikingly picturesque or in any way attractive village. It lies in pleasant, open country, with a view southwards of the Wrekin—and also of the ironworks and coal-pits of Wellington. The Tern, a sluggish and insignificant stream, winds about and past it on its way to the Severn. It is all pleasant, commonplace country; certainly not ugly or squalid, yet making no fatiguing demands on our powers of admiration or exclamation. A quiet, peaceful village set in a countryside, heraldically speaking, 'of the same;' a land secluded and unexciting, where 'it is always afternoon.' A damaging blow to sentiment is also given when it is added that the church is externally a hideous little structure of brick, like not a few Shropshire and Staffordshire churches. Within, however, it retains the virtue of old-fashioned pews, some registers of the time of Elizabeth, and, more to our present purpose, those of the first Cecil-Hoggins marriage in 1790, which certain writers on the subject might ere now have consulted with much advantage in the matter of accuracy.

This first marriage—for, as will be seen, there was an ultimate and necessary repetition of the ceremony—took place at Bolas on the 13th of April 1790; and as he stood at the altar, Henry Cecil, *alias* 'John Jones,' knew full well of a fact that rendered the marriage illegal, for he had a wife still living and undivorced, though proceedings for the latter relief seem at the time to have been pending. Cecil's life could hardly be called commonplace matrimonially. Married in 1776, at the age of twenty-two, to Miss Vernon, a Worcestershire lady, it was fifteen years later (1791) that he obtained his freedom and married Sarah Hoggins—this time validly—at the City church of St Mildred's, Bread Street. Not fully six years later the 'Cottage-Countess' died; and after three years the widower espoused a divorcee—sometime wife of the eighth Duke of Hamilton.

Whatever may be said of Cecil's illegal marriage as 'John Jones,' that he had no dishonourable intentions towards the girl who became his second wife is clear from his prompt remarriage of her on the completion of the divorce. Nor, happily, did any questions as to the legitimacy of the children arise. Henry, the eldest, was not born till 1793. He died the same year; but his brother Brownlow, born two years later, lived to succeed his father in 1804, and enjoyed the newly acquired dignity of the marquise for sixty-three years.

Now, to return to the lady and the circumstances of the wooing. The lonely seclusion of Bolas, and the fact that probably there was then, as now, no house of public entertainment in the village, brought Henry Cecil to the Hoggins's door, but not in the manner usually described and believed. Far from arriving in the waning light of a summer evening, drawn thither by the peace and calm of the scene, he came upon their little world in a November snowstorm; and instead of strolling, staff in hand, he came in a travelling-chaise, with horses foundered by heavy byroads and a postillion who had hopelessly lost his way.

Nor was the Countess that was to be engaged in any such plebeian if picturesque work as the feeding of chickens or milking of kine when she first met her lover's eyes; rather at a pastime which would certainly be a useful accomplishment in her future rank. She was, in fact, dancing. But here let me give the whole story as told by the lady's niece, not many years dead. There are gaps; but the gist of the plain, unvarnished tale is here, and may be relied on as authentic.

'I will now,' she says, after giving some particulars of the Countess's one sister and four brothers, the second of whom, John Hoggins, was the narrator's father—'I will now say something of the mysterious stranger's first appearance in Bolas, which was late in November 1788, about 8 p.m., in a heavy, driving snowstorm. A loud knock was heard at the door of Manor House Farm, which my grandfather opened; when he saw a tall, striking figure, wrapped in travelling-costume, who begged to be sheltered for the night. A chaise, he added, was at the door; the driver had lost his way, and they could go no farther. At first my grandfather refused him admittance; but after much solicitation, and assurance that he was making a tour of the country for the change, he was taken in. On that remarkable night the young people of the parish, as was then the custom, were assembled in the large parlour, taking dancing-lessons, preparatory to Christmas, from a master who was also the musician. The stranger said that he took a great interest in young people, and asked to be permitted to go in and see them. My grandmother had her best bedroom prepared for him, of course concluding that he would leave next morning. However, morning came, and many days passed, but he still lingered, taking an interest in the farm and the pursuits of the family. His prolonged stay caused much rumour in the neighbourhood as to who he was; he had plenty of money, and was a gentleman in manners, appearance, and conversation. After some weeks he left, returning again unexpectedly, and with more money. On this his second visit he purchased ten acres of land from Mr Taylor, and commenced building Bolas—now Burleigh—

Villa. The marriage took place, as the register shows, on the 13th of April 1790. It was then, or very shortly after, that Mr Jones, as he had called himself, revealed his true name to my aunt and her parents, when they were married again, but where I never heard. Soon after the second marriage they went to reside at Bolas Villa, where Henry, the first child, was born and died. He was interred near the pulpit in Bolas Church, a small tablet being placed over the spot.

It needs surely no great stretch of credulity to believe, what is well known locally, that the Hogginses were no rough labourers or cottage-farmers. Is it likely that in 1788 such a man with a family of six children would have had a best bedroom in which to accommodate 'Mr Jones'? Cecil, as the above narrative shows, came to the Hoggins roof-tree entirely by chance, and in ignorance of what attractions it sheltered. There was no sweet face at the window, no girlish figure in the poultry-yard, to arrest him. Other substantial farmers lived in the village, as one historian has gone out of his way to show. That being the case, is it likely, again, that the postillion or driver would have selected a little cottage as the most likely place at which to obtain shelter for his employer, his cattle, and himself; or that, had he done so, the occupant would not have directed him to more substantial hospitality?

Thomas Hoggins was, in fact, a well-to-do farmer or yeoman, and probably quite as proud of his family and pedigree as was the future Earl of his. Looking down—especially in 1788—an Earl might fail to see much difference, matrimonially considered, between farmers and labourers. Looking up, farmer and labourer alike would regard a coronet with reverence. But Sarah Hoggins did not come to Henry Cecil as a labourer's daughter would have come. She wrote a better hand, as the register shows, than could well have been acquired in eighteen months; and as the eldest girl, and consequently the drudge, of a labourer's family, it is improbable that she would have been able to write at all in November 1788. She had certainly not been 'finished' at Paris; but to the present writer's knowledge even that would not have been quite out of the question for the child of the remote Shropshire farmer.

In November 1788 Sarah Hoggins was fifteen and a half years of age, having been born on the 28th of June 1773. She was thus almost seventeen at the time of the Bolas marriage. The ages also of her brothers and sister are not without interest, as I hope to show. When Sarah's lover first saw her and them, they were as follows: William, nearly fourteen; John, eleven and a half; Ann, nine and a half; Thomas, seven; James, four. Of the two younger boys, Thomas became a captain in the 89th Regiment, while James died in 1845,

rector of Eltham, Kent. Both were so young at the time of their sister's change of circumstances that their education and cultivation with a view to advancement in life would be a comparatively easy matter; but what about William, aged fourteen? As a clod-hopping ploughboy, which the labourer's son was likely to be, he would surely take a great deal of polishing before he was at all fit to become, as he did, a captain in the 92nd Regiment. Doubtless, indeed, he owed his profession to his brother-in-law's influence; and if such were the case, the poor lad had little ultimate cause to be thankful for the family's brilliant alliance. He went down with the ill-fated transport *Aurora* when she was lost on the Goodwins in 1805 while conveying troops to Holland.

Those who take the trouble to peruse the Bolas marriage register will find it signed by a witness, John Picken. This gentleman, who gave the bride away, had married her mother's sister. Sarah's mother and aunt were the daughters of a clergyman named Bayley. Now, Macaulay's brilliant account of the social condition of the country clergy of a century before 1788 has come to be regarded as more showy and amusing than strictly accurate; and we may be pretty sure that in 1770 or thereabouts it was not a usual thing for a parson's daughter to marry a labourer.

There is a legendary story current that Sarah's father insisted on the suitor carrying a pig to Aqualate Hall, six miles away, as the price of his daughter's hand. I am not concerned to offer either denial or confirmation of this tale, having, like Andy, only 'heer'd tell' of it; but as a proof of the lowly station and vulgar breeding of Thomas Hoggins it is hardly a success. Such a wager or exhibition of muscular prowess would have been after the very heart of another Salopian of unquestionable pedigree, if eccentric manners and customs—one Mr John Mytton. Readers of the *Memoirs* of his meteoric and hardly edifying career can well imagine his accepting or proposing such a challenge with delight.

Finally, it will be seen that, however sudden was the impression made by Sarah's face on the future Lord of Burleigh—and it seems quite as likely that his love grew out of more mature acquaintance—Henry Cecil was at any rate not guilty of the indiscretion of marrying in haste. Doubtless he waited in hope of getting the wished-for divorce. Moreover, his bride, as we have seen, was still young—too young, indeed, when, after eighteen months of probation, he married her. He had ample time to look before he leapt; and it seems only fair to deduce from the facts that, supposing it to have been an instance of love at first sight, the farmer's daughter only developed in the year and a half traits which the more endeared her to her future husband.

'Thou shalt find there is nothing so irksome in life as a female fool.' These rather ominous

words from the husband of Mary Cheke are apt to suggest the fear that the future statesman did not find the beadle's daughter all his youthful fancy had painted her. But Burleigh was but twenty when he 'stooped to conquer,' while Henry Cecil was thirty-seven, had already experienced fifteen years of matrimonial life, and had probably more fully developed powers of selection. At any rate he paid his dead Countess what is, according to Dr Johnson, the highest possible compliment: he took a successor.

Letters of the Marquis written after his third marriage point to the fact that he was a careful and enthusiastic farmer, and also that he was on terms of friendly correspondence with at least

one of his late wife's brothers. In a letter of 1802 to John Hoggins, the only brother who followed in his father's footsteps as a Shropshire yeoman, the Marquis enters into minute detail on the growing of chicory as a farm-crop (a subject dealt with in this *Journal* at page 652) and on the value of cattle as substitutes for horses in team-work. Lovers of animals may like to know that his teams for the plough consisted of five oxen 'of the large Holderness breed,' that one of the five was thus always enjoying an off-day, and that 'all rest on Sunday!' A nobleman conscious of a fatally false step matrimonially would, one thinks, incline to drop the lady's family five years after her own death.

## MY AUSTRALIAN DUCHESS.

### CHAPTER II.

THE matter of the lease once settled and the partnership-deed drawn up in our respective names, nothing remained but to purchase the necessary stock and to set off to the place itself. After that would come the real work, and work indeed it proved. My son, fine soldier and fine fellow though he is, will never have a similar experience. Sometimes now, when my vanity runs away with me and leads me to believe that I have something to say that may be of interest to my brethren in the Lords, and I rise and propound my views, I find myself wondering if it can be possible that I am the same man who helped to build the homestead at Yarley, who proved himself a very fair top-sawyer, and whose cooking was so bad that Farquhar was compelled at last, in sheer self-defence, to take the office over. However, that is neither here nor there. Let me come to what I consider the most important portion of my story.

I should here explain that, while to the east we had a neighbour, we had none on the other sides. The country thence—north, south, and west—had not then been taken up, and was all primeval bush. Our neighbour on the east was an Englishman; but it was not until we had been settled in our homestead some three months that we made his acquaintance. What rumour had told us of him we did not altogether care about; but as the information had filtered through several hands before it reached us, we were not disposed to attach too much importance to it. I was the first to satisfy myself on the subject, and this was how it came about.

For some few months we had had a considerable amount of trouble with the blacks on our western frontier, and we were resolved to put a stop to it at any cost. Our available force amounted to only eight men; and two of these,

we had satisfied ourselves, were worse than useless.

'What about Bencliff?' inquired Farquhar when we talked the matter over. 'They've been harrying his southern boundary, so I understand. Perhaps he'd join us in punishing them. Why not ride over to-morrow and find out what he thinks about it? You could put up there for the night and be back here the night after. If he's agreeable, we'll teach the beggars a lesson they won't forget for years to come.'

This I willingly agreed to do; and, as soon as it was daylight and I had breakfasted, I set off on my errand. Little did I dream that I was undertaking the most important ride of my life.

I camped for a couple of hours at midday, and rode up to the station just as dusk was falling. Whatever Bencliff's faults may have been, it struck me that he had an eye for the picturesque. The homestead was charmingly situated on a slight eminence overlooking a lagoon. To the right was the stockyard, beyond it the men's hut, and behind all the scrub.

I rode up, and in the usual bush fashion was greeted by a pack of dogs, who made as if they would eat me and my horse as well. However, I dismounted and was about to enter the veranda, when I became aware that some one was coming towards me. I looked up and found myself confronted by a young girl, possibly eighteen years of age. So taken by surprise was I that I am afraid I stood and stared at her longer than was quite compatible with good breeding. I had not expected to find so beautiful a creature in such a place. She came forward to receive me without a trace of embarrassment. I introduced myself, and inquired for Mr Bencliff.

'He is out on the run,' she answered; 'but I expect him home this evening. Won't you unsaddle and come in? It is not often we see a visitor.'

Before I could stop her she was unstrapping my valise from the saddle. I begged her not to trouble; but she assured me, with a laugh, that she was used to such work. Then, when we had turned the horse loose, I followed her into the house. It was a strange dwelling, and unlike any other I had met with in the bush. What Bencliff's history may have been I did not then know, but the possessions he had brought with him into the wilds afforded me opportunity for reflection. On the walls of the broad, wainscoted hall were two or three pictures of undoubted merit. There was a moth-eaten fox's mask over one of the doors, and an antlered head above another. There were books of all sorts and descriptions in the dining-room; and, what struck me as having a certain significance, a cavalry sabre suspended above the chimney-piece.

'You have a charming homestead,' I said, turning to my hostess. 'When I compare ours with it, I must confess to a feeling of envy. Your father must be proud of it.'

'Mr Bencliff is not my father,' she answered, I thought almost sharply. 'He is my guardian. My father and mother died here when I was a little girl. This station is my property—not Mr Bencliff's.'

This came as a surprise to me; and yet, for some reason, I was conscious of a feeling of satisfaction at the news that she was not the man's daughter. However, before I could say anything in reply she had offered to show me my room; so, picking up my valise, I followed her down the passage to a room looking out over the back veranda. It was small, nicely though plainly furnished, and scrupulously neat. I wished now that it were possible for me to make a better toilet, but that couldn't be helped; so I washed off the stains of travel, and then went in search of my hostess.

I found her in the veranda, feeding with sugar a horse that had come up to the rails. I ventured to suggest that she was fond of horses.

'It would be strange if I were not,' she replied, 'seeing that I have been brought up among them. I understand them, and I think they understand me. But see, here comes Mr Bencliff. He is earlier than I expected. Whom can he have brought with him?'

I looked in the direction she indicated, and saw three men riding swiftly towards the house. As they approached I glanced at my companion's face, and discovered an expression of annoyance upon it.

When they reached the veranda-steps they dismounted, and two of them saluted my hostess. I argued, therefore, that the smallest of the trio must be the man whom I had come over to see. I am prepared to admit that I did not care much for his appearance. As I have already said, he was not a big man; his face was clean-shaven, and his complexion sallow; his eyes

were his worst feature: they were small, set too close together, and had a shifty expression that I did not at all like. He seemed surprised to find a stranger waiting to greet him; and, if I could judge by his face, he was not at all pleased to see me. His manner, however, was cordiality itself.

'I am delighted to make your acquaintance,' he said. 'I was wondering when we should meet. Permit me to introduce you to my friends, Mr Grimshaw and Mr Evans.'

Though I shook hands with these two gentlemen, it must not be supposed that I was in any way glad to make their acquaintance, for two more unscrupulous-looking individuals I had never set eyes on. However, they were good enough to profess themselves delighted to see me. Meanwhile my hostess had taken no notice of them, save to give them a curt nod as they came up the steps into the veranda.

'Just an appetiser before dinner, Mr Farebrother,' said Bencliff, taking my arm as if we were old friends; 'it will wash the dust down and conduce, I hope, to our better acquaintance.'

For a moment I felt like declining his invitation; but as my hostess had retreated into the house, and I should have had to remain alone, I saw nothing for it but to accept. It appeared, however, that the decanter needed replenishing; and, asking us to excuse him, Bencliff left the room. An awkward pause followed his departure, which was not rendered any the more comfortable when we distinctly heard the girl ask Bencliff why he had brought those men home with him, when he knew that she had strictly forbidden it.

From the way she spoke I gathered that the young lady not only possessed a will of her own, but also that she could assert it to some effect when occasion demanded. What answer Bencliff made her I did not hear; but, from the way in which the two men nudged each other, I could see that they had overheard what had passed.

It was not until the evening meal was over and we were seated in the veranda that I broached the subject of my visit. Bencliff immediately professed himself as ready to assist, while Messrs Grimshaw and Evans were also good enough to offer me their services.

'I've been wanting to have a go at the brutes for a long time,' said Bencliff, 'and we ought to be able to teach them a lesson that will keep them quiet for several years to come.'

The expression upon his face as he said this was by no means a pleasant one. Badly as we had suffered, I pitied the wretched aboriginal who should have to rely upon such mercy as he might show him.

Later in the evening our hostess, who had been missing since dinner, made her appearance. She did not join our party, but strolled out into

the open space before the house. When, therefore, Bencliff left us to go indoors in search of spirits and glasses, I took advantage of the opportunity and joined her.

It was a beautiful night; not a sound could be heard save the voices of the men in the veranda and at the hut, and the cry of a night-bird in the scrub behind the house. A certain person has confessed to me since that she liked me from the first moment she saw me; so far as I am concerned, however, I will go further, and admit that I loved her from the same moment. Her name I had discovered earlier in the evening was Christine, and her father, Colonel Urquhart, had once commanded a well-known cavalry regiment. Being unable to go the pace, as it is called, he was compelled to sell out; whereupon he set sail with his wife and daughter for Australia, resolved to seek his fortune in that new land. The fortune, however, did not come quite as quickly as he had expected, and eventually they took up the station on which I was now a visitor. How Bencliff came upon the scene I have never been able to discover, and still less can I understand the reason that induced Urquhart to appoint him guardian to his only child.

The walk that evening was one of the most delightful I have ever known; but when we returned to the house, I could see from his manner that Bencliff did not altogether appreciate my sudden intimacy with his ward. However, he was wise enough to give me no hint of this.

Next morning I was easily persuaded to stay on and take a look at the run, possibly because Miss Urquhart offered to accompany us on our tour of inspection. Messrs Grimshaw and Evans had taken their departure before daylight, on some mysterious errand to the east, the details of which were not disclosed to me. After breakfast we set off, and in the course of our perambulations examined a wool-shed and some hundreds of very fine sheep, and later rode off across the plain to take a look at a certain deep water-hole which Bencliff declared he had never, even in the worst season, known to give out. It was at this point that a curious incident occurred, which was eventually to have disastrous consequences.

When we reached the hole in question some eight or ten horses were drinking at it. They were a nice-looking lot, and I was expressing my admiration when it struck me that one of them seemed strangely familiar to me. We had lost a beast very like it a month or two before, and had been unable to discover a trace of it. Yet how could it be? I looked again and again until I became convinced that it *was* the same animal. Bencliff, who had been watching me, now began to edge his horse away, with the evident intention of inducing me to follow him.

'You've seen enough of this—haven't you?' he asked; and then, consulting his watch, 'I see it's time to be getting back to lunch.'

But I was by no means satisfied.

'I was looking at that chestnut with the white stockings,' I said, pointing to the animal in question. 'He's a fine brute.'

'Not bad,' Bencliff replied, with a carelessness that I felt was assumed. 'I got him in a swop with a man some months back.'

While he had been speaking Miss Urquhart had rounded the mob up and had driven it towards us. As it happened, the horse in question trotted slowly past me. It was then that I was able to convince myself that the brand on his shoulder was our own.

'I thought so,' I said in a low voice, so that the girl should not hear. 'That's our brand, Mr Bencliff. The animal has been missing for a couple of months, and we couldn't trace him.'

'By Jove! you're right,' he cried, as if the fact had only just struck him. 'It *is* your brand. I never noticed that before. As a matter of fact, I haven't set eyes on the brute since I took him in exchange; otherwise I should certainly have sent him back to you.'

Unfortunately for him, Miss Urquhart had overheard what he said, and now came towards us.

'What is the matter?' she asked. 'What did you say about that horse, Mr Bencliff?'

I left my companion to explain. The situation was a decidedly awkward one.

'I was just telling Mr Farebrother,' he began after a moment's hesitation, 'how sorry I am that I did not notice before that this horse carries his brand. He tells me they lost it some months ago. Had I seen the horse lately'—

She looked at him in a peculiar way, and I saw her lip curl.

'You rode the horse nearly every day last week,' she said. Her face was as white as a sheet of note-paper.

What reply he would have made I cannot say; but I solved the difficulty by suggesting that we should hasten back to the homestead for lunch. I had no desire that this generous, high-spirited girl should share even in the imputation of having had a hand in the horse-stealing. If, as I expected he would do, Bencliff returned the animal, I was quite prepared to let the matter drop; but, as it happened, we had not done with the wretched affair. After lunch the man was called away for upwards of an hour, and Miss Urquhart and I found ourselves alone together in the veranda. For a time we talked on all sorts of subjects: England, which she could not remember; her life in the bush; and many others. As may be supposed, there was one topic that I desired to avoid. I was soon, however, to discover that she was determined not to shirk an explanation.

'Mr Farebrother,' she said, speaking slowly, 'I

want to tell you how ashamed I am that you should have discovered your horse on this station, and that it has been used by my trustee.'

'Please do not say anything about it, Miss Urquhart,' I hastened to say.

'But I must,' she replied. 'Had I known it before, the animal would have been returned to you at once. I hope you will believe that. I cannot think what Mr Bencliff was doing to have kept it here.'

I thought I could hazard a very good guess; but I was not going to put into words what I had in my mind; so I hastened to assure her that I was quite satisfied with Bencliff's explanation. Whether she believed me or not I cannot say; but it had the effect of putting an end to a discussion that could only have been painful for both of us.

Next morning I bade them good-bye, and returned to Yarley as thoroughly in love as any man could be. At supper that evening I described the success which had attended my visit, and I suppose, from my way of telling my story, must have permitted Farquhar to see that I was by no means anxious to avail myself of Bencliff's assistance.

'It's very evident you don't like the man,' he said. 'Are you inclined now to believe the rumours we have heard about him?'

'I am prepared to believe anything,' I stated. 'If you want my candid opinion, the man is a scoundrel of the first water.'

'That's rather strong, isn't it?' was the answer. 'But, as I know you wouldn't bring such a charge against a man unless you had some very good reason, may I ask what is the reason in this case?'

This was the question I had been dreading; but so far as I could see, there was nothing for it but to tell him everything. I thereupon set to work and got the business over as best I could. He drummed with his fingers on the table for nearly a minute before he replied.

'It's a bad business,' he said at length, 'and it's made all the worse by the fact that the man is our neighbour and Miss Urquhart's trustee. If he hadn't told the lie about not having seen the horse since he got him, one might have believed his story concerning the exchange. As it is, I think we'll omit him from our force when we go for the niggers.'

As it turned out, however, the arrangement we were thus planning was destined to fall through, for two days later the man in question put in an appearance. We were just about to sit down to our evening meal when I saw him riding up to the homestead, accompanied by his two precious friends, Messrs Grimshaw and Evans, and a black 'boy.' The last-named was leading the horse that had caused all the trouble. Bencliff and the other two men greeted me effusively, and were evidently determined not to be offended

by the coolness of my welcome. According to custom, they turned their horses loose and placed their saddles in the veranda. From the fact that they had brought rifles with them, I gathered that they had come with the intention of carrying out the promise they had given me a few days before. Then Farquhar made his appearance, and I performed the ceremony of introduction.

'I told our friend Farebrother, here,' said Bencliff, 'that if we could be of any assistance we were quite ready to give you a hand in teaching the niggers a lesson. As there is not very much doing, we thought we would ride over to-day and find out whether you were ready to commence. The sooner they learn that spearing cattle and firing shepherds' huts is not an amusement to be indulged in with impunity the better it will be for all parties concerned.—What do you say, Grimshaw?'

Mr Grimshaw quite agreed with his friend, and capped his assertion with an oath; while Mr Evans inclined to the belief that if all the aboriginals on the continent were to suffer instant death he would not be grievously concerned at their departure.

As they had come to help us in response to our own request, it was impossible for us to refuse their assistance. Accordingly we arranged that on the morrow we would pay a visit to a portion of the station where the blacks had made themselves particularly obnoxious during the last few weeks. As soon as it was light, therefore, we set off, hoping by nightfall to reach a stockmen's hut on the left bank of the river, some forty miles from the homestead. The two men who occupied it had been in our employ since we had taken up the country, and were both fine, fearless fellows. Times out of number we had warned them to keep a sharp eye on the natives, and to run no undue risk. Our horror may be imagined, therefore, at the discovery we made on reaching the hut. The place had been fired, and only the bare slab walls were standing. Wilson, the elder of the men, had been speared, and lay dead upon the threshold; the other was still living, but so badly wounded that he had scarcely time or strength left to tell us how it had happened. It appeared that the blacks had come down on them about ten o'clock on the previous night, in number something approaching a couple of hundred. After several ineffectual attempts, they had at last succeeded in lodging a fire-stick on the dry wooden roof. The end came very soon then. Wilson opened the door, and was speared immediately; the other had remained inside until the heat drove him out, when he was speared and clubbed before he had gone many yards.

'The brutes shall pay dearly for this,' said Farquhar savagely as he knelt beside the dying man.—'My poor fellow, is there nothing we can do for you to make you easier?'

'I am afraid not, sir,' the man replied. 'It's all over with me. Well, thank God! I'm alone in the world; but I'd like to have had a go at them rascals, if it was only for what they did to poor old Bill there.'

In something less than an hour he was dead, and we buried the two men together a short distance away from the hut where they had lost their lives. Then we went on, and camped a mile or so farther up the river. Neither Farquhar nor myself talked very much on the way; we did not feel in the humour for it; but Bencliff and his two companions made up for our silence with threats of what they would do on the

morrow. Once I thought my partner was going to bid them hold their tongues; but he checked himself in time.

As you may suppose, we were careful to keep a good lookout that night; but we saw nothing of the miscreants. Next morning, however, the smoke of their warning-fires could be plainly seen on the hills across the river. From this it was evident that they were aware of our arrival, and were watching our movements. At midday we camped again for a meal and also to rest our horses. We were now drawing closer to the Ranges, as wild and desolate a stretch of country as the mind of man could imagine.

## LIFE IN A HAMMOCK.

WHEN the discoverers of America first landed in the West Indies they found that the natives used a kind of bed hung from the trees, and manufactured of a fibre which was hardly known to the adventurers.

It is to the Indians of the Western Hemisphere, therefore, that we are indebted solely or mainly for these two articles now so common in all parts of the world, but especially in the tropics: cotton fibre and hammocks. For, though cotton was imported from India and from Spain and manufactured in various parts of Europe for centuries before the discovery of America, the trade was of small importance till import from America began.

The word hammock comes from the Spanish *hamaca*, derived from the language of the aboriginal West Indians, and is not related, as might be supposed, to the German *Hangematte* (literally, 'hanging mat'), which is of independent origin, probably suggested by similarity of sound.

Although hammocks as we know them may be said to be an invention of the Indians of tropical America, hanging beds of various kinds have been in use from the remotest ages, their simplicity and convenience doubtless suggesting them independently to people in all countries. In no part of the world, however, is the science of life in a hammock better understood than among the natives of the West Indies and the Spanish Main, especially in Venezuela. To the native the hammock is probably his most valued possession. It is his chair and lounge by day and his bed by night; it can be extemporised into a kind of covering for his nakedness, though in his opinion this is the least important of all its uses; it is his cradle at birth, and the sofa in which at a later age he conducts his courtship, for a hammock is both luxurious and convenient for a *tête-à-tête* interview. It is easy to understand how much time is spent in the hammock in tropical countries, so productive of languor and inimical to physical exertion. Then at death

the native is enveloped in the folds of the hammock in which he had so often rested during his lifetime, and consigned to mother-earth. Some Indians, however, are said to bury their dead in the water; and among ourselves this custom is not unknown, as the bodies of sailors who die at sea are sewn up in a hammock or piece of canvas, and so consigned to the deep.

Some of the Indian tribes inhabiting the regions of the Orinoco have a curious mode of disposing of their dead chieftains. The body is placed in a hammock of netting and lowered into the water, where it is at once attacked by a number of flesh-eating fish, which in a short time completely consume the more perishable parts, leaving only the clean-picked skeleton, which is then taken out of the water and preserved. These fish, known as 'caribs,' are so fierce that they will even attack bathers; and on this account bathing in some parts is dangerous. The designation 'carib' seems to be not unconnected with the Indian race so called, who were known to be man-eaters; indeed, our own word 'cannibal' is said to be a corruption of their name.

In warm climates hammocks may be considered a necessity rather than a luxury. On hot nights, when not a breath of air is stirring, lying in bed becomes a torture and sleep an impossibility. In these circumstances a hammock becomes indispensable. It is at all times cooler than a bed; and as it is swung to and fro it creates a gentle and refreshing current of air, which also tends to banish inquisitive mosquitoes. Where these insects are very numerous, a mosquito-curtain, which can be easily attached to a hammock, will be found necessary; and mosquitoes are not the only insects that may be banished by the use of a hammock.

Though a very simple matter, comparatively few people understand the art of lying in a hammock; it must be learnt from the experienced. The hammock should be suspended from strong hooks about eight or ten feet above the ground and from fifteen to twenty feet apart,

the length of the ropes by which it is hung being so adjusted that when one is sitting in the hammock the feet may rest on the ground; but allowance should be made for sagging, as it will sink slightly under the weight of the occupant. When one is reclining in a hammock the proper position is not lengthwise, as is generally assumed by a novice, nor crosswise, but in a diagonal position. In that position the body is perfectly straight and horizontal, thus affording greater comfort and freedom of movement. This position, however, is only practicable in a properly constructed hammock of sufficient width; and most of the hammocks sold in the shops in England do not come under this category, some of them being mere instruments of torture in which sleep is impossible. Many seem to consider it necessary to stretch out the hammock transversely by means of wooden spreaders fixed near the ends; but in tropical countries these spreaders are never used, nor is it easy to see how they are consistent with comfort or the maintenance of a correct position.

The occupant of the hammock may rock himself to sleep by a very simple device. A rope is fastened at a point a few feet off, at the same height as the sleeper and at a right angle to the hammock, when a continual oscillation may be kept up by pulling on this rope from time to time; and if the hammock is well and freely hung, one or two pulls on the rope will keep it swinging a long time like a pendulum, thus rendering it possible for the occupant to rock himself to sleep. A sick patient finds a hammock invaluable, as it enables him to lie in reclining positions which would be impossible in a bed. It is also cooler, and its gentle rocking motion is very soothing to the sufferer. The hammock is much more portable than a bed or litter; and when slung on a pole borne on the shoulders of two men, it forms an admirable means of transport for the sick and wounded, as it ensures a minimum of motion, all jolting being avoided and a perfect equilibrium maintained. This method of transport is still in common use among the American Indians and the natives of the West Coast of Africa, and also in other parts of the world, for the conveyance of the healthy as well as the sick. We can well imagine it to be a luxurious mode of travelling in a tropical climate; and for the conveyance of sick and wounded it is commended to the attention of our military authorities. A friend of the writer who travelled thus on the West Coast of Africa stated that so little motion was felt that he could sleep placidly in his hammock even while traversing long stretches of rough and broken country.

The Japanese, certainly a cultured people, have shown us how it is possible to live comfortably without beds, tables, or chairs. At night they sleep on the scrupulously clean matting-covered floor, enveloped in suitable coverings,

which are rolled up and laid aside during the day. A people who sit cross-legged require neither chairs nor tables. Thus the frugal Jap needs very little household furniture, and with the rural native of South America it is much the same. It has been the writer's lot to travel day after day in the remote interior of South America, in parts where beds were almost unknown. On alighting at night at a humble wayside hostelry, exhausted after a long day's ride, he would be shown to his sleeping-quarters, the only furniture in the room probably being a washstand and basin; but two strong hooks were fastened in the walls for suspending the hammock, which, like every other traveller in these regions, he carried with him. Sometimes the room contains a chair and table; but such articles are looked on as quite unnecessary, and are furnished only in deference to the tastes of the fastidious foreigner. Travellers in the forest frequently swing their hammocks from the trees, and so pass the night *al fresco*. A fire is kindled to keep off mosquitoes and wild animals; but this is not always effectual, as in one case known to the writer, notwithstanding this precaution a traveller was seized while asleep in his hammock and carried off by a jaguar, or South American tiger.

In tropical America many kinds of hammocks are used. There is the Brazilian grass hammock, hammocks of cloth of various kinds, of canvas, and of netting; and no little ingenuity is spent in the decoration of some of them, especially in costly ornamental fringes, sometimes made of feathers of variegated colours. These hammocks are of all sizes, ranging from those intended for new-born infants to large ones in which a whole family may take their siesta. In Yucatan netting hammocks made of sisal-hemp may be bought of the Indians for a trifle. The Venezuelan Indians make hammocks of cotton fibre, not netted together, but interlaced in a peculiar fashion, and giving way like a spring mattress to every motion of the body. Europeans who buy them complain that the buttons of their clothing get entangled in the loose strands; but then Indians are not much troubled with buttons, nor indeed with clothing of any kind. There is another very luxurious kind of Venezuelan hammock called the Margarita hammocks, from the island of that name, where they seem to be manufactured. They are made in all sizes, of a peculiar cloth resembling silk, soft but very strong and durable, and are sold by weight. The writer has only seen them in Venezuela; but it would appear that they can also be obtained in the neighbouring British colony of Trinidad.

Hammocks are sometimes recommended as a preventive or palliative of sea-sickness; but their efficacy in this respect has not been proved, though it is true they always maintain a vertical position. This, however, is not sufficient, for the following reason: a vessel at sea is subject

to three different motions—namely, rolling, or swinging from side to side; pitching, or a seesaw motion from stem to stern; and ‘scending,’ the up-and-down, lifting and sinking motion as she alternately rises on the crest of a billow and

sinks again in the trough of the sea. It is the latter motion which is the most distressing and most productive of sea-sickness, and the ‘scending’ motion is increased rather than diminished by the use of a hammock.

## THE BETHEL STONE.

### CHAPTER II.

EXT morning, Danvers, carrying his sketching equipment, climbed the flight of eighty-seven granite steps, known as Jacob's Ladder, that leads from the High Street of Langissack abruptly to the cliffs.

He had said to his landlord, ‘I must make good use of this glorious weather.’ And Bolitho replied, ‘Iss, fay; for we do get more’n our share o’ wet in these parts. When the windows o’ heaven be a bit open other places, in Langissack they’m clean out o’ their sashes.’

At the top of Jacob's Ladder are the allotment gardens, and beyond is a wind-swept, grassy table-land much used for the spreading of nets and drying of linen. Danvers rested a minute at the top of the Ladder, and looked down on the curious little Cornish town—strangely huddled in some parts, strangely straggling in others—over which the blue smoke hung languorously in the sunshine. On the heights there was a fresh breeze, and the festoons of linen flapped and bellied in the wind.

The morning fitted his mood, for he was in an ecstasy of inspiration. Already he had settled in his mind the main features of his picture. His fancy ran away with him, and he saw in imagination the painting finished, framed, and honourably hung in the Academy, bringing him fame and fortune.

A white thing, like a huge butterfly, fluttered past him in the breeze, and he heard behind him the screams and laughter of women; and, looking back, he saw a girl running in pursuit of the fugitive linen. She had almost captured it when the malicious wind lifted it to a farther flight, and it seemed likely that the garment would be swept out to sea. Dropping his easel, Danvers joined the chase, and arrested the truant at the very edge of the cliff. When the panting girl approached and gasped her thanks, taking the garment from his hand with a modest air of embarrassment, he saw to his joy that it was his acquaintance of yesterday, Zillah Trethewey, the girl of the hymn-book who had so gloriously aspired for a thousand tongues. She was flushed and breathless, and looked lovelier than ever in her dress of workaday print.

When Danvers regained his easel he asked politely, ‘Can you tell me by what path I can reach the quarry, by the cliffs?’

‘I will show ‘e the path, sir,’ answered the

girl, addressing the stranger with the frankness of the peasant. Then, as they drew nearer the women and the lines of linen, she called, ‘Agatha! I’ll be back soon. I’m showing the gentleman the quarry-path over Braddock.’

Agatha smiled; she held four clothes-pegs between her teeth, and the smile was consequently expansive. ‘Seemin’ to me,’ said the woman to herself, ‘what wi’ Sunday prachin’ an’ week-day goings-on, the old quarry’s gettin’ ‘most so busy as ‘twas when they digged the stone there.’

As Danvers and the girl walked together over the cliffs there came on the wind the shrill reproach of Agatha: ‘‘T’es a merracle thee hasn’t lawst thy best broidered’— But the tail of the sentence was blown away to sea.

The artist stole many appreciative glances at his companion, though the prospect might well have claimed his undivided admiration. Northward there were upland farms and tracts of heathery moor; and to the south a glorious stretch of sea graduated in colour from an immediate green to a distant ultramarine; there were brown-sailed fishing-boats in the bay, and the heavy smoke of a far steamer smirched a league of the horizon.

‘Are you going to sketch the quarry, sir?’ asked the girl.

‘Yes; in fact, I’ve a larger project in my mind. I was so impressed with the scene of your quarry-service yesterday that I hope to make a big picture of it. I may have to claim the kindness of the good folks of Langissack, for I would like to introduce into the painting some of the real people of the place, and shall want many models.’

‘I’m sure everybody will be delighted,’ cried the girl. ‘My father is chapel-steward—Mr John Trethewey, up to the tannery; and if you will come to see him, he will be delighted to hear about the picture.’

‘And yourself, Miss Trethewey? May I hope to include you in my picture?’

She flushed with evident pleasure, and said demurely, ‘Yes, I reckon I would like to be there—with the rest.’

The path led over Braddock Moor, and they left the shining sea behind them. Zillah Trethewey was conscious of a tall figure following them at a distance; and a smile played about her mouth, and there was a gleam of mischief in her eyes.

They passed the old British encampment—

the site, perhaps, of grim fights in prehistoric times: the scene, certainly, of the less sanguinary battles of differing antiquaries; then the path grew very steep, and the quarry lay at their feet like a broken cup. They stood for a minute at the rim of the cup, and Danvers, pointing to a rude stone structure half-way down the slope, asked, 'What is that building?'

'Tis the old quarry-house,' said the girl, 'where they kept the tools and the blasting-powder.'

'And that curious stone?' he continued, indicating a strange, egg-shaped mass of granite that stood nearer.

'Tis the Bethel Stone,' answered she; 'it first stood here where we stand; but once when they were blasting the rock it fell over into the quarry. 'Tis balanced like a logan-stone, and a strong man can budge it. Folks say the Druids first set 'en up; but 'twas named the Bethel Stone in the old preaching days, for many saws were brought to conviction at the quarry-meetings.'

They scrambled down, and Danvers curiously examined the ancient stone, patched with yellow lichen and seamed and scarred with the storms of ages. He set his shoulder against it to test its movability; but he could not disturb the gravity of the great mass. Zillah Trethewey watched the attempt with a smile, and said with something of derision, 'It takes a strong man to shift it; 'tis beyond 'e.'

Looking up, she saw against the sky at the rim of the quarry a tall man pacing to and fro, and occasionally looking down at them. She fluttered her handkerchief, and the man stopped; she beckoned him, and he stood hesitating at the brink; then she made a trumpet of her hands, and screamed, 'Da—vid!'

'Tis David Pentreath,' she explained as the man approached; and Danvers perceived that he was a veritable giant in stature and finely formed. The artist's eye was quick to note the singular beauty of the man's face, clean-shaven, dark, with passionate eyes. His dress indicated the fisherman; yet there was a certain air of distinction about him, and he looked like a gentleman masquerading in coarse garments.

'David,' said the girl, 'this gentleman would like to see you move the Bethel Stone.'

The great fellow placed his two hands against the rock, seemingly without much effort, and the mass of granite distinctly oscillated.

'You must be enormously strong, my friend!' cried Danvers. The girl cast a proprietary glance at David, and smiled proudly as though she herself had moved the stone.

They descended to the bed of the quarry, and Danvers pitched his easel near the spot where he had witnessed the service.

'Be 'e coming home-along, Zillah?' asked David; but the girl lingered while the painter unpacked his sketch-box.

'Be 'e coming home-along, Zillah?' he re-

peated impatiently. She did not answer; she seemed fascinated by the display of tubes and brushes.

A flush crept over the olive face of David Pentreath; and, turning on his heel, he strode angrily away. Once he looked back, and saw the painter already busy with his sketch, and Zillah Trethewey watching the work over the man's shoulder.

Then Pentreath remembered that he had some business with Bolitho at the 'Plume of Feathers,' and walked rapidly into Langissack.

When the steamer *Magellan* was lost on the Mullet Ridge off Langissack in the memorable storm of November 1873, among other wreckage flung ashore was an immense section of Californian timber—intended, it was thought, for some botanical museum, so large was its girth of bark—which lay upon the beach above high-water-mark for several weeks, till Bolitho conceived the idea of hauling it home and making a big outdoor bench of it. He fixed it at the back of the inn by the skittle-alley; and on fine days the men would use this great table for their mugs and glasses. Its expanse of surface irresistibly invited the pocket-knives of the diligent, and the table was soon scored with names and initials till in time it was covered; and a newer generation, for lack of space, impiously cut deep through the letters and emblems of their elders, and the table was a carven palimpsest.

David Pentreath was seated at this bench, discussing with Bolitho the freightage of some barrels to Porthillian, when he abruptly paused in his bargaining, and striking the wood fiercely with his fist, asked, 'What fool hath been carving thy table?'

The landlord looked up in amazement, and said, 'Tis purty late in the day to putt that question, considerin' that every man-jack in the town hath scored 'en these eighteen years. What fool hath abeen carvin'! He! he! he! What fool hathn't?'

But the gaze of Pentreath was angrily riveted on some newly-cut letters, littered with fresh chips; and the letters spelt 'Zillah.'

'Dicky Pascoe was in this mornin',' said Bolitho. 'I reckon that's his handiwork.'

Oblivious of the half-settled question of the freight, Pentreath abruptly left the astonished landlord, and scoured the town in search of Pascoe. He found the culprit upon the beach, busy with a can of white paint on the stern of an old boat.

Dicky Pascoe was a little fat man of thirty or thereabout; his red face was round as an infant's, and his trousers and guernsey fitted him with a skin-like tightness; the curves of him were cherubic. It was as though Cupid had grown up and become fisherman.

'Dick Pascoe, I want a word with 'e!' cried Pentreath savagely.

'Wan minute!' answered the little man. 'I'm a-titivatin' the old girl; I got a bit ashamed o' her.' The name *Susanna* gleamed in wet paint upon the stern, and Pascoe was retouching the half-obliterated flourishes that flanked the letters. 'When I've finished this twiddle I'll attend to 'e.'

Pentreath gave the boat a mighty kick that moved her two points upon the sand. 'I'll teach 'e to carve letters on tavern-benches!'

'Carve letters! Bless my saw! who made 'e lord an' maister o' the alphabet?'

'What business hadst 'e to score the name o' Zillah at the "Feathers"?'

'Business? No business; 'twas a pleasure; 'tes the purty name o' a purty maid, an' 'tes a brave, purty bit o' carvin'. Did 'e notice the hangles o' the Z?'

'I'll knock the bones out o' 'e for that job!' cried David, advancing.

The little man rolled up the sleeves of his guernsey over his plump arms; and, assuming an attitude of defence, he confronted the aggressor.

The absurdity of the situation was too much for Pentreath; he relaxed his clenched fist, and said, 'Darn 'e, Pascoe! you'm too small to smite!'

Pascoe beamed. 'For the matter o' that, Dave Pentreath, there's two sorts o' smallness: there's littleness o' body an' littleness o' mind; an' for all the length an' width o' 'e, you'm a bit narra-minded. As for the carvin', there's no harm in it—'twas just a passin' fancy. If you reckon the maid's yours I'll apologise; if she ed'n, I won't.'

Pentreath turned away, and was walking across the beach when Dicky ran up beside him. 'We won't quarrel, Dave; you an' me ha' knawed wan another too long for that.'

David did not answer, but walked on with vast strides, so that the other had to break into a little trot to keep pace with him.

'Tell 'e what, Dave,' said the little fellow; 'you'm a bit too sober-minded for the women. 'Tes no good to go courtin' with a frown so

black's a tar-brush. You must tickle the fancy o' 'em; you must coax 'em, Dave, an' you must flatter 'em; for they all do dearly love a 'il sawft word, even if 'tes a bit o' a lie. I do knaw what I'm tellin' 'e, for I've courted scores o' maidens in my day: I was always a worshipper o' the women. Bless thy saw! I make rhymes to 'em; not book rhymes, but fitty rhymes out o' my awn head—all hextempor', like a super's sermon. There's Jago's maid, up to Penidden. 'Twas only yesterday I said to her, "Dinah, my beauty, I be terrible fond o' 'e!" "Since when?" asked the maid, knawin' I'm a bit o' a wanderer. "Since the mornin'," says I; "for love's like fish, my dear: the fresher the better." "An' how long will it last?" saith the maid. An' what do 'e think I answered? The words flashed into my mind so quick's lightnin'':

"Till the hills be flat,  
An' the moon falls scat."

There's a rhyme for 'e, Dave; there's inspiration for 'e. Aw, iss! I was always a terrible worshipper o' the women. So long, Dave!' And the chubby Lothario went back to his boat and his paint-pot.

That night, as was his solitary habit, Pentreath paced the deserted quay of Langissack, smoking his last pipe. It was notably clear, and the sky was aglitter with stars; but David had no regard for the firmament; his gaze was towards the constellation of lights that sprinkled the upper region of the town, and focussed on one faint, luminous square—a white window-blind, dimly irradiated by a candle; and when the square was suddenly blotted out, indicating that Zillah Trethewey had gone to bed, David knocked out the ashes of his pipe and heaved a mighty sigh. There ran through his brain the absurd jingle of Pascoe:

Till the hills be flat,  
An' the moon falls scat!

The big fellow half-wished that he was nimble of thought and speech, and a master of such trivialities of wooing.

But cannons are not loaded with rabbit-shot.

## ARCHIBALD CONSTABLE AND HIS LITERARY FRIENDS.

### PART II.

HE Professor Leslie alluded to in our last part was the great mathematician who was later Sir John Leslie. He was the friend of Adam Smith, and travelled with Wedgwood and Robert Gordon. He succeeded Playfair at Edinburgh in the Mathematical chair in 1805, and in the chair of Physics

in 1819; he discovered the process of artificial freezing, and was the author of many learned papers. He died in 1832. Dr Thomas Charles Hope was Professor of Chemistry in Edinburgh University, and held several high scientific appointments. He died in 1844. Robert Jamieson, mineralogist, was Professor of Natural History in the university from 1804, and was very

instrumental in improving the museum there, and contributed many papers on his own subject to the Natural History Society. One of the most remarkable men in the clerical world of that day in Edinburgh was the Rev. Robert Gordon, D.D. He was appointed minister to several of the principal churches in succession, and in 1825 was at the New North Church. He was a saintly man, an acute and original thinker, and an eloquent preacher. He seceded with most of his congregation of the High Church at the Disruption, May 1843, and became known as one of the 'Disruption Worthies.' The Mr Alison whose chapel is alluded to in the next paragraph was the celebrated writer on *Taste*, and was regarded with much esteem by the learned society of the time. The father of Sir Archibald Alison, he wrote many sermons and essays, and was minister of the Episcopal Chapel, Cowgate, which congregation moved afterwards to St Paul's, York Place.

'Sunday, 8th January.—Went to Mr Alison's chapel; heard Mr Williams preach on the Divinity of our Saviour. Dined with Mr D. Constable. Miss C. received a letter from Laint saying she would be in town to-morrow. We had Mr W—— at dinner, and a son of Professor Wallace came in the evening; he is preparing for the Scotch Church (Kirk); his deafness would prevent his succeeding in any other profession. He is more attached to the Church of England.

'9th January.—Paid a visit to Miss Constable. Walked to the Hills. Coming from College on my way home, when I had just passed Professor Wallace's house I heard some rapping at the window, and on looking round saw L., who beckoned to me. I of course returned, when she asked me would I wish to be introduced to Miss Wallace? So I went in; was introduced to Miss W., a nice little girl about nineteen, with two beautiful dimples. L. asked me had I not often seen Miss W. before? Miss W. said she was sure I never had; but I said I had. Miss W. then said she never saw me before. I told her that was very possible, but that he would be a stupid fellow who could pass her by without seeing her; told her that I had seen her in the early part of the day. She asked me had she music in her hand? Told her it was not at that I was looking. She gave me some cake, and introduced me to the Professor (Mrs W. is dead). L. asked her would she go on Friday to see the skating? We were to go, but I prophesied it would be a bad day (and so it was for me).'

The next two days are recorded as being excessively cold, and the entries only mention his having 'got a bad cough and cold;' but, feeling better on the 12th, 'walked to Princes Street; but while talking to Mr Constable grew very faintish; was obliged to go back in a carriage;' and the next evening 'felt better, yet rather weak; went down to the drawing-room; had on

my surtout, but nothing on my head;' while the following morning, 'a fresh cold in my head. The Misses P. very kind; wanted to send for their doctor, but I would not; afraid he would order bleeding, which I intend to put off as long as possible.

'16th January.—Up at ten; much better. Surprised that Mr C. had not sent to inquire after me.

'17th January.—Went to Princes Street, and, to my great astonishment, was told that Mr C. went to London last Friday. Went to St Vincent Street, but was informed that Mr D. C. was gone to London and Miss C. to Polton. Felt sorry for this, as my friends were scarce, but are now fewer in town. Called into Maclachlan and Stewart's. Heard a person say there that Constable had failed. L. asked me did I hear of it? But I told him that it was nonsense, and the report originated in consequence of his going to London. Would not believe it; but having heard it at home in the evening, I began to think it must have some good foundation.

'18th January.—On my way to College met Mr L., who asked me had I heard anything since about Constable? Told me it was quite true. When I went to Princes St. one of the clerks told me of it. Paid a visit to the Siddons; they were aware of the fact. Got a great scolding from Miss Siddons for not coming oftener: told me her mamma would not ask me again; for having often asked me and also given me a general invitation—which very few ever got—yet I only dined with them once though ten weeks in Scotland. Went to the theatre in the evening: *Twelfth Night*: feel a growing taste for Shakespeare. Wrote to my father to acquaint him about Constable, who also wrote to him a fortnight ago.

'19th January.—Walked out to Polton. Rev. Mr Mackenzie came half the way; indeed he is a delightful fellow, a man quite after my own heart. When I came up to the house, perceived the drawing-room window-shutters closed. It made me hesitate, for I thought all within must be very sad. First saw Miss C., who did not allude to the calamity, though we had a *tête-à-tête*; nor did Mrs C. until after dinner; but Miss Anne C. did, and it was like her. She spoke very feelingly: said she did not care provided her father could pay all; but if he did not she would be unhappy. Asked me what she should do with her pony. Told her to send it to grass. "But who will pay for it?" she immediately said. Told her to send it to Miss Wilkie. Said she was thinking of that, but of course would make it a present to her. I said there was no occasion for that, as Miss Wilkie would have the use of it, without any expense or trouble. Said in either case she would consider herself indebted to Miss W. Mrs C. told me that Mr C. had failed partly in consequence of Hurst & Co., and also of Ballantyne and Sir W.; but this only proved how ignorant she was of the business,

for this last house . . . quite in consequence of Constable. Dined with them; returned by the coach. Called on Mr Mackenzie according to promise.

'20th January.—Heard from one of Constable's head-clerks that his affairs were very bad. He talked of the stock being sold. It is reported to-day that Ballantyne & Co. will continue, as the Royal Bank and Sir Walter's friends will assist.

'21st January.—Called on Mr Mackenzie. We took a walk to Leith; talked a great deal of the Constables and then the "Predestination." Called on the Siddons, and invited myself for Sunday.

'22nd January.—Called on the Misses Siddons to go with them to church, but was late, for they were gone. However, I was in quite time enough, and got a good seat in their church. Heard Mr Shannon preach; it was on the good effects produced by affliction. Went again in the afternoon (two o'clock), and heard Mr Ramsay; it was on the three Creeds; he is going regularly through the Articles. Dined with the Siddons; met a Mr Noel, a near relative of Lord Byron: he was brought up for an independent gent., but now must study medicine.

'23rd January.—Mr Constable returned to-day, but was not visible; did not go to his own house, but to Mr Cadell's. The weather is quite soft and mild.

'24th January.—Mr C. did not go to Princes St. to-day. Great rumours of large failures. A meeting to be held on Saturday of Mr C.'s creditors.

'25th January.—Mr C. in Princes St. I felt somewhat awkward on seeing him, and stayed reading in the shop until he called me; he seemed very low-spirited and quite unconscious how things are to go on.

'26th January.—Went to Princes St. Saw Sir Walter with Mr C. Asked Mr C. was he in good spirits? Said he was, all things considered; but Sir W. really looked miserable. Spent the evening with a Mr Ramsay. The next day commenced translating the Hebrew Bible; think it rather easy.

'28th January.—Paid a visit to Mrs Siddons; heard some delightful music. There were two Misses Wilson there, who sang the melodies beautifully, particularly "Rich and Rare." A Mr Gregory, very young, played the guitar and sang. It was all delightful. Mrs Siddons asked me to dinner. Went to the theatre in the evening. *Elizabeth; or, The Exiles*. Mrs S. was Elizabeth; it was very well acted.

'29th January.—Went to hear my friend M'Kenzie preach at the Canongate Church; text, "Be thou reconciled to God." It was good, but there was too much logic. Diction good; prayers good; but why not introduce the Lord's Prayer? Good to pray for Great Britain, but why omit Ireland? Went with the Misses Siddons to church; heard Mr Ramsay (see Ser.-bk.). Dined at home.

The Mr Ramsay here referred to was doubtless the well-known and popular Dean Ramsay, so

highly regarded for his zeal and tolerant disposition. He came to Edinburgh in 1823, and was incumbent of St George's and St Paul's in succession, and was later assistant minister at St John's. In 1846 he was made Dean of the diocese, and refused the bishoprics of New Brunswick, Glasgow, and Edinburgh. He wrote a biography of Dr Chalmers, but is best remembered by his delightful *Reminiscences of Scottish Life and Character*, first published in 1857, which has gone through many editions. Dean Ramsay died in 1876, aged eighty-three.

'30th January.—A holiday in College. King Charles went to a party at Mrs Ramsay's; saw the Scottish reels danced for the first time; don't much admire them.

'31st January.—Saw Mr Constable. He was very dull. Said he was much obliged to me for my visits; that he wished to know who his friends are. Said he was disappointed that many of his friends had not called. Told him he should make allowances; that people seemed to think he was too much occupied to see a visitor. Told him Professor Leslie had been inquiring of me for him. Desired me to tell the Professor he would take it as a great favour if he would call. Asked me did I call at St Vincent St. often? Said they were very dull there. Went there immediately; saw Miss Anne: not looking well. Went into dining-room; the table was covered with books preparing, as I understood, to be sold. Mr D. C. seemed in tolerable spirits. Asked me to dinner, but could not; gave me a general invitation for every or any day in the week. Miss A. gave me a hint that Miss Wallace was to be there Thursday; to bring her to dinner, it being her brother's birthday.

'1st February 1826.—Saw Mr C. again to-day; he told me of Kay's great failure, but seemed to have expected it. Went to St Vincent Street. Met Mackenzie; we dined there; had more "predestination," or rather fatalism. We were at it from five to ten o'clock; then we walked home together. Heb. doing well.

'2nd February.—Mr C. not able to come to town; went to St Vincent Street. Saw Miss Wallace. Walked with them to Argyle Square, where Miss W. lives. Poor Miss C. feels awkward meeting her friends, though they are, of course, very kind to her.

'3rd February.—Saw Mr C. He again expressed much gratification at my visits; gave me a warm squeeze; told me Miss Margt. C. was in town, but that Miss C. is very poorly. This I was very sorry to hear; she is a delicate plant, and has but a short time to live. Went to St Vincent Street to see Maggy, and was delighted; it was mutual, for she came forward a second time and shook hands. In the evening went to Mrs Drybrough's to tea. No letters from home, nor the gown yet come. Read every morning till one; get up soon after eight.

'4th February.—Had a ride for two hours

after Dr Hope's class, which is the only one on Saturday. Met Miss Wallace; she talked of Dr Brinkley, Dr MacDonnell, and Dr Lardner; knows them all; is rather musical, but cannot have a refined taste, for she prefers, after the Italian, Scottish. She is English. Went to the theatre in the evening, gratis; saw *Paul Pry* and the *Irish Tutor*, but did not wait for the Farce. Saw Combe's collection of busts, heads, &c. to-day; the system seems gaining ground here.

On 6th February mention is made of another visit paid to Mr Constable, who asked, 'Did I not think he was keeping up his spirits wonderfully well? Told him I was glad to see it; it was true philosophy.'

A walk round the Calton Hill on a very blowy day fills another entry, and on the 8th is written, 'Saw Mr C., who gave me a message for Mr D. C. Met Miss Wilkie there; a nice-looking girl; good complexion. Miss Wallace soon came in; she is a quiet lamb. Then Miss Hill tumbled in. I left them soon; the Hebrew not to be neglected for young ladies. Coming along met Mr Rees in St Andrew Square; turned back with me. "Just dropped in" to be introduced to Mr Black, B/S. Then the Hebrew.

'9th February.—Breakfasted with Mr Rees at nine this morning in his lodgings, MacPherson's, Princes St. Asked him to breakfast with me on Saturday, but business prevented him. Told me Mrs Siddons asked me to dine with her on Sunday next. I asked a few young friends to breakfast with me on Saturday.

'10th February.—Dined with Mr Noel, a cousin of Lady Byron. Met a Mr Grant, who is to be an advocate; a nice young man.'

Mr Grant is probably he who became later Sir Francis Grant and President of the Royal Academy. He was born in 1803, and was educated for the Bar, which he abandoned for painting, and among his large portraits are those of Queen Victoria and the Prince Consort. He died in 1878.

'11th February.—Had Mr Noel, Mr Grant, Thomson, the two Siddons, Mr Martin, and Rev. Mr Mackenzie. The Misses Panton prepared a very elegant breakfast; every one admired it and seemed to enjoy it. The fish was in great demand. After breakfast went with Mr Noel to Arthur's Seat; it was quite delightful; amused ourselves by rolling big stones down, then went to the well (St Anthony's), where Mr N. had a drink and we washed hands. Paid a visit to Mr D. C.; he was anxious for me to accompany him to Polton, as he was going out. Said I would go if I thought Mr C. would like it. Saw Mr C., and determined not to go. Went to the theatre. Saw the *Wheel of Fortune*; admired the fool's philosophy; he was the wisest man amongst them. Better to be a witty fool than a foolish wit.

'12th February.—Went to church with the Misses Siddons; afterwards paid a visit to Miss

C. in St Vincent Street. Dined at the Siddons'; met Mr and Mrs Vandenhoff; Mr, Mrs, and Master Murray; and Mr Rees. Liked Mr V. very much; he seems to study his manner of speaking too rigidly; quite the stage; it may be that it is natural.'

The next day, 'Did not wake till the servant called me at nine o'clock, so was too late to breakfast with Mr Rees as promised. Dined with Mr D. C.; assisted him with arranging his books, &c.

'15th February.—Delivered a letter from Councillor Ellis to Dr Thomas; he was out, but I saw Mrs Thomas and Miss Thomas. Mrs T. was delighted to see an Irishman; she was born in Ireland, but has not been there these many years; has resided in the Ionian Islands for some years back; told me Mr T. was an intimate friend of Lord Byron. They were very near him.

'16th February.—Went to Polton. All dull. I had lunch at two, but could not wait for dinner, as I had an invitation for the evening to attend a Baptism, where I was to meet Dr Gordon. Being anxious to get back early, and not liking so long a walk, I had the pony with Miss A. C.'s leave; but unfortunately coming along the Dalkeith Road I lost my gold watch-chain, seal, and key; the ring on which the links of the chain fastened was bad, and they got out of it. I made a search; knew where I had it out last, a quarter of a mile from where I missed it.'

Thus ends the pencilled records of seventy-five years ago, and four decades have well-nigh passed since the hand that wrote them was stilled.

The connecting links in these realistic glimpses of a great publisher's life will be found in his son Thomas Constable's book, *Archibald Constable and his Literary Correspondents*, published in three volumes in 1873. Alexander Blackwood wrote at this time to William Blackwood from London: 'This business will make you the first bookseller in Scotland, and I think the Whigs will feel this most dreadfully.' After Constable's failure Sir Walter Scott gave his patronage to Cadell, who made a large fortune from the sale of the various editions of the Waverley Novels. Although there was a breach with Scott from the date of the failure, yet he bore testimony of Constable's house that 'never did there exist so intelligent and liberal an establishment.' Archibald Constable after his failure carried out a scheme in 1827 about which he had previously been very sanguine, *Constable's Miscellany of Original and Selected Works in Literature, Art, and Science*. But his spirit had been broken by his downfall, dropsical symptoms supervened, and he passed away on 21st July 1827 in his fifty-fourth year, having, as Lockhart says, crowded vastly more than the usual average of zeal and energy, of hilarity and triumph, and 'perhaps of anxiety and misery' into his career.

## EGG-PRESERVATION.

By MRS SANDERS.

THE successful preservation of eggs is of paramount importance to the British householder; and in no department of domestic economy is there greater scope for thrift and good management. When it is considered that eggs can be bought at from sixpence to eightpence per dozen from March to May, and that they rise in price to one shilling, two shillings, and even more from October to December, it will at once be conceded that some method by which a more uniform price may be obtained becomes almost a matter of national importance, placing the producer and consumer on more equal terms, encouraging home-production, killing foreign competition, and thereby helping agricultural prosperity.

Many systems, both chemical and mechanical, for the preservation of eggs have been in use; some tolerably successful, others miserable failures. It is unnecessary to enumerate these; but for the last fifty years lime, either in a creamy state or as lime-water, has been most largely adopted, and found to answer well, so far as kitchen and cooking purposes were concerned, but not for the egg-cup, as the shells become injuriously affected and the eggs are apt to acquire a slight taint of the lime.

In quite recent years a silicate of soda, known under the commercial name of water-glass, has been proved to be by far the best and simplest of all preservatives; and because of its cheapness, its easiness of application, and its efficacy, it well deserves all the praise that is given to it. It is an opaque fluid, tasteless, colourless, and of the consistency of treacle, but readily dissolves in warm water. It can be obtained in tins of any good chemist, with full directions as to the proportions of glass and water.

The following quotation from the *Lancet* will at once show how it affects the egg, and at the same time gives most valuable testimony as to its merits: 'Water-glass owes its preservative effects to the formation of a hard, glassy silicate of lime within the substance of the shell, forming, so to speak, a perfect envelope of glass. It is well known, further, that water-glass possesses a powerful antiseptic action. Eggs treated in this way are said to preserve their fresh milky taste for six months, and to be indistinguishable from an egg taken straight from the nest.'

An expert of some years' standing also writes thus of water-glass: 'It is not possible for us, in our variable and cold climate, to provide any but a very limited number of fresh-laid winter eggs; but if our summer eggs, or some of them, can be preserved so that they shall, for all practical

purposes, be as nearly as possible equal to new-laid, the difficulty is overcome, and we need not suffer either from scarcity, quality, or increased price. Many progressive private families have already adopted the water-glass system, and all declare it to be highly successful.'

Some difference of opinion exists as to the best kind of vessel in which to store the eggs; wood, zinc, and stoneware all being recommended. The latter, however, is the best. Wood is apt to leak, and leave the eggs stranded high and dry; zinc is affected chemically by the silicate; but for private use, at any rate, a stoneware crock answers every purpose, and if evaporation takes place nothing is easier than to fill up the vessel anew, as the liquid should be kept at about two inches above the eggs. When taken out for use they should be washed in cold water and dried, after which it would be impossible for any one to say from their appearance they were not new-laid eggs; and, as stated in a paragraph on 'Egg-Preservation' in this *Journal* (vol. v. p. 478), an unchanged condition of the eggs is ensured for about twelve months. What more can be desired?

One evil seems to loom in the future regarding this wholesale and effective preservation of eggs. The British public are mainly dependent on the shops for their supply, and the superiority of the new system might lead to unfair dealing by the grocer and also by the producer. No one would like to pay for a preserved egg the price of a new-laid one, however good the former might be; but the consumer must protect himself by dealing with honest people or by preserving his eggs at home instead of buying them in the shops.

## NIGHT AND MORNING.

You turned the glory of your eyes  
And woke a world of light!  
I saw the regal morn arise  
On dim, far heights of Paradise,  
And take from flaming seas and skies  
Their sacramental rite.

You turned the glory of your eyes  
And left—a world of night;  
For now, though other mornings rise,  
Dusk-haunted are my daily skies,  
And lonely is the path that lies  
Before my lonely sight.

But when night's legions hold the skies  
In rapt, attentive light,  
Then, in the land of dreams grown wise,  
I see through your remembered eyes  
God's morning sweet and stainless rise  
On life's forgotten night.

## SIXTH SERIES.

### NATURAL WISDOM.

**L**ORD BACON gave it as his opinion that the genius, wit, and spirit of a nation are to be discovered in its saws; and William Penn affirmed that its wisdom is discernible in the same. Neither of these high

authorities, it will be noticed, defines them as either a measure of civilisation or a standard of education, well knowing that neither of these ingredients is concerned in their production, since some of the wisest sayings ever uttered have emanated from rude and untutored minds.

Many may not have heard the aphorism that was uttered before a parliamentary committee some years ago by a shrewd member of the labouring class, that 'Charity creates much of the misery it relieves, but does not relieve all the misery it creates.' Wholesale philanthropists may regard this in the light of a sophism rather than an aphorism; but it is nevertheless only too true.

The Hindu proverb that 'The snail sees nothing but its own shell, and thinks it the greatest palace in the universe,' is a salutary reproof to narrow-minded men who have not a thought beyond the sphere of their own vision.

'Softly, softly, catch monkey,' is a good example of negro proverbial philosophy, a flowery rendering of the Latin *Festina lente* ('Hasten gently').

The wild, illiterate Zulu has produced several aphorisms, of which a couple of specimens will suffice: *Kaliko isela elingalunguziyo emgodini walo* ('There is no toad which does not peep out of its hole'), by which the native means that each one looks after his own interest. *Imbila yaswela umsila ngokuyalezela* ('The rock-rabbit is without a tail on account of having ordered one'), arose out of the supposed treatment of the rock-rabbit by the rabbit. The anecdote is that in days of yore the two quadrupeds held a conference to arrange how to supply themselves with tails, and they agreed that the rabbit should sally forth to

procure them. The rabbit consequently journeyed out on the sea of life, and supplied itself with a tail; but, having got into its own business and interests, completely forgot those of the rock-rabbit. It subsequently was so ashamed of its behaviour that it dared not return to the rock-rabbit, which, in consequence, has remained without a tail. By this proverb the Zulu means that we must attend to our own business if we wish it to be worthily done.

Those who, like Sir Hurricane Bustleton, appear always to be in a hurry, who invariably conclude their communications 'In haste,' and who are for ever complaining that they have no time, cannot do better than lay to heart the wise reply of a poor Indian chief to a New Yorker who excused himself on the plea of 'No time' from the performance of an uncongenial task. 'Well,' said Red Jacket, 'I suppose you have all there is.' Readers who have digested their *Marcus Aurelius* may recall the passage, penned some eighteen and a half centuries ago, in which he tells us that he learnt 'from Alexander the platonic not frequently nor without necessity to say to any one, or to write in a letter, that I have no leisure; nor continually to excuse the neglect of duties required by our relation to those with whom we live, by alleging urgent occupations.' The procrastinating proclivities are well illustrated in this little rhyme:

'When I get time—  
I know what I will do:  
I'll cut the leaves of all my books,  
And read them through and through.

When I get time—  
I'll write some letters then  
That I have owed for weeks and weeks  
To many, many men.

When I get time—  
I'll pay those calls I owe,  
And with those bills, those countless bills,  
I will not be so slow.

When I get time—  
 I'll regulate my life  
 In such a way that I may get  
 Acquainted with my wife.

When I get time—  
 Oh, glorious dream of bliss!  
 A month, a year, ten years from now—  
 But I can't finish this—  
 I have no time.'

The Marquis of Lorne, when Governor-General of Canada, was present at some sports held on the ice of the St Lawrence. Though wrapped in furs he felt the cold acutely, and was astonished to see an ancient Indian meandering around bare-footed, enveloped only in a blanket. The Marquis asked the Indian how he managed to bear such a temperature while so scantily clad. 'Why you no cover face?' inquired the Indian. The Marquis replied that no one ever did so, and that he was accustomed from birth to have his face naked. 'Good,' replied the Prairie King; 'me all face,' and walked away. This was not quite so elegant, perhaps, as our maxim, 'Use is second nature;' but to the same effect, and produced without expense of thought or labour of invention.

A converted negro slave was taken to church by his master, when the clergyman preached from the text, 'No man can serve two masters,' &c. On the master asking Sambo what he thought of the sermon, the negro replied, 'Pa'son man, he no speak de truth. Him say, "No man can serve two massas." Dat's not true, for Sambo serve you and young massa. And him say again, "For he will hate de one and lub de oder;" and dat's not true, for I hate you bofe.' No sally of a genius this, but a simple outspoken truth: too outspoken probably for poor Sambo's welfare.

A shepherd while tending his flock in the wilds of Queensland was accosted by a traveller (not a bushman), who noticed that the animals were running over the wiry grass without taking a bite. 'Good-day, shepherd! Your sheep don't seem to like the grass. Now, if I were a sheep, I would set to work and take a good feed of it.' The shepherd, looking him up and down with supreme contempt, replied, 'If you were a sheep you wouldn't be such a — fool.'

Dr Radcliff, who many years ago resided in Bloomsbury Square, had found it necessary to employ a paviour for some repairs. When the man presented his bill the Doctor made a wry face, and seemed to take the prescription with great reluctance. At length, when he had thoroughly examined it, he said, 'What an enor-

mous charge is here! You expect to be paid, do you? And for what? Never was a job worse done. You have spoilt my pavement, and then covered it with earth, merely to hide your bungling work. 'Ah, Doctor, Doctor!' replied the man, 'there have been many worse jobs done than this; but if it were as bad as you say, you well know that mine is not the *only* bungling work that is covered with earth. 'Oh, you dog!' returned Radcliff; 'you are a wit, I see, and consequently poor. Come into the house, and I'll pay your money.'

Here is a good specimen of an Irish mendicant's ready wit. When General X. was quartered in Dublin, he and his wife were regularly besieged whenever they got into their carriage by an old beggar-woman who kept her post at the door, assailing them daily with fresh importunities and fresh tales of distress. At last the lady's charity and the General's patience were nearly exhausted; but their petitioner's wit was still in its pristine vigour. One morning, at the accustomed hour, when the lady was getting into her carriage, the old woman began: 'Ah, my Lady! success to your Ladyship and success to your Honour's honour this morning, of all days in the year; for sure didn't I drame last night that her Ladyship gave me a pound of tay, and that your Honour gave me a pound of tobacco?' 'But, my good woman,' said the General, 'do you not know that dreams always go by the rule of contrary.' 'Do they so, plase your Honour?' rejoined the old woman. 'Then it must be your Honour that will give me the tay, and her Ladyship that will give me the tobacco.' The General, being of Sterne's opinion that a *bon mot* is always worth something, even more than a pinch of snuff, gave the ingenious dreamer the value of her dream.

Of all the tributes paid to the blessed memory of Victoria the Good none was prettier or more eloquent than that of the Pondoland chief, who, on hearing the sad tidings of his Great White Queen having passed away, remarked in true poetic vein: 'When I look up into the sky to-night I shall see another star.'

These few specimens of unaided wisdom are arranged in no particular order or method, but have been jotted down from time to time as met with. Rough and uncut diamonds many of them are no doubt; but better so than stones fabricated by art and polished with wit. Uncouth, awkward, clumsy—call them what we will; they are also, it must be confessed, genuine, unaffected, natural.

## MY AUSTRALIAN DUCHESS.

## CHAPTER III.

VER our pipes we held a council of war to decide the important point as to whether we should push on and endeavour to settle matters that afternoon or leave it until the morning. For my part,

I was desirous to go on and have it over. I don't think I am a coward; yet, while I was naturally anxious to avenge our poor men, I loathed the work that we should be compelled to carry out. After all was said and done, the poor wretches were only savages, and, with the exception of the Patagonians, I should say the lowest race in the world. I was disappointed to find that Farquhar sided with Bencliff and his two companions, while the rest of the men whom we had brought with us, being only station hands, had, of course, no vote in the matter. My partner's argument was, that as the days were drawing in we might not come upon the enemy until it was nearly dark, when it would be too late to make sure of meting out to them the punishment we intended. Finding myself outnumbered, I withdrew my proposition; whereupon we settled down to spend the remainder of the day and the coming night where we were. The horses having been taken down to water at a fine hole some couple of hundred yards from the camp, they were short-hobbled close at hand in case of need, and the black 'boy' told off to keep an eye upon them. One of our own hands was stationed as a sentry behind a rock a hundred yards or so away, with instructions not to fire should he see any sign of the blacks, but to make his way back to the camp as quickly as possible. After that we settled ourselves down to pass the time as best we could. We were of unanimous opinion that it would be the height of folly to light a fire, the smoke of which would be certain to attract the attention of the enemy and thus reveal our whereabouts, thereby doubling the risk of an attack. However, we had taken the precaution of bringing some grog with us, which with some damper and jerked beef constituted our evening meal. At eight o'clock Farquhar went on watch, and at ten I relieved him.

'No signs of them?' I whispered when I reached him.

'Not a sign,' he answered. 'All has been quiet.'

He left me and returned to the camp, whereupon I seated myself on the rock and entered upon my vigil. Half my watch was at an end when the moon rose and flooded the plain with her silvery light. I have already said what a desolate place it was; but under her magic influence it had a weird picturesqueness impossible to

describe. The dreary wail of a curlew came up to me from the water-hole, and of all the noises of the bush, with the exception of that of the dingo, I think the curlew's cry is the most unearthly. I was asking myself what words it suggested, and had just arrived at the conclusion that they were *we-weep—we-weep—a-weary*, when something caught my eye, and, as the sailors say, 'brought me up all standing.' Some twenty or thirty yards from the water-hole was what looked like a small tree-stump; farther to the right was another, and yet another. Now, I was prepared to swear that I had not noticed any stumps thereabouts; and, being fairly familiar by this time with a number of the diabolical devices that blacks will put into practice in order to approach a camp at night, I was prepared to be suspicious of anything. For this reason I kept my eyes wide open; but though I watched intently for some minutes I could not convince myself as to whether the stumps were trees or men. Apparently they had not moved; but that fact did not satisfy me that they were immovable. Then, turning to my left, I examined the country on that side, and in another moment was running back to the camp as fast as my legs could carry me.

'Wake up! wake up!' I cried. 'They're on us! There's not a second to lose!'

Fortunately we had taken the precaution of loading all the rifles, and of placing them where they could be easily got at in case of necessity, so that almost before the last words had left my lips our party was up and prepared for action. It had been arranged earlier that in the event of an attack we should leave the camp and ensconce ourselves in couples behind certain large rocks to the left, thus preventing the blacks from obtaining possession of the horses on the side where they would be most likely to make the attempt. What happened during the next five minutes I don't think I could tell you if I tried; but I know that it seemed like an hour before I heard Farquhar say, 'Thank goodness, we've driven them off! They'll not trouble us again to-night.'

Strange to relate, not one of our party had received a wound of any sort, though several had had narrow escapes. One spear knocked Grimshaw's hat from his head, while another had struck the rock and glanced off it, hitting the butt of Farquhar's rifle and ricochetting thence over his shoulder. Needless to say there was no more sleep for us that night, though as it turned out we might have lain down in perfect security. In the morning we discovered twelve dead bodies out in the open, one of them within a few yards of the rock behind which I had been standing.

As soon as we had eaten our breakfast we

saddled up and proceeded on our way, crossed the river, and, guided by the black 'boy,' who had all his race's instinct for tracking, hurried after the enemy. Of all that happened when we came up with them I am not going to tell you, because I don't like to think of it even to-day; but there is something that occurred in connection with it which *must* be told, for the simple reason that it is the pivot on which all my story turns.

We had poured two volleys into them, and had mounted and ridden at them with the intention of cutting them down. Farquhar was leading; and, even at that moment of intense excitement, I can remember thinking what a fine soldier he would have made; then a pistol-shot rang out, and almost before I could realise what had happened, his horse had fallen forward with him, and he was lying defenceless among the enemy, his sword and pistol having fallen from his hands. At the same moment a bullet sent my hat flying into the air. I did not stop even to look round to see who had fired the shot, but dashed into the thick of the mob to Farquhar's assistance. I think for the next few minutes I must have been mad; a fit of Baresark rage had taken possession of me that made me insensible to everything in the way of caution or fear. If there were any vengeance required for the two poor fellows who had perished at the hut, we certainly took it then. When the remnants of our enemy had fled for their lives up the hill-side, I helped Farquhar to his feet and inquired whether he was much hurt. He gave himself a shake in order to see.

'No, there's nothing wrong,' he reported, with a laugh. 'But, by Jove! I thought it was all up with me. I should like to know the name of the idiot who fired the shot. I owe my life to you, old fellow.'

'Nonsense,' I replied. As I said so I remembered my own narrow escape, and went back to pick up my hat. Sure enough there was a hole quite through the crown.

Never shall I forget the appearance of that small gully. It resembled a shambles more than anything else. Two of our own men had been speared, but not seriously, one in the shoulder and one in the side. Evans had had a narrow escape, as the long flesh-wound on his face testified. Otherwise, considering the close-quarters at which we had fought, we had come off practically scathless. Not so the other side. But there: that is enough of horrors. Let it suffice that we saw no more of them, and from that day forward we had but little trouble with what remained of the tribe. Bencliff and his two companions remained a day at the station on our return, and then went on their way, offering to help us again should we require their assistance. And this brings me to the part of my story that I don't like telling, but which *must* be told.

One evening, a week to a day after the encounter I have just described, Anderson, the man who had been wounded in the arm, came up to the homestead, and asked if he might have an interview with either of us. The cook brought him out to us in the veranda, where we sat over our pipes after dinner.

'Good-evening, Anderson,' said my partner. 'What is it you want to see us about? Anything wrong?'

'Well, sir, that's how you may please to take it,' the man replied. 'I have been turning it over in my mind for a week before I settled to come up and tell you.'

I filled him a glass of grog.

'Wet your whistle, man,' I said, 'and then let's have your yarn.'

He tossed off the liquor, wiped his lips on his coat-sleeve, and then, with an apologetic cough, told us the following remarkable story.

'Now, gentlemen,' he began, 'you know that I have been out in this part of the country for a good many years, and some while back I was working over at Maraba, Mr Bencliff's place, or Colonel Urquhart's perhaps I should say. It doesn't matter why I left; maybe it was because I knew too much about the manager. Begging your pardon for saying anything agin' him, if he's your friend; but he's a bad lot, is Mr Bencliff. I don't fancy there's much he'd stick at—or his two friends either. But I never thought they were as bad as I know them to be now.'

'I don't think I should say anything unless I were quite certain,' put in Farquhar cautiously.

'Certain, sir?' the man replied. 'I am as certain as I am certain that I am standing before you now. I think you will be too when I have done. You may remember that, on the night when the blacks rushed us, Bencliff and Grimshaw had a few words about some tobacco which Bencliff said he had seen the other put in his pack-saddle.'

We both remembered the circumstance distinctly.

'Well, gentlemen, Bencliff wanted to bet about it, and they walked across to the rock where the pack-saddle was lying, to have a look and settle it. They didn't know that I was on the other side of the rock hobbling old Chester. The tobacco was all a blind to get away to have a talk together. Now this, sir, is what I heard. It was Grimshaw who spoke first, and this is what he said: "If there's a scrimmage to-night, shall we do it then? It will be dark, and it will look like an accident." "Don't be a fool," said Bencliff angrily. "Leave it until we get into the thick of the real scrimmage to-morrow; then nothing will be thought of it." After that they began pretending about the tobacco, and went quarrelling back to the camp. By this time you may be sure I was all attention, for I was beginning to understand what the man was driving at.

Well, next day, after we'd got those niggers cornered up, and we were riding into them, I was a bit behind, for the reason that old Chester wouldn't stand to let me get up; but I was not too late to see Bencliff take aim at you, Mr Farquhar, and fire. He missed you, but he hit the horse, and down you both went. A moment later Grimshaw took a pot-shot at Mr Farebrother, and the bullet went through his hat. It's my belief, sir, that if his horse had not given a bit of a stumble at that moment you'd have been a dead man to-day. Now, gentlemen, you've heard me out and it's off my mind. I can tell you it has worried me more than a bit.'

Neither Farquhar nor I said anything for a few moments. Then he spoke.

'Look here, Anderson,' he said—and there was a note in his voice I had never heard there before—'you must see for yourself how serious this charge is.'

'I know it, sir; but I'm not afraid.'

'If your suspicions are correct, you can trust us to look after ourselves. But can I rely on you to keep a silent tongue in your head about it?'

'Yes, sir, you can trust me,' he replied. 'It isn't the sort of thing I should be likely to talk about.'

'That's right. Both Mr Farebrother and I are much obliged to you for having told us. Now, help yourself to another glass of grog, and get back to your quarters. We shall have to think this out.'

The man did as we told him, and was passing down the veranda towards the steps when I called him back.

'By the way, Anderson,' I said, 'what reason do you suppose they have for making such an attempt to murder us?'

He paused for a moment before he replied.

'Well, you see, sir, as the saying goes, "there are wheels within wheels." Before you took this country up they used to run certain cattle on it, and, for reasons that you will understand as well as I can tell you, it came in very handy. Now, Maraba, Colonel Urquhart's station, isn't big enough, and, what's more, the young lady wouldn't stand any cross-dealings there. I'll leave you to guess the rest.'

We bade him good-night, and he left us.

'This is a pretty kettle of fish, Farebrother,' said my friend when we were alone together—'a very pretty kettle of fish. What's to be done?'

'Keep your eyes open,' I replied, 'and take care we give Messrs Bencliff & Co. no more chances.'

'You think, then, that there really is truth in Anderson's story?'

For answer I got up and went into the house, to return a few minutes later with my hat.

'Poor old Benbow is dead, shot through the head; there is the second proof. What do you make of it?'

'A bad business. I'm sorry for that poor

girl. Surely she must have found Bencliff out in all these years!'

To this speech I made no answer. I felt sure in my heart, from what I had heard and seen, that if she did not know all about him, she at least knew too much for her own peace of mind.

After the episode I have just described some considerable time passed before I again set eyes on Mr Bencliff or his two precious associates. So far we had had a wonderfully successful season; grass was abundant, and in consequence our cattle were in the pink of condition. Prices were high in the south; and, after consultation, it was decided that a mob should be sent off to Sydney, and that I should go in charge of them, taking Anderson, two other men, and a black 'boy' with me.

We set off, and in due course landed them safely at their destination, receiving the congratulations of the agents on their prime condition. As I strolled down George Street a day later I could not help reflecting on the changed condition of my affairs since I had last stood in that busy thoroughfare. Now I was part-owner of a fine station, and, if things continued as they were doing, in a very fair way to become a rich man. Eventually I found myself in the Domain, on a seat looking out over the harbour. If the truth must be told, I was thinking of Christine Urquhart, and wondering what excuse I could make, when I got back, to see her again. At last, thinking it was about time for me to return to my hotel for lunch, I rose and was about to retrace my steps when I became aware of a tall, elderly man who was earnestly regarding me. In a flash I realised what a fatal mistake I had made in venturing near Government House. The man before me was none other than His Excellency Sir George Belford, Governor of New South Wales, and an old friend of our family.

'Lord William, you are discovered at last,' he said, advancing towards me. 'I felt sure it was you, in spite of the change in your appearance. This is a most fortunate and happy meeting. Do you know that your family have been searching high and low for you for more than a year past?'

All I could say was 'Indeed?' Absurd though it may seem, I could think of nothing else.

'You must come and lunch with us,' he said, taking my arm. 'My wife will be delighted to see you. Afterwards you can tell me all your adventures. I shall write by the next mail to your father, and tell him that you are found.'

'No, no, Sir George,' I replied hastily. 'I cannot let you do that. He said he would never forgive me, and he and Birk got on much better without me.'

I saw a strange expression come into his face.

'You have not heard the news?' he said, stopping in his walk to look at me.

'I have heard nothing,' I replied. 'I have

not communicated with my family since I left England.'

'Then you do not know that poor Birk is dead?'

'Dead?' I cried, aghast at the news. 'How long since?'

'Six months ago. He was drowned whilst bathing. Your father has aged terribly since.'

The news came as an awful shock to me. Poor Birk! I did not know how fond I was of him until I heard that I should never see him again. Once more His Excellency endeavoured to lead me along the path; but I held back.

'Not to-day, Sir George,' I pleaded. 'This news

has upset me terribly. Let it be to-morrow if you wish. In the meantime may I ask you to give me your promise that you will say nothing about having seen me?'

'Certainly, if you wish it,' he answered; 'though I think you are foolish, for it cannot remain a secret long. In any case, we will meet to-morrow at half-past one.'

I bade him good-bye and hastened back to my hotel, remembrances of the past and of my old home thronging my brain. Then another thought occurred to me. Since poor Birk was gone, I was heir to everything, with all the duties and responsibilities appertaining thereto.

## THE CROWN ESTATES IN LONDON.

**T**O distinguish is the first duty in treating this subject. Crown Estates are divisible into four classes: (1) That large estate formerly in the hands of the Sovereign which is now administered by the Woods and Forests Department, and the revenues paid into the public Treasury, a Civil List of £470,000, being voted to Edward VII.; (2) the Duchy of Lancaster Estate, also a quasi-public departmental one, the revenues of which are paid directly into the privy-purse of the Sovereign; (3) the Duchy of Cornwall Estate, another appanage of the Crown managed by a quasi-public board, the income of which is payable to the eldest son of the reigning Sovereign, who is born Duke of Cornwall, but must be created Prince of Wales; and (4) the private property of the Sovereign.

Before proceeding with the narrower topic proposed for this article, it may be useful to state that the net income from the Crown lands, &c., managed by the Woods and Forests Department, for the year ending March 1900, was £460,000; that of the Duchy of Lancaster, to December 1900, was £61,000; and that of the Duchy of Cornwall, to the same date, was £70,456. Of course, the income from the King's private property is not published, as it is not a legitimate matter of public interest, save in the sense that all other property is subject to scrutiny.

In the present article attention will be concentrated on the Crown Estate in London, managed by the Woods and Forests Department. No attempt is here made to deal with the property in London belonging to the Duchy of Lancaster Estate (the key of which is in the vicinity of Lancaster Place, on the northern end of Waterloo Bridge), nor with the London property of the Duchy of Cornwall Estate (which lies chiefly in the south of London). The property managed by

the Commissioners of Woods and Forests is a property of a representative character, of great value, and can be made to cast light on the values of other estates, such as those briefly described in a former article on the ground-landlords of London. The fiction is maintained in the office, and carefully preserved in the phraseology of the reports presented to Parliament, that the Woods and Forests Estate is a sort of private affair. More to our purpose is the fact that the estate is maintained and managed much as other private estates, and, indeed, large portions of it are managed by land agents whose ideas are all of the landlord's agent type. In London especially there is a close understanding between the managers of the estates belonging to the various chief ground-landlords and the surveyors and other officials in the office of Woods and Forests. The result is that the management of the public estate by the Commissioners becomes a mirror of other estates in the management and value of which the London public—nay, the whole country—is taking a keener interest. It will be unnecessary to remind the reader that questions of tenure, of unearned increment, of housing, of sanitation, &c., emerge from a study of and a close acquaintance with such typical estates.

To describe the Crown property in London with minuteness and accuracy here is impracticable, as it is somewhat scattered about in various parts of the Metropolis, though it has its centre in Trafalgar Square; but we can follow the description given a few years ago by the late Mr Cates to a committee of Parliament, which will give the reader, as it gave that committee, an idea of the immense importance of this estate.

Following the plans in his hand, Mr Cates pointed out that Kensington Palace Gardens are the first on the list; and this is that grand property reaching from the Bayswater end of the

High Street in Notting Hill to the High Street in Kensington. In this last High Street there is also a property on the south side which belongs to the Crown; and the two immense mansions at the entrance to Hyde Park by Albert Gate, and the houses in St George's Place, by St George's Hospital, are also portions of the same property. Again, there are houses on the north side of Piccadilly, including Hamilton Place, and in Park Lane. Then in Milbank (sacred no more to correction but to art) is the Milbank Estate, extending from Grosvenor Road and the Thames northwards to the Vauxhall Bridge Road and Bessborough Street. Then there is the Regent's Park Estate, which extends from the Albert Road on the north to Park Crescent and Portland Place on the south, and from Park Road on the west to Park Village East, Augustus Street, and Osnaburgh Street on the east. Then at the south end of Portland Place the Regent Street property commences with certain houses north of All Souls' Church, at the south end of Portland Place, and extends down Langham Place, and it includes a small piece of the bow window of the Langham Hotel, the rest of the Langham Hotel being a freehold. The halls on the opposite side, the Queen's Hall and St George's Hall, are on the Crown Estate. For the rest, Regent Street extends southward all the way across Piccadilly Circus to Waterloo Place, where it joins Pall Mall, and the whole is a part of the London Crown Estate. In Piccadilly there is considerable property on the north side of Regent Circus, Piccadilly, and two houses west of Swallow Street, including St James's Hall and all the buildings adjacent to it. On the south side of Piccadilly the Crown property extends from the Haymarket, including the Criterion Theatre and Restaurant and the Museum of Geology, to Church Place, and also from Duke Street nearly to St James's Street, including the Egyptian Hall, and going through both blocks to Jermyn Street. South of that block, and east of St James's Street, there are the blocks which include Boodle's Club and Herries's Bank in St James's Street; also the blocks at the rear between Bury Street and Duke Street, which include the Turkish Baths and Christie & Manson's auction-rooms. On the west side of St James's Street, from Arthur's Club (inclusive) to Cleveland Row, and back to Little St James's Street, is the freehold of the Crown. There is also a strip of land laid out in gardens on the east side of the Green Park, extending from Piccadilly down to Cleveland Row. The west side of the Haymarket, between it and Waterloo Place, including Jermyn Street and Her Majesty's Theatre, with the Carlton Hotel, is also the property of the Crown. Then in Pall Mall, on the north side, west of Waterloo Place, there are a few houses, and the whole of the south side of Pall Mall, except one house, from Cockspur Street to Marlborough House. Then

come Carlton House Terrace and the properties connected therewith, including the offices of the London County Council in Spring Gardens. On the east side of the Haymarket, south of St James's Street, the blocks, including the Haymarket Theatre, the United Universities Club, round Suffolk Street and Suffolk Place, and Pall Mall East from the Haymarket to the National Gallery (not inclusive). Also the block opposite, between Pall Mall East and Cockspur Street, including the Union Clubs and what was at one time Waterloo House, is the Crown's; and on the opposite side of Trafalgar Square the triangular block including Morley's Hotel. Farther east, the triangular blocks between King William Street, Adelaide Street, and the Strand, including the Lowther Arcade and Gatti's Restaurant. There is also a little property to the north of King William Street, which has not been alienated, to Charing Cross Hospital and the Ophthalmic Hospital. North of St Martin's Church there is the property called St Martin's Mews. In Whitehall Place, on both the north and south side (though the south side must now be regarded as transferred to the War Office for its new buildings), and this includes Great and Little Scotland Yard. Then there is, on what was known as Whitehall Land, the National Liberal Club and the magnificent Whitehall Court Mansions. On the opposite side of Whitehall, Dover House belongs to the Crown property. In Westminster, too, there is the Stationery Office and the small strip of land by the side of St James's Park. South of Buckingham Palace is the Palace Hotel and the houses immediately east and west of it up to the Duchy of Cornwall offices, and some portion of Wellington Barracks. In the Strand, east of the portions already mentioned, we come to Exeter Hall and houses adjoining. In Holborn much property on both sides of Newton Street, including the London and Westminster Bank and the Holborn Restaurant. On the west side of Fetter Lane a portion of the Rolls Estate, the Birkbeck Institution, Burt's Printing-Office, and Sampson, Low, Marston, & Co.'s publishing house. In Victoria Street, Westminster, the Crown has property on both sides, and practically the whole of the Holborn Viaduct from Hatton Garden to St Sepulchre's Church. There are some other small properties on Tower Hill, in Church Street, and in Southwark Street; and there is Victoria Park in the north-east, extending from the Old Ford Road to the park entrance, and again following round the park, in Old Ford Road, Gore Road, and Gore Crescent, and others around the park.

During recent years additional property has been acquired in pursuance of the policy of investing in ground-rents and curtailing the agricultural property. As a sample of recent acquisitions, during the year ending March 1900, we give the following: Eastcheap House in Eastcheap, and St Mary-at-Hill in the City;

No. 8 Buckingham Gate, Pimlico; two houses, Nos. 21 and 23 Delahay Street, Westminster, in which Sir James Wolfe Barry had an interest; and Albany Buildings, Nos. 31 to 47, in Victoria Street, Westminster: the sum of £96,000 being paid for this last lot, which is let on lease for eighty years from June 1893. It may be added that in 1889 there were in London, belonging to the Woods and Forests Estate, some four thousand two hundred and fifty-two houses let on lease, and the ground-rents received amounted to £250,388 a year.

This summary of the localities in London where various portions of the Crown Estates are situated will be sufficient to give the reader having some acquaintance with the Metropolis an idea of the value of such an estate situated in some of the most fashionable and some of the busiest districts. The value of the estate, or rather the income derived in 1889, has just been given; but no figures found in the ordinary accounts will afford anything approaching a good estimate of its annual value. Of course, the whole of the London estate, with scarcely an exception, is let on the leasehold system, which is the ordinary tenure in London, a system which could not be improved upon from the point of view of the owner or agent, however much an ordinary tenant might differ from such a view. The involutions of this leasehold system disguise the value of such estates in a way that will be referred to later on. In 1889, when the late Mr Cates was requested to estimate the value as distinguished from the income of the London estate, he said he should hope to receive a rack-rent of considerably more than £1,000,000 for that which then brought in only £250,000. What the capital value of such an estate might be cannot be given readily, seeing the values in localities vary; but it may be remarked that much of it consists of ground-rents acquired within quite recent times, as Mr Cates said that between 1873 and 1889 he had made such purchases amounting to the sum of £1,396,000, the ground-rents yielding £53,820, or about 4 per cent.

In April 1890 Mr Cates was requested to illustrate his management of the London property of the Crown by reference to the principles on which other London estates were managed, such principles being the same confessedly as those on which he acted. The Bedford Estate—which, for the Bloomsbury portion, is bounded on the west by Tottenham Court Road, on the north by Woburn Buildings, on the east by Southampton Street, and on the south by Oxford Street and Holborn; and for the rest consists of Covent Garden Market, Drury Lane Theatre, Her Majesty's Opera, and buildings in the vicinity—is managed as stated in the following excerpt from a letter to Mr Cates: 'The practice on this estate on the points raised is as follows: (1) As to reletting on the expiration of a lease: negotiations are

(as a general rule) entered upon with the occupying tenant, disregarding the holder of the original lease. Sometimes the occupier is the holder of the original lease or its equivalent. There are exceptions to this practice in cases where the occupier is perhaps carrying on objectionable business or may not be in a position to take a lease, or in the case of tenement-houses. In the case of a reletting or the falling-in of a building lease, the terms usually involve an expenditure by the new lessee in substantial repairs and modern improvements—in other words, an investment of capital. The occupier very rarely will make this investment, and then negotiations have to be opened with others. This brings in the so-called "middle-man," or, as he more strictly should be called, the "investing lessee." (2) Building sites are, as a rule, let by public competition; but, of course, there are exceptions to this rule in special cases. Now and then an occupying lessee will take a building lease and rebuild his premises; or a site is required for local purposes, as school, dispensary, or model dwellings. Such sites would go by private treaty.'

The late Mr Boodle answered as follows: 'The practice on the Duke of Westminster's London Estate is as follows: (1) As to reletting at the expiration of leases where the houses are not required to be pulled down for rebuilding: negotiations for a new lease are entered upon with the actual occupier (if he is suitable to be treated with), disregarding the holder of the original lease. (2) Sites for rebuilding have hitherto been let by private treaty and not by public competition. In several cases the occupier, particularly a tradesman, has been allowed to rebuild as part of a comprehensive scheme, and associated with other occupiers in the same block of buildings; one architect being employed for several houses together, so as to secure harmony in the work. This has been found to be very satisfactory to the rebuilding tenants. Regarding the Marquis of Northampton's London Estate, the same principles apply as far as circumstances permit; but the only rebuilding that has taken place for several years has been for working-class dwellings; and, as to these, one or other of the large companies who undertake such buildings have been the rebuilding lessees.'

It will be observed that it is Mr Boodle, the agent for an absent landlord, who speaks of the satisfaction with which tenants have rebuilt under the conditions described; some of these tenants, however, speaking for themselves, do not pitch their tune in the same key, and the mode is frequently a minor rather than a major. These official letters respecting three well-known large private estates in London enable us to see the principles on which that remarkable system of renewal of leaseholds is carried on from year to year.

As the Portman Estate was referred to in a former article, we here add portions of a letter in which Mr Hunt, Lord Portman's agent, shows how the principles laid down above are applied on that estate: (1) Applications for the renewal of leases are not entertained if the lease has more than ten years to run, except under special circumstances. (2) The terms of renewal vary according to the class of property and the means of the tenant. The custom is to commute from one-third to one-half the estimated rent, on the 6 per cent. table, as may suit the lessee, to be paid by him as a fine; and the remainder of the rent not commuted is reserved to be paid under the lease. In some cases, however, renewals are granted at the estimated rent, without the payment of any fine. In some other cases they are granted on the lessee expending money in making improvements, as being the equivalent of a fine; and the estimated rent is reduced after taking the cost and value of these improvements into consideration. For the application of that table and these calculations readers should consult Mr Banfield's little work on the *Ground-Landlords of London*, which is still full of instruction, as the system of leaseholding which obtains in London has not been changed since that date.

Some illustrations of the working of such a system (and Mr Cates was careful to remind his committee in 1889-90 that he was constantly in touch with the managers of the private London estates), drawn from the records of the Commissioners of Woods and Forests and their transactions in quite recent years, are given in the table on pp. 794, 795.

Those who are conversant with the management of property, especially house-letting, and tradesmen and others who do business in leasehold premises, will find much that is peculiar and instructive in the table, which has been made long and full for the purpose. The facts related are from official sources; the income indicated, with its growth so silent and sure and magnificent, goes in this case to the amelioration of public burdens, for the net rents are paid into the public Treasury. The facts disclosed are quite representative, the values indicated are normally secured and created, and they are all the result of the aggregation of an incomparably busy and large population in the world's chief city. Just as the opening of the 'tube railway' from the City to Shepherd's Bush immediately caused a rise in rents at the latter suburban district of from 15 to 25 per cent., so are the values of the various private properties all over London—the Crown, the Portman, the Westminster, the Bedford, and the Southampton Estates—alike enhanced by everything that directly and indirectly benefits the people and their business or pleasure. As the Central Railway Company ('The Tube') did not get the enhanced rents of Shepherd's Bush due to their

enterprise, so is it all over London: those who toil and spin are frequently different parties from those who reap the golden harvest. In every case, with scarcely an exception, the ground-owner is heir to all the fruit of the toil and trouble.

Regarding the figures adduced below, one important fact must be pointed out—namely, the ever-increasing burdens which shop property of every kind has to bear in comparison with the growth of values for house property. It is all the more necessary to observe this, lest any repeat the vulgar cry of favour to the noble and rich who dwell in palatial houses of the West End; for everywhere it is becoming a more open secret that the site-value for business purposes is worth manifold more in the market than for housing purposes. The London County Council, in order to house working people disturbed by their great Strand to Holborn improvement, had to buy the site of Reid's Brewery, west of the Holborn Town Hall, and in doing so paid a sum four times the value of the site for housing purposes. This accounts for the almost insuperable difficulty of building houses for the working-classes within the central districts of the Metropolis. That difficulty arises almost wholly from the land question—the working of which we observe in the table below. However, the difficulty is not presented in the housing of working-classes only. The trading-classes, the lower middle, and the professional classes are all subject to burdens which cannot be borne save by a shortened period of life, and it is acknowledged by men of every school that the legislature must shortly be called upon to deal with a subject which touches the welfare of the State at many vital points. For this purpose an acquaintance with the great Crown Estate will be of the greatest service. In every detail it represents what is going on in the development and management of private estates. The property in such estates is the best and choicest security of the day; better than Consols or any gilt-edged securities of the Stock Exchange are the ever-fertile ground-rents of London and similar centres of prosperous communities. Should any one desire a measure of, say, the Westminster Estate in London, he will not find any help from inquiry at Davies Street, nor will he find it easy to search the details of parochial assessments; but he can turn to the Crown Estate, which in many respects resembles that estate, save, probably, that it is not so valuable and compact, and he will get a good idea of what such an estate must bring to its lucklessly rich owner; nor will he fail to notice how the figures here given show that such an owner may sleep in an arm-chair for life and the estate's value will grow in the night, as Thorold Rogers said, with a rapidity that is, in the twentieth century, the rival of Jonah's gourd.

## LEASES GRANTED ON THE WOODS AND FORESTS ESTATES IN LONDON.

STREET.	TO WHOM.	DATE.	RENT.	FINE.	RENT IN OLD LEASE.	FINE.	NOTES.
Leadenhall House	Sir J. G. T. Sinclair, Bart.	80 years 6/1/86	£ 6600	£ ...	£ ...	£ ...	Not before in lease.

## THE BETHEL STONE.

## CHAPTER III.

JOHN TRETHEWEY'S tannery was at the top of the High Street, and there he lived in a bow-windowed, creeper-covered house, with his spinster sister and his only child Zillah.

Langissack smelt naturally of fish; but at Trethewey's corner the odour of the tanyard mingled with the stench of the fish, and the blend was unique. Sometimes sudden whiffs from the tannery would hit the sense in far corners of Langissack, indicating a shift of wind, and the weather-wise would prophesy.

Trethewey was a widower, a quiet, gray man, nocturnally addicted to the clarinet; and Aunt Deborah Trethewey was a placid, good-tempered, bulky woman, and an incessant knitter.

The position of David Pentreath to Zillah Trethewey was vague. The girl's dead mother had openly desired that the young people should one day be married, and John Trethewey, believing this consummation to be inevitable, did not concern himself further; but there was no actual engagement or formal pledge; and the girl, assured of the allegiance of David, was not impervious to the attentions of other men, and at times the soul of Pentreath was much troubled.

One evening Mr Julian Danvers, remembering the invitation of Zillah, called on Trethewey, and unfolded the project of his picture. The old chapel-steward was proud to think that the

quarry-preaching would be perpetuated in paint, and hoped that some of the familiar faces and figures of the community would find a place in the picture. Indeed, Danvers found the old man's suggestions of some practical value.

'There's old Benjy Meneer,' said the tanner, 'with a beard like a prophet; on Sundays he always wears his smock-frock, an' 'tis gathered and corded to a miracle. An' for a brave bit o' colour there's Maria Polsue; her son sent home silks from the China Say, an' when 'tis fine weather the old sowl's so grand as the Queen o' Sheba. "Maria," I said to her wance, "you'm like a bird o' Paradise." "Which is fitty enough," said Maria, "for Paradise, please God, is where I'm gwain to."'

Aunt Deborah made a junket in honour of the 'company,' and David Pentreath was there to supper. The two young men sat opposite each other at the table, and the artist was so fascinated by the romantic face of Pentreath that at times he caught himself in the rudeness of a frank stare. He afterwards wrote to an artistic crony, 'There's a fellow here, a fisherman, who might have stepped straight out of Tennyson's *Idylls*.'

Zillah was happy, for the painter's gay talk bristled with compliments. He had declared that the central feature of his picture should be her own white-robed figure standing upon a ledge of rock. She promised him any number of sittings, and Danvers's studies were to begin on the morrow.

'Tis a rare gift to paint a picture,' said the girl. 'Nay,' said the artist, smiling; 'it is more a matter of long study and hard work. It's a rarer gift to sing as you sing, Miss Trethewey. They tell me that it's sheer jealousy that keeps the nightingale out of Cornwall; and since Sunday I have thought the nightingale a wise bird and reasonably careful of its reputation.'

David sat glum and silent at the table, till Danvers said civilly, 'I hope to put our friend Pentreath here into my picture; it would give me great pleasure.'

'I was not to the quarry-praichin,' answered David simply. 'Richard Borlase to Trebartha Farm broke his leg that morning, an' we carried 'en six miles on a hurdle.'

'Nevertheless, I might with a little license include you in the group.'

'I was not to the quarry-praichin,' repeated David sternly; 'an' to picture me there wed be a lie; an' I reckon a lie that's pictured's so bad's a lie that's told.'

Danvers smiled at this rebuff, and inwardly vowed that when he left Langissack he would take with him the face of Pentreath, by fair sitting or surreptitious sketch. The head of the man was surely meant for a casque; there was a strange old-world beauty in the sombre oval countenance; it suggested a host of pictorial possibilities. In out-of-the-way corners of Cornwall one sometimes meets with dark, handsome men of this southern type—men of an ancient race. Some say there is Spanish blood beneath their olive skins, the blood of mariners or soldiers wrecked in Armada days; but this theory is nonsense. The comeliness of David Pentreath was older than Spain.

After supper Trethewey produced his beloved clarinet, and there was music; and Danvers, rummaging the portfolio, found a duet, 'O that we two were maying,' in which he joined his own voice, an average tenor, to the clear soprano of Zillah.

David sat gloomily watching the brisk play of Aunt Deborah's knitting-needles; he could neither play nor sing himself, and the voice of Danvers was hateful in his ears. Then he remembered that it was a flood-tide with a rising wind; and, with a word about seeing that the boats were safe, he made his escape.

Pentreath was something better than a fisherman. He had shares in several small maritime enterprises, and was concerned in a little coasting traffic; moreover, agriculture, in the portly form of his Aunt Becky of Trebartha, was continually beckoning him to the farm. Altogether, for a man of his class, he was reckoned well-to-do.

Next day, as David was passing Trethewey's garden, he was saluted with a cabbage-rose flung at his hat; and, looking over the hedge high enough to exclude the gaze of other men, he saw the laughing face of Zillah.

'Why, what's up to-day, Zil? You'm dressed for a feast. 'Tis surely your Sunday frock.'

The girl flushed. 'Mr Danvers has been painting me for his picture; of course 'tis my Sunday frock.'

David's face clouded, and without another word he walked on; but the girl ran eagerly along the garden path, and, opening the little white gate, cried, 'David, I want you. Come in!' He entered by the gate, and she dragged him to the seat.

'I want 'e to do me a little favour, Dave—just wan li'l bit o' kindness.' The gloom instantly cleared from his face; her little errands and tasks made the gladness of his life; her whims were his mandates. He had sailed to Falmouth in rough weather to get her a new song, and when he came back the music, carefully wrapped in his oilskins, was the only dry thing in the boat.

'I want e' to have your picture painted, Dave. Mr Danvers would give anything for your head—not on a charger, Dave, but on a canvas. What he can see in your dear old black jib I can't imagine; but he says it's a rare type.'

'Iss, I reckon 'tis the type of a fool,' said David bitterly—'a fool that loves a maid out of all reason. No, Zillah, I've no time nor mind for such nonsense; an' I don't like the chap, with his dandy London ways. As for this great picture that you'm mazed about: what is 'a that you should all dance to his piping? When 'tis finished, an' he's putt the lot of 'e into the darned thing, folks up-along that don't understand the ways of 'e will ask, "Whatever's that?" an' when 'tis said 'tis a Cornish praichin', they'll stare at 'e through their eye-glasses like as if you was South Say Islanders in a missionary tract, an' say, "Curious creatures they Cornish, with curious religious notions." Darn the fellow an' his picture!'

'You are wrong, David!' cried the girl indignantly; 'you are wrong, and hard, and unreasonable. I'm ashamed of 'e.'

'Well, he saith I'm a type, so I reckon there's more like me,' answered David as he walked away.

Happily David Pentreath was alone in his bigotry, for the painting of that picture was a great event in Langissack, and a matter of universal interest. There was a general desire to be included in the group that filled the foreground; and Danvers had to exercise all his diplomacy in declining unsuitable material. Callers at the 'Feathers' would ask, 'How's the pictur' gwain' on?' as naturally as they would inquire about the fishing or the crops. Bolitho took an absurd pride in the work; occasionally, in the absence of the painter, he would display the half-finished picture to some favoured customer, or surreptitiously exhibit the stack of sketches and studies.

One day old Joe Tresco came to the inn, a

shabby, evil-looking man, with a pinched face and shifty eyes.

'Maister Bolitho, I want to spake to 'e,' said Joe wistfully. 'Do 'e think 'e could get the gentleman to putt me in the pictur'?'

'Joe Tresco,' said the landlord sternly, 'where was you on the mornin' o' quarry-praichin'?'

The old fellow shuffled his feet and twirled his cap of greasy moleskin.

Bolitho grew solemn as a judge as he pronounced the rejection of Joe Tresco: 'Rabbitin'—iss, Sunday rabbitin'—I seed 'e pass wi' ferrets; an' now, here you be wantin' to be putt into that blessed pictur', an' beseechin' to be numbered wi' the saints!'

Then Joe limped pathetically away, feeling that he was indeed outside the fold.

Mrs Mudge's two girls were luckier, for the woman took a child by each hand and confronted Danvers in the narrow part of Brimble Lane. 'Curtsy, my dears!' cried Mrs Mudge; and the artist was arrested by the triple salute.

'Twas maisles, sir!' said the woman to the perplexed painter—'maisles, an' no fault o' theirs they wad'n to the praichin'; an' why should they be left out o' the pictur'?' And the good-natured fellow, seeing possibilities in frocks of washed lilac, could not refuse the children a space.

Danvers was immensely popular in Langissack. He had always a merry word for the women, and for the men an open heart and an ever-open tobacco-pouch; as for the boys, they fought for the privilege of carrying his easel. He scattered largess with both hands; for one pocket of his jacket was stocked with sweets and the other bulged with bird's-eye.

Zillah Trethewey was his frequent companion during the progress of the picture; it was she who draped the women to his artistic notions, and coaxed the children to patience. Danvers called often at the tannery, and soon there was much wagging of tongues and shaking of heads in Langissack.

One evening David Pentreath called at the 'Plume of Feathers.' He was no frequenter of the inn, for he was an abstemious man, and had no liking for the gossip comradship that made the tavern-parlour an attraction to his fellows. He sat with Bolitho in a little inner room, working out a few figures to show the economy of bringing by water to Langissack barrels that had hitherto come by road; and through the open door came gusts of conversation from the parlour, crowded with men and obscure with tobacco-smoke.

The talk was of the picture, for the Porthillian carrier was there—a man who made it his business to pick up news as he picked up parcels.

'They tell me, Mr Roskriggen,' said the carrier, 'that they'mn puttin' 'e into the paintin'.'

'Iss,' piped Zacky Roskriggen the thatcher, a lean-bodied old man, thin of face and thin of

voice; 'I'm there, sure 'nough, an' purty near the middle. 'T'es a mar'v'lous pictur', carrier; what wi' the old stone quarry an' the great company o' folks—putts me in mind o' "Moses striking the Rock."'

'T'es a brave talent to paint sich pictur's,' observed the carrier.

'Iss, fay; 'tes a gift, that's what 'tes; 'tes a talent, same as thatchin'. Old George Landivvy's there, the very image o' 'en; an' Cardennick standin' on the praichin'-stone, an' the maidens singin', an' the children in a purty row with the praises o' God in their mouths. Iss, 'tes a mar'v'lous pictur', carrier, an' there I be purty near the middle.'

'They tell me,' remarked Roper Landeck, 'that when 'tes finished 'twill be putt into a gold frame an' exhibited tu the 'Cademy up to London; an' thousands o' folks'll come an' look at 'en, iss; an' multitudes o' gentry.'

Then Uncle Benjy Meneer made an astonishing suggestion: 'Should'n' wonder if the Prince o' Wales hisself was to behold 'en!'

The audacity of the idea staggered the company; and after a long silence Roskriggen, with a flush of excitement on his wrinkled face, cried, 'If 'a should, my dears, an' 'a should ask, "Who's that brave-lookin' old buck in the stripey westcoat purty near the middle?" I do hope some wan will have the good sense to tell'n that 'tes Zaccheus Roskriggen o' Langissack, thatcher by trade, who carteth say-weed odd times, an' doth jobs raisonable by the day.'

'The pictur's well enough in its way,' said Ned Perran, a loutish, coarse-looking fellow who worked in Trethewey's tanyard; 'but I've a-seed wan that's more to my fancy, an' by the same painter-chap. Iss, 'tes a brave, purty little thing that I've a-seed.' And the man chuckled audibly as the company turned interrogatively towards him.

'Mr Meneer, you'mn a scholar,' continued Perran. 'What signifieth *Cornobla*?'

'Why, Cornwall, to be sure,' answered Uncle Benjy; 'tis ancient for Cornwall.'

'Then I reckon,' said Perran mysteriously, 'that what I've a-seed is symbolical'—it was a long word for Ned Perran, and his eye swept the audience to note the effect of it—'in a way o' spakin', 'tes a hembem.'

'Ned Perran!' cried Uncle Benjy impatiently, 'thee'rt talking parables. Out wi' it!'

'T'es the pictur' o' a purty maid sittin' on a granite rock, with the green say behind her; an' her face is the face o' Zil Trethewey; an' there's say-weed hangin' about her, an' sand an' say-shells at her bare toes'—

'My dear days!' interrupted old Roskriggen, 'hath 'a pictured Zil Trethewey in her bare toes?'

'Iss!' answered Perran, with a guttural laugh; 'bare toes, an' her'—

David Pentreath entered and crossed the room at a stride; he reached over the table with his long arm and caught Perran by the throat.

'Open the door, wan of 'e!' roared David; and in the general consternation some one set the door open. Then the giant lifted the fellow from his seat and flung him clean out into the roadway, where he lay half-throttled, half-stunned.

Pentreath turned to the company, and in a quiet voice, that somehow seemed more terrible than his shout of rage, said, 'I'll thank 'e all to keep the name of Miss Trethewey out of yer conversation.'

Then he strode out of the inn, stepping over the bruised form of Ned Perran in the gutter.

## THE EVOLUTION OF THE ROSARY.

THE possession of a rosary, or chaplet, as it is called in France, is indispensable to all good Roman Catholics—at least to the female portion. Though I have not found that the sterner sex bother their heads much about them, it may be easily understood what large quantities are required, and what a thriving industry is their manufacture. True, they do not wear out; but they are easily lost. At least I suppose so, because during a ten years' residence in France, off and on, I have picked up a great number. Children, I fancy, are the chief offenders, because, after having witnessed a religious procession where children predominated, I have often found one or more chaplets on the ground as I followed the footsteps of the train on my homeward way.

Rosaries are made of different materials; wood, bone, glass, and dried seeds being the chief. The former takes first place; and it is only of wooden chaplets that I write.

The Pyrenees, those beautiful mountains that divide France and Spain, are noted for the box-trees that clothe the lower slopes in a mantle of picturesque green. There are also numerous very rapid streams, or *gaves*, as they are called, which, fed by the glaciers in the higher ranges, fling their brawling torrents down every ravine and valley. Man has hastened to take advantage of the combination, and here, there, and everywhere, often in most unfrequented and unexpected places, you come across the homely mill-dam and roughly built sawmill which, worked by water-power, converts the neighbouring box-trees into chaplets.

Every little Pyrenean village, however small, is sure to be the centre of a commune or parish owning extensive forest and pasturage rights on the wild mountain slopes around it. Once yearly, on a Sunday, its Mayor and councillors solemnly assemble in the little Mairie and put up for sale these rights; the bidders being, of course, only the inhabitants of the commune. The box-trees fit for cutting are an important item. After a spirited competition, much helped by good wine, the sale is over, and he who has bought the box-trees is alternately congratulated and chaffed by his friends, and he wonders what on earth made

him do it, and whether or no he will make anything out of his purchase.

In due course he cuts a load, and proceeds to sell it to the chaplet-makers; so let us now follow this load of the ugly, whity-brown, crooked sticks—none thicker than a lady's wrist—to the sawmill, and watch them being converted into rosaries. It will interest us.

The building is very much of the ramshackle order, and is thickly coated with a fine white or pale-yellow dust that gives it at first sight the appearance of a flour-mill. There is a hum and whir of machinery in the air; but it does not come from downstairs. Here are only the big saws, idle now, that are used for cutting up trees when box is wanting and does not come in quickly enough. But it is different above. Up the dusty, rickety stairs we go, through an ill-fitting door at the top, and we stand on the threshold of a long, low room filled with rapidly revolving wheels, flying leather belts, whirling drills, and screaming, vicious little circular saws, not fenced or guarded in any way. You hardly like to move for fear of coming into contact with some twisting devilment or other, grown-up person as you are; and your heart stands still, or ought to—I know mine did—to see wandering around, in, out, and everywhere, children of four years old and upwards.

I ask the foreman anxiously, 'What are the babies doing here? Surely it's dreadfully dangerous for them amid all this unfenced machinery?'

But the cheerful peasant only laughs. 'It's the tea-hour,' he explains, 'and the children have brought their mothers and sisters up some bread from the village. The babies come with the bigger children; but they will all be off soon, back again home.'

'But don't they get hurt?' I ask.

'Of course they do sometimes, and badly very often; but they soon learn their danger up here; and *que voulez-vous?*'—with a shrug of his shoulders—'the women must eat, and they can't go home, as it's all piecework here, so the children must come to them and risk it.'

I shuddered as a girl, gazing open-mouthed at us, walked backwards nearly on to a huge wheel; and I wondered what some of our factory inspectors would say to it. There are some

things—indeed, a great many—that they don't do better in France.

However, time presses, so we turn our attention at first to a small circular saw. It is going at great speed, and beside it sits a woman with a branch of boxwood in her hands. She presses this against the saw quickly and quite unconcernedly, although her fingers are perilously near its edge, I think; and each time the sharp teeth take off a slice of about a quarter of an inch thick, or less. It is cut obliquely, not straight across, and reminds me exactly of a slice of Bologna sausage, except that it is of a pale-pinkish colour, and not red-and-lard spotted. These slices fall with great rapidity into a receptacle under the saw.

Then we go to the other end of the room, picking our way amongst wheels and children. Here is a long bench or table, something like a turning-lathe; only, instead of one, it has sixteen lathes in a row, all working together. Opposite each lathe, if I may so term it, sits a woman with her head tied up in a cloth and only her eyes and nose showing. Everything is thickly covered with the fine dust, and I notice that I am already taking on a yellow tinge. Boxwood is remarkably hard and close-grained, and the sawdust is as fine as flour. Each woman has her lap full of slices of the boxwood, and a girl goes round with a big shovel filling the laps of the women from the receptacles under the saws.

In a turning-lathe, as most people know, the wood is fixed on a rapidly revolving spindle and turns with it, the operator applying his tool to it as it revolves. In this case it is the wood that is held in the hand, and the tool—a keen steel drill, its end shaped like a half-moon—revolves. From the centre of this half-moon a thin spike projects exactly beyond the two points of the horns the same distance as from its base to these points. In other words, if you stretched a string from point to point of the crescent it would exactly divide the spike into equal distances. If you press a slice of wood gently against this rapidly revolving drill-point the spike penetrates until the tips of the horns touch the wood and begin to cut a circle, and as you press the whole crescent eventually buries itself in the wood; and this is the moment to stop. You will then see that the spike has gone right through, its point just showing on the other side, while the horns of the crescent will have cut but half-way. Then turn the wood and apply the other side to the drill, taking care that the point of the spike is placed exactly on the little hole or mark made by it in the previous operation. Press again, and once more the crescent will cut in and meet the previous cut half-way; and, hey, presto! a neat little ball with a hole through it will drop or rather be pushed out into the palm of your hand. This is the *perle*, as the bead is called, in the rough.

Although I have been slow and minute in describing this first and important operation, it must not be supposed that the workwomen are slow like me. On the contrary, their rapidity and precision is wonderful. A woman takes a slice in her hand, and with hardly any perceptible pauses, presses it against the drill many times in succession until the whole surface is covered with the little circles that are so closely packed as to nearly touch each other: the smallest *perle* made has a diameter of three millimetres! Then, like lightning, she turns the wood and begins again, only this time she must place the spike unerringly on the almost pin-points of holes that stud the surface of the slice; but she does it as rapidly almost as the first side, and so she works for hours at a time, a continuous shower of *perles* dropping from her adroit hand into a box below. So expert do these women become that a first-class hand can cut as many as four gross, or a little over, of the smallest *perles* per day. A gross is a large tin measure, and I took one and filled it from a sack of small *perles* which stood beside me.

'Now, how many chaplets will this gross of *perles* make?' I asked.

'Twelve dozen, sir,' was the reply.

'How many *perles* go to make one chaplet?' was the next question.

'Fifty-nine, sir,' answered the foreman.

The calculation did not take long. Fifty-nine multiplied by one hundred and forty-four gives eight thousand four hundred and ninety-six *perles* to a gross. And a good worker can cut, say, four gross a day, or thirty-three thousand nine hundred and eighty-four *perles*. To me it appears stupendous.

'And how much do you pay per gross?' was the final question.

'Sixty-five centimes, sir' (sixpence halfpenny of our money).

For this small sum these women work ten hours a day amid unfenced machinery, their persons smothered and their lungs choked with the fine dust. An ordinary worker will only do from two to three gross a day, so that some only earn one shilling and a penny for ten hours' work. There is another danger, too, besides the unguarded machinery. The slice of wood is held in the hollow of the hand; and should too much pressure be applied, or the elbow get a jog, the keen drill will slip through the wood and into the palm of the hand like a cheese-taster into new cheese. Yet, poor as the pay is, it satisfies these simple mountain people; and I was told there is never any lack of hands.

On examining the *perle*, a minute ridge of wood will be found encircling it—that is to say, nearly every *perle* has this defect, though not all. The cause of this is that the points of the crescent-shaped drill on the second occasion of using it rarely meet the first cut exactly. Sometimes,

however, the junction of the cuts is perfect, and then naturally there is no ridge. These perfect *perles* are so rare, however, that they are not sought for, and so the whole lot, perfect or not, undergo the next operation which is designed to get rid of the ridge. For this purpose an ingenious machine is used, which I will try to describe as simply and clearly as is possible without the aid of diagrams. The contrivance consists of a barrel-shaped wooden drum, having very narrow slits cut in its sides all round, a few inches apart. Inside this drum is a solid stone core, exactly the same shape as the drum, but smaller, so that one layer of *perles* exactly fit the space between the drum and the stone core. This stone core is fixed, but the wooden drum revolves slowly round it, and the appliance is half-immersed, horizontally of course, in a tank of running water. When the space is nearly filled up with *perles*, the drum revolves and the *perles* are rubbed and rolled against each other, the stone, and the wood, until all traces of any ridge or inequality disappear. The running water passing through the fine slits in the drum carries away all the débris; and when the *perles* are taken out of the rolling-machine and laid out to dry they are as smooth and round as possible; and thus ends another stage in their history.

Chaplets are of many hues—red, black, blue, pink, yellow; indeed, they are dyed all colours. The operation is very simple. A tub of the required dye having been prepared, and another one alongside it containing a solution of boiling water and lime, the *perles* are first dipped for a few moments into the latter and then into the dye, and next they are dried. Without the first hot dip the dye would not adhere; but the lime renders the wood highly susceptible to the colouring matters used. I must not forget to state that a certain proportion of beeswax is added to the dye-tub, which makes the *perles* ready for the next operation of polishing. To effect this the *perles* are placed in a long canvas bag, which is then sewn up and tightly fixed by its four corners down to the wooden floor. Over the bag is placed a wooden frame on wheels containing three or four wooden rollers which press lightly on the *perles*. The frame is then connected up with a long wooden arm, worked by water-power, which draws the frame backward and forward over the bag, causing the *perles* to roll from one end of the sack to the other. This gives them a fine polish and makes them shine brilliantly.

A chaplet is composed of five sets of ten *perles*, each *perle* in a set being divided from its neighbour by either one or two links of the wire chain on which they are strung; but between each set of ten the space is much greater, and in the middle of this space is fixed a single *perle* that has been ornamented with a number of little circles cut by a tiny circular drill. This *perle* is called a *pater*, and is easily distinguished from the others by its

isolated position and carved surface. I do not know anything about the telling of beads, and I did not ask; but I imagine that when the wearer arrives at one of these single beads a paternoster is said. There are usually only four *paters* in a chaplet, the fifth being replaced by a small metal heart-shaped medallion, from which depends a short length of chain. On this piece is strung a *pater*, three ordinary *perles*, and then another *pater*, the whole finishing off with a small metal cross.

Thus in its majestic Pyrenean home is the humble box-tree converted into the many-coloured chaplet, and sent broadcast over the land. It finds its way into far corners of the earth, and brings comfort to many anxious souls. In fever-stricken hospitals under tropical skies the pale and gentle Sister of Mercy tells these Pyrenean beads, while far away at home the water-wheels ever turn, and the speckled trout leap in the ice-fed streams, and heed not.

#### A RIVER OF DREAMS.

SEE! the rising mists below  
All the fields with vapours cover,  
While above their drifted snow  
Pallid moonbeams lightly hover.

Softly curving through the woods,  
Silver Tweed comes gently streaming;  
Thought nor sound of winter's floods  
Haunts the peace that lulls his dreaming.

High upon its grassy height  
Stands old Neidpath, gray and hoary,  
And the wistful evening light  
Clothes it with an old-world glory.

Not a sound the silence stirs,  
Save the ripple of the river;  
Not a breath to lift the firs,  
And the brown bents hardly quiver.

Down beside the stream below  
Winds the path o'er rock and meadow,  
Faithful to the river's flow  
Through all turns of sun and shadow.

There where lightly, day by day,  
Pass the living all undaunted;  
Now, beneath night's mystic sway,  
By what phantoms it is haunted!

What strange shades go wandering by!—  
Ghosts of fishers long departed,  
Flitting forms of fantasy,  
Lovers leal or broken-hearted.

But the trailing mists arise;  
One by one the trees are hidden,  
Till the vale before my eyes  
Fades, by some mute magic bidden.

MURIEL E. GRAHAM.

## SIXTH SERIES.

### FAMOUS DISTRICT LIBRARIES.

**A**MONGST the great benefits enjoyed by dwellers in our large towns is that of easy access to circulating libraries and Free Libraries, which, thanks to Mr Carnegie, have started up like mushrooms all over the kingdom. Although books never were cheaper or more plentiful in the history of the world, not every one forms the delightful and useful habit of possessing a library of his or her very own. The public library and the circulating library are appealed to for expensive books, for current literature, and maybe oftenest for the works of fiction just in vogue. The dwellers in outlying country districts, where life moves more slowly and monotonously, have not always the privilege of easy access to good libraries. All honour, therefore, to those persons who, seeking neither fame nor applause, have supplied this want where the need was greatest. In the annals of self-development, the books read in early life in unknown country libraries have destined the lives of many whom the world has afterwards heard of for good. It is quite impossible to estimate the value of good and great books read during the formative period. The copy of Percy's *Reliques of Ancient English Poetry* which Scott read at thirteen, still existing in Kelso Library, had a powerful influence on the future poet. He bought a copy of the same book afterwards when he could scrape a few shillings together, and he says: 'Nor do I believe I ever read a book half so frequently or with half the enthusiasm.' It was natural, therefore, that the first-fruits of his genius should have been the *Minstrelsy of the Scottish Border*, of which this is the centenary year. Thoughts and impulses are stored which shall afterwards bear fruit, the fancy and imagination are stirred, while the reader feels that he has indeed become 'The heir of all the ages, in the foremost files of time.'

Andrew Carnegie has given away over two millions sterling during the past ten years in founding Free Libraries in Great Britain and

America. He might not have done so but for the benefit he received as a youth from a library of four hundred books for boys which Colonel Anderson of Alleghany threw open every Saturday afternoon to him and others. It is possible that William and Robert Chambers might not have become authors and publishers save for the intellectual culture and stimulus received from Alexander Elder's circulating library in Peebles and from an old *Encyclopædia* in a garret. Books read in the impressionable, formative period, ere business worries so invade the mind and time, are by far the most influential. Books, of course, only go a certain way in the formation of character, and to spend too much time in 'studies' or discursive and amusing reading may be only another form of laziness and sloth. There is a sense in which the man who is always preaching or reading or writing may become very ignorant. Thackeray was a reading and writing man, and yet he said that 'in a pretty large experience I have not found the men who write books superior in wit or learning to those who don't write at all. In regard of mere information, non-writers must often be superior to writers.' Still, to most of us, the deprivation of good literature would come as the removal of the sun from the mental and moral firmament of the world.

What we adventure now is to glance at some of the forgotten benefactions and benefactors who founded famous district libraries which have been, and still remain, living centres of usefulness in Scotland. Amongst the most notable of these is that of Innerpefferay, four miles south-east from Crieff, contained in a long, vault-like chamber in a white house on a knoll close to the river Earn. At a distance the building might be mistaken for a Presbyterian church. There is a school close by, and Innerpefferay Church is near. This library owes its existence to David Drummond, Lord Maderty, some time previous to 1680. By his will, dated 1691, he left the half of six thousand merks for the maintenance of the library, church, and school-house there. The bequest was rendered void

through some legal slip; but a nephew made good the intentions of the donor by setting aside five thousand merks for the encouragement of learning, 'and as a constant and perpetual stock for the preserving of the said library and maintaining a keeper and schoolmaster, and for augmenting the library and building a house.' The collection of books is of high literary, typographical, and bibliographical importance, although it is to be regretted that no catalogue has yet been prepared. Very wisely, the more precious books of antiquarian interest have not been lent out for forty years at least. The library received additions from Robert Hay Drummond, a relative of the founder, who was Archbishop of York. Colonel the Hon. C. Hay Drummond is the present proprietor. The number of volumes is between three thousand and four thousand, and over a thousand visitors entered their names in the visitors' book last year, many of whom gave donations of books. Canon Liddon, Sheriff Mark Napier, Professor Blackie, and others have all been enthusiastic about this collection. Upwards of a thousand books are borrowed during the year. Professor Blackie bestowed his Homer, with this inscription: 'Presented to the Innerpeffray Library, in pleasant memory of a visit to the beneficent foundation of the Drummonds of Madderty.—J. S. BLACKIE.' Mark Napier's *Montrose* has come from another grateful reader, while the late Queen Victoria bestowed her *Journal of Life in the Highlands*, with her autograph. A most interesting relic is the pocket Bible of the great Montrose, printed in French at Sedan in 1633, with the owner's autograph in several places. A pen-and-ink sketch, inside the upper board, of a hillock and roses encloses the monogram 'J. M. E.' (James Earl of Montrose). There are quotations entered here and there, such as 'Roses grow not upon thorns;' 'Honour to me is better than life;' 'Though the shattered universe o'erwhelm him, the ruins should find him untrembling.' Barclay's *Shyp of Fols of the Worlde* (1508) is the oldest dated book; but there is a copy of Lydgate's translation of the *Fall of Princes and Princesses* of an earlier date; a Bible in French printed at Antwerp in 1530, with curious illustrations; a copy of the second edition of the 'Great Bible' (1540), with frontispiece by Holbein; a 1602 copy of the black-letter English Bible, in which the Canticles are given as 'The Ballet of Ballets of Solomon;' a copy of Luther's Bible (1577); some Missals; Latin Breviaries, one of which belonged to Cardinal Quignan; Prayer-books; a Confession of Faith; and a French Psalter by Marot and Beza, with the musical setting printed in staff notation, and sol-fa letters beside it, supposed to be the only copy in this country. Books on history and superstitions are also well represented: we noted original editions of Reginald Scot's *Witchcraft*, Burton's *Melancholy*, Camden's *Britannia*, the prose works of King

James (1616), Dee's *Treatise on Spirits*, Sander's *Chiromancy*, Milton's *Eikon Basilike*, Drummond of Hawthornden's poems, Wither's *Emblems* (with little vignettes on each page), Drayton's *Polyolbion*, a first edition of Bacon's *Essays*, and Holinshed's *Histories*. The works of Donne, Brownrigg, Bishop Andrewes, and Beza's *Tracts* may very well have come from the Drummond who was Archbishop of York. These, with Boece's and Major's *Histories*, Raleigh's *History of the World*, and Elzevirs and Aldine editions, show the rare nature of the literary treasures in Innerpeffray Library. To the visitor, Mrs Birnie, the lady librarian, takes both pride and pleasure in showing these treasures, which are probably unique in the United Kingdom.

Leadhills and Wanlockhead are two mining villages in Lanarkshire: the first is at the head of the valley through which the Gogar flows to the Clyde; the second is on the Wanlock, a mile and a quarter distant, and is the highest inhabited village in Scotland. Corn does not ripen here, and there are no hens, as the poisonous galena ore prevents them from being kept. Wanlockhead is on the lands of the Duke of Buccleuch; Leadhills belongs to the Earl of Hopetoun's estates. Up till lately few of the folks emigrated; they did not understand how any one could be happy elsewhere. Pennant in 1772 and many a visitor since have commented on the barren and gloomy appearance of the neighbourhood; yet no one can doubt its salubrity. Miss Martineau in 1852 noted the absence of a meat-diet amongst the miners, yet could not deny that these folks, living on a poor soil, one thousand two hundred and eighty feet above sea-level, had a remarkably healthy appearance, notwithstanding the fumes of lead-smelting. Allan Ramsay the poet, who was born at Leadhills in 1686, established the first circulating library in Edinburgh. William Symington, who has a monument here, is styled the 'inventor of steam navigation' (see this *Journal*, 1902, p. 180). James Taylor was also a native. A tombstone in the churchyard bears record that John Taylor, miner here, died at the advanced age of one hundred and thirty-seven years. A light railway, seven miles in length, connects Leadhills with Abington, on the Caledonian system. Lead has been sought for in the bowels of the Lowther Hills for five hundred years, and gold and silver are also found in small quantities. In this connection the place has been called 'God's Treasure-house in Scotland.' When the Princess May was married a keeper-ring of Leadhills gold was sent as a marriage present. 'Never go to Leadhills without a hap' is local advice; and in this high-lying, treeless region sharp, sudden showers are common. About a hundred years ago, when William and Dora Wordsworth and Coleridge passed a night at Leadhills Inn, the latter likened the pumping-engine at Wanlockhead to a giant with one idea. Wordsworth and his

sister had a talk with a miner, who said they had just added a book to their library at a cost of thirty pounds, and that they had all sorts of books. 'What! have you *Shakespeare*?' they queried, and were answered in the affirmative. The poet and his sister, to their regret, left without seeing this famous library, founded about 1741 by a mining overseer named Stirling. Much of the decency, industry, and sobriety of the people, their pride of spirit, independence, and desire to give a good education to their children, has been traced as the fruit of this library. A library at Wanlockhead has been equally beneficial. Dr John Brown in 1865 gave a capital account of Leadhills Library in his 'Enterkin,' a paper dealing with the pass which comes out at Wanlockhead, and which he found most noticeable and impressive, and unlike any other glen he had seen in Scotland. He was likewise greatly struck with the range of subjects in the library and of authors in the homely catalogue, and added that it was impossible 'to think with anything but respect of the stout-hearted, strong-brained men who, after being in the bowels of the earth all day, sit down to wrestle with John Owen and Richard Baxter, or dream of heaven and holiness with Scougall and Leighton, or refresh themselves with *Don Quixote*, the *Antiquary*, or the *Fool of Quality*.' This is one of the oldest and best village libraries in the kingdom. There are about one hundred members of the library, which contains four thousand volumes; a sum of three shillings is paid for entry-money, and two shillings annually after that. A book is accounted new until it has been two years in the library. Every member not residing in Leadhills may be provided with a bag sufficient to keep out rain when carrying home books.

Mr D. Russell, clerk to the library, informs us that Leadhills Library is still flourishing and doing much good. There is a small annual grant from a Ferguson bequest, while Lady Hopetoun supplies all the leading daily and evening papers, which are much appreciated. On the back of the card whereon are printed the rules is a picture of the valley, a Corinthian pillar in the centre, a pick and shovel and pail at the foot, and the motto above, 'Leave the Rest to Heaven.' The catalogue shows that the library is strong in history, biography, and sermons. Novels, too, are well represented, with many old favourites, as becomes an ancient library; but we cannot imagine that the stories *George Harrington* and *Ralph Gemmell*, by R. Pollok, deserve to be classed as biographies. 'Philosophy' and 'Letters' are grouped. *Chambers's Journal*, we note, has a most honourable place and a large amount of space.

Thomas Telford the great engineer was one of those who thought very little about money but a great deal about roads and bridges, and when he came to make his will, believed he had only

some sixteen thousand pounds to dispose of; the actual sum turned out to be nearer thirty thousand pounds, so that all his bequests were nearly doubled. About one-fourth of the whole was set apart for educational purposes. Two thousand pounds went to the Civil Engineers' Institute, and one thousand pounds to the minister of Langholm and his native parish of Westerkirk, close by, in trust for parish libraries. There is a slab to his father in Westerkirk churchyard which Telford carved with his own hands: 'In memory of John Telford, who, after living thirty-three years an unblamable shepherd, died at Glendinning, November 1757.' Telford cherished the memory of his native Eskdale, and wrote a poem on the district. Burnfoot, the native place of the Malcolms, who were such great Empire builders, lies below Westerkirk. The Duke of Buccleuch has a fine shooting-lodge at Langholm, a place which is noted, amongst other things, for its lovely scenery and its rainfall. Westerkirk Library was in existence before Telford's bequest, having been founded at Jamestown in 1792 for the use of the men working the antimony-mine (now discontinued); but it is now housed in a suitable building in the shrubbery near the schoolhouse at Bentpath. At the time Dr Smiles wrote his *Life of Telford*, in 1867, there were four thousand volumes; when we called lately on Mr Irving the schoolmaster the number had increased to eight thousand, mostly bound in half-calf. The Langholm Telford Library is also well patronised, and is under the care of an intelligent local bookseller. A few years ago some of the more dilapidated books in the Westerkirk Library were distributed amongst the members. Every month the books are inspected. Bentpath Inn here is the only one between Langholm and Tushielaw in Ettrick, a distance of thirty miles by the Eskdalemuir Road!

For Westerkirk Library there is a charge of ten-and-sixpence as entry-money, and a small annual charge afterwards. The day of the full-moon, or the day following, is appointed for the exchange of books; consequently, as Dr Smiles remarks, 'there is scarcely a cottage in the valley in which good books are not to be found under perusal; and we are told that it is a common thing for the Eskdale shepherd to take a book in his plaid to the hillside—a volume of Shakespeare, Prescott, or Macaulay—and read it there under the blue sky, with his sheep and the green hills around him. And thus, so long as the bequest lasts, the good, great engineer will not cease to be remembered with gratitude in his beloved Eskdale.' Telford the herd-boy, who rests in Westminster Abbey, could have wished for no better monument.

William Chambers, mindful of the benefits which he and his brother Robert received from Alexander Elder's circulating library in Peebles, long extinct, gave in 1859 a suite of buildings having a library of ten thousand volumes, now

increased to fifteen thousand, with reading-room, museum, art-gallery, and lecture-hall, for the mental improvement and recreation of the inhabitants. One regrets to read in his extremely interesting autobiography that the donor had misgivings, after an experience of twelve years, as to whether it had been appreciated. In the museum attached may be seen the small green box which contained the belongings of William Chambers when he started as an apprentice in Edinburgh; also a fine full-length portrait of the publisher by Watson Gordon. A print of Bumby's has an interesting story attached. It represents a soldier lying dead in the snow, his dog sitting in misery on the one side, on the other his widow with a child in her arms. Burns saw this picture in the house of Sir Adam Ferguson at the Sciennes, Edinburgh. This was on the one memorable occasion that Burns and Scott ever met. Burns inquired as to the authorship of the motto of the picture. The boy Walter Scott whispered the information that the author was Langhorne, which drew forth a word of civility from Burns and a look which the author of *Waverley* never forgot. The lines are:

Cold on Canadian hills, or Minden's plain,  
Perhaps that parent wept her soldier slain;  
Bent o'er her babe, her eye dissolved in dew,  
The big drops, mingling with the milk he drew,  
Gave her sad presage of his future years,  
The child of misery, baptised in tears.

The picture, which is not otherwise interesting as a work of art, was presented to the museum by the late Robert Chambers. The Institute, which cost William Chambers over twenty thousand pounds, is not a Free Library in the ordinary sense; the benefit is secured by paying a small fee. The old building in front was at one time a town residence of the Queensberry family, and the fourth duke was born here. The library contains a copy of William Chambers's very scarce booklet on David Ritchie the Black Dwarf, published at Edinburgh in 1820.

We might multiply examples, but these may suffice, of cases wherein a local celebrity has erected his own monument as well as provided a great public boon by the founding of a library or reading-room in a country district. Archbishop Leighton's bequest of books to his diocese has formed the nucleus of a library at Dunblane. Another example is that of the Proudfoot Institute, Moffat, founded from the residue of the estate of William Proudfoot, an early Scottish settler in Natal. About twenty thousand pounds was left to be expended on this working-men's institute, with library and recreation rooms and lecture and concert hall. Evening classes are also held here, which are of great benefit to young men. There are over three thousand books in the library, and additions are made from time to time. The

large hall is used for recreation, and carpet bowls is a popular game. The trustees also assist aged and infirm people or persons out of employment from their funds. The Norman Stewart Institute, Rothesay, owes its foundation to Norman Stewart, of Richmond, Virginia, and his nephews, and has a library of four thousand volumes, with reading and recreation rooms. Selkirk Public Library owes its origin to Mr T. Craig-Brown, author of a *History of Selkirkshire*. He purchased the buildings formerly used as the county jail; the Free Library Act was adopted, and now over six thousand excellent volumes are housed there. Mr Andrew Lang, a native of Selkirk, has been a liberal donor of books. Amongst the curiosities here are a Flodden flag and a uniform which was worn by the Ettrick Shepherd as a Bowman of the Border.

Samuel Brown of Haddington (1817-1856), fourth son of Dr John Brown, author of the *Self-Interpreting Bible*, was the founder of itinerating libraries. In these days, when the great classics of literature can be purchased for a few pence, it is not easy to imagine how difficult it was for the common people to see a new and high-priced volume or to possess good editions of old books. Amongst the thoughtful peasant-class the bulk of the books on their shelves might be volumes of divinity, many of them fifty or a hundred years old. Mr Brown was a genuine benefactor to a wide rural district. When he struck out this plan he formed a collection of books at his own expense, and put them in divisions: the newest were retained for the county town of Haddington, and a division was sent to each of the principal villages of the county. When a division had remained in one place about twelve months it was removed to another village, and a fresh one took its place. The charge for reading was small, and only sufficient to keep the books in repair, while the village librarians did their work gratuitously.

In 1847 Mary Russell Mitford, in conference with Mr Lovejoy of Reading and William Chambers, drew up a scheme for district libraries. Her idea was for five or six parishes to agree and to interchange their books as soon as one set, say, of two hundred volumes, had been finished by one parish, so that five libraries of two hundred books each should serve for five parishes to read. These were to be the very best books: no trash to be allowed!

George Miller, bookseller, Dunbar, who wrote his autobiography, and was publisher of the *Cheap Magazine*, issued his first circulating library catalogue in 1791; by 1811 it contained two thousand five hundred volumes, and a reading-room was started which he says was 'one of the most complete establishments to be met with in any town of equal size in the United Kingdom.'

## MY AUSTRALIAN DUCHESS.

## CHAPTER IV.

EXT day, according to my promise, I presented myself at Government House. Sir George had kept his promise, and you may imagine, therefore, his wife's surprise when he conducted me into her presence.

For upwards of a quarter of an hour we chatted together, and then the drawing-room door opened and a lady entered the room. On seeing her I sprang from my chair with an exclamation of astonishment. You will understand this when I say that she was none other than Christine, whom I had imagined to be many hundreds of miles away. She, on her side, was as much surprised as I was.

Lady Belford was the first to break the silence. Turning to Christine, she said, 'I was not aware, my dear, that you were acquainted with Lord Birkhardon.'

'Lord Birkhardon?' cried the other. 'I know Mr Farebrother. We are neighbours.'

Mutual explanations followed, during which I learnt that Colonel Urquhart had been an old brother-officer of Sir George's, and that Christine had been spending three months with them in Sydney. She was to return home in a fortnight, and I gathered from her manner that the thought of it did not altogether please her.

During the fortnight that followed I was permitted to see a great deal of her, for nothing would suit His Excellency but that I must take up my abode at Government House, and under the circumstances you may be very sure I raised no objection. Every day I fell more and more in love; and who could have wondered at it? Surely a girl so sweet and yet so self-reliant as Christine had never before graced this earth. Times out of number I was tempted to test my fate; but on each occasion I managed at the last moment to keep the words back. To have risked refusal would have been to spoil what remained of her visit, and that I had no desire to do.

Her return journey was to be made in company with a squatter and his wife, whose property lay upwards of a hundred miles to the east of Maraba. After a week's stay there, Bencliff was to meet her and drive her home. When she was gone Sydney seemed a different place; and, in spite of all my kind friends' wishes that I should remain, I determined to set off on my long journey back to Yarley with as little delay as possible. Fate, however, was destined to prove too strong for me, for on the afternoon prior to my departure I was driving with one of the aides-de-camp, when the horse bolted and we were both thrown out. He fortunately was uninjured; my leg, however, was broken a little below the

knee. In consequence many weeks elapsed before it was possible for me to move about, and still longer before I was in a position to run the risk of undertaking long rides in the saddle. During my convalescence I received several letters from Farquhar, in one of which he mentioned the fact that he had had occasion to go over to Maraba on business. The postscript contained his assertion that he considered Miss Urquhart a very beautiful girl. In a later letter he mentioned her again, and the reference was followed with something that caused me no little alarm. He had come to the conclusion, he stated, that a bachelor's life was a miserable one, and that the man who said otherwise was a fool.

'God help me!' I said to myself; 'is it possible that I am destined to have the man I love best in the world for a rival?'

When I reached the station once more it was no longer the same old Farquhar who greeted me. He seemed more reserved—to have lost his sunny, buoyant temperament, and to be more inclined to take offence at small things than I had ever known him to do. At first I thought he was scarcely pleased to see me; but he assured me emphatically that he was. Stranger still, he declared later, in answer to a question of mine, that he had come to the conclusion that Bencliff was, after all, not a bad sort of fellow.

'And Miss Urquhart?' I tried to ask the question unconcernedly, but I am afraid I failed in the attempt.

He rose from his chair and began to pace the room.

'Farebrother,' he said—'for I must still call you by the old name—I love that girl as I shall never love a woman again.'

'Have you told her so?'

'No,' he muttered, 'for I am sure she does not care for me.'

'Poor old fellow!' I said, and I put my hand upon his shoulder; but he threw it off and hurriedly left the room.

It was nearly midnight when he returned, and I had long since gone to bed, but not to sleep. He came to my room and sat down beside me, putting one arm round my neck.

'Old boy,' he said, 'come what may, please God, we'll not quarrel.'

'Never!' I answered. 'I don't think I could quarrel with you.'

And I never did. I like to think of that in these days: you will soon know why.

Now for the conclusion.

Almost before we knew it spring was over, and summer—scorching summer—was upon us; herbage was soon burnt up, and the earth cracked

in the terrible heat. Bush-fires were of constant occurrence; and, worse than all, with every day our supply of water was growing less. Only those who have had experience of it can understand the horrors of an Australian drought. Dead and dying animals—each one representing good, honest money to their owner—are to be seen on every side. Without water they cannot live, and yet the cruel clouds will not break. What grass there is is swept away by fire, and always present is the knowledge that it is impossible to foretell how long this reign of terror will continue. It may be weeks; it may be months; it may even last a year. And the result? In most cases ruin, or something very near akin to it. As for us, we did all that mortal man could do; which, alas! was little enough. The anxiety was overwhelming. Day by day the home we had built up for ourselves was being swept away, and we were powerless to save anything. Every night black clouds covered the heavens, until we momentarily expected to hear the rattle of the rain upon the roof; but no rain came, and in the morning every cloud had vanished.

One afternoon I stated my intention of riding out to see some cattle which we had brought in from the back country and had camped in the vicinity of one of the few holes in which there was anything like a fair supply left.

'I shall go with you,' said Farquhar. 'If I stay here I believe I shall go mad.'

'Come along, then,' I answered; and, catching the only two horses we now kept at the homestead, we saddled up and set off.

In the thick scrub the heat was stifling. Farquhar was in very low spirits, and, try as I might, I could not rouse him. We had perhaps proceeded another five miles when a *coo-ee* attracted my attention, and a moment later, to our astonishment, Bencliff and Grimshaw came into view.

'What on earth are they doing here?' I asked.

Farquhar did not reply; but I heard him catch his breath as if he were in pain.

'This is indeed fortunate,' said Bencliff as he dismounted, and we followed his example to rest our horses. 'We were on our way to see you. Our water has just about given out, and we wanted to know whether you could help us by running a few hundred head for us.'

I noticed a look pass between himself and Grimshaw. The latter nodded as if in corroboration of his friend's assertion.

'I'm afraid it's impossible,' Farquhar answered. 'We're almost dry ourselves.'

'Are you? Then take that!' and almost before I had time to realise what he was doing he had swung his heavy riding-whip and hit the other a crashing blow upon the head. Farquhar fell like a log. Then my senses returned to me, and I sprang upon Bencliff, and began to struggle with him. At the same moment Grimshaw, with an oath,

threw himself upon me from behind. Heavens! how I fought! But I was powerless to cope with them. At last, choked by Grimshaw's hand upon my throat, I found myself losing consciousness, and a moment later fell beside my poor friend. Yet even then, strangely enough, I was conscious of what they said.

'Now what are you going to do?' asked Grimshaw, who was still panting from his exertions. 'Put a knife into him, or what?'

'Hold your tongue,' the other replied. 'I know what I am going to do. We couldn't have a better chance. Just give me that rope off my saddle, and I'll make him safe before he gets his wits again.'

Though I felt nothing, I knew that I was being bound. I seemed to have lost all desire to struggle now.

'Now then, pick him up and bring him along here.'

Presently I opened my eyes and looked about me. My hands were pinioned behind me, and I could feel that I was lying upon an old log.

'Look! he has come to his senses again,' said Grimshaw. 'You'd far better have knocked him on the head as you did the other.'

'Do you think so? Well, I don't,' Bencliff replied. 'I want my Lord Marquis to be in a position to appreciate his fate.—Do you understand, my lord? In case it should interest you at all, I will give you a rough outline of what is about to happen. You and your partner came up here, where we didn't want you, and stopped my little game. You did your best to make it nasty for me about that horse. You have been making love to my ward. I wonder if she will recognise you when she sees you next—if she ever does. Now, what's going to happen to you is this: when I say good-bye to you, I'm going to ride up against the wind and set fire to the scrub. I'm afraid you will find it warm; but perhaps you won't mind that.'

Though only half-conscious, I was able to realise the awful nature of his revenge. Could anything more fiendish be imagined?

'Do what you like with me,' I muttered, 'but not with him.'

Bencliff walked across to where poor Farquhar's body lay, and after a short interval returned.

'You needn't trouble yourself about him,' he said brutally. 'He has got his quietus. When we get hold of that fellow Anderson we shall have the whole lot of you—that is to say, those who are worth troubling about. I've owed him a grudge for a long time, and he'll find that I will pay it.—Now then, Grimshaw, it's time for us to be moving on.'

He raised his hat to me with ironical politeness, and moved towards his horse. But a sudden fit of fury must have seized him, for he strode back to me and struck me savagely with his fist in the face; then, mounting his horse, he rode off,

leaving me to my fate. And what a fate! That he would carry out his threat I had not the least doubt; but how long would it be before the end came? They would not ride fast on such a day, so that, allowing that they would not set fire to the scrub until they were five miles off, it could scarcely be less than three-quarters of an hour before I might expect to hear the roar of the flames. For the reason that my arms were tied in an unnatural position under me, they soon began to cause me excruciating pain. Add to that the ants and flies that settled and crawled upon my face, and you will have some faint idea of what I suffered.

At last I suppose my senses must have deserted me again, for I imagined myself back in England once more, bathing in the cool river that ran its winding course through the park. Then I was walking with Christine in Sydney Gardens, looking down upon the blue waters of the harbour. Later I opened my eyes once more. Hark! what was that? A dull roar like distant thunder that was every moment drawing closer. The fire was sweeping down upon me, and my end was only a matter of minutes now. I tried to form my thoughts into some sort of prayer, and to resign myself to my fate; but it was impossible. The desire for life was too strong, and I struggled madly with the cords that bound me. They, however, were too securely tied; I could not loose them. Presently I could hear the falling of great trees, and see the smoke in the sky above me. Frightened cattle, horses, and kangaroos dashed by, and once a horse jumped the log to which I was bound, his hoofs almost touching my face. Then there happened a thing that, even in such a desperate crisis of my life, gave me cause for wonder. Two mounted men, on maddened horses, raced by me, and I noticed that they were Bencliff and Grimshaw. God's vengeance had overtaken them, and they had been caught in their own trap. Scarcely had they passed before my straining ears heard the beat of other hoofs, but on this occasion they were coming towards me. I turned my head to look, and as I did so a cry escaped me. I saw a woman on a foam-flecked, worn-out horse—and that woman was Christine!

Without losing a moment, she dropped from her saddle and ran towards me. With feverish haste she unlashed my cords, crying:

'Can you run? My horse is worn out.'

'God knows,' I answered as I sat up, and then her eyes fell on poor Farquhar lying a few feet away. She ran to him, looked down, and returned.

'Come,' she cried, seizing me by the wrist. 'He is dead.'

And with that we started to run, never looking back.

'The river should be over there,' she panted, pointing to the right. 'We must reach it at all hazards.'

Still we ran on, though how I managed it I shall never know, for my legs had been numbed by the cords. Christine's excitement kept her up, and gave her the strength of half-a-dozen men. Still holding me by the arm, she half-dragged, half-supported me. The fire was less than a mile behind us now, and travelling at the speed of an express train. The dry river-bed was only a hundred yards or so ahead of us. Could we reach it in time?

But why prolong the story of the agony of that dreadful day? We did reach the river, though how we managed it I do not know. Once there, we tottered down the sloping bank and out on to the broad sands beyond, where there was nothing to burn, and, unless we were suffocated by the smoke, we were safe. Christine told me later that when I reached the middle I fell down in a dead faint. I suppose I must have done so, for I remember no more until I woke to find her kneeling beside me, bathing my face with some water which she had obtained from a small pool near by.

Now you have heard my story, and you can judge for yourself whether it is worth the telling. It was not until afterwards that I learnt full particulars of what had happened. Christine, it appeared, had chanced to overhear a conversation between the two men. The original plot they had arranged was to inveigle us out on to the run, and to do then what they had done. Their opportunity, however, came sooner than they expected. Knowing that it was useless for her to attempt to deal with them, the brave girl had allowed them to start upon their murderous errand, and had then ridden for her life to warn us.

Poor Farquhar's body we found next day charred to a cinder. Retribution speedily overtook the arch-scoundrel of the plot, for we discovered Bencliff in a dry nulla, some sixteen feet deep, into which his horse had fallen headlong, crushing him beneath it. What became of Grimshaw we could not ascertain. At any rate, he never appeared in the district again.

When Farquhar's will was read it was found that he had made me his sole heir. Feeling, therefore, that my duty lay in England, and that after what had happened it would be too painful to remain on the place, I disposed of the property for a very handsome sum, and then went down to join Christine in Sydney. Our marriage took place a month later.

Now, if you will accompany me on to the terrace, I fancy you will find seated there an elderly but very beautiful lady, beloved by everybody. Knowing what you know now, you will be able to understand why I am proud to call her

'MY AUSTRALIAN DUCHESS.'

## THE MALAY LANGUAGE.

HE raconteur of the Eastern Tropics always finds room in his répertoire for the anecdote of the two Singapore merchants who met, during a visit home, in a first-class carriage on the London Underground Railway. Among their fellow-passengers was a lady whose charms caught their artistic eyes. They felt perfectly safe in discussing her comeliness in Malay; but, to their embarrassment, when one of them rose to open the door of the compartment to allow the lady to alight, she, with a guileless smile, thanked them thus: '*Trima kasih, tuan; tabek!*' ('Thank you, sir; good-day'). Truly, London is a dangerous place, when one cannot give vent to the secret thoughts of the heart—even in Malay.

This story is my apology. Day by day our possessions in these sunlit waters are becoming of more importance; Singapore, the hub of the whole, is rapidly growing, and no one can afford to live in Singapore without a knowledge of Malay, inasmuch as it is the means of communication between the European and the bewildering variety of Asiatic races who rub shoulders together in this cosmopolitan port. Added to this, Malay is spoken not only in the peninsula, but also in Sumatra, Sunda, Java, Flores, Timor, Timor-Laut, Borneo, the Moluccas, and the Philippines; while it is also the tongue in which natives of the Eastern Archipelago, who do not know one another's language, converse. To the scientific student its interest lies in the fact that in it is to be found the key to the puzzle of the origin of the peoples inhabiting these islands, seeing that we have no records of them previous to the coming of the Arabic tribes. The English language reveals the historical facts of the peopling of the British Isles by Celts, Saxons, Danes, and Normans; of the intermixture of these races and tribes; of the introduction of the New Learning; of the world-wide empire acquired by the hardy breed of this mongrel race. So the Malay language tells us of an early migration of some probably Africo-Indian race; of possibly two invasions of some purely Indian people (bringing with them great store of knowledge, and introducing many words of Sanskrit origin); then of a sweeping flood of Arabic-speaking tribes (who forced upon a naturally superstitious and idolatrous people the pure monotheism of the Prophet); and, lastly, it whispers to us of the coming of Portuguese, Dutch, English, and even of the bland Celestial.

What is called the 'native' element of the language—that is, those words which cannot be traced to any known origin—comprises simple terms descriptive of a life passed in the jungle by men of primitive habits, such as the names of the physical features of the country, of simple

food, dwellings, hunting, the earliest form of tillage, fishing, and domestic affairs.

The Sanskrit element introduces us to a high form of civilisation: it gives us the word for plough, indicating an advance in agriculture—an advance which has not yet penetrated far into the interior, where the natives still cause a scene of desolation by burning down the jungle, and plant among the blackened stumps and fallen trunks of giant trees their seeds of rice, maize, and tobacco, or churn up the plain by driving buffaloes over the sodden ground in order to make a wet rice-field. Terns, too, descriptive of the elephant and its ménage are of Sanskrit origin; from this source, also, we get terms relative to merchandise, precious stones, dominion, the life of an Eastern court; and the names of some of the more deadly slaughter-weapons, such as *kris*, and of some simple scientific, moral, and religious objects and ideas. The Malay word *manna*, meaning 'where?' 'what?'—derived from a Sanskrit word signifying 'measure'—takes us back in thought to the exodus of the Israelites, who, as the Psalmist so quaintly puts it, 'did eat angels' food' and named it 'manna,' as the margin of our reference Bibles obligingly tells us, from their wondering inquiries, 'What is it?'

The Arabic-speaking tribes brought with them the religion of Mohammed, and consequently from this source springs the bulk of religious and moral terms. Many, also, of the terms of politeness and compliment (to be seen in the wearisome and fulsome address and introductory part of a Malay letter) are almost pure Arabic. In fact, it is difficult to define the Arabic element, as new Arabic words are being continually introduced, and a Malay writer shows his learning by the use of Arabic words and phrases, much as an Englishman proud of his erudition interlards his literary effusions with words borrowed from ancient and modern European languages. It must be added that Malays use the Arabic character, though many now, especially those who have to do with Europeans, prefer to use Roman.

There are but a few words of Portuguese, Dutch, English, and Chinese origin, enough to show that the Malays have come into contact with these races. Chinese, of course, gives the Malay the word for opium, while English gives them 'gas,' 'telegraph' (for telegraph), *musti* (a bazaar-word for must), and such words as *pas-pan* (for saucepan) and 'matches' are gradually coming into use. To compensate for this, they have supplied us with the word *orang-utan* (which we misspell and mispronounce) and the now common English word 'amuck' (*amok*, mad).

The Malay language is soft and melodious, rejoicing in vowels and liquids, and avoiding

all harsh consonants. They drop the *k* at the end of a word after a vowel, preferring the open sound; they generally change the Arabic *f* into *p*, while the deep gutturals of Arabic are very rarely heard. The Malay likes life made as easy as possible, and his life is reflected in his language.

Writers on this language have differentiated or tried to differentiate between High and Low Malay. The terms are unfortunate, because misleading. We might with just as much fitness call Ciceronian Latin High, and Plautine Latin Low. As in every language, there is a literary and a spoken form; and the more educated a man is the more copious his vocabulary, the more grammatical his speech, and so the nearer his spoken language approaches the literary form. This is true of Malay, though the literature of the language is scanty, for the speech of the more leisured and better-educated classes of Malays approaches in proportion to their education that of their literature. There is a language of the bazaar which is so 'Low' as to be almost unworthy of being called Malay, as the stream of the tongue of Billingsgate has wandered far from the 'pure well of undefiled English.'

We might boldly say that the Malay language has no inflections were it not for the compound nouns and verbs formed by prefixes and suffixes. These affixes give an active, passive, or intensive force to verbs and change concrete into abstract nouns.

It has been said that all Malay nouns are naturally plural. It is better to regard them as having in themselves neither number nor gender. To indicate number either some word of numerical value is added, such as 'one,' 'two,' 'some,' 'many,' or the plural is formed by doubling the word—thus *anak* is child, *anak-anak* is children. This principle of reduplication, found commonly in Greek for the purpose of forming the perfect tense, and with less frequency in Latin and English—for example, 'did' represents 'do-do'—is also used in Malay for intensifying purposes; thus *se-bulih-bulih*, as can-can—that is, as hard as one can: to the best of one's ability. Gender, like number, is indicated by the addition of a term signifying male or female.

A grammatical curiosity shared by the Malay, Chinese, Burmese, and Siamese languages is the addition to substantive nouns of what grammarians are pleased to call numeral affixes or numeral coefficients. Such English phrases as 'five head of cattle' and 'seven sail of ships' illustrate the meaning of these pundits. Thus in Malay we have 'five tail of cats,' 'seven fruit of ships,' 'four seed of eggs,' 'two stair [or three door] of houses,' 'thirty slab of planks,' &c.

With regard to personal pronouns, it may be noticed that every word used to designate the first person singular literally means either slave or companion. This is Oriental politeness, and

many examples, such as, 'Is *thy* servant a dog that he should do this thing?' are to be found in the Old Testament. The same cause impels the Malay to avoid the use of the second person singular, and to replace it by the name or title of the person addressed. To address a Malay by the second person singular pronoun is to treat him *de haut en bas*. There are two words to express the first person plural, and a very useful distinction is drawn between them. One of them (*kita*) includes the person addressed; thus it would be used in the sentence, 'We will go a-hunting to-day,' when all the persons present are included. But in translating 'Our Father,' as addressed to God, the other word (*kami*) would be used (the possessive being indicated by position or by the addition of a word), as the person addressed is manifestly excluded. Oh that some good Samaritan would invent an extra third person singular pronoun in English to help us along in indirect speech!

'Bow-wow words'—or, to use the expression of one's Latin Grammar days, onomatopœia—are fairly common in the native element of the language. This is what might be expected, as—we are all evolutionists nowadays—the primitive man, having emerged from the weird state of missing-linkdom, would naturally try to express his thoughts by imitation, and consequently the earliest elements of speech would be the imitation of the cries of beasts and birds. Thus we have *siol*, to whistle; *pipit*, a small bird; *nganga*, to yawn; *clichak*, a house-lizard, &c.

It has been said that a man may carry on a conversation in German with the single word 'so,' if he only knows how to give it the right intonation at the right moment. One might almost say the same of the Malay word *sudah*; but you must be careful to use it with a sharply imperatival tone, its meaning then closely approximating the vulgar English sentence 'Shut up!' But if *sudah* is useful, *barang-kali* (perhaps) is maddening to the Englishman. A Malay hates the trouble of making up his mind—in fact, he never does any such thing. His mind is made up for him by his environment, and consequently *barang-kali* is a very favourite word with him. Again, he is too polite and too timid to use a blunt 'No,' so he generally temporises with *barang-kali*. Therefore, do not ask a Malay a direct question, expecting an explicit answer; talk to him of things in general (he loves a talk); and, as 'in a multitude of words there lacketh not folly,' says the wise man, if you are skilful you will probably find out what you wish to know.

The Malays are not without imagination. This is manifest from their language, their *pantun* (verses), and their proverbs. Thus the Malay word for child (*anak*) enters into such expressions as 'the clapper [child] of a bell,' 'the toes' (children of the foot), 'a key' (child of the lock), 'uvula' (child of the tongue), 'arrow' (child of the bow),

'spokes' (children of the wheel), 'tributary' (child of the river). Again, *mata* (the eye) enters into such combinations as 'the eye of the day' (the sun), 'the eye of a tree' (a knot in wood), 'the eye of a barrel' (a bung-hole), 'the eye of the balance' (*Anglice*, the tongue of the balance), 'the eye of the march' (the vanguard), while *mata-mata* (*Anglice*, all eyes) is the word for a policeman. This last expression is ideally admirable, but would in practice be more accurately expressed as 'an eye for the main chance.'

The *pentum* (verses) of the Malays are mostly of four lines, of which the first two are generally

a metaphor, the last two its application. These people, too, are fond of proverbs; for instance, the vulgar but expressive English saying, 'Teach your grannie how to suck eggs,' has its equivalent, 'Is it necessary to sharpen the thorn?' and 'A man born to be hanged will never be drowned' is expressed by the fatalist man, 'Bark swims, stones sink.'

To sum up, the Malay language is easy to learn, sweet to the ear, somewhat imperfect as a means of communication of thought; but when spoken with understanding, expressive, forcible, imaginative.

## THE BETHEL STONE.

### CHAPTER IV.

THE beauty of Zillah Trethewey had worked its spell on Danvers, and the painter was honestly in love. He was a frequent visitor at the tannery; the odour of the place, once insufferable, became tolerable with familiarity, and he grew almost reconciled to the bundles of hides and the hideous little heaps of horns and hoofs.

Beneath the homely ways of these people there was a degree of education that he had not expected to find. The girl had been decently brought up at a boarding-school in Penzance, and her skill in music was remarkable. It seemed to Danvers that her face and voice would carry her anywhere. Yet he was painfully conscious of a disparity in their social conditions. He wondered at times how this unsophisticated girl would be received by his cultured sisters living in struggling gentility in that Kensington flat. He thought of his aunt Matilda, from whom he had expectations—a proud, precise woman to whom a lapse into dialect would be a thing of horror. How would he reconcile these fastidious relatives of his to the tanner's daughter? Then he remembered with gratitude a certain Uncle Joseph, the 'black sheep' of the family, who had sunk to the abyss of an obscure tobacconist's shop in Islington. He would meet all feminine protests and strictures by throwing Uncle Joseph at their heads. He had never hitherto appreciated this disreputable connection; but all things have their uses, and Uncle Joseph would make an admirable missile.

There was discretion in Danvers; the very practice of his art made him discriminating; and if his affection for Zillah Trethewey should seem an incongruous element in his life, he was prepared to eliminate it with a pang, as at times he had sacrificed in a picture some admirable figure or fond effect of colour that spoilt the ensemble.

As for Zillah, she found herself in a new, strange atmosphere of flattery and compliment.

The attentions of the painter touched her vanity, a point at which all women are vulnerable. Danvers was never weary of making sketches of her in every delightful aspect. She was proud to think that her beauty inspired a man to such industry; and she was exceedingly happy.

In those days David Pentreath seldom came to the tannery; the stranger seemed to pervade the place with his pictures and singing and gay talk. Once or twice, in his desire to be near Zillah, David had called in the evening; but the music and laughter jarred upon him, and he sat all the time in mute malignity.

There was a fierce conflict in the heart of David. At times he was moved to a generous renunciation: he would trouble Zillah no longer; he would go abroad in the next company of emigrant Cornishmen. At other times the intensity of love and jealousy within him drove him half-mad, and a tragedy seemed the only fit finish to his trouble.

Already the names of Mr Danvers and Zillah Trethewey were linked in the common gossip of Langissack. There were significant meetings and rambles which were quickly noted and commented upon by people keen of eye and long of tongue.

One morning Mrs Poljay met David Pentreath at Trethewey's corner. The woman was driving a wheelbarrow-load of tan—the spent tan made a slumbering fuel for a hearth-fire, and could be had at the tanyard for the fetching. The look on David's face arrested the woman, and she said kindly enough, 'I be cruel sorry for 'e Dave; 'tes a bad job when a man's sweetheart thraws 'en awver for a gentleman, an' sometimes 'tes bad for the maid.' And the words of pity fell on David like drops of vitriol.

Mrs Poljay, a sinewy, lean woman, resumed her load, and half-way down the street met Zillah herself.

'Isn't there a man about that would give 'e a hand, Mrs Poljay?' asked the girl gently.

'Drat the men!' answered the woman. 'I reckon I can fetch my awn firin'. Where there's men there's trouble.' She set down her load, and thrusting her hand into her pocket beneath her ample apron, produced a colour-tube, empty and flattened. 'Look 'e, Zillah, what I've a-found.'

'Why, 'tis only an old tube,' said the girl, smiling; 'something that Mr Danvers has used and thrown away.'

'Iss, used an' thrawn away,' echoed the woman; 'tes battered an' twisted, 'tes no good, an' he's a-finished wi' it.' With a little dramatic gesture she threw the tube into the gutter, and cried appealingly, 'Aw, my dear maid, don't 'e make a fule o' thyself.'

'Martha Poljay, how dare you?' cried the girl, as the significance of the woman's parable dawned upon her.

'Dare!' answered Mrs Poljay. 'I'm a darin' old sawl. I nursed your mother when other folks were afeared to go nigh the house. Zillah Trethewey, I beg 'e don't 'e make a fule o' thyself.'

Martha Poljay continued her way down the street, which was now so steep that the difficulty was not in propelling the jolting wheelbarrow but in holding it back. The tears were running freely down her hard, brown face, and she could not dry them while her hands held the barrow. At the turn of the hill by the 'Plume of Feathers' she encountered that chubby philosopher, Dicky Pascoe. Relinquishing her load, she hastily wiped her streaming eyes with her apron.

'Waarm work,' said Dicky sympathetically, mistaking her tears for perspiration; 'you'm most home, or I'd lend 'e a hand.'

'Dick Pascoe,' said Mrs Poljay, resting herself at the edge of the wheelbarrow, 'I be cruel vexed 'bout Dave Pentreath; 'tes shameful o' Zillah to thrav 'en awver.'

'For the matter o' that,' answered the wise little man, 'sometimes a maid throws a man awver same as us drop awverboard an undersized crab, knowing that the salt water's good for 'en, an' by-'n-by we shall be mighty glad again o' Meister Crab.'

'Iss, fay, if 'a doesn't get caught by another body.'

'True enough in a general way,' answered Dicky; 'but Dave Pentreath is wan o' they narra-minded fules that hath eyes awnly for wan maid, forgettin' that the Lord in His goodness hath made a multitude o' women. I reckon Dave Pentreath wed always crawl back to the same old crab-pot.'

The compassion of Martha Poljay rankled all day in the mind of David. It galled him that he should be the object of commiseration. The man was as proud as Lucifer, and on such a nature pity is corrosive. He would bide no longer in the town to evoke the sympathy of old

women. Yet before he departed he would see Zillah once more; there were a few words he would like to say to her—a very few words.

It was late in the afternoon when he called at Trethewey's and asked Aunt Deborah, 'Is Zillah home about?'

'I b'lieve she's gone out quarry-way wi' Mr Danvers,' answered she. David winced at the words, and Aunt Deborah felt sorry for him. For weeks past his grief had been plainly written in his face, and the kindly old soul, who had always loved him, felt a motherly concern for the suffering giant.

Climbing the steep of Jacob's Ladder, David took the cliff-path to the quarry. There was not a breath of wind, and the stagnant air was oppressive. In the south-east the threatening sky was the colour of dull copper, and the flat sea had caught the lurid tinge. All day the storm had been brewing, and a climax was imminent. There came a spasm of wind that agitated the bushes and heather, and suddenly died; then a few big precursory raindrops smote the earth like bullets.

Eager to escape a drenching, David hurried on towards the quarry, for the stretch of moor was shelterless. As he turned his back on the sea at the slope of the path, the opacity of brown cloud was split with lightning, and a rumble of thunder followed. He was hastening down to the old quarry-house when he perceived two figures clambering to the same refuge—evidently Danvers and Zillah. He could hear their voices as they scampered and stumbled over the boulders, the artist carrying his easel in one hand and a wet sketch in the other. David stood irresolute by the Bethel Stone, and the others reached the shelter of the quarry-house without seeing him. Then the rain came—a deluge of rain that swept down the hillside with a sudden fury of wind; in a few minutes the rocky declivity was trickling and gurgling with a hundred rivulets.

David crouched by the lee-side of the Bethel Stone; he could not suffer himself to share the shelter with the others. A great hatred of Danvers possessed him, and there was murder in his heart.

'What a storm! We were just in time!' cried Zillah; and Pentreath could distinctly hear the words.

'I'm afraid this is a poor shelter, for the roof is nothing but open rafters,' answered Danvers; 'you must allow me to throw my coat over your shoulders.'

Then they laughed together—laughed David Pentreath into madness. He felt the great stone vibrate as he strained his shoulder against it. A word from Danvers fell upon his ear—a word of endearment; and the devil within the man grew stronger than human. He set his back against the boulder, and drove his feet into the ground;

all his hatred and love and jealousy found vent in one supreme effort—the ponderous mass was tilted beyond its balance, and toppled down upon the quarry-house; and with an awful crash the crazy building fell in!

Pentreath himself was flung forward, and rolled down the slope, partially stunned; and when he struggled to his feet, bleeding and bruised, the quarry-house was a hummock of ruin, a shapeless cairn beneath which his love and his rival lay fitly buried. The thunder was now immediately overhead, and there was a terrific tearing and crashing. A great quantity of detached stone and rubble, the detritus of years, had slid down the hill—perhaps loosened by the shock of the falling house, or by strange coincidence brought down simultaneously by the storm; and this avalanche of débris added to the tumulus of the collapsed building.

David gazed on the wreck in a strange elation of anger and vengeance, and with a certain fierce sense of achievement. It did not seem in any way wonderful to him that the frenzy of one man could work such titanic mischief. In his egoism of passion this overwhelming catastrophe seemed but an adequate expression of his wrath, and the elemental riot a fit accompaniment.

He did not doubt that the two were crushed to death beneath the ruin. They would need no other burial, for there was a great heap of stones above them, like the mounds on the graves of the old kings upon the moor; and in time the grass would cover the stones, and bramble and heather and fern would grow there.

Then in the heavy rain he walked away; not as a man fleeing from the scene of crime, but deliberately and steadily, like one who has completed a task. For the time he was wholly pagan, without compunction; he felt himself a tool of fate, impelled to this deed of judgment by forces outside him.

An hour later David Pentreath entered the office of Mr John Coad, auctioneer and valuer, and agent for the Unity Line of South African mail steamers. The walls of the dingy little office were covered with announcements of sales, past and to come, mainly of cattle and agricultural effects; and a huge framed picture of the Unity liner *Syrian* lent a patch of incongruous splendour to the room.

'I want a through ticket to Geltesburg,' said David.

Mr Coad looked up in surprise. 'This is very sudden, Pentreath.'

'Iss, things happen sudden,' answered David curtly.

'You astonish me, Pentreath: a thriving fellow like you with a dozen interests in the town. Why should you emigrate?'

David ignored the question, and asked, 'When does the next boat sail?'

'To-morrow,' answered the agent, opening his book; 'you ought to reach Plymouth by the last train to-night.'

David began to count the sovereigns out upon the table; and the agent caught sight of a bruise and abrasion on the man's forehead.

'Been fighting, David?' he asked, not unkindly; but Pentreath continued the audible counting of the money.

'Excuse the inquiry,' said Mr Coad, putting down his pen and looking the other in the face; 'but are you perfectly sober?'

'Sober's a judge,' answered David grimly.

'You must pardon the question,' continued the agent. 'Robert Lowry was here last week in a similar hurry for Africa, and came next morning saying he must have been drunk, and Cornwall was good enough for any sober man; and he gave me a brave lot of trouble altering my books and cancelling the ticket.'

'I have a few matters in the town that I may ask 'e to settle for me, Mr Coad,' said David. 'I shall be writing you.'

'Always at your service,' answered the shipping agent.

When Pentreath had folded the voucher and placed it in his pocket-book, Mr Coad said heartily, 'Good-bye, David; I wish 'e well!' But David, ignoring the proffered hand and deaf to the valediction, walked out of the office.

'Love-smitten, I suppose,' said the agent to himself with a shrug.

Meanwhile strange rumours were flying around Langissack, wild talk of thunderbolts and earthquakes; and later on the little town was thrilled by the definite tidings: 'There's been a terrible landslip in the old quarry, and the Bethel Stone's fallen awver.'

## SOME SOUTH AFRICAN PREJUDICES.

By DOUGLAS BLACKBURN.

THIS is an almost universal characteristic of Colonial and other guide-books that, while they deal pretty fully with the country, they say little or nothing of its people; with the result that the new-comer has to feel his way through the shoals of local prejudices and customs, guided only by a long and often expensive experience.

This is particularly true of South Africa, where many an immigrant has seriously prejudiced his future by the commission of some solecism which has taken a long time to live down. There is hardly a Colonial governor or exalted functionary of whom some story of a blunder is not told; and it is, perhaps, as natural as it is unfortunate that a mild outrage against local prejudices makes a more lasting impression on the Colonial than the most brilliant efforts of statesmanship. One of the most successful English commanders of the early Kafir wars, whose splendid services probably saved Cape Colony, is only remembered now as 'the colonel who publicly shook hands with a nigger.' Bishop Colenso's transcendental ability and services to his Church are overshadowed by the fact that he admitted Kafirs to terms of equality. The late Lord Randolph Churchill is never mentioned without reviving ludicrous stories of his numerous 'tenderfoot' blunders in the veldt; while two famous artist-correspondents have consigned themselves to unenviable disrepute in the eyes of Colonials—one for picturing a British officer walking arm-in-arm with a Kafir girl, the other for representing a trek-wagon with double shafts, and collars on the oxen. Both these men may become titled Presidents of the Royal Academy; but no self-respecting Colonial would ever regard the honour as properly bestowed in the face of these unpardonable vagaries. It may be that South Africans are more sensitive on such points than other Colonials; but the fact must be confessed that, childish and trivial though these local prejudices may appear to outsiders, they are sufficiently pronounced to be worth knowing and guarding against. The few hints that follow may help very considerably in smoothing the path of many of those now joining in the 'new rush,' as Colonials describe the forthcoming exodus of Britons and others to the newly opened South African territories.

One of the first things the new-comer, who has any regard for the goodwill of his fellow-Colonials, will do is to learn to differentiate between 'Afrikaner' and 'Colonial.' It would be wiser did he decide to abolish the former word from his vocabulary if he has already learnt it, for although etymologically correct as describing a person born in South Africa of European parents,

there is an ineradicable impression in the mind of the average Colonial that the word implies a suggestion of black blood. Quite recently several influential educational authorities, backed by the leading South African papers, have endeavoured to rehabilitate the word and assert its claim as the proper designation of Colonial-born Europeans; but the people will have none of it, and leave it to the Cape Dutch. 'Colonials' is the only racial substantive admitted by the mass of British-descended inhabitants, and the new-comer will be wise to make a careful note of this fact. It is also worth remarking that most Colonials have a lurking weakness for being mistaken for comparatively recent arrivals; and no harm is ever done by taking a Colonial who has never seen a town larger than Durban for an ex-dweller of any British city. Yet, by an odd contradiction, it is not usually pleasing to them to hear the wonders of the older civilisations dilated upon, as many a new-comer has found when holding forth on the latest developments of Britain. It is practically certain that he will be abruptly pulled up by a reminder that quite as good—in its way—is to be seen at Capetown or Durban. The parochial spirit is very largely present in the average Colonial, as was exemplified in the case of the millionaire owner of one of the most valuable portions of Johannesburg. Some one hinted that wealth such as his might be profitably expended in visiting the cities of Europe. 'What's the matter with Capetown?' was the unanswerable retort. The wise man will always in the presence of a Colonial manifest the most absolute satisfaction with and appreciation of the colony in which he happens to be, for both Natalians and Cape Colonists are very proud of their respective countries, and resent anything like depreciatory criticism, actual or implied. The present Governor of Natal recently gave mortal offence by publicly declaring that he had seen nothing to justify the title of 'the Garden Colony,' and a mild complaint by a General of Division against the quality of the forage obtainable in Natal has placed that indiscreet warrior on the list of the enemies of the colony.

It is only just to admit that the Colonial has often to put up with a great deal from the 'Johnnie-come-lately,' as the new-comer is colloquially labelled. This young gentleman has a provoking habit of sneering at local customs and institutions, and drawing preposterous comparisons between them and those of the country he may have left. It is, therefore, not surprising that when he commits himself by some egregious piece of ignorance or folly it is brought home to him with full force. One of the most fruitful sources of amusing blunders on the part of the new-

comer is his inability to grasp the enormous extent of the South African continent. To him, for some time at least, Cape Colony, Natal, Rhodesia, and the Transvaal are merely names, conveying little that is definite as to their geographical ramifications. He asks in sublime innocence if his host knows Jones of Bloemfontein or Smith of Port Elizabeth, as he might when at home inquire about a resident in the next street. The same man would smile contemptuously if a Colonial took it for granted that Jones of London knew Smith of Edinburgh, though the Colonial would have more reason for the assumption, for Jones and Smith are much nearer one another than they would be if residing in Durban and Port Elizabeth respectively. One of the many stock South African stories told at the expense of the Briton is certain to be retailed to the new-comer before he has been many days in the country. It is the perfectly true case of the War Office having instructed an army chaplain to conduct religious service at Maritzburg in the morning and at Port Elizabeth in the afternoon, the distance being only four days' journey! Britons are not quite so ignorant of South Africa as they were before the war; but even to-day it is no uncommon thing to receive a letter from a friend in England announcing the presence of a relative 'somewhere' in South Africa, and expressing a hope that 'you will call on him.' A recent mail brought a letter to the writer from a distinguished English novelist giving the address of a mutual friend a fortnight's journey distant, and suggesting that no doubt we saw one another occasionally.

The new-comer is generally puzzled at first by the South African custom of measuring distances by time. A place is so many hours off, not miles. In a country where one can shout to one's neighbour but cannot reach him without a couple of hours' hard riding, skirting mountains, marshes, and gullies, it is much more reasonable to measure by time than by distance. An hour's riding is reckoned to be six miles; but one rarely hears miles mentioned except by new-comers.

Most Britons on arriving in South Africa are struck by the utter absence of the class distinctions he has known at home; and the Colonial in turn finds it almost impossible to grasp the ideas of 'class' and social strata. He cannot understand how a man who has resided in an English town is not personally acquainted with the most exalted inhabitants thereof; and many a new-comer has been under suspicion as an impostor or as having a past to conceal because he has had to confess to never having met certain distinguished fellow-countrymen. Every Colonial is personally acquainted with his public representatives, from the Governor and Prime-Minister downwards, and he cannot conceive how an Englishman could live in London without being on friendly terms with Lord Salisbury or the Colonial Secretary. The Colonial is essentially a

democrat—until he makes money and visits England. Class distinctions are utterly beyond him, and this fact is especially brought home to the new-comer should he be curious enough to ask particulars as to the individual members of a company at, say, a social gathering. Just before the war the writer was a guest at a wedding in the Transvaal, where the company represented the following incongruous elements: the bride was the daughter of the village midwife, her husband was the son of an immensely wealthy farmer, and he himself held military rank equivalent to a General of Division. The bride's elder brother was a member of the late Orange Free State Executive—practically a Cabinet Minister—the second brother a ticket-collector on the railway, a third a blacksmith, a fourth chief magistrate. Other relatives present were a wealthy Natal merchant, a Natal magistrate, and a village road-inspector. This comprehensive intermixture of every class of the community has the natural effect of widening interests and knowledge of persons. Hence it comes that your host will not hesitate to discuss at the dinner-table the comings and goings of private persons of whom you have never heard. He takes it for granted that you know them and are interested, for the Colonial is essentially local, and the fact that Mrs Jones has bought Mr Smith's best horse is an event of much wider interest than the defeat of the British Government or a revolution in Russia. Another interesting feature of the Colonial is his inability to appreciate heroes or hero-worship. He handles with appalling familiarity names that the average Briton has been used to regard with something like awe. The writer well remembers the impression produced upon him some years ago by a Transvaaler, still living, who was never tired of inveighing against 'old Livingstone.' He had been a storekeeper when the great explorer was sojourning on the borders of the Limpopo, and got the worst of a deal with the Doctor, who was a smart man of business, as the Boers often found. I remember endeavouring to impress the storekeeper with some idea of the exalted position Dr Livingstone occupied in the popular mind at home. 'Yes,' replied the storekeeper, 'somebody told me they made a great fuss of the old chap.' It is much the same with every other 'Somebody;' he is only 'old So-and-so,' or Tom, Dick, and Harry, to the Colonial. 'She doesn't seem a bad sort of body; but she has no notion of how to treat Kafirs,' was the remark made in all seriousness, and with no intention of disrespect, by a farmer who had recently travelled with the titled wife of an exalted British official. This characteristic freedom is equally extended to a guest, who is often at first embarrassed by the blunt questioning to which he is subjected. One's private affairs are looked upon as fit subject for discussion at the dinner-table, for in a country where everybody's financial position is known, there is no attempt

at 'keeping up appearances' such as is deemed policy at home. But it must not be inferred from this that the average Colonial is rude or boorish. On the contrary, he is invariably most solicitous for the comfort of his guest; and if, as the country host generally does, he sits on your bed and watches you disrobe, it is only an evidence that he enjoys your company and is anxious to see that you want for nothing while awake. Besides, a bedroom in a Colonial house is not regarded as a sanctum: it is only a sleeping-place, and so is the dining-room when visitors are numerous.

It is fortunate that in South Africa there are no party politics as we understand them at home, and no vexing religious differences. A man's politics are his views of the moment on some subject of purely local interest. He follows no leader, and you may safely abuse the politician your host voted for at the last election, for the chances are that he will oppose him next time. Of British politics the Colonial is woefully ignorant, or he is indifferent. He knows that there are such things as Liberals and Conservatives, but is somewhat hazy as to their differentiation. There is, however, one subject on which the new-comer should be wisely circumspect, and that is the native and his relation to the white. Nowhere, not even in the most anti-negrophilist states of America, is the 'colour line' drawn more carefully than in Natal, and only a degree less strictly in the other colonies. The new-comer must never manifest any interest in the natives, except to abuse them; and he will not need a second warning against bringing up the subject of missionaries. Should he do it at a reputable town-house, he will find his remarks received in chilling silence, and the host adroitly changing the conversation. At a farm he would most likely be treated to a wearisome discourse on native missions that will surprise him. Let the new-comer keep his eyes open and his tongue silent on native matters until he has been in South Africa a year or so, and he will be thankful for the advice here tendered.

Another matter that often irritates the new-

comer and prompts him to hasty generalisation is the indifference to the sufferings of animals that is unfortunately too pronounced a trait of South Africans. It can hardly be called cruelty, for it is rather that evil which is wrought through want of thought much more than want of heart. It is not unusual in new countries whose inhabitants have had to undergo hardships, and who consequently look upon a certain amount of pain and suffering as the due of man and beast alike. Still, the average Briton often finds his temper and patience sorely taxed by exhibitions of cruelty to horses, oxen, and dogs that in England would excite the indignant protest and interference of the spectators.

Colonial women are generally keenly alive to the humour that lies in the attempts of a new-comer to pronounce Dutch or native names. As practically every geographical term throughout South Africa is in one of these languages, the new-comer should make an effort to master the rules for pronunciation, which are surprisingly simple and regular, and by no means so formidable as they appear when expressed in print. The newspaper correspondents have during the war been responsible for many geographical atrocities on both Dutch and Kafir names, their rule apparently being to string them together and make one word of them. 'Crystalpalacenearlondon' is no more an absurdity than some of the long-drawn-out burlesques in the English papers on South African names that amuse and puzzle South Africans. The Taal, the language of the Boers, is extremely easy of acquirement, especially to Scotsmen, who are rarely long in contact with Boers before they are able to communicate with their neighbours without the least difficulty. Very little Dutch is spoken in Natal, but every Natalian speaks Kafir more or less fluently and correctly, and is severely critical of the mispronunciations of the new-comer; but so long as he remembers that *v* is always *f*, and final *d* always *t*, and does not say 'on the veld' for 'in the felt,' he will have learned the shibboleth that will pass him through until he is more at home geographically and philologically.

## BOURNVILLE: A MODEL MANUFACTURING VILLAGE.

MR GEORGE CADBURY, of the well-known cocoa firm, has taken a very practical method of solving the problem of overcrowding and insanitary conditions by setting apart a portion of his estate of Bournville, five miles out of Birmingham, for the erection of a model village. In this and other successful philanthropic schemes he has probably earned the title of 'the greatest municipal statesman of the age.' Bournville is a perfect village paradise, and awakens

the admiration of all who have visited the place.

The gift, which is vested in and managed by trustees, is valued at between one hundred and seventy thousand and one hundred and eighty thousand pounds, and the trust deed is dated 14th December 1900. The motives which prompted Mr Cadbury towards the formation of the Bournville Village Trust were a desire for the alleviation of the evils of insanitary and insufficient accommodation amongst the working-classes, and of securing

to workers in factories some of the advantages of outdoor life, with opportunities for the natural and healthful cultivation of the soil. These benefits are not limited to the workpeople of Messrs Cadbury. Mr George Cadbury, from over forty years' experience in teaching a men's Bible-class, and going into Birmingham every Sabbath morning for that purpose, is well able to judge of the requirements of working-men, and he knows exactly where the shoe pinches. Nothing but good, he felt, would be the result of bringing people away from the squalor of the town to the more wholesome atmosphere and surroundings of the country.

With this in view, he decided that every house at Bournville should have a fair-sized garden; that no building should occupy more than about one-fourth part of the site on which it was erected, and should not be more than two stories high; and that about one-tenth of the land, in addition to roads and cottage-gardens, should be reserved for parks and recreation-grounds. The first one hundred and forty houses were sold at cost price, and the land upon which they were built leased for nine hundred and ninety-nine years. The original purchasers have in some cases sold their houses at a profit of from fifty pounds to one hundred and twenty pounds per house, and it was considered that this increased value ought to belong to the Trust, as it arose from the certainty of pleasant surroundings for the future. The cottages since built have therefore been let to weekly tenants. At the present time thirty-one new cottages have either been built or are in course of erection, and plans for eighteen more are being prepared, so that by the end of next year there will probably be at least five hundred cottages on the estate, with a population of some two thousand five hundred persons. The rents range from six shillings and sixpence a week (rates included) to nine shillings (rates not included). The cottages are semi-detached or in blocks of four; and Mr Barlow says that monotony has been avoided by the introduction of a great variety of design. The smallest houses have on the ground floor a living-room or kitchen, parlour, scullery, lobby, and larder; and on the first floor three bedrooms and a linen-closet. There is also a bath in the kitchen, and the usual outhouses. The larger cottages have similar accommodation, with an extra bedroom. There is no licensed house for the sale of intoxicating liquor upon the estate at present; but should one be established, it would be under the control of the trustees, and any profit gained would be spent on recreation and counter-attractions. It is not to be wondered at that there is keen competition for such houses, and that they never stand empty. It need only be further mentioned that when the estate is built over, the Trust may have an income from ground rents and house rents of about fifteen thousand pounds a year, which will be applied to the development of estates on similar

lines. A Ruskin Memorial Institute is being built here which will take the form of a village library, art gallery, and museum. The site was given by the trustees of the Bournville estate, and the foundation-stone was laid by Lord Avebury.

A brother of Mr Cadbury has built almshouses. On Mr George Cadbury's estate at Northfield he has a wind-machine that generates the electrical power which lights the manor house, does the thrashing, and churns the butter. He evidently agrees with the author of 'Wasted Wind' (*Chambers's Journal*, 1898) that we have many powers of nature unused.

When Mr Cadbury came to the business about forty years ago twelve hands only were employed, and it was a losing concern. For many years he worked from seven in the morning till nine or ten at night until the business took a turn. At one time he thought of going as a tea-planter to India. One of his first acts on becoming an employer was to raise the wages of the women workers all round. At present he rises at 6.30, and rides on horseback with his son for half-an-hour before breakfast; then he cycles to business at 8.30, where he remains till 5.30. Bournville and eleven acres of works testify to the well-deserved success of Messrs Cadbury Brothers, in which thousands more are having a share. In 1879, the year of the removal of the factory from Birmingham to Bournville, two hundred and fifty hands were employed; now the number is about three thousand six hundred, of whom two thousand three hundred are women.

#### THE ALIEN'S FAREWELL.

If I should die, Love! here, to-night,  
An alien, under unknown skies,  
It would not be the heathen's cries  
That press the anguish on my sight,

Or any doubt in Him who gave  
The faith that made the human soul;  
But somehow, ere the deeps unroll,  
I want your hand to make me brave.

One parting more! Not all the past  
Farewells and greetings were as sweet  
As the near music of your feet,  
That came to see me at the last.

One kiss! But I would not awake,  
But bear the seal to Paradise:  
The inprint of your lips and eyes,  
That I would treasure for your sake.

Your hand! that I, across the dark,  
May know the path you chose of eld,  
When some affinity had held  
Us kindled by a kindred spark.

It cannot be you will forget!  
And so I will not say farewell;  
I loved you more than I can tell,  
And waited till the last star set.

J. STUART THOMSON.

## SIXTH SERIES.

IN DR JOHNSON'S CIRCLE.

By SARAH WILSON.

ON the Alne, between Alnwick and Alnmouth, nestles the ancient village of Lesbury, with shade-giving trees here and there, bright gardens everywhere; with a pearl-gray church founded in Saxon times, an old stone bridge spanning the narrow river, a steam-power mill, a few substantial houses, and several clusters of cottages, the sandstone masonry of which varies from pale-buff to dove-colour according to the date of their erection. At the beginning of last century the vicar of this parish was Percival Stockdale, who has left two volumes of autobiography (*Memoirs of his Life and Writings*, 1809) that give us incidentally various particulars of a circle that has an enduring interest for most of us. He included among his intimate acquaintance Dr Johnson, Oliver Goldsmith, David Garrick, Sir Joshua Reynolds, the Burneys, Sandby, and other celebrities of his time. The Duchess of Northumberland (Horace Walpole's duchess), he tells us, called in her coach at his publisher's door, in Bond Street, to buy some of his printed sermons; and it was the Duke of Northumberland who presented him to the additional living of Long Houghton: he was indebted to Lord Thurlow for Lesbury. Dr Johnson familiarly called him Stockey; Garrick wrote verses in his honour; Mrs Garrick acceded to his request to allow him to carve her initials on a tree in conjunction with his own; he wrote an ode on the death of Dr Johnson's cat Hodge; he drank tea with the famous lexicographer and his household, and in many ways identified himself with the famous set of wits of that day. Miss Jane Porter, the author of *Thaddeus of Warsaw* and *The Scottish Chiefs*, resided with him in Lesbury Vicarage, a fact he gratefully acknowledges in the dedication of his autobiography.

Stockdale's father was vicar of Branxton and perpetual curate of Cornhill. At that time, he declares, Cornhill was in great repute as a

chalybeate 'spaw,' and many visitors came from Edinburgh and Newcastle to drink the waters. They formed the society of the place. He was educated first at Alnwick (where he assisted with much zeal at a barring-out), afterwards at Berwick-on-Tweed, and subsequently at St Andrews University. It was the day of Wilkes, who contested Berwick in 1752, and left behind him a wonderful impression of charm. Dining with Stockdale twenty years afterwards, Mr Wilkes explained that he had gone to Berwick on the strength of a promise that the expenses of canvassing, amounting to two thousand pounds, would be defrayed, which had not been kept. It was also the day of Richardson, whose *Pamela* had taken the reading world by storm. His *Clarissa* was published whilst Stockdale was at his Alnwick school, and he writes concerning it that it was 'universally read with the avidity which it must ever give to sensible and susceptible minds.' In after-years he had a tilt with Dr Johnson for his want of appreciation of this author.

The great excitement concerning the probability of war with France whilst he was at St Andrews, combined with the death of his father, which occurred at this time, made him relinquish his first intention of being a clergyman and solicit a commission in the army. He obtained a second lieutenancy in the Royal Welsh Fusiliers, and with Admiral Byng's fleet proceeded to Gibraltar; but he took London on his way to Portsmouth to embark. Here the interest of his reminiscences begins. He saw Mrs Woffington in Congreve's *Love for Love*, read some of his verses to Foote (he was always writing verses), and eventually saw Barry as Othello, Mrs Cibber as Juliet when Garrick was Romeo, and Sheridan as Cato.

The pretty girls of those days were called 'toasts,' and it was the fashion to write verses in their honour. There were some very handsome Spanish 'toasts' at Gibraltar, and they had their fair share of verses. After an engagement, without

casualties, his regiment was ordered back to Southampton, and thence to Leicester, which destination involved a march on foot of a hundred and forty miles. In the course of the winter he was sent to Biggleswade with a recruiting party. Here the reigning 'toast' was a miller's daughter, and some rudeness from admirers had caused her father to forbid her to see strangers. Stockdale made a bet of a dozen of port that he would overcome this difficulty; and he talked the father into giving him permission to have a short conversation with the beautiful rustic, who allowed him, he says, to salute her respectfully. The wine was promptly disposed of at the 'Swan' in the village, and a long poem written in the lady's honour. However, even such a consolation as this did not reconcile him to the army as a profession, and in November 1757 he left it.

After a time he was ordained, and became Mr Sharpe's substitute in the curacy and lectureship of Duke's Place, near Aldgate, for an annual pay of forty pounds; and later he was appointed reader in Grosvenor Chapel, South Audley Street. He now made the acquaintance of several of the London publishers, who were called booksellers in those days. Sometimes several of them would club together and commission an author to undertake a task for them. In the course of years he translated various important works in this way. He also wrote a *Life of Waller*, which gave so much satisfaction that, according to his own story, he was approached with a proposal to write the *Lives of all the poets*. He declares that he had interviews with more than one bookseller concerning this undertaking, and that he was badly used when they passed him over and placed the scheme in the hands of Dr Johnson.

Before he met with this disappointment he had spent five years as curate at Berwick and two years in Italy. As time went on he filled various appointments in different parts of the country, such as a curacy in 'a boorish and vulgar village' on the skirts of Herefordshire, a tutorship he gave up because he was asked to be the prompter in a play that was being got up in the house, the editorship of the *Critical Review*, and he made many translations, such as Tasso's *Aminta*. Not to dwell upon details of no particular interest, we will come at once to the good day when Mr Davies the bookseller invited him to dinner to meet Dr Johnson, Dr Goldsmith, and Mr Meyer the miniature-painter. He was then a near neighbour of the great lexicographer, as he lodged in Bolt Court, and after this introduction he seems to have consulted him upon many points of conduct in his affairs. He mentions that the Doctor did him the honour to come to his lodgings, and he had the pleasure of occasionally visiting him and the blind poetess who enjoyed the shelter of his roof. Among other efforts in his behalf, the Doctor wrote a letter to Burke to solicit his interest; and when Stockdale delivered

it he found that eminent personage engaged in reading a pamphlet by a grandson of Ticknell. Dr Johnson gave him the best of advice on many occasions also; he recommended him to write a history of Spain, and told him he might use his name in mentioning such a project to Cadell.

Stockdale sent a copy of three of his sermons to Garrick (the same that the Duchess of Northumberland had called for in her coach), who did him the service soon afterwards of praising in verse, over the signature of D. L. for Drury Lane, another of his works, a poem entitled *The Poet*. He invited Stockdale to visit him; and Stockdale describes a calm, serene, and beautiful evening when he took tea with Mr and Mrs Garrick in the temple they had built in their grounds and dedicated to Shakespeare. He spent many happy days with them, and the trio arranged to accept an invitation to The Loax, the seat of the Earl of Shelburne. It was on this occasion that the initials of Mrs Garrick were cut in the bark of a tree near Wycombe, with his own beneath them. This incident he described in thirty-nine stanzas.

At last, after foreign travel, two matrimonial ventures that were not of the best, many short engagements, and various publications, he applied to Lord Thurlow for the vacant living of Lesbury, and obtained it. The Duke of Northumberland presented him to the adjoining benefice of Long Houghton. No doubt he owed this good fortune to the recommendation of his acquaintances. Dr Johnson, referring to Stockdale's essay on Pope to a knot of friends drinking tea with him on a Sunday afternoon, declared, 'Stockey has defended the cause of Pope with uncontrovertible eloquence, and he must be supported in his defence of that great poet.'

But Lesbury was as naught after London. The pearl-gray church, the winding river, the one-arched bridge, and the old dove-coloured cottages palled. The new vicar interested himself in collecting materials for an account of a predecessor who had lived there till he attained the great age of a hundred and ten years; but no occupation was of avail. The desire of foreign travel came upon him again, and under the form of an authorisation to perform the duties of a clergyman to such of His Majesty's subjects as resided in the dominions of the Emperor of Morocco, he shook the village dust off his feet and betook himself to his old haunts in the Metropolis, on his road to Africa. He went on as far as Gibraltar, where he obtained a chaplaincy under Admiral Peyton on board the *Leander*. Here the conversation of the officers with whom he messed was so little to his taste that he made haste to leave them, and went on to Algiers with a new acquaintance. He soon quarrelled with this gentleman, and turned his face homewards in company with a German surgeon. At Marseilles they were confined to the lazaretto for a month before they got leave to take the diligence through France. On reaching London, Stockdale applied himself to the study of Syriac

for a year. He hired a cottage near Windsor, in the neighbourhood of his friend Sandby the painter, intending to lead a life of retirement; but a letter from a Durham acquaintance made him alter his mind and take up residence in that city. In this way he consumed his restlessness. In the end, after an absence of twelve years, he returned to Lesbury. He was by no means under a cloud. Mr Catnach, of the firm of dying-speeches fame, then a printer at Alnwick, became another

of his publishers; Earl Grey permitted him the use of his fine library at Howick; and, to his great gratification, one of his pamphlets censuring bull-baiting was quoted from an Alnwick pulpit. Besides, he enjoyed the companionship of the accomplished Miss Porter. As he went about the fine old village, however, we may be sure his thoughts were often with the 'toasts' of former days and the verses written in their honour, but still more frequently with Dr Johnson's circle.

## THE BETHEL STONE.

### CHAPTER V.

**P**LYMOUTH on a wet night is at its worst; and Plymouth, among other and nobler attributes, can boast more wet nights than any other town in the west. It was raining heavily when David Pentreath reached the docks and inquired for the *Syrian*. He was told that the steamer would not be in till the early morning, and that he had better get a lodging for the night.

'Going abroad?' asked a man at the quay-side. David nodded. 'Then I reckon you'll have to sleep on deck,' said the fellow, with a grin, 'for there isn't a berth long enough for 'e.'

Covered with a long mackintosh and carrying a heavy portmanteau, his only luggage, David walked the wet streets. The people hurried past him in the rain, townsfolk of all classes, sailors, and marines, all eager for shelter. Many stared at the big fellow; for his stature, familiar enough in Langissack, provoked interest whenever he stirred abroad.

He had no thought of putting up at an hotel; bed and sleep were things that he had not reckoned on. He had no plans but a vague notion of spending the rest of his days in strenuous labour. He had closed one chapter of his life, and the future held no happiness, no hope for him, but only work—fierce, unremitting work. The pagan mood was still upon him, and he was unrepentant; the deed he had done was inevitable, and he was but an instrument. Another man would gladly have rid himself of the burden of the portmanteau; but the load taxed his energy, and the effort was congenial.

Alas for the pagan! At the corner of a street in the Millbay road, outside a glaring public-house, stood a pitiable old beggar-man playing a fiddle. Suddenly David stood still, arrested by the music like a man struck by a bullet. The crazy instrument was ill-played; the passers probably thought that the night was evil enough without its screeching; but the tune was 'Beulah Land'—'Beulah Land' of all tunes—'Beulah Land' that Zillah sang on Sunday evenings in the old happy times; and instead of the miserable squealing of

the fiddle, David heard a girl's clear voice, and familiar words sounded in his ears: 'I've reached the land of corn and wine,' and the reiterated refrain, 'O Beulah Land! dear Beulah Land.'

When the tune was finished the fiddler held out his drenched hat beseechingly, and Pentreath gave him the first coin his fingers closed upon—a half-crown; then with a sob of agony he walked on—a bereft, doomed, heart-broken man, with two murders upon his soul.

He walked swiftly, turning his steps towards the North Road Station. All thought of South Africa had left him; he had now only one object, expiation, and one goal—the gallows.

He passed the open door of a police station, and in the corridor saw a constable standing in the gaslight. On an impulse, he entered the station and cried wildly, 'I give myself up for the killing of Mr Danvers an' Zillah Trethewey!'

The astonished officer called a superior from an inner room, and David repeated his confession: 'I surrender myself for the murder of Julian Danvers and Zillah Trethewey. I heaved the Bethel Stone 'pon 'em!'

It was a mad story that he told, an incredible story, and at the finish of his incoherent narration he set down his portmanteau, and holding out his wrists with a gesture of surrender, as if inviting the handcuffs, cried vehemently, 'Tis a hangin' job, and here I be—guilty!'

The inspector exchanged a meaning glance with the constable, and a smile played upon his face. 'Take down the information, Jackson,' said he in an unconcerned voice as he left the room, 'and detain the man till the morning.'

It was evident to Pentreath that the police did not believe him; they thought him drunk or deranged. Constable Jackson very deliberately took a sheet and prepared to write.

'Name?' said he curtly.

Then it occurred to David that it would be fitter to make his confession in Langissack, where folks knew him and believed him. They doubted his word, these Plymouth police, and this suspicion annoyed him even in his perturbation of soul.

'I reckon 'twill save questions if I tell my tale in Langissack, where my name's known,' said he; and, taking up his portmanteau, he moved towards the door. The policeman intercepted him, but was brushed aside; and David ran along the corridor into the street, followed by two constables, who blew their whistles mightily, but were feeble in pursuit.

'What place did he say he came from?' inquired the inspector afterwards.

'Glissack or Glassick,' answered Jackson; and the officer, after looking up the gazetteer, said conclusively, 'There's no such place.' So the episode closed.

David made his way to North Road, and inquired the next train to Langissack. 'Five-thirty in the morning,' said the booking-clerk.

All night David walked the wet streets in an agony of remorse. He was eager to reach Langissack, impatient to pay the penalty of his crime. He heard the slow hours strike from the church clocks, and the night seemed interminable. The tune of 'Beulah Land' haunted him, and he could not drive it away. He thought it would make him mad; his pulses beat and his blood surged to the beat of the melody; and his very footsteps, strangely loud in the deserted streets, fell to the persistent rhythm. Once in the stormy wind there came to him the sound of many voices—women's voices—singing, 'Beulah Land! dear Beulah Land.'

He was at the station a good half-hour too soon, and feverishly paced the empty platform. It was still pouring, and an amazed porter, seeing with what indifference the tall passenger walked into the wet beyond the shelter of the station-roof, said, 'Hadh't you better keep under cover till the train comes in?'

David turned upon the man and asked, 'Can 'e tell me the date of the Bodmin Assizes?'

At last the train came in; a deliberate train it was, that stopped at every little Cornish station, and all the way the engine throbbed, 'O Beulah Land! dear Beulah Land.'

David got out at Tregurra Junction; and, too impatient to wait for Poljerry's bus, he walked the six miles to Langissack. When he saw the familiar roofs and chimneys and the pinnacles of the church he felt like an alien with no part or lot in the old place. The south-west wind blew up the combe in fierce gusts, and when he drew nearer the town a smell of the tanyard greeted him like an accusation.

Exertion and emotion began to tell upon him, and he staggered a little as he walked. He stopped a minute at the top of the town to think. Should he make his confession to old Parson Carlyon or to Colonel Boase? They were both magistrates; but the Colonel was a stern, grim man; he would not spare himself: to the Colonel he would go.

'Hullo! Dave Pentreath! Wherever did 'e

spring from?' The voice was Pascoe's, and the little man, clad in shining oilskins, stood in the middle of the road staring at David as at an apparition. 'I'm mortal glad you'm still in the land o' the livin'.' I scoured the town for 'e last night—thought you were dead an' buried, till Mr Coad told me you were smitten sudden with the foreign fayver an' had gone off with the miners in a huff to Afric's sunny fountains. There's been rare doin's, I can tell 'e. Half the folks niver went to bed for tellin' about it; an' here you be trapesin' home along with a port-mantle! You've missed the great doin's, Dave; you'm a day after the fair.'

'What has happened?' gasped David.

'Happened? Wonders! Thunderbolts an' earthquakes, an' two folks buried alive, an' the dandiest bit o' diggin' you ever seed, an' amazin' rescue! Why, what's the matter with 'e, Dave? What be laughin' at? Bless the fella, 'tes no laughin' matter. If you'd a see'd Zillah dragged out half-dead an' all awver dirt'—

The portmanteau had dropped from the hand of Pentreath, and he broke into hysterical laughter—laughter that had no mirth in it; then covering his face with his hands, he cried in a way that was utterly childish.

'I reckon you'd better sit down in the hedge a minute, Dave,' said Pascoe, attempting to support the reeling giant; 'you'm a bit awvercome. I know you'm a bit sawft on that maid; but I should niver go into 'stericks myself for the sake o' a sweetheart, though I be a deep lover o' the women.'

'Tell me all 'bout it, Dick,' said Pentreath when the giddiness had passed.

'Well, 'twas about tay-time, an' a terrible storm, thunder that shook the houses, an' lightnin' fit to blind 'e; an' when it cleared off, Sam Hoskin rinne'd in shoutin' there was a great fall o' rock at the quarry, an' the quarry-house was buried. Out we went to see the wonder, an', sure 'nough, the old quarry-house was all scat abroad, an' the elements had played skittles with the Bethel Stone; an' while we stood wonderin' there was a tap-tap-tappin' in the heap o' ruin. Sam was 'most scared out o' his senses. "Do 'e hear that noise?" says I. "Iss, fay," says he; "an' this is no fitty place to bide." "Man alive!" says I, "what be 'fraid o'?" "Nawthen' on the face o' the earth," says Sam; "but I can't abide no underground devillies." Then the tappin' came again, an' I thought I heard a far-away voice, like a cry from the bowels o' the earth. "'Tes a signal," says I; "there's a live sawl under that heap. Run for your life, Sam, an' bring men!" Then while I waited for the help, I took a great stone an' answered the knockin', tap for tap, an' I could tell they heard me an' understood.

'Then the folks came runnin' in twos an' threes, runnin' in scores, till all Langissack,

male an' female, was there in the wet. We had begun to clear away the rubble, when up came Tregurra the minin' cap'n, an' ordered us back while he inspected the job. "If they'm to be brought out alive," says he, "'twill take more science than you fools be applyin' to the job." For the big granite jambs an' posts in the house had falled inwards, an' made a cubby-hole in the ruin with a mass o' rubbish on the top, an' it all hung together so touchy as a gun-trigger. So we tackled the job in a scientific way, an' fetched timber, an' digged a sort o' adit; an' when the darkness fell they made a great fire, an' we worked by the flare; an' Susanna Chegoweth fetched her 'cordeon, an' the women singed while we digged. They singed "Moab," double-sevens—an' "Moab," Dave, is a beggar o' a tune to dig to—an' "Wrastlin' Jacob," an' "Beulah"—

'Iss, I heard 'e,' said David solemnly. 'I heard 'e to Plymouth.'

'You'm wanderin', Dave; you'm a bit light-headed. You'd better go home an' get to bed.'

'An' you digged 'em out alive?'

'Iss, fay, us shovelled 'em out—bruised a bit, an' scratched, an' exhausted, an' half-stified, an' terrible dirty, but not much injured—Mr Danvers an' Zil Trethewey. We knawed all along 'twas they, for Trethewey had missed his maid, an' Bolitho was lookin' for the gentleman; so it didn't want no conjurer to putt wan an' wan together.'

The two men were now walking down the High Street, Pascoe carrying the portmanteau, for David's strength had left him.

'When the rubble was most cleared away,' continued Dicky, 'I spied a little chinky between the granite stones, an' what did I do, bein' a man o' genius, with more sense than the rest? I got a long clay baccy-pipe, an' poked the stem through the chinky, an' filled the bowl wi' brandy; an' I says to Tregurra, "How's that for science, cap'n?" An' soon I heard the voice o' Zillah, fainty an' muffled, call, "Is David there?" 'Twas good o' the maid to remember 'e, Dave; buried alive with the latest, she had a sawft thought for the last but wan. "'Tis Dick Pascoe," said I through the chinky. "Dicky," she answered, "I'm dyin'; I want to speak a last word to Dave Pentreath." Bear up, Dave! You were nearly down in the gutter that time. "Don't 'e spake o' dyin', my dear," says I; "for we've nearly shovelled 'e out. I'll fetch David." But I couldn't find 'e, Dave, an' nobody had see'd 'e. I thought sure you must be buried too somewhere in the quarry.'

They had now come to Pentreath's door; and, carrying the portmanteau into the house, Pascoe said heartily, 'Get some breakfast, Dave, my man, an' get to bed.'

But David did not go to rest. He washed the grime of travel from his hands and face, and

without changing his wet garments walked up to the tannery. The gallows being no longer the goal of his desire, his thoughts reverted to South Africa; but he would clear his soul of the confession that was bursting within him. It was no longer a matter for the magistrates; it was to Zillah Trethewey that he would make his avowal.

The rain, which had not ceased for seventeen hours, still fell heavily; the steep street gurgled with running water, and fish offal and vegetable refuse floated in the puddles or were swept down by the little cascades. Jupiter Pluvius is sole scavenger in Langissack.

'I want to see Zillah,' said David to the woman Agatha at Trethewey's door.

'You can't; she's upstairs,' answered Agatha.

'I want to see her particular,' persisted David.

'I tell 'e ye can't. Bless the man, the maid's abed!'

Pentreath did not enter the house, but waited an hour outside in the street, like a sentinel; the passers wondered to see the man standing there like a stone image in the rain.

Then Agatha came out with the message, 'Missus says will 'e come indoors?'

David entered the kitchen, but would not sit down; he stood by the wall, his head on a level with the top of the great eight-day clock.

Presently Aunt Deborah Trethewey came in; she was not knitting for once, the occasion being too emotional.

''Tis a merciful escape, David,' said she; 'the Lord hath brought our dear maid out o' the valley o' the shadda.'

'I want to see Zillah particular, Aunt Deborah,' said David.

Aunt Deborah hesitated. The good soul had lately worried a good deal over her knitting. The threads of young life around her were not making the pattern she hoped for; they were getting sadly tangled.

'Zillah's awake. I reckon you can see her, David; she's a bit battered, an' looks weak.'

She led the way up the narrow stair, and David, following with heavy tread, had to duck low to escape the beams.

''Tis David come to see 'e,' said Aunt Deborah, opening the door; then the good soul beat an instant retreat.

It was a long, low chamber, and the roof sloped at one end, so that David had perforce to stand with the bowed head of penitence. At the farther end of the room, propped with pillows, lay Zillah, her head bandaged, and a cross of plaster on her temple, yet looking lovely in spite of these disfigurements. She smiled as he entered; but the smile was wasted upon him, for a blur was over his sight, and he saw nothing but the vague white bed.

''Tis good of 'e to come, Dave,' said the girl gently; and presently the mist cleared, and he saw the pallid, plastered face of Zillah in its

scarred loveliness looking wistfully towards him. He noted the linen fillet that swathed her head, and the bandage at her wrist; and he sobbed aloud.

'I'm afraid I'm a poor object to look at, Dave,' said she, half-laughing. 'Tis the Lord's work.'

'No!' cried he hoarsely; 'tis the devil's doings, an' David Pentreath's!' And straightway he plunged into his confession. Zillah buried her face in her shaking hands as she listened, and gave a gasp when the tale reached its climax. Dave spoke no word of regret or contrition, but told his naked story as if it concerned not himself but another; but at the close he cried vehemently, 'That'll show 'e what love'll bring a man to; for I have loved 'e, Zillah—loved 'e in my wrong-headed way—loved 'e with a love that's so deep's the pit! I came back to surrender myself for killing 'e—'tis the mercy o' God I didn't; an' I believe I stand within the law as 'tis. If so, here I be!'

The girl removed her hands from her eyes, and looked up at him. In the fitness of things there should have been some horror or aversion in her face, or at least indignation and reproach; the look in her eyes may have been pity; if so, pity had taken to itself a strange gleam.

'I am going to South Africa, Zillah!'

'Oh, David, David!' At last the terror of his tale had struck home, and in a troubled voice she asked, 'Why should 'e go? The law can't touch 'e now.'

Passionately, almost fiercely, David answered, 'I couldn't bide in the same land with you an' he. I couldn't live in the same air.'

'He!' She echoed the misused pronoun with an inflection of scorn. 'When we were buried in that awful place he kept striking wax matches,

though I begged him not to burn the little air that was left us, and it seemed to me that his hand shook more than a man's should, and every match showed me the face of a coward, terribly afraid of death. And when the place became hot and stifling, with one little breathing-hole between the stones, it seemed to me—God forgive me if I'm wrong!—that he was too eager for the air, and kept me back from a fair chance of life. Poor fellow! And the Lord made things clear to me there in the dark, Dave—things that I'd been doubtful about in the daylight. And now—now you'm going foreign!'

'Iss, Zillah, I'm going to South Africa.'

'What will a passionate, fierce-tempered man like you do, Dave, wandering about the face of the earth? You want a woman's hand upon 'e, and a woman's voice to calm 'e.'

'Iss, I believe I do,' said David stupidly.

'The Lord hath saved 'e from a terrible crime, Dave; but the intention was there, and you have the heart of a murderer.'

'Iss, a murderer,' admitted David, hearing the accusing words, but blind to the appealing eyes.

'Tis a dreadful thing to love a murderer, and a terrible—responsibility; and 'tis a bad job for me, for I do love 'e, David—fool that I be, I'm afraid I love 'e dearly!'

David stood like a man dreaming. Too abased in his contrition to catch the significance of the wistful voice, the yearning look, he was suddenly conscious of the outstretching of two white-sleeved arms; and later, when Aunt Deborah came upstairs with a loaded tray, making a portentous rattle of china at the threshold, the big fellow was kneeling at the bedside, with the girl's bandaged hand upon his head.

THE END.

## MILLAIS AND MUSIC.

### SOME MORE MEMORIES.

By W. W. FENN.

**W**HEN Music, heavenly maid, was young' must have been somewhere about the date from which I can summon up vivid visions of Millais and Music. It is a very long while ago at any rate; and so I slip into retrospect once more. Indeed, it is unavoidable, for to such a well-worn link with the past as myself, the outlook on the future—or what is left of it—has so little attraction that there is nothing for it but to look back; and, looking back, I bethought me that I had omitted many little matters which might still be full of interest to those who found my 'Memories of Millais' in this *Journal* for 1901 not devoid of attraction.

In that article I alluded to the remarkable gifts with which his family were endowed; but, as a matter of fact, John Everett Millais was at heart a musician as much as he was a painter. His ear was highly sensitive and accurate, as you felt when he was melodiously and softly whistling airs that fascinated him, and which he quickly picked up. All his hilarious, rattling talk, which I have hinted at, was freely interspersed with melody, so to speak: a commonplace habit with every youngster perhaps, but it did not sound commonplace from his lips, for his notes were true and his voice delightfully harmonious and pleasant. His early theatrical experiences at the Princess's Theatre gave him many opportunities of getting hold of the leading points and melodies of the drama and

the orchestra. I wholly neglected, however, to refer to the marked effects produced on him by his acquaintance with the Italian Opera-House, into which Covent Garden Theatre had been transformed just about the time my intimacy with the lad had grown into a close friendship with the young man.

It so happened that my father, 'Varmer Venn,' as Millais called him, had undertaken the treasurership of the said Opera-House on behalf of his friend Mr Delafield, one of the capitalists who were mainly instrumental in starting the undertaking. This position, of course, gave my father the privilege of occasionally favouring some of his acquaintances with boxes or stalls, and naturally the Millais family came in for a good share of these treats. 'I like giving Johnny Millais a seat,' said my father, 'if it's only to watch the intense, eager interest and delight which is shown in his handsome, keen, intellectual young face. It is an immense pleasure to me to observe what a pleasure it is to him.'

We may be sure that the enthusiasm Millais displayed in all things that attracted him found a very wide field for its outbursts at the opera. He paid no regard as to whether it was right or wrong, fashionable or otherwise, to applaud vehemently. Applaud he would, what he liked, when he liked, and as loud as he liked. I can see him now, throwing himself back in his seat, raising his arms, and clapping his hands with the utmost vigour as Grisi, Mario, or any of the great singers of that day brought their passages of song to some telling point or the whole phrase came to a glorious climax. The overwhelming applause nightly elicited from the whole house had no more wildly enthusiastic contributor than John Everett Millais. Nor had his delight much subsided the next day. While at his easel he would be for ever giving tongue not only to the joy the performance had afforded him, but interspersing all his talk with reference to the individual melodies by practical illustrations of them. Nor was it to be expected that his constant visits to the opera did not mightily increase his technical acquaintance with and appreciation of the rendering and quality of the music. He would in a way begin to criticise. 'Grisi was lazy to-night,' or 'Mario was not in such good voice as usual. Did you see how he avoided that top C? Ah! quite right; he was not going to split his voice when he could not get up there easily. No, no, my boy, it's an awfully high note for a tenor to screw out of his chest, and his voice is too valuable an article to be trifled with.'

In this fashion would he comment as he was leaving the theatre, alternating his bursts of admiration with a multitude of suggestions or remarks on the scenery, dresses, appointments, and general 'go' of the performance.

The period was a period of revolution in the world operatic. I do not think I ever exactly

heard the cause of the overwhelming upheaval, the great revolt of the company at Her Majesty's Theatre, as the opera-house in the Haymarket was always called after the accession of our late beloved Queen, although prior to that I can remember it when it was known as the King's Theatre. But certain it is that about the year 1847 the whole company struck, from Costa the prince of conductors down to the humblest musical auxiliary. I suppose Mr Lumley, the *entrepreneur* at Her Majesty's, in some way offended or failed to get on with the great guns who really swayed the destinies of the opera; for not only did the singers revolt, but also the majority of the subscribers, the *élite* of our aristocracy of those days. They all went over to the new house when architects, builders, and decorators had converted the interior of Covent Garden Theatre, as I have said, into a close imitation of the structure in the Haymarket. Each tier was parcelled off into private boxes all round, the two topmost alone being allowed to remain open as amphitheatre and gallery. Thus no part of the pit ran beneath what used to be called the dress circle, but the space there was occupied by other and smaller private boxes, thenceforth to be known as the pit tier. On this level, where it touched the stage, we had an 'omnibus box,' exactly after the pattern of the proverbial one at Her Majesty's, and occupied usually by the same distinguished noblemen: conspicuously Lord Chesterfield, Sir George Wombwell (father of the next inheritor of the title—one of the heroes of the Balaklava charge), Lord Adolphus Fitz-Clarence (son of William IV. and Mrs Jordan), and many other well-known leaders of fashion in those days. Then, again, the pit itself, admission to which was half-a-guinea, had its 'fops' alley' down the centre—yet well below the level of the pit seats—as far as the stall-partition. The stalls, too, of course, were mostly subscribed for by members of the music-loving world, equally with the more capacious boxes on the pit tier, grand tier, first tier, and so on upwards.

These private boxes had, as usual, the names of those subscribers who took them for the season affixed on the doors; and as one strolled round the carpeted lobbies of the various tiers it was amazing to read the multitude of titles which met the eye; for, once admitted to the pit or stalls, commoners were free to go all over the house, and if they knew the occupants—a significant point—to enter any of the boxes. Consequently one might actually rub shoulders with the *élite* as they paid visits to their lady friends in the seclusion of what was an equivalent to their private boudoirs. Dukes and duchesses, marchionesses and countesses, clustered like bees—queen-bees one might say—on every hand; and I can recall the amusement it afforded my young painter-friend to find himself in such close

proximity to what he would afterwards, for a joke, call the 'hupper circles.'

I have often wondered since—and perhaps I wondered then—whether Millais had any prescience of the time to come when he might by right of genius become one of that exclusive circle; whether he felt any aspirations after that sort of distinction. It may be that he did, for that he was ambitious—healthily ambitious—and equally vain—healthily vain—of his ability there can be no doubt.

He often used to say as he grew to man's estate that he did not see any reason why a man, because he was an artist, should necessarily make himself look like one. 'Why should a painter not dress himself and have his hair cut to the fashion of ordinary gentlemen? I can see no reason that because a man happens to get his living by using palette and brushes he need make himself look like a Guy Fawkes.' Thus he came gradually to take care of his personal appearance, and to trim, 'groom,' and dress himself in a becoming manner, a proceeding in which he was not a little aided by his tall, manly figure and handsome, noble head. I can't help thinking that his constant contact with what I may call Opera-House society—although as an outsider then—largely influenced him. His quick observation told him how gentlemen dressed and behaved, and he loved to linger in the crush-room at Covent Garden and take in the general aspect of good society. He keenly noticed and soon came to know by name the leading members of it. He contrasted it with the careless, slovenly, unkempt appearance of the artistic world, in which it was then the fashion for many of his distinguished brethren to make themselves up as what he called Guy Fawkeses, with their long hair, untrimmed beards, slouch-hats, and dusty velvet jackets. Happily this is all reformed now, and it is not easy in most cases to distinguish artists from physicians, barristers, or any class in ordinary life. I really believe Millais almost set the fashion in this direction; and if I am right it adds a small additional social obligation to the many far loftier ones which we owe to his brilliant genius.

However, be this as it may—and, after all, it is a matter of small importance—certain it is that it was his growing familiarity with the *spectacle* on the stage that led him eventually to paint the first of his really beautiful as well as remarkable pictures, 'The Eve of St Bartholomew,' which was the outcome of his habitual attendance at the performances of Meyerbeer's grand opera *The Huguenots*. He never tired of going to see it whenever my father could manage an admission for him.

Apropos of *The Huguenots*, let it never be forgotten that with the transference to Covent Garden of the operatic strength of the Italian company there came about a development in the rendering, at any rate as far as the *mise en scène*

was concerned, of Grand Opera. Grand Opera had never been seen or sung so splendidly in London before. Notable singers we had had—many of them; but they had never been seen or heard to such advantage as were those who flourished in the late forties and early fifties. Once more take, for instance, *The Huguenots*. It was put upon Covent Garden stage with a completeness and magnificence in all respects unequalled and never before dreamt of anywhere. Indeed, the opera itself had been scarcely known in England. It was an entirely new sensation to the British public; and the first night of a fresh reproduction at Covent Garden was an event that attracted all London. Even such old friends as *William Tell*, *La Sonnambula*, *Norma*, and many more, when played at Covent Garden, were as *editions de luxe*, and attracted audiences accordingly; but when we had *Robert le Diable*, *La Favorita*, *Lucrezia Borgia*, *Masaniello*, they stood pretty nearly in the light of veritably new productions to that generation of opera-goers. Remember, too, that the vocal and dramatic rendering of them had never been equalled before. Think of Mario, when he had been drilled into almost as great an actor as he was a great singer, playing the part of the fisherman. Think, I say, what that implied in addition to the splendid background made by Beverley's beautiful scenery and Augustus Harris's (the stage-manager and father of the Augustus Harris whom the moderns knew as lessee and manager of Drury Lane) perfectly managed crowds of men and women choristers.

Unfortunately I cannot recall the names of all the great singers who were pressed into the service of Covent Garden opera when Mario and Grisi were at the height of their fame, for these musical memories are jotted down by 'a man with no ear,' remember; so at least it is said by my intimates, who, apparently not content with knowing that in later life I have had no eyes, declare that my ears have always been musically deficient. I do not think so myself, I need hardly add; but what I certainly am deficient in just now is the memory of names, a common trouble, I am told, of many 'links with the past.' One of these names, however, starts up whilst I am dictating at this very moment, and that is the name of Viardot Garcia; and no one who has ever seen or heard her can forget her. She was certainly the very grandest actress and singer combined, I should think, who ever trod the stage; and it was she, may I be permitted to say, who, in my opinion, made Mario the great actor he became. She was what is now called the 'understudy' of Grisi during the first great run of *The Huguenots*; and one night when Madame Grisi was not well, or was lazy and not inclined to sing, Viardot stepped into the part of Valentine. I recollect Millais was with me that very night, and witnessed the grandest rendering of the rejection of the white badge by

Raoul as Valentine strives to tie it round his arm just before he springs out of the window. She absolutely eclipsed all her predecessor's finest efforts. Millais was perfectly frantic with admiration and delight, as were indeed all true lovers of great art; and that Viardot was one of the greatest lyric artists of her day was never disputed.

Needless, perhaps, is it to add that after that one night's triumph Grisi immediately found her voice again, and did not give Viardot another chance of supplanting her for a considerable period. It came again, however, now and then; and when, in the spring of 1849, Meyerbeer's *Prophète* was produced at Covent Garden for the first time on any stage, with all the resources then at the command of that establishment, she created another 'part all her own,' rivalling probably that already long secured by her in *Fidelio*. Nor perhaps was Mario's singing and acting of John of Leyden less conspicuous.

It would fill pages were I to go on with my recollections of the details of the various scenes of the musical, dramatic, and perfect stage triumphs throughout all these Grand Operas. Michael Costa's band was alone an everlasting joy to listen to; whilst, combined with the great choruses, the absolute completeness of the productions was so striking that, whether one had an ear or no ear, the impression made on the mind became literally indelible. It has lasted me, at any rate, nearly sixty years; and it would, I am convinced, remain equally vivid were I spared to double that stretch of time.

These facts intrude themselves on my pages here whether I will or no; but I must revert to matters which may interest other people besides myself. Chief among these is still, I think, Millais and *The Huguenots*. I have said that it is due to his familiarity with this opera, impressing

him as it did with its essentially dramatic character, that we had, and happily still have, the privilege now and then of seeing his beautiful and world-famed picture known as 'The Huguenot.' But it was the performance of Valentine by Viardot Garcia, above alluded to, which determined him, I believe, to paint the subject. In effect, he said to me as we left the theatre together, 'I should love to paint that scene; it would be fine—the white badge business, I mean; only I should have to get some model with a far handsomer face and head than Viardot has.' I suggested, I remember, that I thought I knew a lady who would suit him. 'She is a cousin of your friend Lemon Hart Michael. Have a look at her, Johnny. "Pip," as you call him, would introduce you, and fancy himself an inch taller if you painted her.' My proposal was adopted, and the lady in question, who was a lovely girl, did sit several times to Millais. That lovely face, however, so full of deep and touching expression, which all the world admires so infinitely and deservedly, was finished from a Miss Ryan, a well-known popular model in those long-ago days.

The influence of Viardot Garcia was enormous, and manifested itself, as I have mentioned, on Mario particularly; and when I am told that the tame, awkward, though handsome young man in modern costume whom I saw playing and singing in *Don Pasquale* was Signor Mario, and then recall the easy, fiery, soldierly, and at the same time pathetically tender lover who refuses to sail under false colours on the eve of St Bartholomew, I can hardly believe them to be one and the same person.

A few seasons sufficed to bring about the change which resulted in the supreme triumphs of the two artistes, Viardot and Mario, and—may I add?—of Millais himself in his Huguenot picture.

## REMINISCENCES OF AN INDIAN MILITARY POLICE OFFICER.

By 'JUNGUL WALLAH.'

V.—A TREASURE-ESCORT—A PLAGUE OF BEES—CAPTURE OF AZEEM KHAN, A NOTED REBEL CHIEF—PROMOTION, REWARDS, AND PENSIONS—THE BATTALION DISBANDED.

**M**Y former narratives have brought my reminiscences down to near the end of 1860; and as the corps was broken up at the end of that year, this will be the last one.

As has been stated, our duty consisted of guarding the treasury at Chuckmuckpur; but every three months we had also to escort large consignments of specie to Agra and Cawnpore, both large military stations, for payment of the troops. These treasure-escorts were never allowed to leave headquarters without a European officer; as, though our native officers were staunch to the backbone, they were

wanting in discretion and a bit inclined to take matters too easy—in fact, like most Asiatics, they were not sufficiently cautious when left to work on their own responsibility.

As a rule these treasure-escorts were not molested, being too strong to be interfered with by less than a couple of hundred bandits; and as we had been scouring the country for over two years, the guerillas had broken up into very small parties, which when beaten scattered by twos and threes to collect again somewhere else. However, the experiences of an escort under my command was an exception.

In the month of July 1860—a scorching time

of the year to be under canvas—I started for Agra with thirty lacs of rupees. The escort consisted of one troop of cavalry, fifty mounted infantry on twenty-five camels, and a company of infantry. The treasure was put into large tumbrels, two being placed on each two-wheeled cart, called a hackery, the conveyance of the country. We had fifty of these carts, and as each cart was drawn by four oxen, our convoy was very long when all were assembled; and the line became much longer when it was once started. Treasure-escorts in those days were never allowed to march at night; and though we hardly ever covered more than ten miles a day, it was very seldom that the rear-guard got into camp before three o'clock in the afternoon—which, it must be allowed, was pretty severe, considering that generally we had seven or eight days' marching before us.

The first day's march went off all right; but on the second day, after we had been in the camping-ground for about half-an-hour, we were visited by a swarm of bees which 'gave us fits.' Luckily no guerillas were anywhere near; for the convoy would have been at their mercy for about a quarter of an hour. I may state that in India bees generally build their hives in large clusters of trees, selecting a stoutish branch for each hive. Our encampment on this occasion was amongst some two hundred trees; and the men not on duty had settled down in threes and fours under the trees and lit their fires to get dinner ready. They make these fires by digging small holes in the ground, then pile on a lot of wood and set fire to it; the wood supplied by the commissariat, being very green, throws out an immense amount of smoke. On this occasion the smoke was too much for the bees, and down they came in millions. Within five minutes over a hundred animals were scampering across country, horses having got free from their heel-ropes and head-gear, no end of oxen had managed to break away, and groups of men with blankets thrown over their heads were flying about as if mad; horses neighing, bullocks bellowing, men shouting, and pet dogs howling—in fact, it was the confusion of Babel over again. The only animals that were not affected were the camels, as their skins were too thick. In the midst of all this clamour I heard the cry '*Burha! burha!*' ('Bees! bees!') pass through the camp. This was enough for me. I rushed into my tent at once and seized my blankets. One of them I carefully fastened round my body, letting the tail-end drag on the ground; the other I threw over my head and shoulders, after having made two holes in it just large enough to see through; and, to crown all, I placed a large *terti* hat on my head. I was shown this mode of encasement by a *shikaree*, or tracker, when out tiger-shooting in Central India. Thus enveloped, I sallied out of the tent to have a

look round, and to see if anything could be done to quell the panic. No sooner did I get my nose out of the tent than down came the bees; but they found my canopy too thick for their little stings to penetrate, so I made bold and strolled all over the camp. Most of the sentries over the treasure were lying under the carts, rolled up in tarpaulins which they managed to snatch off the tumbrels. None of the men spoke or moved; if they had done so swarms of bees would have pounced down on them. Then I ventured to where the horses and oxen were supposed to be; but I found very few of them, as a general stampede had taken place, and a few men were lying about wrapped up in horse-clothing, all perfectly silent. Just as I was thinking of making tracks back to my tent, I thought I heard some one speaking in a very low tone, and became all attention. Then I heard the words, 'Get your gun, sahib, and fire off two shots, and the bees will all disappear.' A nod is as good as a wink to a blind horse, as the saying is, so off I went, got the gun, and stood at the door of the tent. There I fired both barrels; but I dared not venture further out, as I had to remove my upper blanket to enable me to handle the gun. Before the smoke caused by the shots had cleared away the bees were on the move, and within ten minutes not one was to be seen. If ever man was grateful to Providence, I was; as, though there was no fear of any one attacking the camp and getting hold of the treasure while the bees were in possession, my heart was in my mouth until they had departed.

I had now to set to work to collect my scattered men and animals. This took some time; in fact, until 'the assembly' and 'double' had been sounded on the bugles three times I could see no signs of any one returning, and then only very cautiously. I allowed an hour to elapse before setting to work to see what havoc had been committed. Three men had been stung to death; and fifty men, twenty-five horses, and fifteen oxen were stung so severely that they would be unfit for work for two or three days. Our temporary losses in horse-blankets, heel-ropes, &c. were very heavy; but as we knew that nearly all would be found strewn over the country, fatigue-parties were sent out, and within an hour we had recovered everything. After a short time my valet appeared with over a hundred bees, in a jam-bottle, which he said he had killed, he having found them entangled in the blankets that had formed such a splendid protection to my body. Thus ended our bee-day.

This little rampage on the camp made me decide on halting for two days, so as to enable the effects of the stings to go down. Some of the men were sights to behold, with swollen faces, legs, &c., and most of the animals were in the same condition. During the second day's halt I had a deputation from some of the native

officers of the escort, their object being to get me to go out on a shooting excursion, as the country abounded with antelopes and game of all sorts. One of the officers remarked, 'The very thing for your greyhounds.' I was sorry to have to refuse these well-meaning fellows, but I had to do so, and to explain to them that I considered that an officer in charge of treasure who left his post for the sake of a bit of sport was unfit for his position in the service. I made the most of these ideas of mine, and gave a long lecture to the would-be sportsmen, all of whom left the tent grinning from ear to ear at what I dare say they thought in their jocular hearts to be 'tommy rot;' to me it proved that the Government was right in laying down a hard-and-fast rule that a European officer should always be sent with treasure-escorts.

On the fifth day after leaving Chuckmuckpur we resumed our march, and got over twelve miles in very good time; but about two o'clock, just after we had had our dinner, one of our men who was on furlough, and lived in a small village about seven miles off, came in and informed us that he had seen the noted rebel Azeem Khan, a Mohammedan chief who had fought against us at Delhi in 1857, and for whom a reward of six thousand rupees had been offered by the Government. The informer added that Azeem Khan, with four armed followers, was in a small hamlet of only two houses, which were surrounded by walls of mud, and that they had loopholed these and were defying the residents of the adjacent villages to come near them. By all accounts, he said, they had a large party of Dacoits some distance off, whose arrival they were awaiting.

On receiving this intelligence I determined to capture the rebel chief at all costs. This decision placed me in an awkward position, as only the day before I had laid down the law that no officer in charge of a treasure-escort should leave it on any account. However, I believed there was not much risk, if any, in leaving the treasure in the camp well protected by a large body of native officers, with a full complement of cavalry and infantry. Then, again, there would be some justification for reproach if I neglected to take advantage of an opportunity that the regiment had been awaiting for months; in fact, they had had several wild-goose chases after this man, only to return to headquarters utterly disappointed, as either the information brought in was false or the birds had flown. Having made up my mind, I called up all the officers and told them of my decision. I at once placed the senior in supreme command. He was a dear old Sikh whose father had fought against us at Chilianwalla, and had been taken prisoner, but was released on parole until the war was over. Since that time he had remained loyal to us, and had given three of his sons to fight on our side at Delhi. Before I started I gave distinct orders to dig an entrenchment all round the treasure-carts,

and to place the infantry inside it. The cavalry were to be posted in a circle round the baggage-carts and camp-followers, at about a quarter of a mile from the entrenchment. Our infantry having been taught to handle shovels and picks, there was no difficulty in carrying out my orders as to entrenching.

Within an hour of receiving the information as to the whereabouts of Azeem Khan I was off with fifty cavalry and twenty-five trotting camels carrying two infantry-men each. We moved along at a fairish pace until within a quarter of a mile of the hamlet in which the rebel chief and his four followers had taken up their quarters. When the place was well surrounded by cavalry, a frontal attack was made by the infantry, which was successful, and the walls of the hamlet were scaled. Then a hand-to-hand combat took place, in which the rebel chief was cut down by an officer named Bulwunt Sing, and the four followers killed. The chief was bound hand and foot, and carried off to the camp. The war-cry of all these rebels was 'No surrender,' as they knew very well that if they did surrender it only meant a couple of yards of rope and the nearest tree for all *bona-fide* rebels.

This little affair cost us the lives of three of our best men, and nine were wounded; but, strange to say, not a man in the frontal attack was touched. Those killed, being Sikhs, had to be cremated, which could not be done before our departure; so four of their intimate friends were left behind to do the needful the next day, with orders to overtake the escort with as little delay as possible, which they could easily do on their camels. Then we returned to camp in great glee, as may well be imagined, with our captive. As his wounds were severe, we got a *palkee* and put him into it; and on our arrival in camp he was attended by the native doctor of the escort.

I found everything in perfect order in the camp, and was able to send off a glowing account of our success to headquarters; adding that, as Agra was within thirty miles, I should take the rebel chief to that station, it being nearer than Chuckmuckpur. After giving orders for the next day's march, I had my lonely dinner, drank Her Most Gracious Majesty's health, and smoked my pipe in peace; and when I tumbled into bed I slept the sleep of the tired-out one, and dreamt of happy lands far, far away.

Early the next morning we were on the march again, as the men and also the animals stung by the bees had picked up wonderfully with the two days' rest; and I was most anxious to get the captive to Agra. No further incident occurred during this march; but about noon the next day the native soldier who had brought in the information as to the whereabouts of Azeem Khan again put in an appearance, and, like most natives, he was in a most excited state. His story was that within two hours of our departure

from the hamlet a body of over two hundred mounted freebooters had turned up, led by a well-known rebel named Isseeree Sing, who, on hearing that his allies had been killed and the chief captured, had made his followers take an oath on Ganges water—the most sacred Hindu oath—that they would rescue him or die in the attempt. The informer added that just before he left, the whole party had started for a village about four miles from where we were halting. He had been amongst them, carrying grass for their horses, and had overheard a conversation between the leader and three or four men who seemed to be of some importance. The plan they had settled on was to rush our camp shortly after midnight. This was doubtless the gang for which the rebel chief had waited, and which, very fortunately for us, did not arrive whilst our small force was attacking the occupants of the hamlet. If they had come up then we must have been annihilated.

I had no doubt of the reliability of the information; therefore I set to work very quietly to prepare for the attack, if it came off. Knowing well that natives—especially those in subordinate positions—resembled magpies as to chattering and feeble gossip, I had to use the utmost discretion in making any special arrangements. However, one man could not do everything; in fact, an officer who will not trust some of his subordinates, and show that he places implicit confidence in them, is sure to come to grief. Bearing this in mind, I called up the officer I had placed in command on the day that I arrested the rebel chief, and told him all that I had heard, and what arrangements I proposed to make so as to give the rebels a warm reception. For a few seconds he seemed to be in deep thought; then he suddenly exclaimed, 'I have an idea. May I state what it is?' 'Most decidedly,' was the reply. 'Give me fifty cavalry and mount the prisoner on a camel, with a man to drive it, and I will lay down my life, and so will the men, if we fail to land him safe and sound in the Agra fort within six hours.' 'You brave fellow!' I replied, 'there are two very good reasons why your proposal cannot be carried out: firstly, the prisoner's wounds are too severe for him to undergo the rough ride on a camel; secondly, I dare not reduce the strength of the escort by a single man. It would be the cause of my forfeiting my commission if the escort were overpowered and the treasure touched.' 'I see—I see,' he said; 'it is true we Sikhs are too hot-headed and have no forethought; but I will show you once more that we can fight. Let them come.' The fine fellow had proved how he could fight at Delhi, and also on several occasions since he had been in the military police.

Our interview ended in all the officers being called into my presence; and they were bound to the utmost secrecy with reference to the

threatened attack. Each infantry officer was told off to a certain portion of the camp, with orders to double all the sentries. The cavalry, oxen, and camels were all sent to a large *tope*, or cluster of trees, about a mile off, so as to reduce the size of the encampment, by which arrangement we were enabled to form a regular laager with the treasure-carts, and place our infantry in the centre. Luckily, a case of glanders had broken out amongst the horses, so this was made the excuse to the cavalry for their isolation. The reason given out to the infantry for placing them in laager was that the strength of the escort had been so greatly reduced. The rebel chief was placed in the middle of the enclosure, and the guard over him doubled. The cavalry in the *tope* of trees were warned not to sound their hourly gong, as by doing so they might put the enemy on the alert.

Ten o'clock struck on the village gong—all large native villages in India have gongs—then we heard twelve; and five minutes afterwards there was a sudden rush of over five hundred men from all sides. It was found out afterwards that a number of supposed loyalists had joined with the enemy, thus making the attacking party larger than it was reported to be. Well, on they came, but not a single shot was fired on either side; in fact, we allowed them to get within fifty yards of our laager, our men all lying low under the carts and trees; then the front rank got up and fired a volley as steadily as if they had been firing blank ammunition on parade. The freebooters hesitated for a few seconds, great havoc having been made amongst them; then they made one more rush; upon which the rear rank delivered another volley with deadly effect. This was enough, and the enemy bolted for their very lives under cover of the darkness. Our loss was very slight. We dared not venture to follow up the fugitives at the time; but at dawn the next morning the cavalry scoured the surrounding country, and came upon about thirty of the rabble, who promptly laid down their arms, which consisted only of swords. One of these prisoners stated that very few of the gang had guns, which they were ordered not to fire, but to have a hand-to-hand sword-combat.

The next morning the dead and wounded were collected: the former we made over to the headman of the village to cremate or bury according to caste; the wounded we took into Agra. The leader, Isseeree Sing, was amongst the slain, and Azeem Khan was afterwards tried and hung at Agra.

This night-attack, of course, prevented us from marching on the following day, as our men wanted rest; and I took the opportunity to report what had happened. In a couple of days we arrived at Agra and made over our prisoner to the military and the treasure to the civil authorities. I found no end of telegrams awaiting me, one of which contained the

good news that the Lieutenant-Governor of the province was so pleased with our success in capturing the chief and resisting the night-attack on our camp that he had ordered five thousand rupees, in addition to the same amount for the capture of Azeem Khan, to be made over to me at once for distribution amongst the officers and men, and that my name had been brought to the notice of the Viceroy. The officer in charge of the party at the hamlet, Bulwunt Sing, was to be promoted to the rank of captain and recommended for the Order of Merit First-Class for his bravery on that occasion. The commanding officer had also been directed to submit with as little delay as possible the name, caste, parentage, and residence of the man on furlough who had given such splendid information to us, as the Lieutenant-Governor intended to bestow a *jagheer* (grant of land) on him. The names of the widows and children, if any, were to be submitted at once so that life-pensions might be granted to them. The amount sanctioned for rewards was drawn from the treasury the next day, and distributed amongst the native officers and men. European officers never receive, nor would they accept, a share of rewards in money; they look for rapid promotion and honours, which I must acknowledge were always freely given.

After resting a couple of days, we marched out of Agra *en route* to Chuckmuckpur. The third day of our march homewards landed us into the midst of good shooting—black buck and smaller game—and also coursing. I therefore decided to make a halt and go in for nothing but sport, and of this I had my heart's content.

Two days afterwards we were back at headquarters, having covered the distance of seven marches in five days—not bad work!

At headquarters we heard, to our disgust, that

the Government considered that the chances of the rebels or guerillas doing much harm had been destroyed by the capture of the rebel chief, and that it was now time to establish a civil police force similar to the Irish Constabulary; therefore the military police battalions were to be disbanded. This news caused great excitement, and it was noticed that many of the men looked very much disappointed, some of them even going about in a sullen manner, evidently brooding over the grievance. All that we European officers could do was to impress on them that there was no doubt many would be transferred to the regular native army, others would be offered appointments in the new civil police, and those who might not wish to continue in Government employ would receive *jagheers* of land or good bonuses in cash.

The expected orders arrived in a short time to the effect that the disbandment would take place on the 31st of December 1860. The Government were very liberal to the native officers and men, giving them the option of selecting almost whatever they liked. The European officers had the option of returning to military employment under the Commander-in-Chief in India or entering the new civil police. Thus ended my career in the military police.

In my old age I often wish myself back again amongst the brave and honourable men I had the privilege of serving with for over two years, most of whom I looked upon as brothers. In conclusion, I may state that I have only mentioned a few of our exploits, and that there were many other military police battalions in India which saw as much service and rendered as good an account of themselves as the Chuckmuckpur battalion.

THE END.

## THE MONTH: SCIENCE AND ARTS.

### MOUNTAIN OBSERVATORIES.

WE are glad to learn that the observatory on the summit of Ben Nevis is not to be closed, but will continue—at any rate for the present—to perform its useful work. It had been decided to close the establishment in October, owing to want of funds, and the staff had received notice that their services would no longer be required; but the threatened closure raised such a vigorous protest, and so many of the objections took a practical form in the way of money help, that the station will continue its work, and stores have now been taken in for the long winter session. M. Janssen, the famous astronomer, proposes to take similar observations from the top of Mont

Blanc; but there is no intention of establishing human settlements there. He has suggested that the necessary instruments for meteorological observations should be placed on the summit of the mountain, and that these, instead of being of the usual size, should be gigantic, so that with the help of a telescope, say at Chamouni, they could be read with ease. Thus there would be a spirit thermometer holding some gallons of alcohol, instead of the teaspoonful usually associated with that instrument; the barometer would have a dial some feet in diameter; the force and direction of the wind being indicated by a big metal ball suspended from a high post. Should this plan succeed in practice, it is sure to meet with imitation, if only because of its economy as compared with the expenses attached to an ordinary observatory.

## FLYING-MACHINES.

This year will be a memorable one in the history of aeronautics, for the reason that so much attention has been devoted to so-called flying machines, which are in reality balloons over which, by certain mechanical appliances, the occupant has a limited amount of steering power in the absence of wind. Two of these frail machines have come to grief in France, and their drivers have been killed. The machine in which M. Santos Dumont sailed round the Eiffel Tower at Paris was mysteriously injured before a projected ascent at the Crystal Palace, London, and no more has been heard of it. The English balloonist, Mr Stanley Spencer, built a dirigible balloon to take its place, and he made some thirty preliminary trips round the Palace grounds before attempting a bolder flight over London. This at last he has succeeded in doing, his machine starting from Sydenham and reaching the ground at Harrow, after a run of about twenty miles. This experimental trip is the most successful of its kind yet made; but it brings us no nearer to the solution of the problem of aerial navigation.

## THE FIREPROOF HOUSES OF THE ARGENTINE.

The annual fire-bill of the United Kingdom may be taken at twenty millions sterling, that of the United States being twenty-eight millions sterling. There is besides the fire insurance annual bill, and the bill for the fire-stations, with their costly sites and buildings, the fire-engines, the other machinery, and the horses. All this outlay keeps us poorer. But the loss of life is worse; and it is so easy to build fireproof—or, better, incombustible—houses, such as in the River Plate countries and probably in Bethlehem and Nazareth. The manner is as follows: In these countries they neither use the arch nor iron, but hardwood, which, having mostly to come a thousand miles down the river, is dear. So all the floors and the roof, which is flat, are supported by joists shaped as in this country, and across them are laid rails of the same hardwood, about a foot apart, upon which rest the ends of thin bricks, on which another layer of bricks, or sometimes two, is laid in mortar; and on this tiles. Then there is no skirting or panelling. In Britain cement should be used for that purpose, and there should be no boxing of doors and windows, the frames being built in securely. The doors are also of hardwood. In that fine climate no lath-and-plaster is ever used. In this country the laths should be of iron, and if moulding is wanted round the doors it could be of cement instead of dangerous, inflammable wood. In such houses a bonfire made by piling a lot of sticks and shavings on the best bed in the best bedroom and setting fire to it would not set the house on fire. The writer has for sixty-four years lived in or been connected with the great city of Buenos Ayres, the capital of the Argentine

Republic and the largest city in the southern hemisphere, with eight hundred and fifty-two thousand inhabitants, and never heard of a life being lost by fire; but there are fires in grocers' shops and such-like places. Latterly, as pine from the United States is now abundant, some builders have used it partially in buildings in the capital, and such are not quite fireproof; but it is a bad practice. In Britain, as roofs must slope because of the snow, and flat roofs would not do, the slates should be fixed in some way to iron strips. This might be a little troublesome at first, but our slaters and smiths would soon find out a way.

## MOTOR-CAR TROUBLES.

There is much antagonism unfortunately between those who own motor-cars and those who do not, each faction considering that it has far more right to the highway than has the other. It need hardly be pointed out that this feeling has been engendered by the selfish few, who have driven vehicles at an excessive speed without any regard to the safety of others. It is a most difficult matter to define the speed to which motor-cars should be limited, as so much depends upon local circumstances. Some months ago the secretary of the Automobile Club suggested that the difficulty might be met by adopting a plan which would tend to secure the safety of both motorists and pedestrians. He proposed that the club should, with the concurrence of the local authorities, place on a certain high-road, by way of experiment, diamond-shaped boards which should serve as 'control' signals for drivers. On reaching such a sign the driver of a motor-car would slow down and continue to go at a moderate speed until the end of the control was reached, which would be indicated by another board of a different colour. In this way towns and villages would be protected from the dangers of excessive speeds. An offer of one hundred pounds has been made by a member of the club towards the cost of the experiment, and part of the Portsmouth road has been suggested as the best highway upon which to try the system.

## A FLOOR SCRUBBER AND WASHER.

A most useful domestic help has been recently introduced under the name of the arc-twist floor scrubber and washer; and as we have seen it in action we are able to speak to its merits. It is a combination of a scrubbing-brush and a flannel at the end of a long handle, so that the housemaid who uses it has no need to stoop. She can scrub the floor with the brush, after which the flannel is applied; and then, by a clever arrangement, the latter is drawn out and twisted over a pail, so that all moisture is at once wrung from it. The machine appears to be a real labour and time saver, and is moderate in price.

## MALLEABLE GLASS.

Of all substances in common use, glass is the most brittle, a fact which has been crystallised in

the old proverb about stone-throwing; but unless the report is altogether erroneous concerning a new description of glass invented by Mr Louis Kauffeld, of Matthews, Ind., U.S.A., there will come a time in the near future when dwellers in glass houses can indulge their stone-throwing propensities to their hearts' content without any damage to their homes. The new glass will not break or crack even when submitted to the roughest treatment. For example, a lamp-chimney of the new material, after being chilled in ice-cold water, was put on a blazing lamp without injury. The same chimney was placed on a gas-stove until it softened, but it would not break; cold water was placed in it, and brought to the boil, but no harm came to it. Next it was used as a hammer to drive nails into a box, and even this did not break it. Finally it was treated as a mould, a hot glass chimney being blown within it, both mould and new chimney coming out of the ordeal uncracked and unscarred! These various experiments are described and illustrated in a recent number of the *Scientific American*, and there is no reason to doubt their truth. Malleable glass has long been the dream of enthusiastic inventors, and if it can be produced at moderate cost it will have many useful applications.

#### HEATING BY ALCOHOL.

A recent exhibition held in Paris under the auspices of the ex-Minister of Agriculture had for its object the more extended use of alcohol for heating and other purposes, and was organised with the hope that demonstrations of its usefulness would result in its successful competition with imported petroleum; for alcohol can be easily produced by farmers from a vast number of vegetable substances, and its extended use would be a great benefit to the country. It need hardly be said that alcohol for manufacturing purposes would be rendered unpalatable, as it is in this country, so that the revenue interests might be safeguarded. Alcohol-stoves, having no bricks and being quite without smell or risk of explosion, were exhibited, and it was shown that their use was economical. These stoves were also highly efficient for both heating and cooking purposes, some of them bringing water to the boiling-point in less time and at smaller expense than is possible with gas. These stoves are quite portable and free from danger; indeed, one exhibitor offered a prize of four hundred pounds to any one who could cause one to explode. In another class were exhibited brazing-lamps, blowpipes, soldering-irons, flat-iron heaters, and other minor applications of the alcohol flame. The use of alcohol as a motive-power was also shown. The spirit is already largely in use in France for motor-cars.

#### PASSENGERS' LUGGAGE.

Railway travellers, especially during the holiday season, have plenty of evidence that the want of punctuality which is such a lamentable feature of

some of our lines is largely due to the way in which passengers' luggage is handled. A novel plan has lately been introduced by the London and South-Western Railway at their Woking station by which large quantities of luggage can be rapidly transferred from one platform to another. Upon the up and down platforms respectively are erected towers thirty-two feet in height, between which are stretched cables capable of bearing a heavy strain. Upon these travels a cage holding half a ton of luggage at one time, the journey from one platform to another occupying only thirty seconds. This aerial cable-way is worked by hydraulic power, and will not only save much time, but will obviate all necessity for luggage being carried to and fro by hand.

#### LIQUID FUEL FOR RAILWAYS.

The coal bill is one of the most serious items in a railway company's balance-sheet; and, seeing that the amount is liable at any time to be increased by the occurrence of a strike in the collieries, the possibility of finding an alternative method of firing the locomotives is a most important matter. The coal bill presses most heavily upon those companies whose lines do not touch the neighbourhood of the collieries, and it is for this reason that we find some of the south-country railways experimenting with liquid fuel. This has been done with marked success in the case of the Great Eastern line, and now the Brighton Company is following suit. Weight for weight, oil will raise more steam than will solid fuel, and in the case of railways remote from the coalfields it is cheaper. More than this, there is with oil no stoking required. The supply of oil, now that fresh sources of supply have been discovered, seems to be practically inexhaustible, our Free-Trade policy of admitting it free of duty thus bearing good fruit. Coal-burning engines can, without much alteration, be converted into oil-burners, and readily reconverted into coal-burners if need be. The change from solid to liquid fuel has other advantages which need not be enumerated.

#### SALT IN SHEEP-FEEDING.

From some recent experiments in France it would seem that salt is of great value in the dietary of sheep. A certain flock was divided into three portions, the first of which was fed without salt, the second had half an ounce per day added to the food of each animal, and the third three-quarters of an ounce each. In the result it was found that the salt-eaters made an average of one and three-quarter pounds more wool than those kept without the condiment, and that the sheep that had the half-ounce allowance gained four and a half pounds in weight, while those that had the larger allowance gained one and a quarter pounds less. Half-an-ounce of salt added to the daily ration of each animal seems, therefore, to be the amount best suited to sheep; but possibly locality would have something to do with the matter. It might naturally be assumed that on pastures near the sea

the quantity of salt added artificially to the food should not be as great as in inland places.

#### LEAD POISONING.

Much discussion has taken place in the public press with regard to lead poisoning and the advantages of using a leadless glaze in our potteries. There have also been, from time to time, accounts published of new methods of making whitelead, by which the health of the workers is not endangered; but we do not hear much of the risks run by those who mostly use lead in the form of a pigment. House-painters are subject to a painful malady known as 'painter's colic,' which in reality is a form of lead poisoning, and the Minister of Commerce and Industry in France has lately issued regulations which are framed to meet the evil. These rules, copies of which are to be posted in workshops, decree that whitelead must only be used in the state of paste—that is, it must not be in such a form that its particles can be taken in with the breath. The dry scraping and rubbing with pumice-stone of old painted surfaces is forbidden. Such work must be done wet, and the masters must provide their men with 'overalls' for exclusive use in this employment. The direct use by hand-work of products of which whitelead forms the base is forbidden unless some liquid vehicle be included.

#### WIRELESS WONDERS.

Remarkable achievements continue to be recorded of Marconi's wireless telegraphic system, and the distance over which talking is possible is continually on the increase. It has now been proved to demonstration that this method of communication is most valuable for use on shipboard, vessels more than a hundred miles apart being able to exchange

messages with ease provided that they are fitted with the necessary apparatus. According to the Berlin correspondent of the *Times*, the German Government has invited the chief European countries and the United States to arrange for an international conference, with the idea of preventing the wireless system of telegraphy from becoming a monopoly, which would be objectionable both for commercial and political reasons. We do not think that there is much fear of any monopoly in this case, for the reason that there are other systems of wireless telegraphy besides Marconi's, and so much attention is now being devoted to the matter that invention is being further stimulated.

#### A VISITOR FROM SPACE.

A 'shooting star' is by no means an uncommon apparition; but it very rarely happens that one of these bodies finds its way to the earth. They are mostly dissipated as fine dust when their contact with our atmosphere heats them and renders them luminous. On 20th September one of these meteoric stones fell at Crumlin, County Antrim, within a few miles of Belfast, while the British Association was holding its meeting there. It was seen to fall, about ten o'clock in the morning, by a labourer who was gathering apples within twenty yards of the spot. The stone had buried itself eighteen inches in the soil, and when dug up was found to measure seven and a half inches in length, and to weigh nearly nine and a half pounds. The stone, which was quite hot when found, is the largest meteorite that has been seen to fall in the British Isles for eighty-nine years. On hearing of the occurrence, the chief of the Mineralogical Department of the British Museum visited Crumlin, examined the stone, and purchased it for the national collection.

*Volume V. of the Sixth Series of CHAMBERS'S JOURNAL is now completed, price Nine Shillings.*

*A Title-page and Index, price One Penny, have been prepared, and may be ordered through any bookseller.*

*A cloth case for binding the whole of the numbers for 1902 is also ready.*

*Back numbers to complete sets may be had at all times.*

*Annual subscription, including postage to any address, either at home or abroad, 9s. 6d.*

The January Part of *Chambers's Journal* (published about 20th December) will contain the opening instalments of a Story of the BRETON COAST,

ENTITLED

## BARBE OF GRAND BAYOU,

BY JOHN OXENHAM,

AUTHOR OF 'JOHN OF GERISAU,' 'OUR LADY OF DELIVERANCE,' ETC.

There will be Novelettes and Stories by other well-known writers, and the usual instructive and entertaining Articles.

END OF THE FIFTH VOLUME.

Printed and Published by W. & R. CHAMBERS, Limited, 47 Paternoster Row, LONDON; and EDINBURGH.

## THE BAN OF WODELOK.

By J. R. OLIVER.

### CHAPTER I.

'H, that's good!' exclaimed Mr Thornton, looking up from a letter he was reading.

'What is it, Tom?' asked his wife.

'Bramwell says he can come after all. I am uncommonly glad. He will just make our party complete.—He is a crack shot,' he added, looking towards the men, 'and a rare good fellow all round.'

Mr and Mrs Thornton and their guests were seated at luncheon in the pleasant dining-room of Finavon Lodge, whose open windows commanded a magnificent view of Highland loch and mountain.

'When may we expect him?' Mrs Thornton inquired.

'To-morrow. No. Stay'—consulting the letter again—'why, I believe he will arrive to-day. I ought to have had this letter yesterday.'

'It is a blessing he did not arrive before it,' said Cissy Westwood, Mr Thornton's niece, as she turned, laughing, to the young fellow who sat next her. 'That was what happened to Jim Cowan last year. The boat was late. There was nobody to meet him, and no conveyance except a fish-cart, and it was pouring wet, so he stayed all night in a fisherman's

cottage, and walked over the hill next day, arriving an hour before his letter.'

'Well, Bramwell would have better luck than that, for Miss Wodelok arrives this afternoon, and we are sending to Rhumohr to meet her in any case,' observed her uncle.

'By the way, Thornton,' said Major Ashdell, 'is the man you expect one of the Bramwells of Bishopton?'

'Oh no. He is Bramwell of Wodelok, a place down in Hampshire.'

'I don't seem to have heard of him.'

'Probably not. Old Bramwell made his money in business—steel rivets or something—and he bought the estate some twenty years ago. Hubert, the son, and I were great friends both at school and college; but I have hardly seen him since he came into the property, for after his father's death he went to India, and has been knocking about all over the world for some years. It was quite by accident I ran up against him in London immediately after his return home.'

'I shall be very glad to see him,' said Mrs Thornton; 'but, all the same, I wish he had been coming a few weeks later. I don't think Edith will like meeting him.'

'Oh, nonsense! They'll get on all right, you'll see. But I had better go over and see Duncan before he starts with the wagonette.—Are you coming, Ashdell?'

'Why do you think it will be unpleasant for Miss Wodelok to meet Mr Bramwell?' asked Mrs Ashdell when the others had gone.

'Well, you know Wodelok, Mr Bramwell's place, was her father's family property.'

'Oh, indeed! So she does not like the man in possession. That is rather a pity. Have they had any quarrel or anything?'

'Oh dear, no! Edith has never even met him, and knows nothing about him personally; but she is very proud of the old name—one of the oldest in England, I have heard her say. The Wodeloks owned large estates at one time, though the property had dwindled down sadly before Sir Thomas Wodelok sold it. He was so much cut up about having to part with it that he died before the Bramwells took possession.'

'Very sad for his daughter. She is an only child, isn't she?'

'Yes; and the last of the name. She used to be quite tragic about it when we were school-girls. She knew nothing about the Bramwells; but she hated them because they owned Wodelok, and seemed to think they were responsible for her father's death.'

'Good gracious! Is she so bad as all that?'

'Oh, well, that was when we were still in our teens, and I gave her my warmest sympathy. She rarely mentions the subject now, and I dare say her feelings have toned down a little; but still I would rather not have been obliged to introduce her to "the usurper," as we used to call him.'

Mrs Ashdell laughed. 'So Miss Edith Wodelok has a fair share of family pride, I see. Do you think the steel rivets would be too much for the descendant of a thousand knights?'

'Why, whatever do you mean?'

'Don't you think it would be a very delightful arrangement if the ancestral halls and the ancient name were reunited?'

'What nonsense you talk!'

'It is not nonsense at all. If such a thing should happen it would be perfectly lovely. It is a piece of rare good luck that they should happen to be travelling together. Seems almost as if Providence were taking the thing in hand.'

'Oh Meg! you are incorrigible,' said Mrs Thornton, laughing.

## CHAPTER II.

THE steamer *Queen of Thule* was fuming and roaring at the pier at Oban as if impatient to be gone, while a crowd of passengers were pouring across the gangway to her decks. A tall, elegant-looking young lady and an elderly woman, evidently her attendant, were standing a little aside to make way for the jostling, pushing throng. At length, when nearly all were on

board, the young lady stepped forward and crossed to the deck; but just as her attendant was about to follow, the vessel gave a lurch, displacing the gangway as she set her foot on it, and she stumbled and would have fallen over the edge of the pier if a gentleman who was behind had not caught her by the arm and pulled her back. A terrified scream from her young mistress was succeeded by an ejaculation of thankfulness as the gentleman, taking the dressing-case the woman carried from her trembling hand, guided her on board.

'Thank you so much,' said the young lady, looking up at him with swimming eyes. 'You have saved my dear old nurse from what might have been a serious accident.'

'Oh, don't mention it,' he said. 'It was an awkward lurch, certainly; but fortunately I was close behind;' and, raising his hat, he moved aside.

'Oh Dolly, what a fright I got!' said Miss Wodelok, for it was she. 'I thought you were over between the pier and the vessel.'

'Indeed, Miss Edith, it has given me quite a turn; I am all shaking yet. That was a very nice gentleman who helped me. Took the case there out of my hand and carried it for me. There's not many men so polite to a servant.'

The *Queen of Thule* was now ploughing her way past the wooded height where Dunollie Castle crowns the northern entrance to the bay. The deck was somewhat crowded, for it was the middle of August and the height of the tourist season; not to mention the sportsmen and their belongings, who were seeking the moorlands and lochs, where the grouse and the salmon abound.

Miss Wodelok was looking about her for a seat, an apparently hopeless quest, when Dolly's preserver came up and said, 'There are two chairs over here, well sheltered from the wind. Won't you take possession before some one else appropriates them?'

'Oh, thank you,' said Miss Wodelok, moving in the direction he indicated, where one of the crew was vigilantly guarding a couple of deck-chairs.

'Chairs are evidently at a premium,' she said smilingly as she seated herself. 'It was very kind of you to secure them, and this is a delightful corner.' Her natural hauteur and reserve in accepting service from a perfect stranger giving way to her sense of gratitude, she spoke quite cordially as she saw that he made way for her maid to take the other chair, and had evidently no intention of inflicting his society upon her.

She looked after him, wondering who or what he might be. His tall, well-set-up figure and bronzed face suggested that he might be a soldier home from foreign service.

'I am sure he is a gentleman, Miss Edith,' said Dolly, whose thoughts had taken the same direction as her mistress's.

[Christmas Number.]

'Oh yes, a gentleman certainly, whatever be his station in life;' and, as an intimation that she did not care to discuss him further, she opened the novel she carried.

The day wore on. The *Queen of Thule* plunged ahead; and, stopping at various ports, she had landed the greater number of the passengers. A pretty high wind had sprung up, and the vessel no longer glided over smooth seas, but was heaving and pitching in a way that most people appeared to find disagreeable and conducive to an immediate desire to go below. Miss Wodelok, however, was one of those who remained on deck and seemed to enjoy the fresh breeze and the view of the rugged and picturesque outline of the islands to the west. The gentleman who had excited her interest in the morning was leisurely pacing the deck; and when Dolly came up some time after with an armful of rugs and other things, she was surprised to see her mistress, who was usually so unapproachable to strangers, sitting chatting and laughing with him in the most friendly manner possible.

'I am just getting your things together, Miss Edith, for we are near Rhumohr,' she said.

'Is this Rhumohr?' said the gentleman. 'That is where I get off too.'

As the steamer slowed down, a boat with a couple of rowers put off from the shore, and was soon alongside. The luggage was quickly transferred; but it was no easy matter for the passengers to get into the boat, for the waves alternately lifted it up to the level of the lower deck, and then plunged it down six or seven feet below. It was necessary to be ready to spring in when the boat was on the top of the wave, and trust to the man in the blue jersey to save you from falling. Miss Wodelok accomplished this feat in safety, but poor Dorothy hung back in terror, and missed half-a-dozen chances, to the disgust of the man in blue; but again her friend of the morning reassured and helped her, and the boat at last cast off and made for the shore.

Here an open wagonette and a cart for the luggage awaited them.

'Well, Duncan, how are you, and how are all the folks at Finavon?' said Miss Wodelok to the driver, who touched his hat and answered, with a smile, 'All very well, ma'am, and glad to see you back again.'

'Is this the trap from Finavon?' asked the gentleman.

'Yes, sir. Mr Bramwell?' he added inquiringly; for, though there was no other gentleman there, Duncan liked to be certain.

'Yes; that is all right.'

The name awoke no recollections, nor had it any significance for Miss Wodelok, who smiled and said, 'So you are going to Finavon?'

'Yes. My old friend Tom Thornton has asked me to give him a hand with the grouse.'

1902.]

He helped her into the carriage, and they soon left the little fishing village, with its scattered cottages, behind, and were slowly climbing a steep and very rough road.

'Hadn't we better get out and walk a bit?' Miss Wodelok suggested. 'This jolting is by no means agreeable; but we will be past the worst when we get to the turn of the road there.'

Duncan pulled up. They got down and walked on to the point indicated, where a sharp turn in the road brought into view a splendid prospect of mountain and loch.

'There is Finavon,' said Miss Wodelok, pointing to a large gray stone mansion standing against a background of dark fir-trees on the opposite shore of the loch.

They again took their seats in the wagonette, Duncan touched up his horses, and they went rattling down towards the loch at a good pace.

As they drew nearer some people could be seen on the green slope in front of the house.

'Oh! there is Gladys—I mean Mrs Thornton—waving her handkerchief,' cried Miss Wodelok eagerly, as she answered the signal of welcome.

'I see you are quite at home here,' remarked Mr Bramwell.

'Oh yes. I have known Mrs Thornton nearly all my life. We are just like sisters.'

They soon reached the loch, and stopped at a little landing-stage, where a boat awaited them.

'Is there no road to the house?' asked Mr Bramwell in surprise.

'No, sir; not unless you go twelve miles round by the foot of the loch,' Duncan replied.

'Another voyage yet?' Mr Bramwell said, turning to Dorothy with a smile. 'I hope you will be able to embark this time without adventure.'

'Thank you, sir. There is nothing to be afraid of here,' she replied as he helped her into the boat, where her mistress was already seated.

Mr and Mrs Thornton, Cissy, and one or two others were on the landing-stage when the boat reached the farther shore.

The greetings and introductions, though warm, were a trifle confusing. Mr Bramwell understood that the name of his fair travelling companion was Miss Wood, while his territorial designation had not been mentioned, and she never thought of associating him with Wodelok.

Mrs Ashdell was amused to observe that at the dinner-table the new arrivals appeared to be on the most cordial terms with each other, and laughed as she drew her hostess's attention to that subject afterwards.

'You see the steel rivets don't count, and noble birth is rather out of fashion,' she said. 'I bet the event comes off.'

## CHAPTER III.

IT is true that Edith Wodelok was proud of her ancient name, and her love for the old home of her race was an almost sacred feeling, too deep for words. Her father, Sir Thomas Wodelok, was the descendant of a very ancient family holding estates in Hampshire before William of Normandy tumbled on the sands at Hastings. For centuries the Wodeloks had flourished there, increasing in wealth and honours. Then about the beginning of the seventeenth century the tide of their prosperity turned. Losses and misfortunes fell upon the house. The elder branch of the family became extinct, and the title and the estates fell to a distant cousin, a spendthrift, who squandered his means and alienated a large portion of the family acres. The tide of disaster flowed on till Sir Thomas—the last of his line, save Edith, his only child—was forced to sell the Hall and what remained of the old acres. When the time came for the new lord of Wodelok to take possession, Sir Thomas, broken in health and spirit, laid himself down in the great oaken bed, and, giving up the struggle with all the troubles and worries of life, he quietly breathed his last, and was laid to rest in the family vault, the only part of all the Wodelok heritage to which no one would dispute his title.

Twenty years had passed since Sir Thomas Wodelok was gathered to his fathers, and the last descendant of the ancient name had left her old home. She had never seen it since, rarely even heard it spoken of; for her aunt with whom she lived had no great love for the place where her young sister had spent the brief years of her married life, and where she had met an early death. Miss Wodelok's faithful attendant Dorothy, who had been born and brought up on the estate, and left it along with her mistress, was singularly reticent in speaking of Wodelok.

Miss Wodelok had been but a child when she left the place, too young to observe the signs of neglect and dilapidation. The Wodelok Hall which her memory pictured was an idealised and glorified vision of the picturesque old mansion, on which the mildew of poverty had been only too apparent to others. Her mind dwelt on this fair vision with poignant sorrow, and regret that this goodly heritage had gone from the old line for ever, and that the ancient name, once honoured and illustrious, would perish with herself; and with this feeling was one of intense bitterness against the malignant fate which had conspired to bring all this about—a bitterness not unmingled with enmity against the man who now enjoyed the heritage of the Wodeloks. She rarely spoke of these things, however, for she was quite aware that her

feelings, in all their depth and intensity, would meet with little sympathy; and she was also aware—scornfully aware—that her ancient lineage, without wealth to give it dignity, was not an asset of great value in the fashionable world. So she quietly accepted the position society assigned her, maintaining a proud reserve as to her claims to higher rank.

Miss Wodelok never dreamed of connecting her pleasant and attentive fellow-traveller with the 'despoiler' of her house. The object of her enmity and scorn was but a nebulous personality at the best, and when she did clothe him in definite shape it was always as an elderly gentleman as unlike as possible to this handsome, interesting young man, whose society she had already learned to like.

Mrs Thornton was delighted that the guests about whom she had felt some anxiety were on such cordial terms with each other. She mentioned this to Miss Wodelok a few days after her arrival, and asked her what she thought of Mr Bramwell.

'Oh, I think him delightful, and Dorothy is quite in love with him,' she replied. 'Did I tell you how he saved her from falling from the pier at Oban?'

'No. How was that?'

'You know that gangway thing they put across from the pier when you go on board the steamer? Well, it slipped just as she stepped on it, and she would have been over if Mr Bramwell, who was just behind, had not caught her. Oh, I did get such a fright!'

'And no wonder. It would have been dreadful if anything had happened to dear old Dorothy. So that was how you came to be so friendly with him. I thought you must have met before.'

'Oh no. I did not know him at all; but surely, dear, you would not have had me sit up like a wax-figure during our drive over the hill. When we were to be staying at the same house, it was only civil to anticipate the introduction.'

'Yes, of course. It would have been absurd to have done anything else, though it must have been a little awkward for you. I would have let you know if there had been time; but we were not sure that he was coming till an hour or two before he arrived.'

'It did not matter in the least.'

'I am so glad, dear, that you do not mind meeting him.'

'Why should I?' asked Miss Wodelok in surprise.

But just at this moment the door opened and in toddled the son and heir of the Thorntons, aged two; and Mr Bramwell was forgotten in a service of baby-worship.

It was the beginning of the grouse season, and splendid weather for the moors, and the gentlemen were out shooting all day; so the ladies were left a good deal to themselves.

[Christmas Number.]

Mrs Ashdell had promised herself some amusement in watching the latest arrivals; but there was little to reward her observation. She drew her hostess's attention to the fact that when Miss Wodelok sang Mr Bramwell always turned the leaves for her, and paid her similar little attentions; but Mrs Thornton only laughed.

'Who else is there to do it? You see how Cissy monopolises Mr Ward and young Morgan,' she said, nodding towards the corner where that young lady sat strumming on a guitar and laughing and chatting with her two admirers.

One afternoon Edith Wodelok was sitting in a favourite nook of hers, away up the hillside, at the edge of a little ravine formed by a mountain stream which came tumbling down in a series of foaming leaps. It was overhung by birch and mountain ash, and commanded a lovely view of the loch, with its green islets, and the mountains on which the heather glowed ruddy-purple in the afternoon sun. She had a book in her hand; but her eyes were dreamily fixed on the scene before her, when she was startled by a dog's nose thrust into her hand, and, looking up as she patted the setter's head, she saw Mr Bramwell coming across the hillside.

'You are returning early to-day, Mr Bramwell,' she said, with a smile.

'The birds are rather wild now, and I am tired. It is so awfully hot,' he replied, throwing himself on the heather near her.

'Where are the others? Have they had better sport?'

'Much the same; but their energy is greater.'

They had been chatting some time when he idly picked up the book, which had fallen from her lap.

'What have you been reading?' he asked, turning to the title-page, where her name was written. 'Edith Wodelok,' he read with an accent of surprise.

'Yes, it is my book,' she said.

'But, excuse me; I thought your name was Miss Wood.'

'Oh no, no!' she cried, laughing. 'What put such an idea into your head?'

'I must not have heard correctly, I suppose; but it certainly sounded like Wood.'

'I dare say the mistake was easily made, particularly as it is not a name you are likely to hear, for I have the unique distinction of being the only one who bears it.'

'What!' he cried, in surprise; 'then you must be the daughter of Sir Thomas Wodelok?'

'Yes, I am. Did you know of my father or of Wodelok?' She sat straight up, and spoke in an eager tone.

'Why, I thought you knew that Wodelok is the name of my place.'

'What! Wodelok Hall, where I was born, and where my father died?' She flushed and then grew pale. 'Oh! I never dreamed that

1902.]

you were the owner of my old home,' she said after a pause, and with a quiver in her voice which she could not suppress.

He was surprised at her evident excitement, and replied in a light, easy tone, 'I am sorry if the knowledge of my identity annoys you; but really, you know, I cannot help being myself.'

'Annoy me! No. Why should it? Only I can hardly be expected to feel much cordiality for those who possess what was the heritage of my people for generations, and which it killed my father to give up.' She spoke in a hard, bitter tone which stung him even more than her words, and he answered her with quiet dignity.

'I assure you, Miss Wodelok, that no one could have felt more sincere sympathy for Sir Thomas Wodelok than my dear old governor; but it was not his fault that your father was obliged to sell the place. If my father had not bought it some one else would.'

'Oh! of course, of course, I know that; but the transaction cost my father his life and me my heritage. That we were the victims of necessity does not make it pleasanter to think of.'

There was obviously no reply possible, and Mr Bramwell kept silent.

Miss Wodelok had risen to her feet, and stood with flushed cheeks and eyes sparkling with excitement; for it came as a shock to her to be brought face to face with one whom from childhood she had regarded as an enemy and hated as a usurper; and it was no less of a surprise to her to find that he was no purse-proud, vulgar upstart, as she contemptuously imagined, but a perfectly well-bred gentleman, whom she had even learned to admire. As she struggled to regain her composure, her common-sense told her that it was absurd to cherish ill-feeling against any one for buying what her father could not keep. She might have thought of that before; but she had taken a melancholy pleasure in dwelling on her wrongs—or her hard fate, as she was pleased to call it—and had never subjected her sentiments to the light of reason. She began to think that she had been foolish to show so much heat, and rather unreasonable into the bargain, and was deeply annoyed with herself. She tried to speak lightly as she directed his attention to a boat which was rounding the nearest islet.

'There come Mrs Ashdell and Cissy from their shopping expedition.'

'Shopping, did you say? I did not know there was a shop within a hundred miles.'

'Oh yes. There is a shop down the other side of the loch, near the kirk. I believe the stock consists largely of peppermint-drops, in which they do a large trade on Sundays; the sale being permitted as a work of necessity, in order to keep people awake during the sermon. I must go and see what they have bought.'

She flew down the little zigzag path, and Mr

Bramwell watched her white dress flitting down through the trees. He noticed that she did not go near the landing-stage to meet the boat, but went directly into the house.

'So she is the daughter of Sir Thomas Wodelok, is she?' he said to himself; 'and a mighty proud young madam too, I dare say. But she did look handsome, standing there with the tresses of the birch drooping over her; and what scornful glances she threw upon poor humble me, the interloper, who dared hold the heritage of the Wodeloks! Though, what a tumbledown and out-at-elbows old place it was when the dear old dad bought it!' He laughed to himself as he took out his cigar-case.

#### CHAPTER IV.

MISS WODELOK was unusually silent when she went up to her room that night. She hardly spoke as Dorothy moved about the room arranging her things.

'Aren't you coming to have your hair brushed, Miss Edith?' the maid asked as she placed a chair in front of the dressing-table.

'Oh yes, Dolly. I was forgetting; but I was thinking about Wodelok.'

'About the old Hall, Miss Edith! Why, I shouldn't think you could remember it.'

'Oh Dolly! do you think I could ever forget the dear old home! I often think of it and dream of it: the lovely old garden, where such heaps of roses grew, and the pond full of white water-lilies, and the long rows of windows flashing back the rosy light of the setting sun.'

'Bless me! To think you can remember all that, and you such a little mite when you left.'

'Ah, but, you see, I love the place! Our people had lived there for hundreds of years, and it breaks my heart to think it is now in the hands of strangers.'

'Well, I wouldn't fret if I were you, Miss Edith. Things is maybe just as well as they are. There's been little luck at Wodelok Hall for many a long day.'

'What do you mean, Dolly? Has anything happened to Mr—to the new people?'

'I don't know anything about the new people; but there was little good and much ill happened to the Wodeloks in the old Hall, and you are better away from it. Yes, sure, you're better away.' She spoke as if to herself, and did not observe for a moment her young mistress's startled look of surprise.

'What are you saying, Dolly?'

'Oh, nothing, dearie,' she answered, in the caressing tone she sometimes used while speaking to her young mistress, whom she had petted and scolded as a child.

'But what do you mean by saying that it is

better I should be banished from my old home?'

'Did I say so? Well, isn't it better to leave a place altogether than live in it without money? Of course you can't remember; but the place was going to rack and ruin. Talk of the house! There wasn't a carpet fit to be seen. The way I used to darn that old nursery carpet, which was always tearing at a different place, was enough to try the patience of Job.'

'Why did you not ask my father for a new one?'

'There was a deal of things both inside and outside wanted besides carpets. It wasn't Sir Thomas's fault that he hadn't got the money, as I often said to those who complained of the cottages being in such a bad state.'

'Were they very bad?' asked her mistress in a low tone.

'Bad? I should just think so. There was not one on the estate fit to keep out the weather. Not that I would say anything against Sir Thomas. He was a kind gentleman in his way, and always civil-spoken. But what could he do?'

'Poor father! It is indeed dreadful to be poor.'

Dorothy said nothing; and after a pause the young lady resumed rather bitterly, 'Then I suppose all is prosperity under the new régime, "And peace and plenty bless the smiling land."'

'I did hear there was a lot of money spent on the place.'

'Ah, likely enough; and it will no doubt be improved beyond recognition.' She paused for a few moments, and then said abruptly, 'Do you know, Dolly, that the gentleman who came here at the same time as we did is the owner of Wodelok Hall?'

'What! him the master of Wodelok?' and she stared at her mistress with a look of consternation.

'Why, what has come over you, Dolly? There is nothing to be alarmed about, though I confess I was surprised when I discovered who he was.'

'Oh, what brings him here?'

'Come, come, Dolly, you are forgetting yourself. Mr Bramwell is a friend of Mr Thornton's, and has as much right to be here as we have. I thought he was rather a favourite of yours.'

'Oh yes. He is a nice gentleman—I will say that—and he saved me from a fall which might have killed me; but, all the same, I wish you had never seen him.'

'Well, Dolly, I don't mind saying that I would much rather he had been somebody else; though, after all, what does it matter? The man is nothing to me.'

'That is right, dearie. Have nothing to say to Mr Bramwell, for remember there is nothing but bad luck to the Wodeloks in Wodelok Hall.'

Her mistress looked up and said sharply, 'That

[Christmas Number.]

is the second time you have spoken of bad luck. Do you mean anything? Are there any special misfortunes supposed to attend the Wodeloks?'

The woman busied herself about the dressing-room for a few minutes before she replied, 'Well, I wouldn't go so far as to say there was anything special like; and it is no matter now, Miss Edith. You left all the bad luck behind you when you left the Hall.'

'That was certainly the crowning stroke of bad luck.'

'Ah, yes, dearie; but we don't always know what is best for us.'

## CHAPTER V.

THE weeks had run on till Hubert Bramwell had been a month at Finavon. He had several times spoken of taking his departure; but he had been warmly pressed to stay, and had not been difficult to persuade. Whether the grouse and blackgame or a certain pair of soft dark eyes were the greater attraction was known only to himself.

For some little time after their conversation on the hillside there was a marked restraint between Miss Wodelok and Mr Bramwell, which Mrs Ashdell did not fail to notice.

'I fear the owner of the ancestral acres is not very susceptible,' she said to Mrs Thornton. 'Not that she gives him much encouragement, so far as I can see. If she lets her "long descent" stand in her way she is a very foolish girl.'

Miss Wodelok's feelings towards Mr Bramwell as the owner of Wodelok had undergone some modification—perhaps, after all, her ancestors deserved more blame for squandering their inheritance than pity for losing it—and she felt ashamed of her unreasonableness. Mr Bramwell, however, did not know this, and her reserve produced a corresponding coolness on his part; yet he could not make up his mind to go, though he told himself again and again that he was a fool for his pains.

At all events a visit cannot last for ever, and the day of his departure was now fixed. The Ashdells had been gone a week, Ted Ward and Jim Morgan had also gone, and another young fellow had come; and Miss Cissy Westwood flirted harmlessly with him, as she had done with his predecessors.

It was a lovely evening, the last of Mr Bramwell's visit. Dinner was over, and the whole party had gone out to enjoy the beauty of the night. A full moon hung low over the mountain, its reflection making a path of golden ripples across the silvery bosom of the loch. Cissy had seated herself in the boat, and was making her latest admirer row her backwards  
1902.]

and forwards across the shimmering golden reflections, while she sang Italian boat-songs to the accompaniment of the guitar. Mrs Thornton had gone indoors; her husband had been called away to speak to one of the gillies; so Hubert Bramwell and Edith were left alone.

'She is a light-hearted girl,' said Edith, looking across the moonlit water to the merry minstrel in the boat. 'She does indeed banish dull care, and thinks not of to-morrow,' she added, alluding to the song Cissy was singing.

'I envy her. I wish I could enjoy the present, and forget what to-morrow must bring,' he said, with a sigh.

Edith did not reply; but her heart beat faster, she could hardly tell why. They strayed on by a winding path which led through a little grove of silver-stemmed birches and crimson-berried rowans. Neither spoke for some time; then he turned towards her with a quick, decisive movement as of one who has suddenly resolved to take his courage in both hands and learn his fate.

Cissy's song had ceased; the boat was rocking by the landing-stage, and every one had gone in when Hubert and Edith emerged from the shadows of the trees. His arm was round her, and he was whispering something with smiling lips.

'Oh no, Hubert! you must not go to-morrow now,' she answered softly. 'We must tell Mrs Thornton at once. Gladys has always been my dearest friend.'

'Oh, I am so glad!' said that lady when Edith, with smiles and blushes, told her the great news. 'I wish you every happiness, dear; and I am sure you will be happy. He is so nice. Tom says he is a right-down good sort, and he ought to know. I like him immensely myself. And, oh! isn't it lovely to go back to your old home and everything? It is just like a novel, or a fairy tale rather, for they never put anything half so nice in modern novels. You are a lucky girl, Edith. Not but what he is the luckier of the two,' Mrs Thornton added, as she kissed her young friend affectionately.

Hubert was no less heartily congratulated by his host.

'Caught at last, old man, eh! Well, I am precious glad to hear it,' he said, shaking his hand energetically. 'You are a lucky fellow. You have won one of the nicest girls I know, and just as good as they're made. And now you must tumble all the things out of your portmanteau, for you don't leave to-morrow. That's settled.'

At last Edith said good-night to the hostess, who in the fervency of her congratulations had kept her guest up till close upon midnight. Late as it was, Dorothy was waiting, and looked round quickly as her mistress entered the room all smiles and blushes. Then she turned away with an impatient sigh, and with a trembling

hand busied herself with the things on the dressing-table.

'Dolly! dear old Dolly! never mind those things just now. I have something to tell you.' She pushed her old nurse gently into a chair, and, throwing herself on her knees beside her, said, 'I am so happy, Dolly. I am going to marry Mr Bramwell, and we shall go back to Wodelok again.'

'Oh, Miss Edith! don't say so. It is not right. Don't do it, dear;' and the good creature burst into tears.

'Why, whatever is the matter, Dolly?' said her mistress, rising and looking at the old nurse in bewilderment. 'I thought you would be delighted to hear the news. Do you imagine Mr Bramwell is not good enough for me, you partial but ridiculous old Dolly?' she asked, putting an arm round her caressingly. 'You are quite wrong if you think anything of the sort; but you know he is good. Any woman might be proud to be his wife; and I love him,' she added, her voice sinking to a whisper.

'Oh no, Miss Edith! Any one but him. Any one else in all the world.'

'Oh Dolly! I believe you are jealous, and want to keep me all to yourself that we may become two cross, crabbed old maids together. Come, be nice to me,' she said in a sweet, coaxing voice. 'My marriage can make no difference to you. My home will always be yours. Unless,' she added playfully, 'you also go and get married. I know you have always loved me since you carried me in your arms, a wee baby. Now, nursie, kiss your little Edith, and wish her happiness.'

'That I do, dearie; that I do with all my heart. But, oh, my dearie! I wish you had found your happiness anywhere but at Wodelok.' She kissed Edith on the forehead with passionate fervour.

Miss Wodelok rose from her knees in sheer perplexity and distress, and looked at the bent form of her nurse, shaken with sobs.

'I don't understand you, Dolly. Do you know anything against Mr Bramwell?'

'Oh no. He is well enough. Only I wish them tigers had eaten him before he came near you.'

'Dorothy, have you taken leave of your senses? I cannot allow you to speak of Mr Bramwell in that way. I am going to marry him, and no one—not even you, Dorothy—shall speak disrespectfully of him in my presence.'

'The Lord's will be done,' said the old servant solemnly; 'but I did think the Ban of the Wodeloks would pass over your innocent head.'

'The Ban of the Wodeloks? What do you mean? I never heard of it.'

'Oh dear, dear! I hardly know what I am saying. But the good book says, "The curse

causeless shall not come." I found that text the other night, so perhaps you may escape it.'

'But what is this awful malediction?'

'Don't ask me, dearie. It was wrong of me to mention it.'

'Oh, but you must tell me. I cannot be put off in that way after having my curiosity excited, and being nearly frightened out of my wits. Come now; what is this ban or curse, as I suppose it means?'

'Your aunt, Miss Pembroke, will be very angry with me for having mentioned it.'

'But, having mentioned it, you had better make a clean breast of it and tell me everything; and I may as well add that I shall worry your life out until you do.'

'You were always wilful, Miss Edith. Well, the story goes that Lady Ursula, who lived hundreds of years ago, was to have been married to her cousin, and she was so enraged because he jilted her and married another that she called down an awful curse on them and on every bride who should come to Wodelok. They say she was a witch, and had dealings with the Evil One.'

'Do you mean to say that you have made yourself miserable and given me an awful fright over an absurd old story like that?' cried the girl scornfully. 'It is just one of those silly old legends the country-people delight in repeating. I thought you were too sensible to listen to such nonsense. What a foolish old woman you are to cry and make your eyes red over rubbish like that!'

'I am foolish, that is true,' said the good woman, wiping her eyes; 'and it will be best to forget all about it.'

That was not difficult so far as her young mistress was concerned, for she was so full of her new-found happiness that she had no thoughts to spare for anything else; but poor Dorothy carried a heavy heart with her when she went to bed. The Ban of the Wodeloks was very real to her, and she recalled so many instances of evils which had befallen the unlucky race that her heart trembled for her dear Miss Edith. There was Edith's own mother, who died in giving her birth; Lady Alice, who went mad, and raved about the curse of Wodelok till she died; Lady Peggy, a sweet, winsome young lady who had only been married a few months when she was killed by the coach being overturned. These and many other tales of disaster and horror she remembered to have heard told by the cottage firesides in her youth. Then over all brooded the baleful apparition of Lady Ursula herself, who was believed to haunt her former habitation, always bringing fresh troubles in her ghostly train. Poor Dorothy could only weep and pray that her nursing might have a happier fate, or that something might even yet occur to prevent the ill-omened marriage.

[Christmas Number.]

## CHAPTER VI.

HE course of true love, for once, ran smoothly on, and early in the year Edith Wodelok became Edith Bramwell.

Miss Pembroke was delighted when she heard of her niece's engagement. She had no prejudice against Wodelok Hall, though her sister's marriage had been unfortunate; and she laughed at 'the curse' when Dorothy, with solemn voice and grave visage, reminded her of it.

'The greatest curse of the Wodeloks has been poverty,' she replied. 'Happily all that is at an end, and I think we may risk the rest.'

'How ridiculously superstitious the lower orders are, my dear!' she said later to her niece. 'That excellent Dorothy of yours, a sensible, good woman in other respects, has got some absurd idea into her head that something dreadful will happen to you if you go back to Wodelok; and all because of some stupid old legend which the country-people repeat. I never heard of anything so preposterous.'

'Yes, isn't it absurd?' said Edith, laughing. 'And the queerest thing is that poor Dolly is so dreadfully in earnest about it. She actually wanted me to give Hubert up.'

'Give him up indeed!' said Miss Pembroke in amazement. 'Why, the woman must be crazy.'

'Well, I am in no danger of following her advice.'

'No, my dear, I should think not. Indeed, you are a very lucky girl. He is a man of whom every one speaks well; and he has made such liberal settlements, too.'

It was a bright day in early spring. The daffodils were nodding to the violets and primroses in the woods, and the poplars and beeches had donned their robes of freshest green. Mr and Mrs Bramwell were walking on the terrace to the west of Wodelok Hall, and the setting sun was gilding the quaint gables and lighting up the windows with brilliant rose-coloured and golden reflections. Since their marriage they had been wandering under the sunny skies of Italy, cruising among the Isles of Greece, or exploring the old-world wonders on the banks of the Nile, and had returned only the previous evening. Edith had spent the whole day running about the house and grounds, and renewing acquaintance with her old home.

'Oh Hubert, what a perfectly charming, delightful day this has been!' she said, turning her bright, animated face to her husband. 'It is quite true, as the north-country proverb says, "East or west, home is best."'

'Then you are not disappointed? You don't think we have spoiled the place or improved it out of recognition?' he asked mischievously.

1902.]

'Oh! please don't remind me of my foolish speeches,' she said, with a slight blush. 'It is a lovely place. I may well be proud to call it home,' she added, looking across the park, with its stately trees, to the broad, winding river. 'But it is late. I must go in to dress.' Then, coming back a few paces, she said, with a smile, 'By the way, I forgot to tell you what a flutter Dorothy was in when she heard we were to occupy the queen's room. She is very superstitious, you know, poor old dear! and she declared the room was haunted.'

'An old house like this would not be complete without a haunted room,' he replied, with an answering smile. 'But I am afraid we did not take over the ghost with the rest of the furnishings. At least it has not shown itself in our time, and the room has been frequently occupied.'

'Oh, of course it is only an idle tale; but Dorothy has a deep-rooted belief in the supernatural. I had no idea of it till I told her of my engagement, when she got into a dreadful state about some old curse which, she said, I would bring on myself by coming back here.'

'Now you speak of it, I have heard something of it. The Ban of Wodelok it is called; but it is nonsense of course.'

The queen's room, so called because Queen Elizabeth had occupied it, was a large apartment on the first floor. Edith had a dim recollection of peeping into it when a child, and regarding with some degree of awe the great bed, with its velvet canopy and hangings, in which her august Majesty had slept. That historical and imposing piece of furniture had been removed, and the room, though still antique in style, was furnished with due regard to modern ideas of elegance and comfort. Some ancient tapestry which had adorned the walls at the time of the royal visit was hung below a rich frieze of carved oak. The sides of the deep oriel window were also lined with oak, carved in a particularly quaint design, which had formed part of the decoration of an ecclesiastical building, and represented the Garden of Eden, with a big serpent coiled round the slender stem of a tree, on which grew a huge apple. The tree seemed too slight to support even the apple, far less the serpent; but that was a mere detail to which the medieval artist had been quite indifferent.

As Edith entered the room she paused at the threshold, for the light from the western side of the window fell on the polished surface of the big apple and the smooth body of the serpent, the reptile's eyes seeming to have a wicked light in them. She was startled, as if it were a live thing; but recovering herself in a moment, she advanced into the room, saying aloud, 'Horrid creature! You are the only thing I don't like here.' She flung her hat and jacket on the chair in front of the objectionable work of art, and stood for a few minutes at the window,

watching the deep, rich orange tints of the after-glow, where the sun had gone down.

It was already dusk in the room as she turned from the fading glories in the west to ring for a light and her maid, when she was arrested in the act by the sight of a gray shadow, or rather the misty outline of a woman's form, gliding from the doorway across the room, and floating noiselessly past; then, when it reached the arras, it melted away like a vapour. She stood in awe-struck silence, as if transfixed to the spot; but on hearing her husband's footsteps she called to him in a sharp, excited whisper.

'What is the matter?' he inquired as he hurried in; then, seeing his wife's pale face and agitated expression, he put his arm round her tenderly.

'Oh Hubert!' she said in an awed voice, 'I have seen the strangest thing. A—a something like the shadow of a woman crossed the room and vanished by the tapestry there.'

'My darling, it must have been your own shadow, or Dorothy's ghost stories have made you fearful and nervous,' he said soothingly.

'No, Hubert, it was no fancy. It was like a mist; but I saw it quite plainly as it moved slowly past—as we have seen the cloudlets do across the brow of Ben Finavon.'

'It could only be a creature of your imagination,' he said, with a perplexed, helpless air.

'No; I saw it,' she repeated, 'and it vanished just there,' pointing to a corner of the room opposite the door.

'That is the passage to the turret chamber; and, going to the place indicated, he drew aside the tapestry and revealed the entrance to a passage.

'Where does that lead to? I did not know a doorway was there,' she exclaimed in some excitement.

'Only to a small room. It is in the oldest part of the house, and there is no other entrance to it except this. But come and investigate,' he said in a lighter tone, taking up one of the candles which he had lighted.

They passed through the low arched doorway into a passage some ten feet or so in length, and entered a small square room. Its walls were very thick, as was seen by the depth of the long, narrow slits which served as windows. It was furnished with a wardrobe and a couple of old oak chests, and some of Edith's trunks were standing there, waiting to be unpacked.

'There are no shadows here, except our own,' he said, holding the light up.

Edith looked round. 'No, there is nothing to be seen. It is strange,' she added, with a slight shiver, 'that I should have seen the—the apparition go towards this passage when I did not know it was there. It shows that, whatever it was, it knew its way about.'

'Evidently. Well, it is a gloomy hole, quite a befitting retreat for the family ghost, which

does not seem to be on view just at present. I am afraid I must decline to believe that your misty phantom was anything more than a trick of the imagination.'

Edith shook her head.

'Don't say anything about it before Dorothy,' she whispered, for they could hear her moving about in the bedchamber.

'Oh no. It would be a triumphant case of "I told you so,"' he replied, with a smile.

'We have been investigating, you see, Dorothy,' said Mrs Bramwell. 'I wonder you did not tell me of this old place.'

'Why, ma'am, I thought you had known of it.'

'No; I never heard of it before.'

Mr Bramwell went to his dressing-room, and Edith proceeded with her toilet.

'You told me this room was haunted,' she said after a time. 'What was the ghost supposed to be like?'

'It was said to be the ghost of Lady Ursula.'

'The one who brought the curse you told me of?'

'Yes. That is her portrait above the fireplace.'

Mrs Bramwell glanced up at it. It represented a thin, sharp-featured lady, with dark hair and piercing black eyes.

'She looks an unpleasant sort of person.'

'She had a terrible temper, they say. My grandmother used to tell me about her,' Dorothy replied.

Mrs Bramwell was silent and thoughtful during dinner. Though far from superstitious, she felt disconcerted by the strange, mist-like form she had seen. Her husband looked anxiously at her, and could not help thinking of the ominous curse—though he did not attach any real importance to it—which had been brought to his recollection that afternoon. Somehow he felt very uneasy.

'You are not vexing yourself about that misty vision of yours?' he said when the servants had left the room.

'No, not vexing myself, but puzzling over it dreadfully,' she said, striving to speak lightly.

'Much better try to forget it, dearest.'

'Ah, Hubert, that is easier said than done; for I get more mystified the more I try to account for it.'

'Then we must treat it as we do a hard conundrum—give it up.'

When the bright sunshine poured into her room next morning, Edith found less difficulty in 'giving up' her efforts to account for her ghostly vision, and the impression gradually faded from her mind; more especially as she had many other things to occupy her attention. A great many preparations had been made all over the estate to welcome the newly married couple, a welcome which was all the more enthusiastic that the bride was one of the old

[Christmas Number.]

stock. The Wodeloks, in their latter days, had not been exemplary as landlords; yet there was something in the name—some inexplicable bond of affinity between the family and the land and the tillers thereof, some unconscious or instinctive reminiscence of feudalism perhaps—which made the tenantry accord to the daughter of the ancient race a more enthusiastic greeting than they would have given to the noblest or wealthiest bride the new lord of the soil could have brought home. The neighbours—the county families—were also eager to welcome the return of the last of the Wodeloks, and were as warm in their congratulations as the tenantry had been. In fact, Mr and Mrs Bramwell were so much occupied with visits and entertainments that they had no time to think of mystic shadows or ominous anathemas.

## CHAPTER VII.

THE months sped on happily and pleasantly at Wodelok Hall, and the shade of Lady Ursula had not reappeared to disturb the equanimity of its mistress. It was now the height of summer. Mr and Mrs Thornton and Miss Pembroke were on a visit to the Hall, and a few friends had been asked to dinner to meet them. The lamps were lit in the drawing-room, but the windows were open to admit the cool evening air. The ladies, who had not yet been joined by the gentlemen, were discussing some questions of family likeness, with special reference to Mrs Bramwell and a certain ancestress of hers.

'My dear,' said Miss Pembroke to her niece, 'haven't you a set of old miniatures? I think the portrait I mean is among them.'

'Oh yes, aunt. They are not yet mounted. I have them in my room.'

'Would you mind sending for them, dear? I should like to show them to Lady Dacre.'

'I am afraid nobody knows where to find them except Dorothy, and she is in bed with a headache; but I will run up for them myself.'

'Oh, I couldn't think of giving you so much trouble,' said Lady Dacre; but Mrs Bramwell had already disappeared.

There were no lights in the room; but the twilight still lingered, and it was quite light enough to see to open the jewel-cabinet, which stood in the window. She took out the miniatures, locked the cabinet, and was just about to retrace her steps when she stopped, quite terrified, for there in the doorway appeared the same mysterious, ghostly form she had seen on the night after her arrival at the Hall. The apparition was the same, yet there was a difference: its outline was more distinct. She could

see that its shadowy garments were in a fashion of a bygone time, and the eyes looked directly at her with something of wild appeal. Then it glided slowly across the room, and vanished as before at the tapestry-covered entrance to the passage.

Mrs Bramwell, shaking in terror, strove to call out, but her mouth felt dry and parched, and she could not utter a sound. When the spectre had disappeared, however, she partially recovered, and rushing from the room and along the gallery till she reached the staircase, she stood on the landing for a few minutes trying to pull herself together. The gentlemen were crossing the hall on their way to the drawing-room, and the sound of their cheerful voices and Mr Thornton's genial laugh came up to her with a reassuring effect.

When they had entered she at once descended, and, after helping herself to a glass of water in the dining-room, managed to enter the drawing-room with tolerable composure.

'I am afraid, from the time I have taken to find them, you must think I keep my things in sad disorder,' she said, with a smile, as she laid the miniatures on the table before Lady Dacre and her aunt.

'My dear Edith, you look dreadfully pale. Is there anything the matter? Are you ill?' asked Mrs Thornton in a low voice.

'Oh no, it is nothing. I was a little upset, that is all; but I am all right now,' she replied, for she had resolved not to mention what she had seen till she could tell her husband.

'I understand, dear,' that lady answered, with a significant smile and a little pat on the hand. Edith blushed, which of course confirmed Mrs Thornton in her idea, and saved Edith from further questions.

When their guests had left, and Mr Bramwell was going off to the smoking-room with Mr Thornton, his wife touched his arm, saying, 'Don't be long, Hubert; I have something to tell you. I—I am afraid to go up alone.'

'Ah! Afraid, are you, dearest? That is not like you.' And then something in her tone and the expression of her eyes struck him. 'Is anything the matter?' he asked quickly.

'That awful shadow!' she whispered. 'I have seen it again.'

'When? Where?'

'In my own room, just as I saw it before, only more awful. Oh Hubert, if you had seen those terrible eyes!' She shuddered, and covered her face with her hands.

'My poor girl,' he said, tenderly putting his arm round her, 'you are nervous and ill, I fear. I must send for the doctor in the morning.'

'Oh, nonsense, about the doctor. There is nothing the matter with me; but I saw it as plainly as I see you now. It was like the portrait of Lady Ursula.'

'Ah, I see. Your eye caught the picture,

and you fancied you saw her. Imagination plays us strange tricks sometimes.'

'It was no illusion, Hubert. If you had seen it as I did you would not talk of tricks of imagination.'

'Perhaps not,' he said, with a smile; 'but you cannot expect me to believe that you have seen the spirit of an ill-natured old woman who died three hundred years ago.'

'Ah, yes, I dare say it seems incredible; but then I have seen it, and you have not. That makes all the difference.'

'Would it not be better to go to another room, dear? I see you are still agitated.'

'Oh no. The servants would be sure to think I had been frightened by the ghost, and that would be a fine example to set them. But I am not afraid when you are with me.'

'Her ghostly ladyship has been careful to keep out of my way so far,' he replied.

Mrs Bramwell had been too nervous and excited to sleep much; but the short summer night soon passed, and in the bright sunshine of the morning it was easier to take a calmer view of things. She resolved to keep what she had seen a profound secret from every one save her husband—a resolution of which he warmly approved.

'If the servants hear of it,' he said, 'they will see a ghost in every corner.'

'And I am not going to be frightened out of my room, either,' she added.

'That is right, dear. It does not do to give way to idle fancies.'

'Now, if you talk of idle fancies, I see our first quarrel looming in the near future,' she said, smiling. 'I certainly saw something awful—for which I cannot account; but I am not going to run away from it.'

'Spoken like a heroine! My dear, I congratulate you on your courage.'

'It is easy to talk in broad daylight,' she said, with a sigh. 'But wait till the shades of evening are gathering, and then'—

'Suppose we have the candles lit before dusk. Our ghostly visitor will think twice before she trails her shadowy garments through a well-lighted room.'

'We can try it; but I hope her visits will be like those of the angels, few and far between.'

## CHAPTER VIII.

HE summer had faded into autumn, and the woods around Wodelok were glowing in a rich harmony of brown-and-gold, with here and there a touch of bright crimson. The glory was fleeting fast, however, for the falling leaves which kept the gardeners so busy in the avenue and in the park told of the near approach of winter.

In preparation for the hunting season, Mr Bramwell had to go to a place at a considerable distance from the Hall to look at some horses. He was to be absent for two days.

'Perhaps it would be as well if you would make Dorothy sleep in your room, in case your shadowy friend, the Lady Ursula, should take advantage of my absence to pay you a visit,' he had said to his wife before leaving.

'Why, Hubert, I believe you are more nervous than I am.'

'Not at all. I should like extremely to make the mysterious lady's acquaintance; but she won't show when I am present. Perhaps my lineage is too humble to bring me under the notice of her aristocratic ghostship.'

His wife laughed and said she was not at all afraid; but she would not mind having Dorothy with her. It was lonely so far away from the rest of the household.

There was certainly nothing in the appearance of the room to cause nervousness when Mrs Bramwell and her maid retired for the night. A bright fire was blazing merrily in the ample fireplace. The lamps were lit, and the whole aspect of the room was that of cheerful and luxurious comfort.

'You are not afraid to sleep in the haunted room, are you, Dorothy?' her mistress asked, with a smile.

'I don't see why I should be afraid if you are not,' was the reply. 'Besides, ghosts never appear to more than one person at a time.'

'So you think there is safety in numbers?'

Mrs Bramwell put on her pretty white dress-gown and loosened the abundant waves of her soft brown hair, which Dorothy proceeded to brush, mistress and maid chatting cheerfully the while.

Presently Mrs Bramwell spoke of some incident of their recent visit to Finavon, whence they had just returned, the mention of the place recalling some interesting reminiscences, and she was silent for a while, gazing at the dancing flames with a happy smile on her lips.

'Dorothy,' she said at last, looking up at the kindly face of her maid, 'do you remember when we were at Finavon, a year ago, that I told you I was going to marry Mr Bramwell, and that you wept and begged me to give him up? How foolish you were, Dolly! It was all because of some silly old wives' fable, I remember.'

'Yes, perhaps I was foolish. There are no Wodeloks now, so the curse must have fallen to the ground.'

'Quite true, Dolly. I have done with the name, and I hope also with the bad luck which you say attends it, for I am sure there is no happier wife in the world.'

As she uttered the last words, in low tender tones, a cold rush of air blew over her, lifting

[Christmas Number.]

the hair from her forehead and fluttering the ribbons at her neck.

Dorothy became pale to the lips, and the brush fell from her hand.

'Where can the wind have come from?' cried Mrs Bramwell, starting up. 'Some door or window must be open.' She tried to speak unconcernedly, but was trembling visibly. Nevertheless she walked to the window, but found it close shut, and the door was also fastened. They looked at the passage in the corner, but neither of them had the courage to penetrate to the room beyond.

'No draught could come from there, so we need not trouble to look; though you never can tell where a puff of wind may come from in an old house like this,' observed the mistress.

Dorothy made no reply; but her mistress talked on with assumed carelessness as she finished undressing. 'Now we must be quiet and try to go to sleep,' she said as she laid her head on the pillow. 'Good-night, Dolly.'

'Good-night, ma'am,' replied the faithful attendant as she also lay down.

Dorothy could not sleep. That icy breath, coming just as her mistress spoke of her great happiness, filled her with dread.

'It is unlucky to talk of being perfectly happy. It is tempting Providence,' she thought.

Soon she knew by the sound of soft, regular breathing that Mrs Bramwell was fast asleep. Dorothy herself lay wide-eyed and restless, her pulses throbbing audibly as the hours dragged on, for she could not help connecting that cold breath with the curse of the Wodeloks, and felt convinced that it was a warning that the curse was still potent for evil. Her heart was wrung with grief and dismay as she thought who might be the next victim. 'Oh, my dear, dear mistress!' she said inaudibly, sitting up in bed, and looking across at the sweet face lying in calm repose on the pillow; 'if I only saw you through your trouble.' Then it seemed as if some malevolent spirit hissed into her ear the old ghastly distich she had often heard long ago:

With the cradle bring bier and pall:  
Death comes with birth to Wodelok Hall.

Alas, how often had the ominous warning come true! She buried her face in the pillow and wept silent, bitter tears.

By-and-by Dorothy also slept.

The cheerful glow from the fire was gone, and only a comfortless heap of white ashes left, when the first gray streaks of dawn stole into the room. Mrs Bramwell opened her eyes and lay drowsily looking at the big apple among the oak carvings at the window; its polished surface caught the rays of light and made it distinctly visible against the dim background. Suddenly she felt wide awake. Turning her head in obedience to an irresistible impulse, she again saw that gray, shadowy form glide from the

1902.]

direction of the doorway; but instead of crossing to the passage as on former occasions, it approached the window, laid a semi-transparent hand on the apple, and gave it a twist; then, still with its hand on the apple, it turned towards her.

Though objects in the room were barely distinguishable in the faint light, Mrs Bramwell saw the face quite clearly. The features were those of Lady Ursula, and the eyes wore such an expression of horror, anguish, and despair as almost froze her blood when their piercing gaze was fixed upon her, as if in appeal. She did not know how long this lasted. It might have been minutes; it might have been only seconds. She tried to turn away her eyes, but was as helpless as a bird under the fascinating spell of a serpent. She endeavoured to call out, but was unable to utter a sound. Then the figure threw its arms above its head with a gesture of hopeless agony, and fell on the floor.

The spell was now broken, and Mrs Bramwell's terrified shrieks instantly roused her attendant, who sprang up and rushed to her side.

'What is the matter?' Dorothy exclaimed.

'There! There! Don't you see her?' cried her mistress, who, with staring eyes, was pointing to the floor in front of the window.

'There is nothing there. You must have been dreaming,' said Dorothy soothingly.

'Oh, her eyes! Those dreadful eyes!' and Mrs Bramwell covered her own eyes with her hands and shuddered.

'What has frightened you? Come, tell your own old nurse, dear,' said the good woman, putting her arms round her mistress, and speaking in the soothing tones with which she had been accustomed to comfort her in her childish troubles.

'Oh Dolly!' exclaimed Mrs Bramwell, throwing her arms round the woman's neck, 'it was Lady Ursula. She looked at me as a lost soul might look. Oh, shall I ever forget that look?' and she trembled and shook so that Dorothy was seriously alarmed.

'Don't take on so. It was only a dream. See, there is nothing nor nobody here,' and she went and drew aside the curtains to let in the morning light.

'No, Dorothy, it was no dream. I saw her as plainly as I see you now. She came from the door, and walked across to the window—and then—O merciful God! what can it mean?' She threw herself on the pillow in a violent fit of sobbing.

'Mercy on us! What is to be done?' exclaimed Dorothy, almost beside herself with anxiety and terror, for she saw in her mistress's dream or vision a confirmation of the fears which had haunted her during the past night. It seemed another foreboding of doom to her

beloved mistress, and her heart quaked within her. But the brave, loving soul crushed down her own grief and terror, and sought with soothing words and kindly ministrations to restore her mistress to composure. She ran and ordered the fire to be lit and some tea—that panacea for all feminine troubles—to be brought.

By-and-by, when Mrs Bramwell grew a little more composed, she was able to tell exactly what had occurred.

When she had described what she had seen that morning, she added, 'It is not the first time. I have seen that figure twice before; but this time it was far more distinct and terrible. It appeared as if there were some awful thing it wished me to know. Oh Dolly! what can it mean? What dreadful thing is going to happen?'

'The good God will protect you. We are all in His hands,' said Dorothy, and the tears she could not restrain rolled down her cheeks.

'I—I cannot bear to look at the picture,' said Mrs Bramwell, with a swift glance up at the portrait of Lady Ursula on the panel over the fireplace. 'Its eyes seem to be always following me. It is a pity we cannot take it down; but we could have it covered up—couldn't we?'

'Would it not be better to take another room?' suggested Dorothy.

'Perhaps it would be as well, at least for the present.'

'The pink one in the west corridor would be bright and cheerful for you. Shall I tell Simmonds to get it prepared?'

'Yes, do. I think if I could get away from those haunting eyes I might sleep.'

The excitement of the morning had culminated in a racking headache, and Mrs Bramwell could only throw herself on the bed in the pink room, thankful to be away from Lady Ursula and her haunting eyes.

## CHAPTER IX.

At the time when her husband was expected to return drew near, Mrs Bramwell came down to receive him, though hardly able to stand.

'What has happened, Edith? Are you ill?' he exclaimed, looking anxiously at her pale cheeks and the dark circles under her eyes.

'I have a dreadful headache, and I did not sleep well.'

'I hope the gray shadow did not disturb your slumbers?' he said, sitting down and putting his arm round her.

'Oh Hubert! don't laugh, please. I did see it. It was more awful than ever. This has been a dreadful day. I have longed every minute for your return, that I might tell you;'

and she laid her head on his shoulder and gave way to a fit of sobbing.

He was greatly alarmed, and would have rung for Dorothy, but she prevented him. Then she strove to compose herself, and in broken sentences related the events of the morning.

'My dear Edith,' he said, kissing her forehead, 'you have been dreaming. The Lady Ursula's portrait is at the bottom of the whole thing. I shall have it taken out or painted over.'

She shook her head.

'Why, darling, what else can it be? You have been thinking of the story of her death, and dreamt you saw it all.'

'The story of her death?'

'Yes. You know she was found lying on the floor dead.'

'In that room, did you say?'

'Yes, just in front of the window. Of course you know the story.'

'I never heard of it till this moment,' she replied excitedly. 'Who told you about it?'

'I heard it from the old rector. He was well up in the family history of the Wodeloks.'

'Did you hear anything more about her?'

'Nothing except that she was in the habit of wandering in and out of the queen's room. You know the royal visit was made in her time. I dare say she was deeply impressed with the honour, like Lady Margaret Belinden in Scott's novel. Very likely she was a trifle mad in her latter days. She was an awful tartar, if all tales be true.'

He began to think he had made a blunder in mentioning the legend; for his wife sat up listening while he spoke, with flushed cheeks and a look of intense interest. But there was one circumstance he withheld. He did not tell her that Lady Ursula was often heard muttering the words which had been handed down as the curse of the Wodeloks.

'My dear Edith,' he said, 'the thing admits of a perfectly natural explanation. You must have heard the story when a child, and it may have lain dormant in your mind till recalled in your dream. One often hears of such things.'

'No, no, Hubert, I never heard a word of it before, and yet I saw her fall down just where you say she was found dead.' She was silent for a few moments, and then proceeded in a solemn voice: 'Hubert, I am certain the poor lady must have died with some awful secret on her mind, or even some fearful crime. It might well be from her look of despair.'

'My dear Edith, you surely are not serious in thinking that what you have seen was really the disembodied spirit of a poor mad woman who died hundreds of years ago. The thing is altogether preposterous and simply incredible.'

'Ah, Hubert! it is easy to talk. You did not see her.' She shuddered and wrung her hands nervously. After a pause she proceeded:

[Christmas Number.]

'My dream—let us call it so if you like—has been strangely corroborated by what you have told me. And now, dearest, I want you to humour my fancies so far as to examine the wood carving round that apple. I am sure the key to Lady Ursula's secret lies there.'

'Certainly, I will do as you wish; though I do not expect any result to follow.'

'Never mind. Result or not, it will prove whether I am right or wrong. But, mind, it must be no perfunctory examination. I must know what is behind that carving, even if you have to take it all down.'

'It shall be done. But I hope you do not want me to start to it at once; for, to tell the truth, I am more interested in the question of dinner at present.'

'How selfish of me not to think of it! But I am afraid I cannot join you to-night. My head still aches dreadfully.'

He was more disturbed by what his wife had told him than he cared to show. Not that he for one moment believed in the ghost. It was all a dream, though a strangely real one.

As he went down to dinner 'The Ban of the Wodeloks' kept sounding in his ears, and a ghastly rhyme he had heard in connection with it flashed into his mind: 'Death comes with birth to Wodelok Hall.' He felt as if the air were full of voices whispering it. Though he swore in angry impatience at the infernal nonsense, he could not banish the fear that filled his heart because of it.

He had but an indifferent appetite for dinner; and when he had finished he sent a message to Dorothy that if her mistress could spare her he should like to see her in his study.

In a few minutes she came, looking, as he could not help noticing, almost as ill as her mistress did. He pushed a chair towards her and motioned to her to sit down.

'I was sorry to see your mistress so ill when I returned,' he began abruptly.

'It was no wonder, sir,' she said, shaking her head.

'Don't you think it strange that she should be disturbed by a dream?'

'It was no dream, sir.'

'How do you know? You did not see anything yourself?'

'No, I saw nothing, for I was asleep till her screams awoke me. I really thought she would go out of her mind. She was fair crazed with fright.'

'I did not know she was so nervous and excitable.'

'No more she is, sir. She is as sensible a lady as ever I saw, and never showed any nervousness before; but she should never have slept in that room. I warned her against it at first.'

'What absolute bosh! What did you talk about last night? Surely you did not tell her  
1902.]

any confounded nonsense about the room being haunted?'

'I never mentioned such things. We spoke of the happy time she had spent at Finavon; and then she talked of you, sir, and said she did not believe there was a happier wife in the world; and just as she spoke a cold wind as if from a vault blew on us. It made my flesh creep. Oh, my poor, dear mistress! All this is but a foreshadowing of her doom. The curse of the Wodeloks is about to fall.'

'What do you mean? What wild idea is this you have got into your head?'

She laid her arms on the table, bowed her head on her hands, and gave way to a burst of weeping. 'Oh, my sweet mistress,' she sobbed, 'why did you ever come to Wodelok?'

For some minutes only her sobs were heard, while her master sat with pale, compressed lips, as if he were turned to stone.

'Come, come, Dorothy, this will never do. You must try to control yourself.'

'Ah, yes, sir, I will try; but my heart is like to break. I have cared for her and loved her since she was born and her own mother died, as she will'—

'For God's sake, woman, hold your tongue! Do you want to drive me mad?' and he strode up and down the room like one distracted.

'Forgive me, sir,' she said, struggling with her emotion; 'but I could not help it, and I would not have her see me break down for the world. Oh, sir! let us trust in the good God, and hope that the curse may be lifted after all.'

When Dorothy had left the study, Mr Bramwell called to a servant to come with a light, and went upstairs to examine the carving, determined either to be at the bottom of the mystery or prove that there was no mystery to solve.

'Harris,' he said, 'hold the candle here. I wish to examine this carving.'

Harris held the light as directed, marvelling much what his master was up to as he turned and twisted and tugged at the big apple in the carving; while the polished eyes of the serpent, catching the light, seemed to leer mockingly at his futile exertions.

At last Mr Bramwell wrenched away a portion of the woodwork by main force, revealing a small recess behind, to which the piece of carving in his hands had formed the opening.

It was an irregularly shaped piece, and had been fitted into the tracery so cunningly as to defy detection. He put his hand into the aperture behind, and drew out a roll of papers yellow with age, and covered with small, neat calligraphy in faded ink.

His amazement at this strange corroboration of his wife's dream, or vision, as she preferred to call it, was extreme. It was quite opposed to all his most cherished convictions to believe that the secret recess where these papers were

concealed had been indicated by a being from another world; but indicated it had been, in a most unaccountable manner. It recalled the Scripture narratives: 'And behold it was revealed to her in a dream.' He took up the papers. They at least were tangible, and, so far as a cursory glance could show, were quite decipherable. It was possible that they might contain the elucidation of the mystery, which both puzzled and irritated him.

Having satisfied himself that the recess was now empty, he took up the papers and retired to his study, where he set himself diligently to their perusal. The somewhat crabbed handwriting and archaic orthography made the task rather difficult; but he became so interested in the narrative contained in the manuscript, which had come into his hands so strangely, that he read on to the end.

## CHAPTER X.

### THE MANUSCRIPT.

URSULA WODELOK, being haunted by remorse for a secret crime which I did commit, do here, for the easement of my guilty soul, set down in mine own handwriting the true story of my sin.

'My cousin Wilfrid Wodelok was next heir after me to Wodelok Hall and the broad lands appertaining thereto. His parents had both died while he was yet a child, and my father brought him hither and made him as his own son. I was my father's only child, and heiress to all his possessions save only Stevehurst Grange, which, with the few acres of park-land around it, was all that would go with the title to Wilfrid; but that mattered not, for my father willed that Wilfrid and I should wed when we were of a fitting age, so that the lands should still go with the title.

'I was three years older than my cousin, and had felt like an elder sister towards him, when he was first brought to the Hall, a fair-haired, prattling boy. We had known from the time we were children that we were to marry when we were grown up, and we oftentimes played at being husband and wife. When I commanded Wilfrid to do this or that, as, being the elder, I was wont to do, he would say, "Nay, Mistress Ursula, I am thy husband and the master. 'Tis mine to command, and thine to obey." And thereupon we would quarrel, as children will.

'As we grew older we seldom spoke of the time when we should wed; for I loved Wilfrid, but I hid my love in mine heart, as a modest maiden should, till he to whom her love is given shall woo her. But, alas! Wilfrid was "kind ever, loving never." He had grown up tall and handsome, and his blue eyes sparkled with mirth,

for he was of a gay humour. His hair was bright gold, and his face was fair as a summer morning, while mine, alack! was dark as a winter's cloud. We rode forth together with hawk on wrist, but he cared not to stay by my bridle-rein; and as I and my maidens sat together in the great hall in the evenings, busily plying our needles on the tapestry for the bridal chamber, he never placed his stool near my tabouret and talked softly, as lovers are wont; but would laugh and jest with my maidens, and would oftentimes whisper to them as I sang to my lute, and my heart would be filled with a great rage of anger and jealousy. Alas! he knew not how my heart yearned for his love. I would have given all the wealth that ever should be mine for the sweet assurance that he cared for me.

'When Wilfrid had reached man's estate my father spoke of the wedding. "We must have gay doings at such a joyful time," he said; "and it is meet that we begin to prepare."

"'Tis not winter yet. Didst thou not say 'twould not be till the Christmas revels begin?" Wilfrid replied.

"'Methinks thou art but a laggard lover," my father answered, frowning.

"'Nay, uncle; no man is in haste to put his neck in the halter. Thou knowest Ursula hath a proud temper, and will so order me that I must do her bidding, or, marry! I shall suffer for't."

'He spoke in a light, jesting tone; but I saw my father's choler rising. I was stung to the quick, and angry tears rose to my eyes, and as I turned aside to hide them Wilfrid said, "Was it not so, Ursula, in our childish games? Thou didst ever command; 'twas mine to obey, lest there should be the beginning of strife. But perchance we may pull together in time—eh? What sayest thou, fair cousin?"

"'Why should we seek to pull together?" I answered in anger. "Why should I wed one who scorns my love? The smiles of the meanest serving-wench are more to thee than mine. Thou wilt wed me for the broad lands of Wodelok; but were I portionless I might sing, "Hi, ho, for a husband!" for all Wilfrid Wodelok would care."

'Then my father rose up in anger and smote the table with his staff.

"'Tell me," he cried, "is this true, Wilfrid? Have you dared to trifle with thy cousin Ursula? An it be so, thou mayst go packing, and starve on Stevehurst Grange as thou wilt."

'Then Wilfrid also became angry, for his anger ever came swift as summer lightning, and as quickly went. He was bold and fearless in his wrath, and answered with a light, mocking laugh, "Softly, softly, good uncle. The bargain was none of my making. I am willing to obey thee, as I have said. What more wouldst thou? Love will come at no man's bidding, nor, methinks, was it mentioned in the bond."

[Christmas Number.]

"Will you dare flout her to my face?" cried my father, choking with rage; and then—oh! how shall I write what followed?—his face became purple, he reeled, and fell in a fit. Wilfrid rushed forward, raised him from the floor, where he had fallen, and loosed his ruff.

"Leave him," I cried. "'Tis you who have done this."

"Forgive me, Ursula. I spake but in jest, and I meant not to cross his humour. I answered him unthinkingly. Oh, a malison upon me! that I have injured my best friend, my second father, and have brought this evil on him, ingrate that I am! Make these varlets run for a leech. Mayhap if he were bled he might recover."

"While he spake he raised my father in his arms, and bade the serving-men help to carry him to his chamber. The leech came, and all was done that could be thought of; but all of no avail. He never recovered from his swoon, nor did he speak any word. Wilfrid and I watched beside him all night, for in my great sorrow I remembered not my anger against my cousin. Love and jealousy were alike forgotten as I heard my father's breathing grow fainter and fainter; and just as the day was breaking his eyelids quivered for a moment, his breath came in short gasps, and then all was over.

"I need not write of the next few weeks. Gloom and sorrow fell upon the household. The funeral, with all its pomp and state, was over, and my dear father had been laid at rest in the vault among his ancestors. Wilfrid still remained at Wodelok Hall. His manner to me was gentle and deferential. He spoke with sorrow and remorse of his untoward speech which had evoked my father's anger and brought on his fit. My heart had softened towards him, for I saw that his sorrow was deep and sincere, and my grief had made me forgiving, and I spake gently to him.

"Vex not thyself so sorely, Wilfrid," I said; "the blame was not thine alone. 'Twas my words which first kindled my father's wrath against thee."

"Ah, would that we could recall our rash words!" he said sadly.

"After my father's death I became the ward of the Queen's Majesty till such time as my marriage should be completed; and when the first months of mourning were over I was sent for to attend Her Majesty at her Court in London. Before I left Wodelok I said to Wilfrid, who was to remain and keep all things in order there, "Thou wilt surely come to Court, Wilfrid, and make thine obeisances to the Queen's Grace, as is thy duty, and inform me, thy liege lady, how it fares at Wodelok?"

"That will I right gladly," he made answer; and hope sprang up anew in my heart, and I thought, "Now sure he will love me, and will long to bring me back to Wodelok as his bride."

1902.]

B

"Months passed, and still Wilfrid came not. Sometimes my royal mistress would observe,

"When is the gay bridegroom coming, Ursula?"

"There is no haste," I would answer, "and Wilfrid hath many things to do at Wodelok."

"When many more months had passed, my royal mistress again spake to me of Wilfrid.

"Ursula," she said, "it might be well for thee to go down to Wodelok and see what this laggard lover of thine is about."

"If it please your Majesty, I will go to Wodelok," I made answer. "There be many things it were well I should see to; but I want no unwilling bridegroom."

"Ha! there speaks the pride of thy race; but wed him or not as thou wilt, keep the power in thine own hands, and bend not to his will in all things."

"And yet, methinks," I made reply, "a woman must needs submit to her husband. Where she gives her love, she willingly giveth her obedience."

"That is well, if thou art sure that the man truly loves thee; but if he only loves the wealth and power that thou canst give him, then, marry! let him take the second place, and be thou the man in thine own house," said the Queen, laughing bitterly."

## CHAPTER XI.

### THE MANUSCRIPT CONTINUED.

ON my return to Wodelok my cousin received me joyfully, and he gave me such an account of his stewardship as could not fail to satisfy me. Wilfrid was even handsomer than he had been when I left the Hall two years ago. He was tall and strong. His eyes, which once were full of careless mirth, now wore a more thoughtful look; but his mouth under his fair moustache had still the bright smile I knew so well.

"Ere I had returned home I had essayed to pluck his image from my heart, but, ah me! my heart was as wax, and melted in the sunshine of his presence. And truly, he was more kind and attentive than he was wont to be, and sought in all things to please me.

"Since I had returned to Wodelok, Wilfrid had at divers times been absent for a day. Riding forth at early morn, he did not return till late at night. When I asked him whither he had gone, he answered, "Oh, only on affairs concerning the more distant parts of the lands;" but methought he liked not to be questioned.

"At length it was told me that Sir Wilfrid was wont to ride towards Ealswith Manor, where dwelt Sir Simon Waldron; that his

daughter, Mistress Edith, had now grown to be a beautiful young maiden; and, further, that Sir Wilfrid and she were often seen wandering in the chase together. A sharp pain smote my heart, and the fires of jealousy again awoke within me, and bitter anger that Wilfrid should have so deceived me—that I, Ursula of Wodelok, should be slighted and scorned for the sake of a pert moppet with her doll face! Yet a hope lingered in my heart that perchance it was not true. I could not bear to think him false to me, so I met him as if all were well; but I would take means to discover the truth; and if Wilfrid Wodelok were indeed a traitor to me, then let him look to himself. He should know the vengeance of a woman scorned.

'Weeks passed, and Sir Wilfrid still had business in the more distant parts of the estate; and I discovered without doubt that he rode out to meet Edith Waldron, that they spent long hours together in the forest, and that they parted with kisses and fond embracements.

'Then another rumour reached me: a rumour of treasonable plots against the life of the Queen's Majesty and the peace of the realm. It was one of the plots devised by the friends of the Queen of Scots, who had for some years been a prisoner in England. Our enemies in France, uniting with those of the Romish faith in England, essayed to slay our gracious Sovereign, place the Scottish Queen on the throne, and restore the ancient form of religion. Sir Simon Waldron of Ealswith was deeply implicated in the plot. He was a Catholic at heart, though he dared not openly show his faith, for heavy penalties were inflicted on those who practised the proscribed religion. His property lay near the seashore, where there was a bay, and where it was expected the French forces under the Duke of Alba might be secretly landed. The conspiracy was discovered before a rising took place. There was a sudden visit to Ealswith Manor, some treasonable papers were found, and poor Sir Simon, who had been but a tool in the hands of more guilty conspirators, was taken prisoner and lodged in the Castle of Winchester. Amongst the names of those implicated in the plot was that of Sir Wilfrid Wodelok. He had disappeared from the Hall on the first hint that the conspiracy was discovered, and no one could tell whither he had betaken himself.

'I could not believe that Wilfrid was a traitor; but he may have thought to win favour with Sir Simon by joining the enterprise, and I was firmly persuaded that it was love and not treason that first led him into the company of the conspirators. Now, alas! that plea would avail him little. His secret visits to Ealswith, where the conspiracy was hatched, would be held a sufficient proof of his guilt. He was now an attainted fugitive, with a price set on his head, and should he be taken, that head would

soon be laid on the "wooden pillow" where so many had perished. Alas that all this should be for the sake of a girl—a fair-faced moppet of a girl! What fools men can be!

'At Ealswith Manor all was confusion and despair. Lady Waldron and Mistress Edith were lodged in the house of one of their vassals; and I caused this house to be watched, for where the honey is, thither will the bee come, sooner or later.

'It was late autumn, and the nights closed in early, when it was told me that a figure, as of a man bent double with age and wrapped in a long loose garment, was seen to approach the Manor at nightfall and ask alms. When he departed, Mistress Edith stole out and met him in the forest. I had little doubt who the ancient mendicant was, and I was resolved to see him and tax him with his perfidy.

'My page, Perkyn Barfoot, was slippery as an eel, cunning as a fox, and faithful withal as a dog to the hand that feeds him. He it was who had brought me news of Sir Wilfrid, and under his guidance I was minded to go to the trysting-place in the forest where the lovers were wont to meet. 'Twould have been rash and somewhat dangerous to ride in mine own proper person after nightfall, and so far from mine own domains, attended by only one page. Mine enterprise being secret, and there being a tempting price on the head of Sir Wilfrid, I dared not trust my serving-men. I therefore disguised myself in the garments my cousin had left behind when he rode forth on this hapless enterprise. We rode to the borders of the forest, and Perkyn left our horses at the hut of a woodcutter. From thence we went on till we came to a great oak, where my page said the beggar and the lady were wont to meet. The branches were low, and I climbed up and laid myself along one of the low spreading boughs, where I was completely concealed, and yet so near that I could hear every word that might be spoken under the tree. I then bade Perkyn retire and conceal himself at a little distance till I should call him.

'It was not long ere I heard a crackling among the brushwood; then I beheld the dim outline of a man's form approaching. He came and leant against the trunk of the tree just beneath where I lay concealed on my leafy perch. He waited silently, except for a quick sigh now and then. There was no doubt that it was my cousin, and though I could not see him where he stood in the deep shadow, I could have touched him, he was so near. In spite of my jealousy and wrongs, my heart went out in pity towards him: so handsome, so manly, albeit so daring and so rash. Alas, alas, that thou shouldst be brought to such a plight as this!

'At length a great deerhound suddenly came bounding forward and leapt upon Sir Wilfrid

[Christmas Number.

with a bark of joyful recognition. Then a girlish figure emerged from the surrounding shadows, and he sprang towards her, exclaiming, "My sweet Edith, thou art here at last! Why hast thou tarried so long? The minutes seem like hours when waiting for thee, sweetheart;" and then came the sound of rapturous kisses.

"In a moment all my feelings of tenderness and pity were turned to hate and jealousy. I had been slighted, deceived, and scorned for this girl. Had he not been gentle, kind, and loving all these months after my return to Wodelok? Yet all the while he was but playing with me: laughing, mayhap, at my foolish fondness, and thinking it a fine jest. I lay clenching my hands in the effort to subdue my passion, for I dared not move lest I should be discovered.

"I will be revenged; I will be revenged," I kept repeating to myself. "They shall know what it is to deceive Ursula of Wodelok," I said as I listened to the whispered words of love and devotion he poured into her ear.

"The deerhound must have heard my movements, slight though they were, for he growled and snuffed around with his nose upraised.

"What aileth Gurth?" said his mistress. "He used not to be so restless."

"Peradventure the deer are stirring, or the conies disporting themselves.—Down, Gurth; down, good dog!"

The moon had now arisen, and I could dimly see the lovers as they stood almost beneath me.

"Thou wilt agree to my plan, then, sweetheart?" he said. "A week hence things shall all be ordered as we have designed. The good priest, whom thou vottest of, hath promised to come and join us in holy wedlock. The ship will be out at sea, and a boat with four stout rowers will wait for us at Oswyn's Cove. Soon we shall be on board the *Fleur-de-Lis*, and with spreading sails we shall wing our way to sunny France, where no danger can come nigh us."

"God grant it may be so! Nevertheless, my mind misgives me. What will thy cousin the Lady Ursula say?"

"Beshrew me an I care," he said, with a short, uneasy laugh.

"Nay, but she will be greatly angered against thee, if 'tis true, as I have been told, that she loves thee."

"Faith, she loveth her own will best."

"Twas said to me but yesterday," said Edith, "that thou wast betrothed to thy cousin, and that thine uncle had willed that thou and she should wed."

"It was my uncle's wish that we should wed, so that the title and the heritage might go together; but I"—

"Ah, Wilfrid, and but for poor Edith Waldron thou wouldst be lord of Wodelok."

1902.]

"Nay, my sweet love, that might never be. I could not love her, even hadst thou not stolen my heart; and she, an she cares for me—and I think she doth—'tis as a sister or a mother perchance. She is elderly, thou knowest, and had she consented to wed me 'twould have been because it was her father's will."

"She murmured something in a low voice which I could not hear, and then, raising her head from his breast where it had rested, said, 'I fear me that she doth love thee, and I dread her anger. It would have been better for thee if thou hadst never seen me. Thou mightest now be lord of Wodelok and a free man, whereas thou art a fugitive in danger of thy life.'"

"And with the love of the fairest, sweetest girl in all England. Better exile with thee, sweetheart, than all Wodelok and Hampshire to boot, with bondage to that elderly termagant, my worshipful cousin Ursula."

"At these words I was so filled with pain and anger that I could not keep still. The hound, hearing my restless movements, set up a short, sharp bark; and, seeing that I could not longer remain concealed, I dropped from the bough on which I had rested, and, laughing loud and bitterly, exclaimed, 'By my faith, cousin, but thou art careful not to belie the old proverb, and let listeners hear any good of themselves.'"

"What! Cousin Ursula?" he cried, amazed. "How camest thou hither? Why this disguise?"

"The great hound snarled round me as if he liked not my sudden appearance. 'Down, good dog!' said his mistress, laying her hand on his head. I laughed again, and when the hound was silent I said, 'As to the disguise, the doublet and trunk-hose are thine own, left behind when thou didst leave Wodelok Hall without ere a good-bye to thy loving cousin. In truth, methinks they are not unbecoming.' I said, looking down at myself. 'What sayest thou? I look not so elderly in these—eh, cousin?'"

"Twere foolish mayhap, but it angered me more than all the rest that my cousin should have said I was elderly."

"I entreat thee, cousin, pardon my heedless words. Beshrew my tongue that uttered them! Yet I fain would know why thou camest hither, and how thou didst know where to find me. And say truly, art thou here to betray us?"

"One question at a time, good cousin. Why I came thou shalt know anon. How I knew where to find thee is my secret. And look to it: what one hath discovered others may have found out also. I fear me that purpose of thine may scarce be carried out. Francis Drake may have seen that French ship. He hath a quick eye, thou knowest. He may make a prize of her, and may wait till thou art on board, so that the prize may be more valuable. Knowest

thou how many crowns is the price on thine head?"

"At this Mistress Edith fell into a passionate weeping, and threw herself on the grass at my feet, begging me not to betray him, and promising never to see him more.

"Oh, save him!" she cried, wringing her hands. "I will give him up to thee. I will."

"Thanks, fair maiden," I interrupted, with a laugh; "but who made Sir Wilfrid of Wodelok thy property, to give or to keep as thou dost choose?"

"Nay, Edith, cease thy prayers," said Wilfrid, raising her from her suppliant posture, and supporting her in his arms.

"And know," I added, "that Ursula of Wodelok scorns him as thy gift; though, by my faith! 'tis a good jest.—How likest thou, Wilfrid, to be handed about as if thou wert a dish of comfits?" and I again laughed loudly. I felt I must laugh, or else weep—weep wild tears of passion and despair.

"Methinks 'tis scarce time for merry-making," said my cousin. "Tell me, what is thy purpose in coming hither?"

"My purpose was friendly to thee, little as thou seemest to regard me. Yet, have I ever been aught but friendly to thee?"

"Thou hast ever been good to me."

"I know that thou canst not escape," I said. "All the ways by which thou hopest to elude thy pursuers are watched, and wherever thou essayest to leave the country thou shalt most assuredly be taken; and it will be short shrift and small hope of mercy, for our good Queen is not over lenient to traitors."

"Hereupon Mistress Edith again fell a-weeping, and once more flung herself at my feet, imploring me to save her lover. Her tears and entreaties only hardened my heart, for did not every word tell of Wilfrid's devotion to her?"

"Tush, tush!" I said. "Rise up and hold thy peace. What I shall do for the safety of my cousin shall be for his own sake, and not for thy asking."

"Then turning to Wilfrid, I spake further: "Know, then, that our gracious Sovereign Queen Elizabeth will shortly honour my poor house of Wodelok by passing a day and a night under my roof. Do thou come thither. Thou canst, if thou wilt, carry out the first part of thy purpose and get wed. It might be best that thou shouldst bring Lady Wodelok with thee. I will keep thee in safe hiding until I have sought my royal mistress's favour for thee. When I tell her that it was love and not treason that drew thee to Ealswith, perchance if she be in good humour she will pardon thee."

"Thanks, thanks, a thousand thanks, good cousin. Thy goodness overwhelms me. Sure the Queen will pardon me for thy asking, and Edith will herself be my best excuse."

"Edith covered my hand with kisses ere I could snatch it away.

"Forgive me, cousin, for having so far mistaken thee," said Wilfrid. "I thought thou wert full of anger; but thou hast proved thyself an angel of goodness."

"No more, no more," I cried harshly, for his thanks were like daggers in my heart. "Wait till thou art safe. 'Twill be time enough for thanks then. I must needs go now if I would be home before morning. In a week thou shalt hear from me."

"I raised a small silver whistle to my lips and blew a shrill summons to my page, then hurriedly left them.

"There shall come a speedy end to their dalliance," I said to myself, for the desire for vengeance was hot within me, and to intercede with the Queen for them was very far from my purpose. Neither would I betray my cousin. It were an act for which every one would condemn me should I give up mine own kinsman to the block; but I would have my revenge, for if he had not been a traitor to the Queen, he had been a traitor to me."

## CHAPTER XII.

THE MANUSCRIPT CONTINUED.

ER Gracious Majesty Queen Elizabeth was making a royal progress through the southern counties to receive the homage of her loyal subjects, stopping for a day or longer, as it pleased her, at the houses of men of rank; and she had graciously consented to honour me by passing a night at Wodelok Hall. Great doings were afoot to prepare for the royal visit, for Queen Elizabeth ever loved to be received with much state and ceremonial, rich banquetings, and splendid entertainments. There was much to be done in preparation, therefore. The large oaken chamber overlooking the park and the river was being set in order for my royal guest. The tapestry, which had been begun in my mother's time, and at which I and my maidens had worked for years, was now finished. It had been designed for my bridal chamber, but it would never be needed for that, and, as was most fitting, it was used for the adornment of the Queen's room. It was hung on the wall against which the great bed was placed, with its heavy velvet draperies and fringes of silk and gold. On one side of the oaken chamber was a small passage leading to a room where the Queen's mails would be placed, and where sundry of her firewomen would sleep. To the left of this passage was a small oratory, partly set in the thickness of

[Christmas Number.

the wall. It was lighted by a narrow slit, a mere loophole; and underneath, an altar-table was wont to stand, with its altar-cloth, crucifix, and candlesticks. On one side was a small silver dish for holy water, let into the oak panelling. By touching a spring underneath this the panel opened, and revealed a narrow flight of steps leading upwards to a chamber near the roof. This was the secret chamber of Wodelok Hall. From generation to generation the secret of it had been known only to the head of the House of Wodelok, who in turn transmitted the knowledge to the next heir, with solemn vows of secrecy. In this wise had my father shown it to me. With much caution and at dark midnight he had taken me to the oratory; and when he had bolted the door he opened the panel, bidding me observe how to move the spring. Then he led me up the stairs to a curious, irregularly shaped room. Though full of odd corners, it was fairly large, and was lighted by several small apertures concealed among the chimneys and ornaments of the roof. It contained a fireplace, and was furnished with a bed, an oaken settle, two stools, and a table. It was this mysterious chamber which I was to prepare for Wilfrid and his bride.

As soon as I had known assuredly what day the Queen would arrive, I had sent Perkyn Barfoot to apprise Sir Wilfrid thereof, and to bid him come with Lady Wodelok the evening before, at dusk, when their coming would be little observed among the numbers of people who would be arriving, to assist in the jousting and games which were being prepared for the divertisement of my royal guest and her suite.

On the appointed evening, just as it was growing dusk, Sir Wilfrid arrived, disguised as a travelling musician; and his bride was with him. They entered unperceived by a side-door at the foot of a little turret stair, where I met them. He presented me to Lady Wodelok, and I kissed her cheek and bade her welcome.

"I could have wished," I said, "to have received you in a manner more befitting your rank and my relationship; but I trust the need for concealment will be but brief."

I led them through the oaken chamber which was now prepared for the Queen. "Ah, Cousin Ursula," said Wilfrid, looking round, "this is the famous tapestry, I see. How often have I seen you and the maidens working at it!"

"Much labour to little profit," I replied bitterly, for I remembered what hopes and visions had been entwined with those silken flowers. I then led them through the little oratory where the secret door stood open, with the dark stair beyond. Lady Wodelok shrank back.

"Oh Wilfrid!" she said, "my heart misgives me. I am afraid to go in there."

"Nay, sweetheart," he said, "there is nothing  
1902.]

to fear." As she still trembled and hung back, he put his arm round her and kissed her cheek. His eyes were bent on her in passionate devotion, and his voice was low and tender as he strove to calm her fears.

"I turned my head, for I was mad with jealousy, and holding the light above my head, I led the way up the dark stairs which I determined they should never more descend. Alas! alas! why was my heart so hardened that I felt no pity for her innocent youth or his strong manhood? I bade them come and see their bridal chamber; and, with a harsh laugh, I said I was grieved that I could not make it more worthy of the occasion.

"Tush, cousin! no more such regrets," said Wilfrid. "'Tis a nobly furnished chamber. Much less would content us in our present peril. Pray thee, good cousin, lose no time in making thy petition to the Queen on my behalf. I long to present my fair Edith to Her Majesty.—When she sees thee, sweetheart," he said, turning to his wife, who stood warming her cold hands at the blazing log, "she will understand how fair an excuse I had for my seeming disloyalty.—Assure her, Cousin Ursula, that she hath not a more devoted subject than Wilfrid Wodelok."

"Nay, fear not, cousin," I answered; "by to-morrow at this time thou shalt have no more need of my help. Thou and thy bride shalt be free of all these troubles. But I must needs go, as I have much to do. If I cannot ask you to join us at the banquet to-morrow, I have brought thee some of the meats prepared for it;" and I pointed to the well-laden table. "Here, Wilfrid, is a flask of thy favourite wine. Is there aught else thou lackest? If so, I will bring it anon."

"Nay, cousin, all we want is here save freedom and our Sovereign's gracious countenance."

"Good-night, then," I said, hurrying downstairs. But I paused and listened a moment ere I closed the panel, and I heard Edith say, "Oh Wilfrid! be not angry; but I greatly fear thy cousin intendeth us some evil. Her eyes had a cold, cruel gleam as she looked at me, and her voice soundeth false." I held my breath while he murmured soft words of comfort and assurance. "Thou art over tired, and that maketh thee fanciful," he said. "Cousin Ursula hath ever been kind to me. Why should she seek to do us an injury?"

I waited to hear no more, but fastened the panel securely, locked the door of the oratory, and went to the gallery overlooking the great kitchen that I might see that the cooks and scullions were attending to their duties, then to the great hall to make sure that all was being ordered according to my wishes.

Anon the steward of mine household came to ask of me what I would please to have done in this or that matter. My tirewomen likewise had things to ask of me concerning my apparel; and, in good sooth, there was much to do, and

many things to think of. All through these bustling scenes I heard a sweet, low voice saying, "Oh Wilfrid! I fear some evil will befall us."

"The evening wore on, and at length all things were fitly prepared for the morrow. The great hall was decked and the tables garnished for the banquet. Fiddlers and players had arrived, and had well-nigh deafened me with their noise as they essayed their parts for the morrow.

"But now all was done, the hurrying to and fro had ceased, silence had fallen upon the household, and I retired to my chamber, not to rest or sleep, though I was weary. The air seemed full of voices, repeating, like the refrain of some mournful dirge, "I fear some evil will befall—some evil befall—evil befall." Had it befallen? Had they drunk of the poisoned wine? Would it take effect? Ah! mayhap they were already dead. Or perchance they had only taken enough to cause sickness. Oh God, should it be so, they would know of my treachery, of my murderous purpose! Wilfrid would denounce me to the Queen, and I should be shamed and disgraced before all men, and peradventure the axe would be my fate.

"I paced my chamber all night long, and ever and anon I stole along the dark galleries to the oaken chamber where I listened but could hear no sound, for the walls were thick. At length in the gray dawn of the morning I took the key of the oratory with me, opened the door, and stood hearkening with my ear at the secret panel. Hearing nothing, I stood with my hand on the spring, fearing to open it—burning with desire to know what had befallen, yet dreading what I might see. Then slowly my fingers pressed the steel, and the panel fell back. I crept up the stairs and when I reached the top I again waited and listened; then I pushed aside the hangings and looked in.

"On the bed lay the bride of a day. The roses had faded from her cheeks, and left her pale as the lily. Her golden hair, all unbound, lay spread over the pillows. Her blue eyes were open, and their fixed gaze met mine. So calm she looked, so full of dignity and reproach, as if her pure soul looked from a great height into my guilty heart. I gazed as one enthralled; then I saw that the face was the face of the dead, that the light of life had left those blue orbs for ever. Suddenly I was startled by a low moan; and, darting forward, I saw Wilfrid kneeling by the bed, his head buried in the coverlet and his arms thrown across the body of his dead wife. He raised his head as he heard my footsteps, and his face was ashen gray; but a gleam came into his sunken eyes as he saw me, and a faint colour rose in his cheek.

"Ha, Ursula, is it thou?" he cried in a hollow voice. "Hast thou come to gloat on thy hellish work? Come hither and look upon her, so fair, so sweet, so innocent of guile. Ay, look upon

her, wretched murderess, and may the sight haunt thee for ever!"

"Oh Wilfrid, Wilfrid!" I cried, sinking on the floor in an agony of remorse.

"God's curse light on thee!" he said fiercely.

"Mercy, mercy!" I implored, raising my hands in supplication.

"Mercy?" he cried. "What mercy hadst thou on her who never did thee harm, or on me thy kinsman, who trusted thee?"

"Oh that I could undo the night's work!" I sobbed.

"Thy remorse comes too late. It shall cling to thee like a leprosy. Never shalt thou know rest or peace. Wodelok Hall shall be cursed for thy sake till this thy secret crime shall be published at noonday, and thy name held up to infamy."

"He had raised himself to his feet, and spoke in wild frenzy. Now he fell down half-across the bed; and, kissing the white lips of the dead, he whispered, "Sweetheart, we are not parted for long. I come to thee—I am coming—I am"—With a long, shivering sigh the breath left his body.

"I cast myself down beside him, weeping wildly in my bitter repentance. Too late. Alas! what availed my tears? Could I weep tears of blood it would not bring back the dead, or give one moment's peace to my guilty soul. "Oh Wilfrid, Wilfrid, speak to me again if only to curse!" I cried, raising his lifeless head and laying it on my bosom. "Have I murdered thee—I who loved thee so? Oh, why did envy and jealousy take possession of mine heart? Oh that I had loved thee more, and been content to see thee happy with the woman of thine own choice! Sure she, in her sweet youth, were fitter mate for thee than I had been." I threw myself on the ground and grovelled in an agony of weeping.

"How long I lay there I knew not; but at length sounds of life and movement in the house and in the park aroused me, and I remembered the Queen's visit, and all that must be gone through. I rose, gave one look at the ghastly burden on the bed, and then turned and descended the stair. I fastened the secret panel; closed and locked the door of the oratory, concealing the key under my garments; and, raising the tapestry which hung over the entrance to the passage, I met my kinswoman Dame Hilda Wodelok.

"Oh, Cousin Ursula!" she cried, "we have been searching for thee everywhere; but I bethought me that thou wouldst be here to see that all is ordered fittingly for Her Most Gracious Majesty, whom God save! And truly I think 'tis a right royal chamber. But haste thee, cousin, for time flies apace, and we must soon set forth to meet the Queen's grace."

"Truly, as thou sayest, there is no time to lose," I said, going hastily to the door, for I

[Christmas Number.

would fain escape before she should perceive my tear-stained face and disordered apparel. I reached my own chamber, and made haste to bathe my face before any one should see me. While I was being bedecked with jewels and lace, my youthful tire-maidens laughing and talking the while, my kinswoman came in. She was a good woman, but was one of those who loveth the sound of her own voice, and who speak many things that wiser people would leave unsaid.

"Ah, cousin!" she said, "thou art pale. Thou hast wearied thyself with thy preparations, and sure 'tis a heavy task to entertain our worshipful Queen Bess, for she loveth rareivers and much merry-making; but all is done as thou couldst wish, so do not fret thyself, but don thy brave apparel. Thy gown is marvellously beautiful and becomes thee well, if only thou wert not so pale and weary-looking. Ah! if Sir Wilfrid had been here he would have taken much of the burden off thy shoulders. Knowest thou where he is?"

"How should I know?" I made reply, startled by her sudden question. "Thou knowest that he is attainted as a traitor."

"Thinkest thou he is really guilty? Sure he is in evil case if he be, as our good Queen hath little mercy for rebels, and the axe is not like to get rusty for want of use. A murrain on that Queen of Scots, who so turneth men's heads. Ah, poor Wilfrid! I like not to think of his comely head rolling in the"—

"Oh, hush, hush, I beseech thee, cousin!" I cried, and I became ghastly pale, and fell back in my chair, while great drops of sweat stood on my forehead.

"Oh! ah! alack! what have I said? Prithee, good Margot, run and fetch some wine for thy mistress. Sure, I was wrong to speak so. Mayhap Sir Wilfrid hath escaped, and his head is in no danger."

"God grant it!" I made answer, with a groan.

### CHAPTER XIII.

#### THE MANUSCRIPT CONTINUED.

HE day on which Her Most Gracious Majesty Queen Elizabeth honoured my house by her presence was one never to be forgotten in the annals of Wodelok. To me it was a day of untold agony and terror: an agony of grief and remorse for my awful crime; a terror of dread lest I should betray myself, and that my guilt should be discovered and I held up to shame and infamy. Oh! in very truth I suffered the tortures of the accursed as I stood in the presence of my royal guest in all my splendour

of velvet and jewels—yea, and laughed and jested with the Queen and her train. Oh God! Yet 'twas easier to laugh than to keep silent, with Wilfrid's dying words ever in mine ears.

"The sun shone in unclouded splendour and all went well. The Queen was all smiles and good humour. In sooth I knew I had found favour with my royal mistress, and she was pleased to do me honour. I could have obtained her forgiveness for my poor cousin Wilfrid had I asked it; but, alas! by my crime he was now beyond the need of the pardon of an earthly sovereign.

"At nightfall, when I conducted my royal guest to her chamber, so near the scene of my awful crime, I could scarcely stand to wait upon my liege lady, as in duty bound.

"There is only one thing has marred our perfect enjoyment of this day," said the Queen as she was being disrobed, "and that is the absence of Sir Wilfrid. We are grieved for thy sake, Ursula, that he should have proved a traitor. How comes it, thinkest thou? For the Wodeloks were ever loyal."

"Nay, ask me not," I answered, with trembling lips; "and yet methinks he is not so guilty as doth appear." So I spake, having bethought me that I might at least remove the taint of treason from his name.

"How so?" said the Queen sharply. "Is it not true that he did visit in secret the house of that arch-plotter, Sir Simon Waldron?"

"'Tis even so, my liege," I answered; "but Edith Waldron is fair to look upon, and 'twas her charms which drew him to Ealswith, for it hath been told to me that they are wed."

"Ha! sayest thou so? Then no wonder his visits to Ealswith were under the rose, for was he not thy plighted husband? Mayhap he feared thine anger, for, in good sooth, thou hast a temper, my good Ursula." And she laughed.

"My face flushed with shame and anger that she should flout me so; and anon the room seemed to turn round with me, and I clutched the post of the bed to save myself from falling.

"Nay, nay, Ursula, fret not thyself so much," said the Queen in a kinder tone. "We will find thee a fitting husband, and do thou forget this faithless Wilfrid. God's death! but he hath played thee a scurvy trick. Knowest thou whither he hath betaken himself?"

"Nay, that I cannot tell," I made answer with white and trembling lips.

"Thou art weary," said the Queen, "and methinks thou lovest this false lover only too well. We will excuse thy further attendance."

"Oh, the horror of the night that followed! I was aweary, yet sleep came not nigh my pillow. Sweet refreshing sleep was not for such as I. I tossed on my uneasy couch, and anon rose and paced my chamber in a frenzy of despair and remorse. Sir Wilfrid's awful words, his dying curse, sounded ever in mine ears. Again I saw

the death-chamber, and the pure loveliness of that dead face on the pillow. Oh, the pity of it! So young, so fair: could I not have spared her sweet youth for his sake? A great tenderness for her awoke within me, and mingled with my repentance, making it the more bitter. I would have given my richest jewels—yea, and all Wodelok to boot—could I have recalled that fair face to life.

'In the dawn of the morning my wearied eyelids closed over my aching eyes; but sleep only brought dreams more horrible than my waking thoughts.

'The royal visit was over. The fiddlers and morris-dancers had departed. The long tables had been removed from the hall, and all things had returned to their wonted order and quiet. For me, dread days and fearful nights dragged slowly on. Often, when the weary hours of the night had passed in sleepless tossing on my uneasy pillow, or in pacing to and fro like a caged wild beast, some weird fascination would draw me towards the oaken chamber, through which I passed to the door of the little oratory, and then I would draw back in wild affright. I dared not—I would not for a kingdom have looked again upon the horror of that upper chamber; and yet my unwilling feet dragged me thither, always in the light of dawn or in the evening twilight. I was in terror lest some day I should open the secret panel and find myself face to face with the dread and ghastly sight which was ever present to my memory.

'At length I did resolve to have the door of the oratory built up. I sent for skilled craftsmen, and stood and watched them at their work; and when the last stone had been placed I felt that now it would be impossible for me to enter that fearful chamber of death. Then I caused the passage to be lined with oak, so that all trace of the door was hidden. And so, I thought, was all trace of my crime.

'Years rolled on. To the surprise of all save myself, nothing was ever heard of Sir Wilfrid or his lady, for it was known that he was married, and it was supposed that he had escaped beyond the seas.

'Poor Sir Simon Waldron, who might have made search for his daughter had he lived, was beheaded, and his lady died of grief before the end of the year.

'Thus all things conspired to let my crime remain hidden and undiscovered, my guilt unsuspected. Year after year has come and gone, yet no rest has come to my troubled spirit, and the horrible gnawing of my remorse has ceased not. Oft my misery seemeth more than I can bear. If only I could make confession of my crime, peradventure 'twould bring some easement to my soul. Oh, could I do it! It might be that I—even I—might obtain forgiveness and peace. Oh that I had strength and courage to endure the shame, the reproach, the ignominious

death. Alas! alas! I cannot—no, not yet. How gladly would I seek release in the grave! But I dare not go before the great Judge with my crime unconfessed, not unrepented of. No, there hath not been an hour during all those years that I have not bitterly repented. "Oh that I could undo the past!" hath been my despairing cry day and night. "Oh, God help me to make confession and expiation!"—Written with mine own hand. **URSULA WODELOK.'**

#### CHAPTER XIV.

**M**IDNIGHT was long past ere Hubert Bramwell had finished reading the manuscript whose existence had been so strangely, almost miraculously revealed to him. His were doubtless the only eyes that had looked upon its pages since these fading lines had been traced upon them.

Could he doubt the genuineness of the awful confession? Was it possible that this tragic story of love, jealousy, and crime could be true? It tallied wonderfully with the family traditions. Then there were his wife's mysterious visions, the agonised look of the apparition which had directed her to the place where the papers were concealed. 'Was this really the confession of a murderess,' he thought as he gathered the sheets together, 'or was it but the ravings of a mad woman?'

He shook his head as this thought occurred to him. No; the story was too coherent, too well connected, to be the illusion of insanity.

One thing he was resolved upon: he would have the passage examined the next day. He would have the woodwork taken down, and see if there really was a built-up doorway. If there were not, it would prove that his wife's dreams and visions were but the result of nervous excitement, caused no doubt by the recurrence to her memory of long-forgotten family legends and traditions. It would prove also that this awful story was a myth related by a master or mistress in the art of fiction. If, on the other hand, the result of his investigations showed that the doorway had really been there, that the oratory was within, that the stair up to the secret chamber led out of it as described, and that the secret chamber contained that which would corroborate or confirm the truth of the dreadful story, then—Ah! yes. What then? Would he be forced to admit the supernatural explanation of the mystery? Lady Ursula's ghost was a big pill for a man of average culture and intelligence to swallow.

Yet was it possible that disembodied spirits should be allowed to visit the scene of their former crimes? He shrugged his shoulders and turned his thoughts to other possibilities: that

[Christmas Number.]

this terrible crime had been committed, and that the hidden room so near them had held a ghastly secret for three hundred years.

He remembered the curse—the curse of the Wodeloks, which to Dorothy was such a dread reality, and had even filled his own soul with terror in spite of his mental attitude of scepticism and contempt. That curse had its prototype, if not its origin, in the malediction recorded in the confession.

Next morning a carpenter was sent for, who soon took down the woodwork in the passage, and there, plainly to be seen, was the built-up doorway. Masons were summoned and the stones removed, and before nightfall the hidden room was opened up and its awful secret revealed. The chamber was very much as it was described in the manuscript. On the wall hung the arras, discoloured by damp, and fallen from its fastenings here and there. The table was covered with trenchers, platters, and wine-cups. Then there was the bed; and on it lay a ghastly skeleton partially concealed by the silken coverlet. In a huddled heap on the floor beside the bed, among a man's garments of an ancient fashion, lay another skeleton. On the hearth was a heap of ashes, and over everything, like a gray pall, lay the dust of centuries.

The strange and startling discovery of the hidden room of Wodelok Hall, and the ghastly remains contained in it, soon got noised abroad. And when the poor relics of humanity had been removed and laid reverently to rest in the family vault, the housekeeper would sometimes show the room to curious and wondering visitors, who would listen with bated breath while she told the tragic story of two fair young lives sacrificed to a woman's jealousy, and of the curse that clung to the Hall because of her crime. 'But, thank God! the curse is now removed,' the good woman would oftentimes say in conclusion.

Yes; the voices of happy children, at play in the stately rooms and dim old corridors are a proof that the baleful curse is now only a tradition.

Dorothy, who now reigns supreme in the nursery, derives a strange pleasure from dwelling on her past terrors. In the evenings, when her mistress comes up to kiss her darlings so snugly tucked up in their little white beds, she sometimes speaks of the night when she wept in such wild grief because she feared her beloved mistress would share the fate of so many ladies of the Wodelok race.

'It was all because you were brave enough to sleep in that room, ma'am. No one of the Wodeloks had ever dared to do it for hundreds of years, not since the Queen slept in it herself.'

'I thought it had been used as a guest-chamber in old Mr Bramwell's time,' said her mistress, smiling.

'As if the Lady Ursula would demean herself to strangers!' said Dorothy, with scornful conviction.

'Ah, true! She had a great idea of the family dignity.'

'As I was saying, ma'am, none of the family had dared sleep in the room, and the poor ghost could get no one to understand her.'

'Very hard on the ghosts, isn't it, Dolly? Very trying that people should faint or run away when a spectre appears, when all the poor thing wants is to communicate "something to their advantage."'

'Oh, you needn't make fun of it, ma'am. You know well enough that it was Lady Ursula's spirit that showed you where her confession was hid. The curse was only to last till her crime should be made known. If it had not been for you, her secret would have been a secret still, and them blessed darlings— Oh, what am I saying? The curse is gone, and instead, these are the blessings of Wodelok.' And she pointed to the sleeping children.

## LOVE AND DUTY.

HERE at the parting of life's ways I stand,  
And see a figure veiled—dread Duty—he  
Who bids me follow not Love's fantasy  
Down fair, strange paths, allured by beckoning hand;  
But tread instead, with him, that higher road;  
Leave zephyrs for a keen, remorseless air;  
Forsake the flower-bright meadows, pleasure's lair;  
March onward with sharp conscience for a goad.

I choose. I follow with unswerving feet,  
Yet aching memory of Love's last caress,  
And heart aware of all its emptiness;  
Till, when the hidden form I turn to greet,  
Fair Love himself I see, with no disguise,  
And all of heaven shining in his eyes.

FRANCIS ANNESLEY.

# A PORTSMOUTH POINT ROMANCE.

BY WALTER JEFFERY,

AUTHOR OF 'A CENTURY OF OUR SEA STORY,' ETC.

## CHAPTER I.

A VOLUNTEER AND A PRESSED MAN.

DICK HOLDING, as he tore down Smock Alley to his boat, thought bitterly upon certain things just said to him. 'It's true I'm a rough feller, an' 'e, wi' 'is schoolin' and shore-goin' ways, is more fit for the daughter o' the owner; but, all the same, I'm right: a cruise in a man-o'-war 'ud do 'im a deal o' good. Yet, because I'm a fool, I'll 'ave to go on board that frigate an' take 'im off some'ow. They ain't got no right to press 'im; but right don't trouble 'em when they want men. Yet that ain't the pint. If they carries 'im off that gal will blame me for it.'

The cool way in which he had heard the news of Preston's seizure by the pressgang had given offence to the girl, and she had told him to his face that he was coarse and vulgar, and jealous of the other's superior education.

The idea of being jealous! Why, hadn't he the greatest contempt for the young fool's book-knowledge, and was not Preston's ignorance of sailing a constant trouble to him? But it would have been all the better to have known a little—enough, for instance, to read handwriting. This he thought as he stepped into the dingy, and the boy George shipped the oar and sculled him off to the brig.

When they came alongside he yelled for 'another 'and in the boat,' while he sat and waited until one of the sailors climbed over the brig's side, grumbling at being disturbed just as the men were going to supper in the forecabin. 'Ship that rudder, get two oars, an' give way. Stop a minute, you boy; come aft an' steer. I'll take yer oar. There's a long pull ahead o' us, an' it looks as if it 'ud blow afore long.'

It was a long and tedious pull from where the brig was lying off the Camber to the *Aladdin* riding at Spithead, and at every stroke of his oar Holding pulled the boat's head half-round, though the boy kept the rudder hard against him. Before their boat reached the *Aladdin*'s side the sun had set some time; but by the twilight of the summer's evening Holden's seaman's eyes told him that the frigate was on the point of sailing. Her boatbooms were rigged in and boats hoisted, and all her sails loosed ready

for sheeting home; while the scraping of a fiddle and the regular tramp round the capstan were sounds that Holding knew meant that the anchor would soon be weighed.

The arrival alongside of the *Estenute's* dingy created some little sensation, the men on the frigate's deck wondering if the rowers, breathless from their hard pull, had brought with them some message which would delay the ship, and a row of heads peered curiously over the hammock-nettings to listen for the reply to the lieutenant's hail: 'Boat ahoy! what do you want?'

'The *Estenute's* boat. Tell your captain that Holding, master o' the brig, wants to see 'im; an' pass me a line for the boat.'

'All right; we'll lower a ladder for you in a minute if you want to come aboard.'

When Holding, disdaining a ladder, climbed the ship's side by the aid of a rope, he was met at the break of the poop by the captain with the question, 'Well, sir, what brings you off like this at the last moment? Something wrong with your crew: a mutiny? There are men-o'-war lying handier to you than I am.'

'No, sir; my men are all right. That's not what I am 'ere for. I am come for my mate.'

'Your mate? Oh! ah yes, the young fellow my second lieutenant caught this afternoon. And what do you want with him?'

'Want wi' 'im? I want to take 'im back to the brig. You surely won't seize 'im in that fashion?'

'My good man, you know very well that we shall take him, though he seems a very impudent fellow, and will need a lot of breaking in; yet the service must be manned, you know, and the press is the fashion we have of manning it.'

'But, sir, 'e is my only mate, an' I can't take my vessel to sea without 'im. The law says you can't do it.'

'Whatever the law says, I *have* done it. Your vessel is in port; get another mate.'

'Look 'ere, captain'—Holding came up closer to the other and spoke gently and persuasively—'ye are a young man an' a good-lookin' feller, an' I'll be bound that some young lady is at 'ome waitin' for ye to splice 'er. Now, I put it to

[Christmas Number.]

ye: 'ow would ye like to be served this way?'—

'Meanin' that this mate of yours is leaving behind him Alderman Tuffin's daughter Ellen, the good-looking girl with the dark eyes—eh?'

'Meanin' 'er, captain. She was wi' 'im when yer men took 'im, an' she says she was insulted by yer sailors, which I 'ad no time to 'ear the rights o'; but I suppose that was only 'er fancy, not understandin' the ways o' seamen.'

'Well, Mr Holding, you go back to that young lady and tell her that she is quite mistaken; I wouldn't hurt her feelings for the world. Besides, I heard from the lieutenant that she fought to save him from my men, the fellow himself not showing half her spirit.'

'Then ye'll let me take 'im back to 'er?'

'Indeed I won't; it would not at all square with my duty.'

'Very well, sir.' Some of the officers on the lee side of the poop stepped forward hurriedly, thinking by the man's appearance and the sudden rise in the tone of his voice that he meant mischief. 'Very well, captain. By the Lord! I'll 'ave the law on ye. No, ye needn't put yer 'and to yer sword. I am not fool enough to lose my temper so far as that. I know the consequences too well; but I'll go straight to the Admiral, an' see if an Englishman is to be made a slave o', an'—'

'Now, look here, my fine fellow, the anchor's apeak, and we shall be half through the Solent before you touch the beach; and even if you went to the Admiral, he would only laugh at you. I make every allowance for your anger; but I won't let you have this man, if for no other reason than for his behaviour since he came on board. Why, he has been so sulky that I have kept him in irons ever since.—Haul up that boat there. Stand by to sheet home your topsails.'

'Yes, it is too late to save 'im that way: I see that clear afore me; but there is still a chance, an' if ye're a man ye'll give it to me.' Holding had recovered himself, and spoke very quietly.

'Very well; out with it. What do you mean?'

'Take me instead.'

'You?'

'Yes, me. I 'ave thought it all out. Preston's only been to sea about four years; I've been brought up to it. A volunteer's worth a dozen pressed men, as ye know very well, an' ye'll find me willin' enough.'

'Why do you make this offer? Only a fool or a madman would do it.'

'Because I want to send the man back to 'is gal, an' I've got no more business wi' the brig.'

'Very well; I'll take you at your word.'

1902.]

'Will ye write a letter for me, sir, just to tell 'em ashore w'at 'as become o' me? I ain't no 'and at writin'.'

'All right; I'll take you to my cabin directly. You shall have your way.—Hold on everything yet with those topsails, and pass the word for that fellow Preston to be brought to me in my cabin.—Come below with me, Holding.'

In the cabin the captain produced pen and paper. 'Now, Holding, what do you want me to write?'

'Address the letter, if you please, sir, to Mistress Ellen Tuffin—private: "This is to tell ye that I send back yer sweetheart."—'

'Oh, the wind's in that quarter, is it? By George! you're a generous fellow, Holding; and the other is not worth it.'

'She is—she is. You write: "Get yer father to make 'im master o' the brig in my room; but get yer father to send an old sailor wi' 'im as mate, because readin' an' writin' ain't all that's wanted at sea." 'Ave ye got that?'

'Yes, and there's a deal of sound sense in it; if the fellow's cur enough to accept the exchange I wouldn't give him command of a jolly-boat.'

'Now, write this to Alderman Tuffin: "Sir,—I 'ereby resign command o' the brig in favour o' yer nephew, Edward Preston, an' am sure 'e'll turn out a good man if ye send a sailor wi' 'im as mate. I 'ave volunteered for the frigate *Aladdin*.'"

'Very well. Now sign these. Anything more?'

'Yes, sir; give the one for Alderman Tuffin to Preston to deliver, an' give that one for the gal to me, an' send for my boy out o' the boat.'

The word was passed for the *Extremate's* boy, to whom on arrival Holding thus delivered himself: 'Now, look, Jarge, I've rope-ended you into a smart young fellow, an' this letter I am goin' to give ye ye 'ave got to give to Mistress Ellen Tuffin wi' yer own 'ands w'en there's no one by. I 'ave taken it into my 'ead to go for a cruise in this ship, an' the mate's goin' to take charge o' the brig. Ye look out an' behave yerself under 'im, or w'en I come back I'll give ye a dose wi' the end o' the topsell halyards that ye won't forget in a 'urry.'

'I shan't go back. I've taken it into my 'ead to go for a cruise in this frigate too, an' I'll go wi' ye.'

'Nice boy,' said the frigate's skipper.

'Look 'ere, Jarge; I peticular want ye to go back, an' I give ye my word that w'en we come 'ome to Portsmouth, in whatever ship I go in again I'll take ye wi' me.'

'Tain't fair! I can't stand that feller Preston.'

'I won't argue wi' ye, my lad, though we ain't on the brig; but I'll presently give ye a very pretty rope's-endin' if ye don't get into the boat'

in 'alf-a-minute. Now, Jarge, come, I ask ye to do it in a friendly way.'

'Very well, Capen 'Oldin'; I see w'at's up. Ye want me to look after yer interests wile ye are on the cruise. I'll go.'

'Well done, my lad; I thought we understood one another.' Then the boy left the cabin.

'Now, is there anything else, Holding?'

'No, sir.'

'Well, just remain in the cabin a moment, and I'll give you a chance to see how little this fellow is worth what you are doing for him. Go aft behind my cot, where you can hear without being seen.—Marine, tell them to bring Preston here.'

The word was passed along, and Preston was led into the wardroom, while Holding, farther aft in the captain's cabin, could see him through the half-open door, and could hear what was going on without being seen. He was wearing handcuffs and was hatless, clothed only in shirt and breeches. From the wound of a cutlass-hilt on his head the blood had streamed down both sides of his face, had dried there, and had clotted upon his long hair, making him ghastly to look upon.

'Well, my man, will you turn to if I take off your handcuffs?'

'No, I won't. You have dragged me here by sheer force; but you shall kill me before I'll work for you.'

'You'll sing a different tune by-and-by when we rig a grating for you. Your friends ought to be glad to get rid of such a fellow.'

'I have no friends or I should not be here now. You know that very well, or you would not have taken me.'

Holding made a movement; but the captain, anticipating him, turned in time and waved him back.

'What about the master of the brig? He ought to know your value. Why is he not looking after you?'

'Yes, you may ask; but I know all about it. I can see through the plot. The brig's boat came alongside just now, so that Holding could get his blood-money. He is the cause of my being here. He laid the pressgang on to me. I see through it all.'

'Well, my lad, you're wrong. Holding is here, and he came for a totally different purpose.—Come out, man, and speak for yourself.'

Holding stepped forward eagerly. 'I am come to free you, Preston,' he said simply. 'The captain says 'e'll take me in yer place, and'

'Of course I know very well this is only a piece of the plot. You'll take care not to lose the chance of getting me out of the way.'

'I don't know what ye mean; but I swear if ye are allowed to go I'll stay.'

'Now then, Preston, do you hear what Holding says? He takes your place, and you go back—to command the brig and marry the alderman's daughter.—That's what it amounts to—eh, Holding?—Here's a letter to her owner from Holding, resigning her—the brig, I mean—to you.'

'Yes, sir, I believe—I 'ope—that is what will come to pass.'

'Now, Preston, say the word. I want to get under sail.'

'Well, Holding, if you mean it, well and good; but I suppose they're going to land you down the coast somewhere, or else make a petty officer of you. Anyhow I am glad to go, so you can take off the handcuffs as soon as you like, captain.'

'You hear, Holding, what he says. For the last time, are you willing to change places?'

'Put 'im in the boat an' 'ave done wi' this, for God's sake!' answered Holding. He was very pale, but he spoke firmly.

'And you, Preston; are you agreeable?'

'Yes, and glad to get off at the price.'

'Marines, bundle him into the boat instantly.—You are a white-livered scoundrel to accept such an offer.—Get him out of the ship at once. Take that sailor out of the boat, and let the wretch get ashore as best he can.'

Holding interposed. 'For the sake o' the boy, captain, give him the sailor. 'E's an old man, an' little use on a king's ship.'

'Very well, Holding, for the sake of the boy, and more for your sake—for you're a fine fellow—I'll let your seaman go; but, by George! I'd like to drown that cur.'

There was no time for further talk, for the captain ran on deck, ordering as he went that Holding should be sent forward, and that the boat with those to go ashore should be cast off.

'Go for'ard, Holding, to the fo'e'sle-head and let's see how you shape,' said the first lieutenant; 'unless you have any clothes in the boat you want to get out of her,' he added.

'Clothes, sir!' Holding smiled. 'I didn't bargain for the cruise when I came off. I've nothing but what I stand upright in; but I'll wave my boat good-bye if you've no objection.'

'Go ahead, then, and be quick about it.—Now, men, heave away the capstan; sheet home the topsails.'

The fiddle struck up again, and the men at the capstan resumed their tramp in step with the music; the anchor, already under foot, broke ground; the sail-trimmers manned the topsail sheets and halyards; the great canvas sails bellied out and flapped noiselessly in the strong breeze as the wind filled them; and Holding, running to the ship's side, had only time to wave his

[Christmas Number.]

hand to those in the dingy as it dropped astern, until those in her were lost to his view, and the boat became a tiny, shapeless black object on the white crests of the choppy sea.

'Good-bye, Jarge; good-bye, Preston. Remember me to them at home.—Don't forget the letter, my lad. Good-bye.'

'Good-bye, Capen 'Oldin,' came the voice of the boy across the water; but Preston bent to his oar and made no answer—never even looked back towards the dark shadow of the man at the bulwarks, for another moment visible to the boy, then lost among the crowd of moving figures on the deck of the frigate.

Then those in the boat gave way with a will and pulled hard to make the smooth water of the harbour. As they neared its mouth they paused for a moment from their rowing to gain breath, and looked out towards Spithead. The moon, now high in the heavens, had come out from behind a bank of clouds, and it showed the white canvas and dark, low hull of the frigate just clearing the tail of the Motherbank as she ran before a strong, fair wind, leaving a white glitter in the sheen of light a-wake that marked the rate at which she was travelling.

## CHAPTER II.

### WHAT BEFELL PRESTON.

**P**RESTON, not knowing that the Tuffin family were anxiously waiting up to hear from Holding the result of his mission, went below to his berth; while the boy, dog-tired after his hard day, made fast the boat and crawled into his bunk in the forecabin, when he would instantly have fallen asleep but for the old sailor.

'This 'ere's a rum go. W'at's the meanin' o' it all?' he asked. 'Ye was in the wardroom, an' 'eard what was goin' on. W'at's the game?'

'Ye'll know fast enough in the mornin', w'en Capen Preston rouses ye roun' the deck; but ye don't know w'at a narrer squeak ye 'ad o' sailin' in the frigate.'

'W'at d'ye mean, ye sassy young cub?'

'Never ye mind; I don't carry yarns from aft for'ard any more'n I carry 'em from for'ard aft, and I shan't say nothin' about it. So ye go to sleep.'

Preston, at his end of the little vessel, could not sleep. He lay and built castles in the air, speculating upon the near fulfilment of his hopes and ambitions, and seeing ahead a wedding at St Thomas's or Kensington, with an alderman to give the bride away—a wedding in style befitting the genteel young master of the favourite brig *Extenuate* and the well-to-do and beautiful daughter of the brig's owner.

At daybreak he was out early, and had the 1902.]

crew turned to washing the brig's deck, determined to begin well by having his vessel in good order. Then the dingy was hauled up, and Preston, in his best clothes, with—but for the scar on his head—no trace of the adventures of the day before, was sculled to the Sally Port by the boy.

'You take the boat back, and the boat-swain will keep you going till I want her again.'

'Please, I'm goin' to make 'er fast. I've got to go up to Mr Tuffin's.'

'You've got to go to Mr Tuffin's? Who says so? Just remember I'm your master now.'

'Please, sir, Mistress Ellen said I was to be sure an' see 'er first thing when I could get ashore.'

'What does she want you for?'

'I think it's to run a' errand for 'er, sir.'

'Oh, well, you can walk up behind me.'

George Tinkle then made the boat fast and solemnly fell into the rear of his superior officer; but the march up to Mr Tuffin's ship-chandlery would have been more dignified if the boy had not varied his part in it with an occasional step-dance on the cobble-stones and with derisive gestures at the back of the mate, making great fun for the passers-by.

As soon as they entered the shop the girl caught sight of Preston, and in great excitement called out, 'He has come back; they've let him go. Thank God!' She held out both hands to him. 'I was sure you would escape.'

'Yes, here I am. It's all right.'

'Well, Ned,' said his uncle, 'so they let you go, then? How did Holding manage it?'

'I'll tell you all about it directly, uncle.'

'Come in, come in. You're just in time for breakfast. Where did you leave Holding?'

'Never mind Holding, father. I've no doubt he is on board the brig.'

'But I do mind Holding, Ellen. I want him to have breakfast with us.'

'Oh, bother! We have Ned back, and I suppose he'll have to go to work directly.—Tell us how you got away.'

'I have a letter for you, uncle, from the skipper which will explain everything. Here it is.' Preston, handing the note to Tuffin, took his seat at the table. Then the boy, who was quite overlooked in the excitement, caught Ellen by the skirt. She turned, and he pushed a piece of paper into her hand, and gave her a look which plainly meant, 'This is between you and me and him, you know.'

The girl thought this was some plan of Preston's to communicate with her secretly, and took the note, smiling at George a recognition of his diplomacy as the boy slipped out of the room and went back to the boat.

Then she was startled by an exclamation from her father.

'Good heavens! the man's mad. Why, he's gone off in the *Alladin*—actually been fool enough to change places with Ned here.—Why, Edward, what does it mean?'

Ellen tore open her note and hastily looked through it. 'Here,' she said, 'I too have a note from Richard Holding. It is true he has gone in the frigate. This was not intended for you; but read it, father.'

Preston looked curiously from one to the other of them, and stopped in the act of eating the breakfast-bacon. Presently he said, 'It seems easy enough to understand. Holding has changed places with me.'

'Richard Holding may be mad, but he's a noble fellow,' Ellen said as she got up from the table and moved away to the other side of the room.

'Yes, it was lucky for me to get the chance—wasn't it, Ellen? But then, you know that Holding was a rough sort of man, and could scarcely read or write. I suppose he liked the idea of a cruise in the frigate. Don't you think so?'

The girl was standing with her back to him, looking out of the window, and she replied without turning round, her voice sounding strange to him, 'I don't know how such as you may think of it; but I understand. I doubted the evidence of my senses yesterday when the press-gang attacked us; but my eyes are opened now.'

'It was most infernally foolish,' said the alderman. 'Who is looking after the brig?'

'Oh, she's all right, uncle. I slept on board last night. I got back as soon as I had seen the frigate under way.'

'Upon my word, you take things easy. Why, we sat up the best part of the night waiting for Holding to return and bring us news of you, while you were snoring comfortably in your bed.'

'I am very sorry; but how was I to know? He ought to have told me. But Holding was always slow-witted.'

'He has been quick enough in perpetrating this folly. Goodness knows for how long the man will be away. The frigate sailed under sealed orders, and I suppose he had nothing but what he stood upright in.'

'Of course not; that's how I was. I had nothing either, and he had to go as he was, or not at all.'

'It's not necessary to talk any more about it,' said Ellen. 'Holding's note to me is enough, and I can see clearly what it means.'

'What can Holding have to say to you, Ellen? And how did you get a letter?'

'A messenger gave it to me, and Holding wrote because, I suppose, he had some-

thing to say. You can see the letter. My father will, I have no doubt, show it to you.'

The girl turned suddenly from the window, and looked at her cousin in a fashion that made him fidget uneasily upon his chair; then she gathered her skirts about her and walked out of the room.

'I can't make head or tail of the business,' said the alderman. 'Tell me exactly how it came about that Holding is in your place, Ned. This note of his to me gives no reason for such conduct. A pretty sort of man, at his age too. Serves his time aboard my ships, gets charge of the largest and best of them, and has every comfort, with good wages; then coolly throws the whole thing over to go to sea afore the mast in a man-o'-war without so much as saying by your leave to me, the best friend he ever had.'

'There's nothing to tell, sir. Holding came off to the frigate just as the anchor was up, saw the captain, and told him he wanted a cruise in a man-o'-war, and, if he would let me go, offered to take my place. I was not going to be so foolish as to refuse the chance.'

'It stands to reason that you wouldn't refuse,' said Ellen, who had come back quietly and taken her place at the breakfast-table. 'You had better sit down and have your meal,' she added. 'If father is going to give you the command of the brig you ought to be on board now.'

Preston looked meaningly at her. 'Yes,' he said, 'until your father decides what to do I ought to be on board looking after things.'

'Hold your tongue, Nell. Edward Preston has been four years at sea, and Holding had been more than five-and-twenty. The man who takes charge of the *Extemuate* will have to be a good sailor and know his business.'

'Of course, sir; Cousin Ellen's note perhaps explains what was Holding's idea.'

The alderman broke the shell of an egg very deliberately. 'My daughter Ellen may know the meaning of the man's whim. She knows more than most gals of her age and station of life—and she knows how to hold her tongue.'

'What did you say when Holding offered to stay in your place?'

'Oh, I don't know, Ellen. I just accepted his offer, and got into the boat. Of course, I thanked him and all that kind of thing.'

'Father, when do you think Holding will get back?'

'I don't know, Nell—perhaps never, if a stray shot happens to hit him. Better than him have been killed in action.'

'And many not fit to be spoken of in the  
[Christmas Number.]

same breath have taken precious good care not to risk their worthless bodies.'

'I think a man's a fool to run after fighting, Cousin Ellen; unless, of course, it is in defence of his home.'

'Look here, my lad, if you have finished your breakfast you'd better get aboard the brig. I'll be off to her in an hour or so, when we'll see what's to be done next.'

'Very well, uncle; there's some refitting and a little paint wanted, and we will carry on till you come aboard.'

'Very well,' said Ellen. 'Can you let George Tinkle come ashore? I want him to do something for me. Any time to-day will do.'

'Yes,' he said. 'You wanted him; and I thought he came up here with me.'

Then the young man went off to the brig; and on his way down to the water's edge, he knew not why, the castles in the air of the night before had all vanished, and in their place doubts that the future would not be all plane sailing had taken their place. Certainly Ellen's manner was peculiar, he thought; but then she had to act a part while her father was present.

Alone with his daughter, the alderman lingered over his breakfast longer than usual, paying no heed to anything. Then he looked up and said, 'Ellen, my gal, you were always fiery, like your mother afore you, and sometimes you and me don't altogether get on as father and daughter should. Now, don't you flare up at what I am about to say, because I fancy somehow that you and me for once will be of a mind; but just give me truthful answers to my questions.'

'Ask me anything you please, father dear. I have never lied to you, though I may not have been so meek as I ought.'

'Just so. Now, did that fine young cousin of yours come any sweethearting with you?'

'Yes, father,' said the girl, looking the alderman straight in the face, and speaking firmly, though she was very pale, and Mr Tuffin could see that she was trembling in every limb.

'Um! Well now, my dear, will you tell me how far this thing went?'

'Too far, too far. I am ashamed to say that yesterday I promised to marry him.'

'Oh, indeed! Well, my gal, are you still of the same mind? When is the wedding to come off?'

'I would drown myself first.'

'Hush, hush! Don't talk like that, and don't tremble so. Come, give me a kiss. We understand one another. Come, come! don't give way. I have one more question: Did Holding ever make love to you?'

'Never, father.'

'Didn't he in any way just show that 1902.]

he thought more of you than most other gals?'

'I believe that Richard Holding is breaking his heart for me, and only now do I understand what a man he was; but he never once spoke.'

'Never mind, my gal; knock off crying; it will all come right some day. Holding's not good enough for you, good as he is; and as to the other fellow, we shall see—we shall see.'

Then the alderman put on his coat and hat, went down to Point, and took a waterman's boat off to the brig. On board he found Mr Preston, in the full exercise of his authority, setting the crew to work to paint the bulwarks.

'Well, sir, you see we are making her ship-shape,' said the young man as his uncle stepped on board. 'When are we likely to get a cargo?'

'You tell that boy George Tinkle to be ready to scull me ashore. I want him to go up to the house. My daughter wants to see him. Knock off that painting.'

'Very well, sir, and'—

'And look here, my lad, being my sister's son, I intend to do what I can for you, so you can have the day and these five pounds—more by four than I started in the world with. At the end of that time, if you are not clear of the town and well on the road to your mother in London, who'd best make a counter-jumper of you, I'll take care that the impress officer has you. Now go.'

### CHAPTER III.

#### WHAT BEFELL HOLDING.

N ten minutes Alderman Tuffin had finished his business on the vessel and was duly sculled to the beach by the boy, who was ordered to make fast the boat and follow to the shop.

'Here, my dear, is George. Take him into the parlour and hear what he has to say, while I attend to business.'

'George, my boy, I want you to tell me how it all happened, and how you came by the letter from Captain Holding.'

'Well, it was like this. Capen 'Oldin', 'e goes down into the cabin wi' the skipper o' the frigate; then they sends for Capen Preston, and'—

'For Mr Preston, you mean, George?'

The boy looked up sharply. 'He were capen when I left the *Exenquate* a few minutes ago, anyhow, miss, until your father'—

'Maybe; but perhaps it was but a temporary command, George.'

George looked very knowingly at the girl.

'Well, missus, you ought to know, bein' in the owner's confidence like; an' o' course'—

'Never mind, George, never mind; go on with your story.'

'Well, when they was down in the cabin, presently Capen 'Oldin' comes up an' 'e goes for'ard, an' the other feller 'e'—

'You mean Mr Preston?'

'Yes, Mr Preston. 'E—I mean the man-o'-war feller—'e says, "Bundle that rascal into the boat. Get 'im out o' my ship. I wouldn't 'ave a feller like 'im." Then we whips into the boat an' shoves off; but the other fellers—I mean Mr Preston an' the sailor: that's Bill—they never takes the trouble to look round, so I sings out, "Good-bye, Capen 'Oldin'," and there I saw him leanin' over the rail right up to the last.'

'But how did you come by that letter for me? You must have had some talk with Captain Holding, and must have seen him alone to have been given that.'

'Look 'ere; ye're a sharp un, ye are. I was comin' to that; but I won't say no more unless ye tell me somethin'.'

'I don't know what you mean, boy. What do you want to know?'

'Well, ye see, miss, it's like this: is he Capen Preston?'

'Tell me truly why you ask?'

'Ye haven't got to go to sea in the brig an' be knocked about by 'im. If I tells ye the 'ole lot I don't want my 'ead knocked off.'

'My cousin will not be master of the brig.'

'Hooray! But look 'ere now, is there anything between ye? 'E's a very good fellow, ye know; though I did say hooray, I never said nothin' agen' 'im.'

The boy was looking at his owner's daughter. His head was tilted to one side and one eye closed, and such a wonderful depth of cunning was in his little wizened features that the girl, in spite of the weight at her heart, could not help laughing.

'My good boy—I believe you are a good boy—I will whisper to you: the man who has gone is worth a hundred of the man he has changed places with.'

'I knowed it! I knowed it ye was the right sort. I knowed we was right. Me and Capen 'Oldin' knowed what we was about. I'll tell ye the whole lot now.'

'Very well, George; tell your story and what it was that you and Captain Holding knew so well.'

'It was like this, ye see: while they was in the wardroom they sends for me; an' the skipper (that's Capen 'Oldin'), 'e says, says 'e, "Look 'ere, Jarge, you and me's always been friends. You take this 'ere letter, an' give it to Mistress Tuffin, an' don't let no one see

ye do it. I am goin' away in this 'ere ship, 'cos I think I ain't wanted by the young woman."

'Are you sure he said that?'

'That or very near them words. Then I says, "Well, I am goin' too. Me an' you's got on well together, an' I ain't goin' back without ye." Then 'e says, "Now, look 'ere, Jarge; off ye go without no more words. Ye 'ave got to go back an' do what ye can for a certain young woman. I depend upon ye to look after 'er."

'Were those his exact words?'

'Em or somethin' like 'em; anyhow, I says, "Since ye put it that way, capen, I'll go."

'Is that all?'

'No, it ain't; but the rest is what you've got to keep dark about. The skipper 'e sends for Mr Preston, and afore 'e comes aft 'e hides Capen 'Oldin' out o' sight; then 'e gets talkin' to the mate an' leads 'im on a bit, an' the mate 'e spoke very nasty about Capen 'Oldin', an' said if 'e was a man an' a friend 'e'd 'ave got 'im clear o' the frigate by that time.'

'And Captain Holding heard all this?'

'We both o' us 'eard it. Then the skipper calls on Capen 'Oldin' to come out o' his hidin', an' 'e makes Capen 'Oldin' say what 'e was after to change places wi' the mate; but the mate only laughs an' says 'Oldin' was humbuggin'; or anyhow it was a game between 'im an' the skipper o' the frigate.'

'Where were you all this time?'

'I was outside, listenin' through the skylight. Then the sentry came along and drove me into the boat; but afore I was drove away I 'eard the capen o' the man-o'-war call Mr Preston a cur and Capen 'Oldin' a man, an' I 'eard 'im say that if Mr Preston 'ad shown 'isself a man instead o' a cur 'e'd 'ave let 'em both go; but as it was, 'Oldin' was too good a man to lose and Preston too great a rascal for 'im to keep.'

'Very well, George; go back to the brig, and we will keep this a secret between ourselves.'

'All right, missus. I believe ye won't get me into no row; an' remember if ye wants anythin' I'm yer man, for Capen 'Oldin' he depends on me to be 'andy when ye're wantin' anythin'.'
